FOREST AND STREAM & ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

[Entered According to Act of Congress, in the year 1879, by the Forest and Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.

Terms, $4 a Year. 10 Cts. a Copy. Six Mo's, $2, Three Mo's, $1.

NEW YORK, THURSDAY, AUGUST 7, 1879.

Volume 13—No. 1. No. 111 Fulton Street, New York.

For Forest and Stream and Rod and Gun.

AWAY TO THE HIGHLANDS, AWAY!

BY NATHAN UPHAM.

I.

AWAY to the Highlands, away!
Dame Nature is now at her best;
She is donning her bridal array,
And in garlands of daisies is drest:
In the flush of each morn
Some rare flower is born
That our youth will renew,
If we lave in its dew,
For the fortunate finder is blest!

II.

Away to the hillsides, away,
And partake the sweet breath of the rose!
Its fragrance will brook no delay,
As it reckons late-comers its foes:
To show its deep scorn
It leaves them a thorn;
Nor will deign to unfurl
Its bright petals of pearl,
It so loves at gray dawn to disclose.

III.

Away to the woodlands, away!
The robin is piping his song;
He awakes at the first peep of day,
And leads out the gay choral throng:
Their songs, to the skies
As sweet incense arise;
And joy will be ours,
If with birds and with flowers
We unite the glad hours to prolong.

For Forest and Stream and Rod and Gun.

A Week at Shiflett's.

A CORRESPONDENCE between Judge Kinney of Staunton, Virginia, and myself, based upon letters I had seen in FOREST AND STREAM relative to the excellent trout fishing to be found in the north branch of the Shenandoah River, convinced me that this was the place to go to. I enlisted the sympathies of an editor, and on the 6th of May we started from our home in Western New York for a week's trout fishing in the "Old Dominion."

The morning after our arrival at Staunton, an early call from the Judge and a cordial welcome extended assured us at once that we were among friends; which assurance was heightened when we were escorted to the club room, where an informal Sunday morning reception was tendered us, and we met the best crowd of fellows we could wish to find. Among them were Captain Doyle, Captain Bumgardner, Mr. W. L. Olivier, Dr. Carter Berkeley, Mr. Ned Echols, and a dozen more.

The Judge took us to his home, and, after dinner, such as only the superintendence of a real daughter of Virginia can produce, a walk about the city was in order.

Immediately upon our arrival we learned that there had been heavy rains in the mountains, and that the streams were swollen enough to interfere seriously with the fishing, but we had come resolved to spend a week at "Shiflett's" and fish the North River; and next morning, although the sky wore that heavy leaden aspect bespeaking a wet day, we piled our traps into an excellent covered rig, and behind a pair of good horses with the Judge as Jehu, we rattled out of town toward the Alleghanies piled up in the west like a gigantic green wall.

Arriving at the ford of the middle river we found the water foaming, but we crossed without mishap, although the treacherous element lapped against and into the wagon box occasionally. And now the rain came down again, and the outlook was anything but flattering; still we floundered on through mud and water and at last reached Stribling Springs, thirteen miles from Staunton. This watering-place lies in a beautiful little valley just at the base of the North Mountain, and consists of a large hotel and a number of neat cottages surrounding it. It is a summer resort of considerable notoriety, owing to the variety of mineral waters found here. Within a hundred yards of the hotel are an alum spring, sulphur spring, chalybeate spring, and freestone spring, all neatly housed; and hundreds of people visit here yearly to drink the waters, fish in the adjacent streams, and shoot deer and turkeys in the mountains. Mr. Charles Kinney, the proprietor, is my ideal of the old school Virginia gentleman. Hospitality and good living are among his leading characteristics, and the hearty welcome accorded us, as we drove up all wet and hungry to the porch, will never be forgotten.

After a hearty dinner, which our host facetiously called "a snack," we held a council and decided, owing to the depth of water at the fords, to go horseback over the mountain by a bridle path to "Shiflett's," our destination. While we were deliberating the rain ceased, and having donned our old clothes, hung on our creels, and placed what extra toggery we would need in a bag, which was thrown across the pommel of the Editor's saddle—he being the feather weight of the party—with fishing rods grasped firmly and cigars alight, we started. The Judge and Editor being old cavalrymen looked on the journey with pleasure, while I, all unused to the saddle, had some misgivings as I looked up the steep sides of the mountain, and I could not help wondering how I was going to hold on to my bridle rein, rod, and the pommel of my saddle simultaneously, when my steed struck a forty-five degree angle! But it was not so bad as it looked; the path was well worn, and the grades comparatively easy, so I forgot the novelty of my position in contemplating the beauties all about me. Here was nature unadorned, here the forest primeval. Who knows but Washington himself, when in his younger days he roamed with chain and compass, toiled up this same path, which is nothing more than an old Indian trail. Possibly his eye took in the very scene that burst on mine, when pausing at the summit we gave ourselves over to this exquisite feast of vision. The valley of Virginia stretched away at our feet like a magnificent garden, its eastern confines guarded by the battlements of the Blue Ridge full thirty miles away. All about us filed the peaks of the Alleghanies wooded with magnificent timber to the very tops. Elliot's Knob and Big Bald, lifting their stately heads above the lesser peaks, seemed to look down contemptuously on their humbler brethren. It was on one of these same "humble brethren" that we were resting, and mighty glad were we that it was no higher now that the summit was reached. Our descent was easy, and varied in my case by a tendency to slip over the horse's head instead of the crupper as in the ascent.

Soon the murmur of the North River's welcome sound came borne up the mountain side to our ears, and in a short time we reined up on the bank, and prepared to ford. Here was another experience for me, but we passed in safety with no other mishap than a shoe full of water. We were now fairly in the North River bottom, and, as the Judge assured us, but three miles from "Shiflett's," with a good path and only one more ford. Encouraged at the prospect we pushed on merrily, and soon came to evidences of civilization in the way of snake fences and cultivated fields. Reaching the last ford, we crossed, and there, in the midst of fields of waving grass and grain, was the place for which we had been looking ever since we left the Empir eState, "Shiflett's." One would scarcely look for so civilized a habitation in this great wilderness where the nearest neighbor is three miles away. It consists of a substantial log house, two stories in height, with an L adjoining, in which is the dining-room and kitchen. At either end of the upright, built outside, as is the Virginia custom, are great stone chimneys offering pleasant suggestions of wide-mouthed fireplaces sputtering with fat pine knots and hickory backlogs. The house is about two hundred yards from the river, and midway are the barns, a little primitive in their construction, perhaps, but comfortable. The old man is well to do, having three thousand acres of land, embracing all styles, from the perpendicular to the horizontal. Several hundred cattle, suitably branded, browse upon the mountains, and the sturdy old mountaineer and his sons clad in homespun are as happy and care-free as Robin Hood and his merry men.

After giving us a hearty hand shake and bidding us welcome to "White Oak Lick," Pap—as they all call him—led us in to supper. Now don't let any one imagine that, because "Shiflett's" is away up in the mountains, they don't have anything to eat. Listen: On that supper table was some of that "mast-fed" bacon immortalized by "Asa" in this paper not long since; hominy, fresh, white bread, and grass butter, peach and apple butter, good coffee, hot corn bread, lettuce, sweet milk, pickles, and peach and whortleberry pies; and everything was well cooked, clean and wholesome. So when at an early hour we tumbled into downy beds, we vowed that not half the virtues of "Shiflett's" had been told us."

But we came here to fish, and, in spite of the high water, we sallied forth after any early breakfast and saw, what we had not seen in many a long month, the sun rise. And a sunrise in the mountains is something well worth the effort to witness. Everything is so peaceful and quiet. The lofty summits tipped with gold, while the base of the mountains are in shadow, makes a contrast one never wearies of gazing at.

The North River, in which we soon had our lines, is a brawling mountain stream which heads away up in the Alleghanies, miles above "Shiflett's." Uniting with the Middle and South branches below Staunton, it forms the Shenandoah, which, flowing north, drains that fertile valley bearing the same name, and is lost in the Potomac at Harper's Ferry. The term river as applied to this stream is a trifle strained, as it seldom spreads out over six rods in width. An experienced fly fisherman with an eleven-foot rod, could cover every inch of good water in wading down. A perfect trout stream, the water is clear, cold, and so pure that to drink it is like taking a draught of pure oxygen. Full of rapids, pools and eddies, it is just the place for the fish to lurk. The most indifferent angler's eyes would dance to see the North River in good tide. But unfortunately it was not in good tide this morning; the water was flush and discolored. But don't think we caught nothing. Why, the Judge was to leave us at noon to return home, and we had to catch some, and we did. A good, big basketful of as fine trout, running from seven to ten inches in length, as ever gladdened the heart of a lover of "the gentle art. After he had gone, much to our regret, leaving us his kindest wishes for our success, we went earnestly to work, and, although the weather remained fine, the river during our whole stay was too high for any great fishing. But we caught enough to satisfy the demands of sport, and more than enough to eat. We had trout for breakfast, dinner, and supper, until we were tired of them; and often would we slight the speckled delicacies for the "mast-fed." It is only a waste while fishing at "Shiflett's" to catch more trout than you can consume, for you can't give them away, for the simple reason that there is no one to give them to.

One would think that company would be scarce at this place; but this is not so. Nearly every night during our Stay, some wandering herdsman, fisherman, or distant neighbor, would drop in at the ever-open door, take supper, stay all night, and off again at daylight.

It was decidedly enjoyable after wading the river all day, to get on dry togs and sit around the cheerful fireplace, whose warmth was always acceptable after nightfall in this elevated region, and while enjoying our pipes to listen to the old man's stories of deer and bear hunts, and how the deserters and offscourings of both armies during the war used to come through this very pass, and were never turned away unfed from his door. He told us of a neighbor of his, an old mountaineer and hunter, named Todd, who lived three miles above on the river. A peaceful old man, who at last met a violent death at the hands of a gang of ruffians. A remarkable character was he, whose history as a hunter and scout would read like a romance.

Time slipped rapidly away. We would fish up and down the river until we had trout enough, never getting so far away as to "lose our bacon" at meal time. Then, through the heat of the day, we would lie around, smoke, sleep, and generally give ourselves up to the perfect restfulness of this lovely vale.

One day we took a long horseback ride over the mountain bridle-paths, and to show the peculiarities of what is known as the "narrow-gouge" railroad route by which we returned, I will say that by actual count we forded the North River twenty-one times within three miles.

I think it due the shooting and fishing fraternity, that a short description of the family of our old friend Shiflett be here recorded. Mrs. Shiflett is a quiet, unobtrusive body, but of decided opinions when necessary, as witness a remark she made on election day when the old gentleman returned a little late from Mount Salon where the polls where held. "Whiskey is good in its place, but thar is such a thing as carrying it too fur." "I say?" quoth the mountaineer in reply, and that is all he said. She is an excellent cook, and her duties in that capacity are onerous. "From early dawn till dewy eve" she bakes and boils, roasts and fries, for the multitudinous hungry mouths that gather round the board three times a day. There were *only* seven of the children at home. Jack, a sturdy fellow of twenty-eight, was at the head of the farm. Three daughters, all young women grown, and very pleasant, intelligent girls, by-the-way, fully occupied the spare time of the susceptible newspaper man, while three bright boys, aged respectively ten, twelve, and fifteen years, completed the group.

Friday evening we were delighted at the arrival of three friends from Staunton, Messrs. Doyle, Olivier, and Cook. These gentlemen had come out to take a half-day's sport with us, and all return to town together. So next morning we bade "White Oak Lick" and its pleasant inhabitants adieu, and fished down the river three miles to the ford where the wagon was waiting. Here we cleaned our trout, and they filled an eight-pound basket comfortably. Then three of us walked three miles over the mountain to Stribling Springs where another carriage was waiting, while the other two drove around the base of the mountain, ten miles over the roughest kind of a road. We foot-pads got there first, and had clean clothes on before the rest drove up. A short stay here, just long enough to breathe the horses, and we were off, arriving in Staunton shortly after nightfall.

Monday we took a trip over the Chesapeake and Ohio Railroad with Major N. H. Hotchkiss, general traveling

agent of this line. At Hinton, West Virginia, we had the pleasure of meeting Mr. N. M. Lowry, one of the State Fish Commissioners, who kindly invited us to stop a week with him, and enjoy the magnificent trout fishing to be found in the tributaries of the New River. Mr. Lowry pointed out the best streams as we passed, and for the benefit of FOREST AND STREAM and its readers, I took the names not only of the streams themselves, but the nearest stations to them on the C. & O. RR.: Glade Creek and Mill Creek, Paw Paw Station; Laurel Creek, Piney Creek and its tributaries, Batoff, Corpers, and Fat Creek, Quinnemont Station; and Manns Creek, Sewell Station. All these streams are full of trout; and under favorable circumstances one may catch them until tired of the sport. I have no doubt a letter to Mr. N. M. Lowry, Hinton, W. Va., would elicit a response telling all about this wonderful game and fish region. A short visit to White Sulphur Springs, Kanawha Falls, and Richmond, a parting hand-shake with the dear friends at Staunton, and we were off for home.

To say that we were pleased and thoroughly satisfied with our trip, but feebly expresses our feelings. Hearty cordiality and true Southern hospitality greeted us on every hand. From the moment we entered Staunton until we left Richmond for home, it seemed as though every one we met tried to do something to help us on, and we owe everybody we met in Virginia a vote of thanks for services rendered.

Any one taking this trip will not be disappointed. There is an abundance of trout in the spring and summer, and plenty of quail, deer, and grouse in the fall and winter, and by writing to any of the gentlemen mentioned in this article, full information will be freely given; and in case the correspondence brings about a trip, I know by experience that a sincere and hearty welcome will be extended.

Don't fail to visit Shiflett. He is an original, and well worth making a journey to see.

Staunton is very accessible to Northern people from Washington, Virginia Midland to Gordonsville, where you take the Chesapeake and Ohio road to Staunton. Here a comfortable conveyance can be hired at a reasonable figure that will carry you to "Shiflett's," and come after you at any time. The charges here are very low—never more than a dollar a day—and you can pass a week there enjoying the very essence of sport for a very small sum. A trip into West Virginia over the Chesapeake and Ohio road, would also pay any one who is fond of fine scenery; and a few day's fishing along the New River would certainly yield satisfactory results.

Another year, Providence permitting, will find the Editor and I whipping the North River at "White Oak Lick," and getting fat on corn pone and "mast-fed."

H. W. DE L.

Fish Culture.

THE DOMINION FISHERIES BLUE BOOK.

WE have received the Report of the Commissioner of Fisheries of Canada for the year ending December 31, 1878. These annual reports of the Dominion are voluminous documents, far exceeding in scope and detail any thing of a similar character prepared by our own Government. The volume now before us opens with an elaborate comparative statement of production in each branch of fishing within the respective Provinces of the Dominion of Canada in 1877 and 1878. Here are presented in minute detail the quantities and values of the catch of each separate pound of fish in each Province. The recapitulation shows the value of the fisheries for the year 1877 to have been $12,029,967.63, and that of 1878 to have been $13,215,678.83; making an increase of $1,185,721.20; the difference being principally in the cod, mackerel, salmon and lobster fisheries.

Following this exhibit in an equally full compilation from the trade returns and records of the Custom's Department, showing the exports and imports of fish for the fiscal year ending June 30, 1878, and the subsequent half year to Dec. 31. In the former period the value of the exports was $6,929, 366; an increase of more than a million of dollars over the same period preceeding. Half of these exports came to United States markets. The exports for the latter period were $4,846,566, of which the United States received more than a third. The imports for the entire year and a half were something over $2,-150,000, nearly all from the United States.

This vast industry, of which entire control is assumed by the Government, of necessity demands the services of a large force of employees, and we find elsewhere in the Report a tabulated list of the names, districts and addresses of no less than 624 fishery officers, overseers, wardens, inspectors, etc., whose salaries and disbursements for the fiscal year above, amounted to $95,387.81. This does not include the appropriation by the government of $20,088.80 for the support of the seven establishments engaged in the artificial breeding of fish. The collections during the period for rents, license-fees, fines, forfeitures, etc., made up the sum of $14,118.11; the total sum accruing from leases of salmon streams amounting to about $5,000.

Apendix No. 3, which comprises nearly one hundred pages, contains the report of the cruise of the government steamer *Lady Head* in the protection of the fisheries of the Gulf and River of St. Lawrence, during the season of 1878. This is intended to give a summary, from the personal investigation of a competent officer, of the cod, salmon, mackerel, halibut, herring, whale, lobster and seal fisheries of the territory under the supervision of the vessel, being Gaspé, Bonaventure, Labrador, Magdalen Islands, and Anticosti Island. An outline of this report would show that the cod fishery was better during the summer of 1878 than for the same period of the previous year, but that there was a falling off in the fall yield; the whole season's catch exceeding that of 1877. A like increase is noted in the returns of the salmon season, which indeed proved to be one of the most remunerative since the establishment of the license system. The mackerel, for a time absent, returned to the shores in great abundance, and a large catch was recorded; and like success was met by seal fishers. Herring were more numerous than usual, but a less catch made. The lobster fishery of the Dominion is rapidly increasing in extent, the comparative returns of the two years being 450,669 and 731,000 lbs. The returns from the Provinces of Quebec, Nova Scotia, New Brunswick, Ontario, and British Columbia, are sent in by the County wardens and overseers, and constitute the bulk of the remainder of the volume.

Turning now to the fish-culture operations of the Dominion, we find figures which are intelligible to practical fish culturists only. The number of young fry distributed and eggs desposited in the Canadian establishments during the year 1878 was 54,533,000. These were salmon, California salmon, salmon trout, speckled trout, and whitefish; and were distributed from the seven establishments at Bedford, Miramichi, Restigouche, Gaspé, Tadoussac, Sandwich and Newcastle.

We have had occasion in the past frequently to call attention to the liberal and wise conduct of the Dominion Government in regard to an industry so important and of such magnitude as the coast and inland fisheries. This report is an evidence of the thoroughness and system with which this department of civil affairs is conducted.

The value of such a book of statistics as we have thus briefly outlined, is incalculable in the competent management of a vast industry like this. By its aid the Canadian Government is enabled to legislate intelligently and effectively; and to wisely foster the natural wealth of Canadian waters. Our own fish-culturists have looked to their neighbors for methods and processes; the United States Government would do wisely should it also follow, so far as similiarity of the two forms of administration will allow, the example of Canada in regard to the control of fisheries.

WISCONSIN—*Madison, August 1—Editor Forest and Stream:*—For some months past the Wisconsin State Fish Commission has had discord in its ranks. Charges and counter charges have been made, Superintendent Welsher and ex-Superintendent Dousman being the parties mostly assailed. A commission of investigation has just closed its labors in Milwaukee. Testimony was taken in relation to the general management of the Madison hatchery. The committee determined to get at the bottom of the trouble. After a thorough investigation, Superintendent Welsher was completely exonerated. The committee also resolved that it was for the best for all concerned that Commissioner Welch, of Madison, be requested to resign. Mr. C. L. Valentine, of Janesville, has received the appointment of Fish Commissioner in place of Dr. Hoy, resigned. ROVER.

Natural History.

[Read before the Linnean Society of N. Y., Oct. 26, 1878.]

GRAND MENAN NOTES.

Summers of 1877 and 1878.—By R. F. PEARSALL.

Turdus migratorius, Robin.—Is very common; more so than with us. Found it breeding abundantly on our arrival June 6, 1878. Two broods are frequently reared even here, as we found July, 1877, a nest containing a full set of eggs, which had been deserted, and must have been a second litter.

Turdus pallasii.—Common and breeds chiefly on main island, but we found no nests. In 1877 secured a fine set of eggs and nest from one of the islanders. This species also rears occasionally two broods in a season, as I received the same summer a set taken August 3d.

Turdus Swansonii.—Abundant, secured several nests all placed from two to four feet from the ground, about evenly distributed over both the main and outlying islands; all nests were *saddled*, generally near or in swamp ytracts.

Regulus satrapa.—Quite common and breeds. Watched a pair several hours in hope of finding nest without success, which their actions plainly indicated was not far off. Very common. One of our party found a nest containing three fresh eggs, June 15, 1878, which must have been a second brood.

Parus Atricapillus.—Very common. One of our party found a nest containing three fresh eggs June 15, 1878, which must have been a second brood.

Parus hudsonius.—Rare, saw one specimen on one of outer islands, June 14, 1878, which probably had bred there.

Sitta Canadensis.—Young, fully fledged. Was first attracted to it by the coating of gum collected below the opening.

Geothylpis trichas.—Very common, but only on main island.

Dendroeca coronata.—Very commonly distributed, we found them with young fully fledged July 7, 1878. Probably raise two broods.

Dendroeca striata.—Common; secured several nests. They seem to prefer the smaller islands where swampy situations occur for their breeding places.

Dendroeca maculosa. — Common; unlike preceding species found only on the main island. Secured a nest June 12, 1878, containing four fresh eggs. Think this was earlier than majority breed, as we found another partially constructed. Both were placed in small spruce trees in low open growth not more than two feet from ground.

Siurus aurocapilla.—Heard the well known notes of this bird on main island.

Setophaga ruticilla.—Very common everywhere, more so than in this latitude; took several nests; raise one brood only.

Hirundo horreorum Hirundo lunefrons Cotyle riparia H. bicolor.—Plentifully represented, and breed abundantly not common; saw one specimen on the main island.

Carpodacus purpureus.—Not common; breeds in tall spruce growth, generally near dwellings.

Loxia leucoptera.—Saw a flock of about a dozen individuals June 15, 1878, apparently in moult and quite shy.

Passerculus savanna.—Very common; breeds plentifully.

Zontrichia albiollis.—Common; we saw the young birds flying. They must have nested so early as the second week in May.

Junio hyematis.—Very common and breeding plentifully. Many of them have hatched their second broods by June 29.

Melospiza melodia.—Rare; saw only one specimen.

Corvus corax.—Saw several specimens, but they are persecuted so constantly that they are becoming rare.

Cprvus americanus.—Quite common; breeds.

Empidonax traillii.—Quite common, but very shy and retiring. Took one nest with eggs in the summer of 1877, placed in the upright fork of an alder, not more than two feet from the ground in a swampy tract, and very compactly built of long grasses closely woven.

Empidonax flavecentus.—Rare. On June 19, found, in company with S. D. Osborne, a nest of this species on the main island, placed on the ground in a tussock of moss and completely hidden from view, a small round hole for entrance and exit of the parent being left. It was loosely constructed of dead fibers of moss mixed with the living fronds and without lining, containing four fresh eggs, of a rosy white previous to blowing, pure white afterward, and finely speckled with reddish brown about the larger end. June 20, on the eve of our departure, a second nest was brought me by a son of our host, similar in all respects to the first one, containing four fresh eggs. It was found imbedded under the projecting roots of an alder, and belonged to a pair which I had watched closely during our stay. The female was rarely seen, but the male bird, in the early mornings would mount to the top of an alder, and utter his cry of pe-wee, in quick succession for ten minutes successively. The first syllable with a rising inflection, the second falling. This is the only sound I heard them utter, generally being very shy and silent. Both nests were placed in the border of swampy tracts.

Colaptes amatus.—Saw but a single specimen. It undoubtedly breeds there.

Haliœtus leucocephalus.—Saw several specimens, some in immature plumage. Procured a set of eggs which were taken in April. I observed an old bird chasing the herring gulls, and obliging them to disgorge their food which was greedily devoured by the robber.

Aegalitus semipalmatus.—Not common; a single pair bred for several successive years on Nantucket Island, and in searching for its nests last season I found a young bird just hatched, and unable to walk covered with a whitish fluffy down striped with black.

Philohela minor.—Rare. I flushed a family on the main island, the young just able to fly, June 10.

Macrorhamphus grestus.—Common in autumn; shot a female July 18, 1877, in summer plumage.

Gambetta flavipes.—Quite commou.

Tringoides macularius.—Very common; breeds plentifully on all the islands.

Phalaropus hyperboreus.—I preserved a fine specimen which was shot on the ripplings, by one of the fishermen. We saw a flock of perhaps a dozen individuals in crossing from the main land but procured none.

Somateria mollissima.—Common, and breeds on many of the lower islands; but persistent robbing of their nests, as well as shooting out of season, must in a few years drive them from here entirely. I secured a fine set of five eggs June 14. In connection with the eider I would mention an occurance which took place at the time of my first visit. Mr. Cheney had raised a family of young eiders intending to domesticate them. As the season advanced he neglected to clip their wings and one morning they were missing. Two years after, one of them (a female) came swimming about near the island but seemed afraid to venture on land; but as soon as he called it in his old way, it flew up and lit near his house, where it remained several days associating with his tame ducks. One could walk within five feet of it and not disturb it, yet when away from there it was as wild as any of its brethren. Occasionally it would be absent for several days, when we supposed it joined its mate, and attempted to rear a brood, but on being robbed would come back. After repeated trials it finally gave up and attached itself to a family of tame ducklings, being very assiduous in its care for them. This season whether from instinct or reason it returned, and bringing its unwilling mate (which finally deserted it) made its nest on Nantucket Island not fifty rods from his house, where we left it patiently sitting on its downy nest.

Thalassidroma leachii—Very common; breeds in great numbers on all the outer islands.

Larus marinus—A set of eggs in possession of J. D. Osborne were procured on one of the lower islands, and were stated to belong to this species which the people here call Farmer gull.

Larus argentatus.—Very common: breeds on all the islands either on the ground, in trees, or on the cliffs.

Sterna macroma.—Breeds abundantly on the Seal Islands where we procured a large number of eggs, laid mostly on the bare rock without an attempt at a nest.

Alca torda.—The only breeding place of this species at Menan is on one of the murre ledges where we procured a number of their eggs laid in the crevices of the rocks, without the semblance of a nest.

Uria grylle.—This species still lingers in its old haunts, though robbed every season without mercy.

Marman arctica.—Being assured that this species bred on the Seal Islands, we determined to pay them a visit. Accordingly we started on our thirty miles row out to sea in a small fishing-boat. After seven hours of continuous labor, most of the time through a dense fog and rough sea, guided only by the fog whistle on the islands, we made a landing, hauled up our boat and surprised the light-keeper

with a request for night's lodgings. We were comfortably and hospitably entertained, and soothed by the breakers roar, and a blast from the steam whistle which shook the house every half minute, we managed to pass the night, comforted with the thought that should the wind or a storm arise, we might be detained here for an indefinite time. But the morning dawned clear and calm, and four o'clock saw us out prying among the crevices of the rocks for eggs; and such a task. Great boulders lay tossed together in every shape, and under these the puffins had made their nests. But we were lucky to secure these four eggs. What contortions and strainings we underwent for their sake. One of the birds we started from its nest was so bewildered that Mr. Cheney caught it after a short chase, and its skin now reposes together with its egg in my cabinet.

This is, I believe, the most southern point on our coast at which the species is found breeding.

LYNXES.

THE LOUP CERVIER, OR CANAD A LYNX.

A GREAT deal of confusion has arisen in regard to the characteristics of this animal, owing to the fact that the earlier writers confounded it with the wolverene; and thirty years ago, when the former animal was very plenty in almost every part of Maine, and was quite destructive to young lambs, it was scarcely ever called anything else than "wolverine;" in fact, the trapper's name for the animal to-day is "wolvin," which any one can see is only an abbreviation of the former name. It was only a short time since that the writer read an account in a Maine local paper of a stage team being badly frightened by a wild "animal, which proved to be a wolverene," meaning of course a lynx as the wolverene is not found in any part of the State.

It is the writer's opinion that the name "Loup cervier" was not given by the early French voyagers to the lynx, but to the wolverene, as the name loses all significance when applied to the lynx, and genuine hunters would never be guilty of the absurdity of calling an animal a "deer-wolf," which has all the characteristics of a cat, and preys on nothing larger than a rabbit. It is true that Hearne, or Richardson—I forget which—speaks of it gathering a kind of moss which deer are very fond of, piling it up at the foot of a tree, provided with a convenient limb overhead for the animal to crouch on, and when the unsuspecting victim approaches to feast on the dainty repast so generously provided, dropping down on to its back, and cutting its throat with its sharp fangs. But this is precisely what is said of the wolverene and of no other animal, and the writer alluded to seems to have been misled by a confusion of names.

The lynx has nearly disappeared from the lower and central portion of Maine, but abounds in the vast forests of the northern border. It cares but little for the presence of man, and the writer once saw a very large one shot in broad daylight within four rods of a camp door, where it was unconcernedly feasting on the offal of an ox, slaughtered there the day before. It must, however, have been greatly pressed by hunger, as it is essentially a nocturnal animal. Its huge cushioned feet surrounded by a thick fringe of hair enable it to walk on the surface of any but the lightest kind of snow, and it is an expert in the capture of the hare. Where these abound it has a curious habit of catching them, apparently for sport, sometimes leaving them where killed, and again hiding them, as if for future consumption. It is silent, except during the pairing season, which occurs in March. Then during the night, and sometimes in thick, stormy days, it gives utterance to a variety of cries and calls, all more or less feline, and one almost exactly resembling the "Miau" of a huge tom cat. They are exceedingly active, and are capable of making tremendous bounds, but cannot keep up an extended fight, and are easily treed by a dog, when one can be found to run the trail, which is not often. They leave scarcely a vestige of any trail, but are so very cat-like in all their movements that their earlier designation of *Felis canadensis* seems more appropriate, though perhaps less scientific than their later one of *Lynx borealis*.

The animal is almost as easily trapped as a dog, and the best skins command about $2.50. But a few years ago they were made the subject of a curious speculation. The skins were artificially colored by furriers, made into sets, and sold as "Black Lynx." They took amazingly, and became at once the fashion; the raw skins trebled in price, while mink, which they superseeded, suffered a corresponding depression. This lasted for two seasons, and then there was a sudden collapse. Even the votaries of fashion refused any longer to purchase an article of which the color, fur, and skin were equally worthless. As the first faded the second was coarse and came out easily, and the last was almost as tender as a rabbit's.

The other representative of the family, the bay lynx, is somewhat rare in Maine, and is called by hunters "wild cat" and "bob cat." I believe this to be the animal so frequently spoken of as being killed in different sections of the New England States while engaged in robbing hen roosts, etc., though it is often called a Canada lynx. The latter animal, in my opinion, is never found at any great distance from caves, and is best at home where the wilderness is vastest; but the bay lynx is found in the lower portion of the State, in small forests surrounded by fields. What strengthens my belief that it is often called the Canada lynx is the fact that this animal is shown in the pictorial illustrations in Webster's Unabridged as a veritable wild cat, with a ringed tail six inches in length at least, and the only difference one can detect between that and the bay lynx, as depicted, is simply a change in position! This mistake would readily be made by any one familiar with the western bay linx, for this animal is so totally different in color and markings, and so insignificant in size, as compared with its Maine namsake, that no person of common sense would ever dream of calling the two animals the same.

Let me illustrate by a single anecdote in point: An old trapper caught two of the western variety in the northern part of Maine, and never having seen anything like them, he brought them out just as they were caught—that is, unskinned. None of his friends would name them, and he took them to a well-known fur dealer and sportsman. After a long examination he pronounced them a pair of half-grown kittens, a cross between the bay and Canada lynx, and had them carefully skinned and mounted as curiosities. And such they certainly were, being the first and last of their kind that were ever seen in the State. The writer saw them after being mounted, but never having seen the western lynx at that time, was as much in the dark in regard to their true character as all the rest; but the following season, on going into the Kansas and Nebraska State Building, in the Centennial grounds, he was confounded on seeing their exact counterpart, labeled the bay lynx. Since then he has seen scores, all alike as two peas—light gray, with brown spots. There is not a gray hair in the Maine variety, except a narrow strip underneath. It is a very dark redish brown, with black spots; and it is no exaggeration to say that one of them could pick up and carry off the western lynx as easily as a cat could carry a kitten.

PENOBSCOT.

A WRONG NAME.—We regret that the authorship of the article referred to in the following note should have been incorrectly given by us:

BOSTON, 223 *Beacon street, August* 3, 1879—*Editor Forest and Stream*:—I see that you attribute the authorship of the paper in the *Nuttall Bulletin* on the "Rocky Mountain Golden-Eye" to J. M. Brown. By referring to the *Bulletin* you will please observe that the real author writes his own name of THOMAS M. BREWER.

SEA LICE ON GRILSE.—A correspondent of the London *Fishing Gazette* writes:

It may interest some of your readers to know how grilse get rid of sea lice. While I was watching some ten or twelve large grilse in a deep pool in this river last summer (the first pool that they remain in for any time above the tidal part of the river) I saw a large eel come out from under the stones and carefully go over the fish one after another and eat off the sea lice. The grilse did not appear to object to the process in the least. I have mentioned this to many old fishermen, who never appear to have noticed this or known it.

TO BREED QUAIL.—From all that we can learn from the experience of others, the best way to breed quails, which may be easily domesticated, is to place the eggs of the birds under bantam hens. The following is evidence in point:—

"Mr. Henry J. Stone, of Shrewsbury, Mass., while engaged in mowing grass in the early part of July, found a quail's nest with sixteen eggs in it. The bird of course deserted the nest, and the following day Mrs. Stone took the eggs and placed them under a bantam which desired to set. Yesterday the bantam left her nest with sixteen little quails all lively, every egg having been hatched in twelve days from the time they were placed under the hen. The bantam is extremely proud of her brood."

DOMESTICATION OF QUAIL.—I desire to come to the assistance of J. T. Bohon on this subject. On the division of my grandfather's estate in Philadelphia, sixty acres of mostly improved land fell to one of my uncles, an "old bachelor," a little eccentric, but withal a very excellent gentleman. The only building on this place at the time of the partition was a first rate barn, in which the owner fitted up a room suited to his wants as a dining-room. Here he spent the remainder of his life, surrounded by his horses, cows, and fowls. Dog nor cat had he; he prefered the society of the birds to cats. He never used a gun, and the sound of burnt powder was seldom heard near his place; the result was that quail abounded, and as he made it a point to feed them regularly they became as tame as domestic fowls—no more shy of strangers than the latter. To me the sight of these beautiful birds so familiarly inhabiting my worthy uncle's home was a gratifying sight, and confirmed my natural liking for Bob White. I have not been in that part of Pennsylvania since the death of the old gentleman, but presume that with new owners came new practices, and the happy family became dispersed. MILES.

THE BLOOD TEMPERATURE OF FISHES.—We have mislaid a communication of a correspondent who makes an inquiry in respect to the above, but are pleased to print what Professor Gill has kindly furnished us on the subject at our request:—

WASHINGTON, July 21, 1879.

Respecting the temperature of fishes I would state that it generally does not range from more than two to five degrees above that of the surrounding water. This generalization is applicable to all of our fresh-water fishes. There are, however, a few species of the Scombrid family, especially the Tunnies and Bonitos, where the muscular system is quite highly developed and a temperature little if any less than 100 degrees is maintained. Dr. J. Davy, a number of years ago, ascertained for example that a bonito taken in water of the temperature of eighty and a half degrees had blood whose temperature was of ninety-nine degrees.

Yours very truly,

THEO. GILL.

A NEW VARIETY OF ROCKY MOUNTAIN GOAT.—Our friend Captain Charles Bendire, of the First United States Cavalry, now stationed at Fort Walla Walla, Washington Territory, and who is known to the scientific world as one of the most eminent of our North American oölogists, has written us a letter in which he makes reference to the new species of goat alluded to by a former correspondent. He writes:

On my last trip I passed through a section of country north of the Columbia, principally new to me, which in the proper season no doubt abounds in game; but I did not look for any, and consequently saw but little. All the streams, however, notably the Ipokane River, abound in the finest trout of large size, and furnish excellent sport at this season of the year.

I am just reading the numbers of your paper which came to hand during my six weeks' absence, and in the number of May 22, under the heading of "Range of the Black-tailed Deer," signed by Geo. H. Wyman, I notice an item of particular interest to me. The writer speaks of a small white goat. I have for years had knowledge of the existence of such an animal; have corresponded on the subject with Professors Baird and Allen, but have never been able to see one or obtain the skin of one. I am perfectly familiar with the ibix and the bighorn, have hunted both of the latter, and am satisfied at least in my own mind from descriptions received from different parties out here, that we have still another species of white goat considerably smaller than the ibix and which has a much finer fleece. This goat is something like our red trout out here—hard to get specimens under the observation of competent naturalists—but the day will come when some one will forward good specimens for examination.

AN ARMADILLO HUNT—*Washington, D. C., July* 3, 1879.—*Editor Forest and Stream*:—Referring to the armadillo, as mentioned in your number for June 26, I have no recollection of ever having my attention called to them in Texas—my hunting in that State having been confined to its northern and elevated regions. But they abound in Tamaulipas, beyond the lower Rio Grande. Coming many years ago overland from Tampico to Matamoras, a week's journey, it was my habit to stroll in advance of my ambulance armed with gun and revolver, and knocking over an occasional jackass, rabbit, crane, Mexican eagle, etc. One afternoon I encountered an armadillo, the first I had ever seen outside of a menagerie. Knowing his armor to be proof against small shot, I opened upon him with my revolver, and after an exciting chase, during which I emptied five chambers, the unfortunate little pachyderm bit the dust. Just at that moment up came, running at full speed, my Mexican guide with flashing eyes and cocked revolver. To his excited inquiry of *que hay, Señor?* I pointed to the wriggling little quadruped. The scene was too much for his native politeness, and bursting into a roar of laughter he said: "We don't shoot those creatures, but just catch them with our hands; I thought you were attacked by a tiger or by robbers." However, we made game of the quarry, and a famous roast he made in the ashes and embers of our camp-fire that night, with his belly filled with potatoes, onions, and red peppers. The flavor reminded me of young pig; there was nothing musky about him. But that was my first and last taste of armadillo.

J. T. PICKETT.

INTERESTING NOTE ON ALBINISM—*Milltown, Me., June* 30, 1879.—*Editor Forest and Stream*:—I was interested in the letter of your correspondent "W" about Albinism. He asks if any of your readers had ever known a wild bird (albino) to reach the age of a year or more?

I knew a white barn swallow, *Hirundo horreorum*, to breed in Mr. John Cofrin's barn in Topsfield, Me., with a mate of the usual type. I wanted the bird for a specimen for my collection, but Mr. Cofrin was not willing to have it shot. The next spring a white swallow with its mate returned to the barn and built upon the same rafter. The birds left in the fall, never to return in white plumage. The young of each year were of the usual color. In moulting might they not change sometimes to their normal color? I once had a black robin *turdus migratorius* brought me from a nest; it was black as a grackle. I kept it in a cage to see how it would come out in fall moult. The new feathers all came out black. In a few days it began to change to white; the tail first, then the wings, the other feathers fast changing to white, and as I had two white robins in my collection and Melanism was more rare than Albanism, I killed the bird and had it mounted; it is now black, with white wings and tail.

Yours, very truly,

GEO. A. BOARDMAN.

ARRIVALS AT THE ZOOLOGICAL GARDEN, CINCINNATIA, UP TO AUGUST 1, 1879.—2 Sea Lions (*Zalophus gillespiei*) 1 Collared Peccary (*Dicotyles torquatus*) all purchased; 2 Macaque Monkeys (*Macacus cynomolgus*); 1 Green Monkey (*Cercopitheus callitrichus*); 1 Virginia Deer (*C. virginianus*); 1 Florida Gallinule (*Gallinula galeata*); 2 Turkey Buzzards (*Cathartes aura*); 4 Ring Doves (*Turtur risorius*) 2 Sparrow Hawks (*Falco sparverius*); 2 Cooper's Hawks (*Accipiter cooperii*); 2 Bitterns (*Botaurus lentiginosus*) all presented; 2 Fallow Deer (*Dama vulgaris*); 1 Virginia Deer (*C. virginianus*); 1 Llama (*Lama peruana*); 4 Pug Dogs (*Canis domesticus*) all born in garden; 1 Passenger Pigeon (*Ectopistes migratoria*); 8 Silver Pheasants (*Euplocamus mythemerus*); 6 Gold Pheasants (*aumalea Thpicta*); 4 English Pheasants (*Phasianus colchicus*); 10 Virginia Quails (*Ortyx virginianus*) all hatched in garden.

FRANK J. THOMPSON, Supt.

The Kennel.

THE NEWFOUNDLAND DOG.

The true type of the Newfoundland dog, as judged by the English standard, is undoubtedly rare in this country; and yet there may be many excellent specimens in the hands of non-exhibitors whose real merits have never been made public. We mention the English standard for the reason that in that country the Newfoundland is one of the most popular of dogs, both as guards and companions, and much attention has been paid not only to his breeding, but towards establishing a carefully selected scale of points by which he shall be judged. Water trials have also been held, in which his usefulness as a member of the benevolent society has been fully developed. Innumerable are the stories told of the sagacity of the Newfoundland, and almost as frequent are the pictures depicting his exploits. Sir E. Landseer is responsible for conveying to the minds of most people a wrong impression regarding what is the true type of this breed. In all of his pictures he is represented as being an immense, woolly-coated, white and black dog, whereas the true Newfoundland dog, as understood by the term, should be all black, without any mixture of white whatever, and should have a straight coat. We believe, however, that of late years at some of the principal shows in England a class was made for the white and black dog, which is now known as the Landseer dog, and the example has been followed at one of the recent shows (Philadelphia) in this country. A few gentlemen in this country have given attention to breeding Newfoundlands, but, as a

rule, the exhibits at our shows are very much mixed and lacking in quality. Dr. T. C. Stettwagan, of Philadelphia, has been breeding from an imported brace carefully selected in Halifax for the purpose. At the first dog show held in this city there were a few very fine dogs exhibited, notably Leo, the property of Mr. E. B. d'Espinville Picot, of Philadelphia, who has bred some very good ones. Some years ago a very fine brace of Newfoundland dogs was presented to Mr. Cyrus W. Field by the citizens of Newfoundland. The bitch, Fannie, was litter sister to Cabot, a dog presented to the Prince of Wales. The dog's name was Cæsar. Two of his progeny were exhibited at the show mentioned above, but both were beaten by Leo. The Leo, of whom we print a portrait, is a celebrated prize winner in England, and was selected by "Stonehenge" to illustrate the breed in his recent edition of "Dogs of the British Islands."

In addition to the large breed which appears to be peculiar to the island of Newfoundland itself, there is a smaller breed which is scattered over Labrador, and which is now known as the Labrador, or Lesser Newfoundland, and is sometimes also called the St. John. It is stated that a dog over twenty-six inches high at the shoulder is almost unknown in Newfoundland, but puppies bred and reared in England from pure strains will attain a height of thirty or even thirty-two inches. One of the most striking characteristics of this dog is the benevolent expression of his countenance. His feet, particularly the fore ones, should be enormous. Dr. Stables says that his Theodore Nero would take a No. 9 glove. The following are the points for judging as laid down by "Stonehenge." A careful analysis of them will show what goes to make up a perfect dog of this variety:—

NEWFOUNDLAND DOG LEO.

POINTS OF THE NEWFOUNDLAND.

	Value.		Value.
1. The Head	20	7. Feet	5
2. Ears and Eyes	5	8. Size	10
3. Neck	10	9. Symmetry	10
4. Chest	5	10. Color	5
5. Back	10	11. Coat	5
6. Legs	10	12. Tail	5
Total			100

1. The *head* (value 20) is very broad and nearly flat on the top in each direction, exhibiting a well-marked occipital protuberance, and also a considerable brow over the eye, often rising three-quarters of an inch from the line of the nose, as is well shown in the case of my present illustration, Mr. Mapplebeck's Leo, in which it exists to a greater extent than usual. The Labrador shows the brow also, but not nearly in so marked a manner. There is a slight furrow down the middle of the top of the head, but nothing approaching to a stop. The skin on the forehead is slightly wrinkled, and the coat on the face and top of the head is short, but not so much so as in the curly retriever. Nose wide in all directions, but of average length, and moderately square at the end, with open nostrils; the whole of the jaws covered with short hair.

2. *Eyes* and *Ears* (value 5.)—The eyes of this dog are small and rather deeply set; but there should be no display of the haw or third eyelid. They are generally brown, of various shades, but light rather than dark. The ears are small, clothed with short hair on all but the edges, which are fringed with longer hair.

3. The *neck* (value 10) is often short, making the dog look chumpy and inelegant. This defect should always be attended to, and a dog with a sufficiently lengthy neck should have the full allowance; but on the other hand a short, chumpy one is so often met with that even if present the possessor of it should not be penalized with negative points. The throat is clean, without any development of frill, though thickly clothed with hair.

4. The *chest* (value 5) is capacious and rather round than flat; back ribs generally short.

5. The *back* (value 10) is often slack and weak, but in some specimens, and notably in Leo, there is a fine development of muscle; accompanying this weak back there is often a rolling and weak walk.

6. The *legs* (value 10) should be very bony and straight, well clothed with muscle on the arms and lower thighs. Elbows well let down, and neither in nor out. Both the fore and hind legs are thickly feathered, but not to any great length. There is also often a double dew claw.

7. The *feet* (value 5) are large and wide, with thin soles. The toes are generally flat, and consequently this dog soon becomes foot-sore in road-work and cannot accompany a horse or carriage at a fast pace.

8. In *size* (value 10) the Newfoundland should be at least twenty-five inches in height, and if he is beyond this it is a merit rather than a defect, as explained in the above remarks. Many very fine and purely-bred specimens reared in this county have been from thirty to thirty-two inches high.

9. The *symmetry* (value 10) of this dog is often defective, owing to the tendency to a short neck and weak loin. As a consequence a symmetrical dog like Leo is highly to be approved of.

10. The *color* (value 5) should be black, the richer the better; but a rusty stain in it is so common in the native breed that it should by no means be penalized. Still, the jet black is so handsome in comparison with it that I think, other points being equal, it should count above the rusty stain in judging two dogs. A white star on the breast is often met with. The white and black color exhibited in the Landseer type never occurs in the true Newfoundland.

11. The *coat* (value 5) of the Newfoundland is shaggy, without much undercoat, and at first sight it would appear unfit for much exposure to wet. It is, however, so thick and oily that it takes some time for the water to reach the skin through it. There is often a natural parting down the back, and the surface is very glossy.

12. The *tail* (value 5) is long and gently curled on one side, but not carried high. It is clothed thickly with long hair, which is quite bushy, but often naturally parted down the middle.

Mr. Mapplebeck's Leo, whose portrait accompanies this article, is the finest Newfoundland I have ever seen, exhibiting all his best points in proportion, without the short neck and weak back which are so often met with. He is by Windle's Don, out of Meg of Maldon, and is a great grandson of Mr. Robinson's Carlo, a first-prize winner at Birmingham and Islington in 1864 and 1865.

THE GORDON SETTER, DON.—In our report of the Rochester dog show it was stated that the judges passed over the Gordon setter, Don, entered in the puppy class, probably because they thought he was over twelve months old. His owner, Mr. E. A. Van Valser, of Oneida, forwards us a letter from Mr. A. F. Mullin, of Mount Holly Springs, Pa., breeder of the dog, in which it is certified that Don was whelped on the 6th of September. This settles the question as to the dog's age, and removes from his owner any imputation, although we believe none was made, of having misrepresented it.

MR. W. Z. COMSTOCK'S bitch, Nellie, whelped on the 26th of July three dogs and one bitch pup, by his dog Young Trap.

Sea and River Fishing.

FISH IN SEASON IN AUG.

FRESH WATER.

Trout, *Salmo fontinalis.*	Muskalonge, *Esox nobilior.*
Salmon, *Salmo Salar.*	Pike or Pickerel, *Esox lucius.*
Salmon Trout, *Salmo confinis.*	Yellow Perch, *Perca flavescens.*
Land-locked Salmon, *Salmo glovert.*	Grayling, *Thymallus tricolor.*
Black Bass, *Micropterus salmoides;*	*M. nigricans.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Bluefish, *Pomatomus saltrix.*
Sheepshead, *Archosargus probatocephalus.*	Spanish Mackerel, *Cybium maculatum.*
Striped Bass, *Roccus linneatus.*	Cero, *Cybium regale.*
White Perch, *Morone americana.*	Bonito, *Sarda pelamys.*
Weakfish, *Cynoscion regalis.*	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES FOR AUGUST AND SEPTEMBER.

GRAY COFLIN, NO. 10 AND 11.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's herl; wings and setæ, hyaline.

BROWN COFLIN, NO. 10 AND 11.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's herl; wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wings.

The white moth, for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season

At this season use the small flies for day fishing, and the large flies for evening and night.

THE LEOPARD FISH.—This is the name given to a new fish, of which the first specimen was caught recently by Capt. W. H. Kirby, of Gloucester, Mass. It belongs to the new genus *Lopholatilus*; has an adipose fin on the top of the head; the dorsal extending from about two-thirds of the fish to the caudal; the under fin on the belly continuous. It is yellow, with spots; hence its name. There have been quite a number of them caught, the fishing ground being fifty miles south by east of Noman's Land, in seventy-five fathoms of water. Cod bait and hook are used. The fish is pronounced to be excellent eating, and may have commercial value.

SPORT AROUND FORT LARAMIE.—An army surgeon stationed at Fort Laramie, Wyoming Territory, sends us notes of a little excursion up the Laramie river in company with Mr. John P. Collins, a fish culturist, to a locality some thirteen miles above the post, where they caught one hundred and forty-nine wall-eyed pike with minnows. The lot weighed over two hundred pounds, and were all taken in one day. These fish afford very good sport.

THE SENILE SEA SERPENT SEASONABLY SEEN.—The sea captain with a penchant for visions of the sea serpent (usually beheld through the bottom of a small glass darkly), has been sadly derelict this year. The patient-waiting, long-expectant public, which always demands more sea serpent than the most accommodating mariners can reasonably supply, had been shading its eyes with its hand and gazing afar out to sea all this summer; but no huge reptile of the deep had rewarded its vision, until last week a dispatch was sent from Halifax to the New York *Herald*, announcing that Captain Sampson, of the schooner *Louisa Montgomery*, had when ten miles east of Pictou Island sighted the long-lost monster. It was one hundred feet long (regulation length), and "about the size of a barrel"—flour barrel or gun barrel not specified. The serpent "was going straight along at the rate of seven knots an hour." It is a pity that the crew of the *Louisa* should lose a fortune by neglecting to capture this Pictouresque monster which ties itself into seven knots an hour. A real, live sea serpent like this, one hundred feet long, clad in a red shirt, its nose suitably colored with sour mash, sailing around a sawdust track in Gilmore's Garden in a six days' go-as-you-please pedestrian match-with Old Sport, would bring in more half dollars to the *Louisa's* crew than all the profits of the lumber trade of Nova Scotia.

The public's thirst for sea serpents, however, has abated. Let us hope, in the interest of science and pedestrian managers, that the next high old sea's son, who sails the seas on, in the serpent season, when next he sees one, will not cease un-til he doth it seize on and lug it into port.

INDIAN FISHING METHODS.—From the subjoined communication it will be seen that the pound net is of very early origin in this country. We can hardly agree with our correspondent, however, in ascribing its adoption by the white man to an imitation of aboriginal methods. The pound net existed long before the mound builders, and long before the first canoe brought to the sands of the Pacific shore the progenitors of the so-called American races. It is altogether probable that the net method of fishing was adopted at a very early stage in the history of man. Its principle of construction involves no scientific attainments, nor any refinement of mechanical skill. Certainly, every expert angler will uphold us when we venture the hypothesis that the conception of the net was evolved from the savage brain long before the first rude suggestion of a hook was baited. The piscator primeval who went out with the fish-hawk and the otter to satisfy his craving for something to eat, we may safely assume, captured his breakfast in the easiest possible manner. And it required little ingenuity of invention and very limited manual dexterity for this hungry savage to drive his fish into a hole or shallow, and there "scoop him in." The next step, there being no hole, naturally was to make one; and we may discover in this primitive, rude bark contrivance of withes and rushes, the original of our perfected net of to-day wrought of steam-spun lines. The fishermen of the Nineteenth Century have improved the device in construction only, they have not altered its principle.

As the pound net fisherman of the present day is using precisely the same methods of work that were employed

by his savage progenitors, if we look carefully we may also sometimes discover, along with this permanence of implement type, some survival of savage mode of thought, aboriginal lack of logic, and possibly woeful want of wisdom. Not a great way indeed above his savage prototype is the fisherman who is incited by unthinking greed to set at nought not only the statutes of the community, but the simplest and best known laws of nature; and who exterminates at once the fish, and in them his own means of future livelihood. Gentlemen who have given much attention to the protection of food fishes will readily testify to this crudity of common sense among a class of market fishermen, which is in its way as much of a survival of early barbarism as is the pound net—the moral of which would seem to be, that to gain for our important fishes the needed protection from poachers and ignorant netters, we must begin at the foundation; take the rising generation of prospective fishermen and send them to school and to Sunday-school; give them too a thorough course of State fish reports, and let them be armed and equipped, if not in abstruse principles of political economy, at least in those simple rules of arithmetic, which teach that nothing multiplied by nothing makes nothing, and that two taken from two leaves nothing. They might also with profit be sufficiently coached up in Latin to understand the phrase *Omne vivum ab ovo;* and give them enough science to apply the principle to animal life in general and fishes in particular. Then they may return to their nets, clothed and in their right minds; and game constables and fish wardens may snuff out their dark lanterns and sleep the sleep of the just; they will no longer be compelled to wage unequal war against savages. But to return to our Indians:

Col. C. C. Jones, of Augusta, Georgia, in his "Antiquities of the Southern Indians," says: "In the "Admiranda Narratio," of De Bry, Frankfort, 1590, we find a distinct representation of one of these fish traps, with extended wings, one of which reaches the shore, the other far out into the water. It is made of canes or small poles, firmly stuck in the mud, so as to preserve an upright position. They are securely fastened together with withes, thus forming a sort of hedge or rustic fence, through which the fishes are unable to force a passage. In the middle is an opening leading into a circular enclosure. This by a circuitous opening communicates with a second pen, this in like manner with a third, and that with a fourth, each somewhat smaller than the former. Indians are seen in a canoe, dipping up the fish with a scoop-net."

So that the destructive pound-net, which has ruined so many of our best fisheries, instead of being a Yankee invention, is merely a copy of a device of the Indians, and if further proof of this is needed it will be found in the statement of Capt. Ribault, in his "True Discoverye of Terra Florida," who describes "a labarynthe or maze, made with great reeds, with many turns and crooks" which he saw in the River of May, now called the St. John's.

Col. Jones quotes the following passage from Adair's "History of the American Indians": "The Georgia tribes have a surprizing method of fishing under the edges of rocks that stand over deep places in the water. There they pull off their red breeches, or their long strip of stroud cloth, and wrapping it around their arm so as to reach to the lower part of the palm of the right hand, they dive under the rock where the large catfish lie to shelter themselves from the scorching beams of the sun, and to watch for prey. As soon as these fierce aquatic animals see that tempting bait, they immediately seize it with the greatest violence; then is the time for the diver. He opens his hand, seizes the voracious fish by its tender parts, and at last brings it safe ashore."

Here is a kind of sport demanding muscular strength and boldness, worthy the attention of our young sportsmen—certainly nobler than the bow and arrow amusement now so popular.

But the author goes on to say: "They also shoot fish with arrows and stupefy them with various roots and seed; catch them in crails or baskets made of hickory splints, and spear them with long canes with points hardened in the fire. These Indians appear also to have used nets of various kinds, as great quantities of stone sinkers or plummets are found about the sites of their villages. The narrative of De Soto's march indicates that cast nets of various kinds were made and used by the natives. Very few hooks have been found, and those were of bone."

In that beautiful legendary poem, "The Song of Hiawatha," Mr. Longfellow describes his Indian hero as fishing with a line of twisted cedar bark for the great pike of the Gitche-Gumee, the Maskenoza; and hauling line in hand over hand, making the canoe stand up endwise in the water; then he catches a sunfish or bream, of such huge dimensions that the canoe is whirled round in circles. Then he hooks the mishe-nahma, the sturgeon, the king of fishes, who in his rage swallows both Hiawatha and the canoe. The poet made a mistake in attributing this feat to the sturgeon, which has no mouth to speak of, while there are, or have been, specimens of *Esox nobilior* in the great lakes, which with slight poetic license, might be equal to it. C.

JAPANESE BARBLESS HOOKS.—We have before us some very delicate Japanese trout hooks which came to us with the following letter. They are tied on very fine gut, with black hackle, peacock body, and solid gilt head, and have no barb. They are as diminutive as any Scotch fly we ever saw. We understand that barbless hooks have been in use in Japan for many centuries; and if long experience has proven to the people of that country that they are the best, (and they seem to use them exclusively,) why, then, Mr. Seth Green stands backed by a mighty moral power, and can place a very tall feather in his fishing cap; that's all! In shape these Japanese hooks include two-thirds of a perfect circle:

BOSTON, Mass.

Editor Forest and Stream:—

Verily there is nothing new under the sun, in proof of which I enclose a couple of Japanese needle pointed flies. I suppose that Seth Green thought that he was inventing something new when he introduced the barbless hooks, but here are some from Japan, the same as they have been using for centuries. They were sent to me by a young Japanese, who writes that they use them for trout, or a fish resembling our trout, running from one quarter to one pound. The bend and general look of the fly strikes me as not bad, and with the exception of the gold head, is about the same as some English flies I have for brook trout.

I have been reading your letters with great pleasure. It is the first account of Canadian salmon fishing that I have seen which gives any true idea of it, and if generally read would save some of our would-be salmon fishermen a useless journey and expensive outfit. It is extraordinary the ignorance there is about the matter.

CANADA—*Escuminac, P. Q., July* 27.—If any of your readers who are tired of angling for "fingerlings" in the depleted streams of Pennsylvania and New York, will come to this place, they may be able to take a few trout ranging from two to five pounds, in one of the most beautiful rivers in America. This place is fifteen miles east of Campbellton, on the Inter-Colonial Railway, twenty-four hours by rail from Montreal. As the result of a recent morning's fishing, I had one trout weighing 5½ pounds, two of 3¼ pounds, one of 2 pounds, and one of 1⅛ pounds weight. This was by no means an unusual catch, but certainly afforded more exciting sport than taking several hundred of the little fellows still left in the streams near New York.

Comfortable lumbermen's camps may be found near the banks of the river as far up as it has ever been fished. Mr. Daniel Brown—from whom as guardian of the river permits to fish may be obtained—lives at this place, has excellent accommodations at his house, and is in all respects most gentlemanly and accommodating; just such a man as a true sportsman loves to meet, and can appreciate. A moderate license fee is charged for privilege to fish. Fishing continues good until September. S.

NEW BRUNSWICK—*Meadam Junction, July* 26.—With N. S. Dickey, of Boston, I left that city 23d inst., at eight o'clock A. M. on Steamer *New York*, of I. S. S. Line, for St. Stephen, N. B., distance, three hundred miles. Arrived 24th, 3 P. M.; fare $4.50. Put up at the "Queen's," a good hotel with moderate charges. Left at 9:45 A. M. 25th, on N. B. & C. R. for this place, distance thirty-five miles, fare $1.25. Arrived at twelve, noon, at Junction House kept by James Haddock, a good hotel with all the luxuries of the season and very moderate charges. The proprietor is always pleased to see sportsmen and ready to pilot them to fishing grounds, of which there are plenty in an hours' ride east, west, north and south of the station. After trains were off at three o'clock P. M. he took us on a hand car four miles to a branch of the Cranberry, where we secured thirty-eight fine trout, to two rods, and got back before sundown. The water is very cool for the season and the trout rose well to the fly and were strong. Flies all gone and fishing is a pleasure. To-day we go up the line nine miles to Sugar Brook, where we are to be joined by John Stewart, Supt. N. B. & C. R. for a trip to Fifth Lake, four miles on "a tote" road. This lake has never been fished, except in the winter a little by lumbermen, and is full of large trout. We will be the first party to cast flies on its waters. Mr. Stewart will fetch along his boat, and George and Bobby Glem will serve as guides. I have visited this section the past two summers, and find trout, ducks, partridges and bears in great abundance. But let no feather-bed sportsmen come here. This is a wilderness, and rough at that; but those who are willing to rough it in primitive style will find rare sport. A letter in advance to John Stewart as above, relative to sport and route, will be duly replied to. Passengers on the *New York* will find it an advantage to make the acquaintance of Andrew Taylor, chief engineer, a sportsman thoroughly posted, and a courteous, modest gentleman. I should mention that the Silver Doctor was most killing. Corporal LOT WARFIELD.

NEW JERSEY. *Forked River, July* 2.—The past week has been the best fishing so far this season. On Monday, our yacht the *Belle*, with Mr. W. M. Leslie, of New York, came in with 115 weakfish; on the following Thursday, 268 fish, the largest catch of the season; they were caught by Mr. W. M. Leslie, Jr., in our yatch, and within a mile and-half of the house. To-day the boat came in with Mr. and Mrs. J. L. Kirkland, of New York, they having caught in a few hours 135 fish. A.

BUNKER FISHING.—From July 21 to July 26, the Peconic Oil Works, of Shelter Island, took 400,000, caught chiefly in Long Island Sound by steemer *Peconic*. The Hawkins' Works caught 408,000 last week.

We hear that now Long Island Sound is full of fish, but only the steamers can follow them and bring them in to the factories in season, for the fish soon spoil, and as soon as they begin to decay they are unfit for use, either for oil or scrap manure. A very large number of sailing craft and steamers are now engaged in this business off the southern coast of Long Island and Long Island Sound, which are the best fishing grounds. I have a bower of cedar trees overlooking Peconic Bay, and from it yesterday with my glass, counted over forty fishing vessels. McL.

LIGHT BASS RODS.—*Editor Forest and Stream:*—I noticed in your last week's paper, an article on Cape Vincent, in which a gentleman speaks of catching black bass on a sixteen ounce rod with a fly, even two at a time. Allow me as an old fly fisherman to say that I do not consider that by any means a light rod for that style of fishing. The veteran anglers who use the fly for bass at Clayton and like places, seldom use a rod over eight or ten ounces in weight; many is the time I have killed two bass at a cast on the St. Lawrence on my eight ounce trout rod. Mr. Hume of Alexandria Bay, killed a few seasons ago, a muskalonge weighing twenty-seven pounds on a seven and-a half ounce rod. Mr. Robert Lawrence of Flushing, L. I., killed last week a twenty-two pound lake trout on a ten ounce rod, and there are many such exploits on record. W. HOLBERTON

KEEPING MINNOWS ALIVE.—A correspondent in Stanford, Ky., writes: "I have lately tried a long contemplated experiment with minnows. Put about a tablespoonful of common salt in each three-gallon supply bucket, little more than a third full of water, fully one hundred minnows in each from three to six inches long. Buckets tied together, cloth wrapped over each to prevent waste of water; throw across a saddle, and horse kept constantly moving the two hours and ten minutes required to reach the river. Have never seen salt recommended by writers. Tried it on recommendation of an acquaintance who *knew* its virtue. Even in April and May, with two changes of water, I never succeeded so well in preserving minnows over the same road."

REMINISCENCE OF LAKE MENDOTA.

OCONTO, WIS., JULY, 1879.

Editor Forest and Stream. —

Early in June I started with my wife to camp out, at the invitation of four other college friends, on the banks of beautiful Mendota, one of the two lakes which encircle the City of Madison, Wisconsin. The banks of this lake rise at intervals, nearly perpendicular, to the height of fifty or sixty feet, formed of jagged limestone boulders whose rich cream color, visible many feet in the depths of the water, turns its azure to green, and seems to add to the cool verdure of the grand old forest trees which o'er shadow the rugged steeps. Poised on these treacherous slopes, the cattle graze unconcerned, while its caves and miniature grottos echo back the voices of evening melody far over the water. Years ago, the rising flight of startled wild fowl from these lakes was like the roar of a mighty cataract heard in the distance, and thousands upon thousands of the finest fish seemed to swarm throughout the whole breath of their waters. To-day there seems to be all the fish one could desire—the wild fowl have mostly departed to some more quite retreat. Then quail flew about the streets and even in the Capital Park, and the unbroken prairies formed the beau-ideal of luxurious hunting, because your light phaeton could follow the course of your dogs; but to day the quail have been ruthlessly trapped and are gone, and the prairies teem, as far as the eye can reach, with the golden harvests of civilization, and the "chickens" have all been gardened in with the gleanings of other days.

No wonder then, as we sat by the evening camp, and watched the still smoke float away like the phantom of the past, and fade in the darkness of the red woods, we thought of some of the companions of our boyhood whose great, generous hearts, like those of all true sportsmen, were a burden too heavy for none but themselves, and sadly wondered if in the "happy hunting grounds" beyond the darkness, they still thought of the friends and the field sports of their earthly sojourn and longed, as we did, to again be all together near these scenes of our youth's happy hours.

The fish of these lakes consist chiefly of pike, pickerel, white, silver, rock and yellow bass. Perch are plentiful, but to me they do not seem to have the flavor of those of Lake Michigan, being neither so white, firm, or delicious when cooked. I think, too, there is a difference in their back fins from those of the great lakes. White bass fishing is the attraction at Madison. It is a grand sight to look down in the clear, transparent depths and see thousands of these beautiful fish swimming in shoals. The live minnow is the usual bait, but by trolling you can catch them with the spoon when they bite at all. They like partly cloudy, breezy, cool days, like all fish in summer, and bite early in the morning or between four and seven in the afternoon. We caught more fish than we could eat or give away, and rather than be wasteful, instead of fishing, amused ourselves with the exclusive absurdities of a free camp-life, out of sight of the world and its fashionable formalities.

Two weeks soon found us reluctantly breaking camp and once more returning to busy life. *Au revoir!* RUTT.

LICE ON CANARIES. — Woodward's Medicated Bird Perches and Swings ought to have a universal sale. They cure and prevent lice and vermin in coops and cages.

A LOW-PRICED CANOE.

BY CHAS. E. CHASE, COMMODORE OF THE JERSEY CITY CANOE CLUB.

OF whatever material you build your canoe she must be light. It is desirable that she be strong, but it is even more desirable that she be so light that she may be carried with ease. To portage a heavy canoe any distance the cruiser must if alone find a good-natured stranger who will carry one end, or lose a couple of hours in bargaining with a close-fisted farmer who will require a couple of hours more to hitch up and put the canoe on the wagon. Two canoeists will carry the heaviest canoe almost any distance, but it may invariably be observed that stitches in the side and cricks in the back bear a

fixed relation to the weight of the craft. The *Breeze* is one of the class of heavy canoes. Her gallant captain, before she was launched, conclusively demonstrated on paper that she could safely run Niagara Falls and that "considering her great strength she is a light boat." The boat-keeper once helped to carry her from the water to the boat-house and was so exhausted by his prodigious effort that nothing less than a fee of fifty cents will now induce him to bear a hand. Her captain has since sold her to a young Hercules for half her cost, and the club is thus relieved of the necessity of adding a yoke of oxen and log chains to its appliances. The *Argo*, on the other hand, weighs about thirty pounds, and her captain carries her with less effort than is necessary to the management of a good sized cotton umbrella in a fresh breeze. The canoe is a cruising craft and must be carried from stream to stream, and therefore it is better to sacrifice strength to lightness than lightness to strength. The mean of the two qualities is what is desired. The light canoe is of course faster under paddle.

Canoe materials are innumerable. White cedar is excellent, oak is heavy; basswood and pine fair. The paper canoes built by E. Waters & Sons, of Lansingburg, N. Y., are superb boats, but they are not included in the class of low-priced canoes.

Canvas has been tried and answers the purpose admirably. The first of these canoes, it is believed, was the *Qui Vive*, built by Mr. Isaac F. West, of the Jersey City Canoe Club. The construction is so simple that with the material, a jackknife, saw and plane, any man of ordinary ingenuity may build a canoe in which he may cross the continent. The purpose for which the canoe is to be used will determine her form and interior arrangement. If she is to be a smooth water racing canoe she will be a modification of the common shell and afford no room for sleeping or stowage.

Racing Canoe.

A canoe that is to cruise upon small rivers and creeks and to run rapids, is more serviceable without a keel and straight stern post, and may dispense with a rudder, while for work on large rivers, bays, and open sea all these appliances, with addition of shoes or false keels, are serviceable. If the canoeist will deny himself the gratification of sleeping in his canoe he may carry a centre-board.

Anything but oars is admissable. They may be carried in barren countries where fire wood is scarce.

A double canoe is better than none, because a man may take aboard a load of ballast and sail her alone. The single canoe allows the cruiser the privilege of going as he pleases. It is the symbol of generosity, as it accords to every other canoe the right to do the same thing.

The Vice-Commodore is silent on the subject of double canoes, though usually exercising the right of the citizen to express his opinions. He has been reticent about three weeks. Four of the club, including the Vice, started in single canoes, of course, from the boat-house for the Idle Hour.

They beat down against the tide, until the Vice suddenly put about and earnestly pointed to the lowering clouds in the southwest. A few rain drops pattered on the decks; the captains stowed their rigging below, adjusted rubber aprons and took to paddle.

"Where's the Vice?"

Three canoeists were startled.

"Where's the Vice?" passed along the line. The flagship's powerful marine-glass swept the lower bay; the Secretary shouted as he had not done since the days of schoolboy declamation; the *Argo's* captain was just about to generously heave overboard his pet cork life-preserver when a youngster on a passing sloop shouted:

"There 'e is, mister! Don't he spin?"

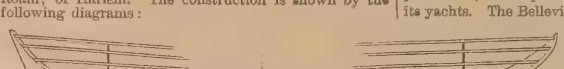
Three canoes swung quarter around and watched the retreating officer. For a moment he ceased paddling. Against the breeze—now perceptably freshened—the fleet caught the faint words: "Pull for the boat-house! It's going to rain!"

The fleet, however, kept its course, but the captains talked boldly of court-martial. The Idle Hour was made not a moment too soon, for the shower came down as the canoes were hauled out. The coffee and sandwiches were ready and all hands were speedily made comfortable. That night, when the fleet landed at the boat-house, a disconsolate being emerged from the darkness—a drenched being who was striving hard to bear up under accumulation of misfortunes.

"Hallo, Vice! that you? Why, what's the matter?" asked the sympathetic secretary.

"Mat-tat-mat-at-ter!" answered the Vice as crisply as he could while his teeth were beating a long roll. "Matter? con-found it! I was caught by the shower and drenched; then in my deuced hurry to get ashore I fell overboard."

No one smiled outwardly.

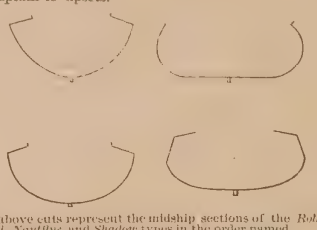


"Well, my dear fellow, why don't you change your clothes?" inquired the secretary.

"Change my clothes!" Here the teeth drummed furiously.

"*Change my clothes!* They are in the Commodore's locker, and he has the key."

As the party left the boat-house the *Argo's* captain handed the Vice a cigar and quietly remarked: "Go in a double canoe next time, Vice; the chances are that the other fellows won't back out."



The canoe's length should be determined by her captain's length and weight. A canoeist of 150 pounds' weight should use a canoe that is fourteen feet long. Five inches of length should be added for each additional twenty pounds of weight. The cruising canoe should be so constructed that she may be slept in comfortably; therefore this rule must sometimes be departed from to accommodate extraordinary length of limb. The midship beam should, however, be always the same. Twenty-nine inches at the top of the gunwale and thirty-one inches at a point three inches below is convenient width for paddling, and with flat bottom and usual depth of ten and one-half inches affords good bearings. The canoe may be built with many or few interior fittings. Water-tight compartments may be dispensed with, and the luggage carried in rubber bags—one forward and the other aft. The compartments add somewhat to the cost of the canoe. The best canvas canoes are identical with the *Shadow* canoes built by Everson, of Williamsburg, and Roahr, of Harlem. The construction is shown by the following diagrams:

Stem and stern parts, keel, keelson, bulkheads and strips.

The stem and stern posts are hackmatack pieces, one inch thick at the dotted lines and beveled down to one-half inch or less at the outer line. In these pieces there are slots one-quarter inch deep that receive the strips. The keel, one inch by inch; keelson, one-half inch by two inches; both of oak, and the stem and stern posts are bolted together.

The mould of the midship section is then placed in position, six inches aft of the true midship section. This mould gives the canoe its distinctive shape and largely determines its usefulness under sail and paddle. If it gives great depth the canoe will be slow under paddle; if little beam and bearings, she will be crank and treat her captain to upsets.

The above cuts represent the midship sections of the *Rob Roy*, *Herald*, *Nautilus*, and *Shadow* types in the order named.

For cruising purposes the *Shadow* and *Herald* are the best, as they afford more room and superior sailing qualities. Of these two we prefer the *Shadow*, because she will sail closer to the wind and is better adapted for work in rough seas. Twenty-nine inches on deck is a convenient beam for paddling. At a point three inches below the deck line the beam should be thirty-one inches. The depth should be ten and a half inches. The water-tight bulkheads of one-half inch pine are then placed in position. Their form should be more nearly that of midship of the *Rob Roy*. They should not have the flat bottom of the midship section.

They are not absolutely necessary, and to fit them neatly requires mechanical skill. They should be notched to receive the strips. The side strips are of spruce and planed on both sides, one inch by one-quarter inch, except the gunwale strip, that is one and a quarter by one quarter inch, and rests against a three-quarter inch square inwale. They are fastened to stem and stern posts with brass screws. The lines at the bow should be slightly convex. The concave lines pile up the water and thus retard the progress of the canoe. The ribs may be made of split barrel-hoops, and should be placed about five inches apart. The deck should have a camber of two inches. The timbers should be of pine and very light.

A, A, are water-tight hatches; B, B, mast tubes; C, sliding bulkhead, against which back-board rests; D, cock-pit; E, hatch.

Oak knees contribute to the strength of the canoe. The masts, when stowed below, may be suspended from them. The floor board rests upon strips that are screwed through the keelson to the keel. The canvas should be light, but close and hard. No. 8 is quite heavy enough. It should be forty-eight inches wide, that there may be no break at the keel. Canoes that are covered with single-width canvas are generally leaky. To cover a canoe she must be turned bottom up and the keel removed. The keelson and groves into which the canvas is laid and the edges of the water-tight bulkheads should be coated with white lead, that may be laid on with a brush. The fabric is then cut exactly midway the sides until it may be laid smoothly upon the keelson and then turned neatly into the grooves. The keel is then bolted or screwed in place, the screws or bolts first having been coated with white lead. The canvas is then cut to follow the grooves, turned under and securely fastened with copper tacks. It overlaps the gunwale and is taked to the inside of the inwale. The deck should be of canvas. The hatches may be of canvas or wood. They may be rendered water-tight by rubber strips at their edges. They should be fastened down with brass thumb screws. The canoe should then be treated to a light mixture of oil and white lead, and may then be painted to suit the fancy of the canoeist. It is well, especially for a cruise, to paint the inside.

The copper mast tubes are one and three-quarter inches in diameter, and are stepped in a block screwed through the keelson to the keel. The dandy mast is three feet eight inches from the stern post, and the mainmast four feet from the stem post. There are several simple devices for steering with the feet. The *Rubble's* rudder lines lead from the yoke through the cockpit, combing and sliding bulkhead. They are fitted with stirrups that rest on the toe of the shoe, and may be easily thrown off. Such an arrangement is preferable to the common yoke, as it admits of easy adjustment to any length of limb. The cost of material for such a canoe is about $18. The *Argo* cost less than $10. It possesses the requisite qualities of beauty, capacity, strength, stiffness, and speed. It may be paddled and sailed, slept in, railroaded, carted, and dragged, and when the canvas succumbs to weather or knocks, it may be removed and new put on at small expense.

CRUISING.—Owing to recent absence on a cruise to the eastward, correspondents will please bear with the unavoidable delay in attending to their inquiries, and the reader will overlook sundry typographical errors in late issues. The racing record will be brought up to date at the earliest opportunity.

THE INTERNATIONAL MATCH.

Belleville (Ont.) is a lively town, and it has a lively yacht club, which prides itself upon the performances of its yachts. The Belleville *Intelligencer*, which is as lively as the town it furnishes with news, has the following concerning the account of the recent *Ella-Katie Gray* match:

Some would-be nautical genius has sent from Oswego to the New York FOREST AND STREAM what purports to be a description of the international yacht race at Kingston. The value of this production can be judged of from the fact that it states that at the start the wind was from the nor'-nor'-west and light, and that the squall struck the yachts from the nor'-nor'-east, drifting the *Ella* far to windward of her course. The wind was from the southwest at the start, blowing fresh, and the squall came from the west, veering to the northwest, which threw the *Ella* to leeward—not to windward, where her captain and crew would have given a good deal to have been. Let the Oswego writer try again.

In justice to the Bay of Quinte Yacht Club we print the following very able account of the match, which did not reach us in time for the last issue:

BELLVILLE, JULY 17.

Editor Forest and Stream:

The International Yacht Race between the sloops *Ella* of Oswego, and *Katie Gray*, of Bellville, for $250 a side, which rose out of a challenge from the owner of the former, was decided at Kingston on Tuesday, the 15th ult. The race was over a course of thirty miles (nearly thirty-five geographical miles), which was duly logged with a patent log, and the rules precluded any shifting of ballast. Both are handsome crafts the *Katie*, which was measured as being eleven tons, being one of Couthburt's models, whilst *Ella* which measures twenty-one tons, was built in the State of New York, but had an over-hanging stern put on her last year by Couthburt, thereby greatly improving her speed. Time allowance was as per Herreshoff's scale, the smaller yacht receiving 9 m. 23 sec.

The early part of the morning was very calm, but before 10 o'clock a nice breeze came down Lake Ontario, and by the hour fixed for the start it was blowing from eight to ten miles an hour, and freshening at that. The course, it may here be stated, was from a buoy off Swift's dock, thence Georges' horn, on Wolf's Island (about two and-a-half miles S. S. E.); thence west to a buoy off the penitentary; thence S. S. W. to a buoy off Four Mile Point, and return to the starting point, leaving all buoys to starboard. Shortly before 11 o'clock the starting whistle was blown, and both yachts made for the starting point, each carrying gaff topsails, and *Katie* a jib topsail in addition. *Ella* dashed off at precisely 11 o'clock, *Katie* following thirty seconds later; but the latter had not gone a quarter of a mile before it was seen that something had gone wrong, as the topmast bent badly to leeward, and seemed to be about going over her side; but the jib topsail was at once taken in, and the good stick remained, although still bent considerably by the pressure of the gaff topsails. Subsequently it was ascertained that the strain had been too much for the lanyards of the topmast rigging, which had given away. This was to the advantage of *Ella*, which went on increasing her lead, rounding the first buoy 1 m. 30 sec. ahead. It was now a run with sheets nearly close hauled to the penitentiary buoy, and after a short run under the land gaff topsails were doused, the breeze at the same time increasing materially, so that the larger yacht kept widening the gap between herself and the former, although the smaller boat stood up much better under her canvass. *Ella* rounded this mark twenty-three minutes ahead, and now it was a boat dead to the windward to the buoy at Four Mile Point. The breeze still freshening, the big sloop passed the other much the faster, but did not point so closely, so that there was very little change in their respective positions when they got around the mark. For the run back to the harbor "dead before it," both set gaff topsails and winged out huge balloon jibs, and although *Ella* sailed a little the faster she passed the home buoy on the first round only 3 m. 35 sec. in the lead, actual time. One-third of the course had now been covered, and it was still felt to be anybody's race, provided the smaller yacht did as well as on the first round. But the wind even obtained its maximum blowing over twelve miles per hour, and the larger vessel, owing to her great length and weight, forged ahead rapidly, heaving a lead of 13 m. 40 sec., actual time, which the allowance reduces to 3 m. 17 sec., as she finished the second round. It now seemed to be the *Ella's* race beyond a doubt, as she had very nearly reached the first buoy before *Katie* made the starting point. But soon a change occurred which gave the stakes to the Canadian yacht. A heavy cloud was observed in the N. W., giving token of a coming rain squall, which struck the yacht form the northward, whilst the *Ella* was within a mile of the penitentary buoy, and the *Katie* was upwards of two miles behind her, and consequently, however, just so much lead to leeward. The former, after being headed off, was on the starboard tack and standing from the north shore, whilst the latter was on the port tack and standing towards the land. Both yachts were ably handled, and despite the fury of the squall and the falling sheets of rain, were soon and snugly reefed. All at once the howling wind veered to N. W., and it was all up with *Ella*, which was thrown right to leeward of the buoy she was attempting to make, whilst the *Katie*, after wearing to escape being driven on shore, was able to reach the mark which had to be turned with a free sheet, her crew slacking out their reefs as the storm began to die away, and she rounded it 12 m. 15 sec. in the lead. To Four Mile Point was now a run before the rapidly falling wind, and both yachts were covered with light canvass almost as quickly as the foat can be placed on paper, The *Katie* maintained her lead, but the wind subsided so rapidly that it was now a most interesting question as to whether the race would be finished within the stipulated seven hours. The American party hoped not, and the Canadians doubted extremly. but soon all doubt was put at rest by a light breeze veering out of the S. W., which wafted the *Katie Gray* across the line a 5:59:40 a gallant winner, with the *Ella* following at 5:53, beating her actual sailing time four minutes.

Later, the result was a mere fluke, there is no denying, and it is now more clear to your correspondent then ever before, that it is not desirable to sail matches between yachts so widely apart in their tonnage and build as those which contended as above related. In a breeze up to six knots, the *Katie Gray* can hold her own, or very nearly so, without time allowance from *Ella*, but as the wind increases the heavier yacht must bring her greater powers into play. I very much regret to add that Mr Stone, the owner of *Ella*, behaved in so unsportsmaa like a way throughout the match, and that his behavior oluminated in accusing his crew of selling the race, and ordering them off his yacht, which insult they resented by doing as they were bid. No sportaman will hereafter have anything to do with Nelson S. Stone, of Oswego, or with the yacht *Ella*, so long as she remains in his hands. She is a very fine

boat, but I still hold firmly to the opinion that either the *Dauntless* of this city, or the *Madcap*, town of Toronto, will beat her whenever they meet, unless the breeze be very light, as the *Ella* is of skimming dish pattern. PORT TACK.

CONSUELO-O'CONNOR MATCH.

One of the most exciting yacht races ever held in San Francisco bay was sailed on July 19th, between the yachts *Consuelo* and *Cornelius O'Connor*, the prize being valued at $1,000. The *Consuelo* is the winner of the Ashbury Challenge Tankard, and holds three of the annual prize flags of the San Francisco Yacht Club, to which she belongs, and numerous other prizes won at different times. She has been "cock of the walk" since 1876, when she was built. Her builder is Capt. Matthew Turner, measurer of the S. F. Y. C., who has constructed a number of very fast vessels. The *O'Connor* is a new yacht, one foot shorter than the *Consuelo*, and this was her first race. She was built by Farnham & White, and modeled expressly to beat her rival, the builders to receive $1,000 extra if she did so. The race was over the S. F. Y. C. course. There was a splendid strong breeze and the yachts went tack and tack over the course, the *O'Connor* winning by six minutes. The *Consuelo* lost a man overboard near the finish, but would have been beaten any how, as she was considerably behind. Every yacht in the bay was out to see the race, all but the racers being under short sail with very strong breeze. Plain sails were carried till the Golden gate stake-boat was reached, when the *O'Connor* set a gaff topsail and staysail before the wind, but had to take them in shortly to ease the spars. The *Consuelo*, with her leg of mutton mainsail, carried a ring-tail. Capt. Turner has a new yacht on the ways to be launched in a week for Mr. T. Gutte, one of the Trustees of the S. F. Y. C., which was also designed to beat the *Consuelo*, and more excitement is in prospect. The new yacht is the same length as the *Consuelo*, but has a foot more beam. The *Consuelo* is 55 feet on water line, schooner rigged. The race has created great excitement, and the shore and hill-side of the city were crowded with spectators. The members of the club feel a little sore in having their favorite beaten by an "outsider," but as several new yachts will be out before long, hope to retrieve the laurels. Mr. Spreckels, the owner of the *Consuelo*, will probably build a new yacht to beat the old favorite and her more fortunate rival with.

SOUTH SALEM MOSQUITO FLEET—*Salem, Mass., July 28.—Editor Forest and Stream:*—Since Boston absorbed our shipping this port has settled down to a nursery for web feet, and though there are many yacht clubs about our harbor, yet the most interesting one is composed of young men, and is called the South Salem Mosquito Fleet, and numbers nine members and six boats. Officers as follows: Commodore, Clarence H. Millett; Vice-Commodore, Sidney S. Conrad; Secretary and Treasurer, Edward L. Pierson; Regatta Committee—John P. Browning, Saml. A. Goodhue, H. P. Pierson. Boats and owners—*Mad Cap*, Pierson & Bro., twelve feet; *Sea Foam*, J. F. Browning, fourteen feet; *Glance*, Millett & Bro., fourteen feet; *Midge*, Saml. A. Goodhue, fifteen feet; *Star*, Louis H. Glazier, fifteen feet; *Daisy*, Conrad & Bro., sixteen feet. The first regatta was sailed in Salem Harbor on Friday, July 25, five of the boats entering. The wind was rather light, but the race was a perfect success, and the management of the various crafts evinced skill and judgment of no common order. The course was from Palmer's Point to Abbott's Rock, leaving it on the starboard; thence to Little Aquavitæ, leaving that on the starboard; thence to starting point. Distance, four miles. Result is appended:

	Actual Time.		Corrected Time.	
	H.	M. S.	H.	M. S.
Glance	3	43 45	3	23 38
Midge	3	46 46	3	27 38
Sea Foam	4	02 03	4	01 25
Daisy	Not taken.			
Star	Not taken.			

Glance took first prize, *Midge* second, and *Sea Foam* third.

THE RECENT NEENAH REGATTA—*Oshkosh, Wis., July 28.—Editor Forest and Stream:*—In your issue of July 21, the Neenah correspondent states that at the annual regatta of the N. Y. C. held July 5, the *Carrie Moryan* took the first prize, and *Albatross* took second, and *Niobe* "turned turtle." I wish to state the facts of the case as they are. The race proper was advertised and held on July 4, the following boats taking part: *Albatross, Mermaid, Myra-Belle of Neenah* and also *Carrie Morgan*, and *Niobe* of Oshkosh. The start was from an anchor; wind light from the east, afterward hauling to the south. The race was started at 3 o'clock, *Niobe* taking the lead, and holding it throughout the race, coming in 25 minutes ahead, with *Myra-Belle* second. The judges held a meeting and declared the race off, and wanted it sailed over next day. Believing we had won the race fairly with the *Niobe*, we refused to enter her next day, and on the morning of the 5th started for home. We were not in the second day's race, and not within ten miles of them at the time the race took place. If that is what your correspondent calls "turning turtle," I must thank him for the information. I wish to assure him that the *Niobe* is ready and willing to meet them at any and all times; having competed against every boat of any note in the State, and coming out victorious in twenty-two races out of thirty-two she has taken part in, and in nearly every race she was the smallest boat in her class.—JOHN M. DICKINSON, owner of yacht *Niobe*.

ROWING IN SAN FRANCISCO.—In the single scull race between Leahy of the Pioneer Club of San Francisco, and Stevenson of the Alert Club of Vallejo, rowed at San Francisco on July 21st, Leahy won an easy winner. The race was for a purse of $1,000, and both men had been in training for some time. Stevenson rows Ed. Nelson a race over the same course on July 28, his backers believing in him yet.

YACHTSMEN AND COASTERS' GUIDE.—This excellent little volume of sailing directions, by Captain Wm. A. Pratt, we have found of the greatest use while cruising in strange waters recently. The sailing directions are clear and explicit. Captain Pratt, now in charge of the schooner *Sea Witch*, cruising in Maine waters, forwards the following correction of a typographical error discovered in the book: In the second edition, page 103, sixth line from top, read "port" instead of starboard.

—The H. W. Collender Co.'s billiard tables are famous for durability and perfection of manufacture.

THE TRUE PRINCIPLE OF SPORT.—The writer of the following lines strikes the proper chord. The zest of true sportsmanship lies in the acquisition and practice of those artifices which enable one to overreach and circumvent the devices which nature has implanted in creatures for their self-protection, as well as in the success which results from the acquisition and possession of such knowledge:—

Editor Forest and Stream:—

Of course, in a journal like yours, you have many tastes to suit, and, while one peruses your paper almost exclusively for the purpose of reading the subject, etc., of yachting and boating, another reads the fishing, and another the hunting matters. I know one man who is a dog-enthusiast, and takes your weekly just for the sake of its canine proclivities. Now my "vanity" is hunting, although I fish considerably, and I agree with the remarks in the last two numbers regarding articles wholly confined to the murder of birds.

If one should take five hundred ducks, arrange them in line, and kill the whole with one shot from a twelve-pound cannon, I could not see anything smart, amusing, or instructive in the act. Neither does an article on shooting, describing the unnecessary slaughter of game birds to ten times the amount I know the writer needed, or could give away, particularly interest me; or should it the true sportsman. It is partly the description of scenery, but more than all, the science of hunting and the habits of the bird hunted, which I believe is most interesting to the majority. I had rather read of the approach and capture of one wild, wary, cunning bird, and the real skill and ingenuity of the hunter necessarily used in taking the fowl, than a statement of stacks of birds killed at a shot. Again, the subject of loading, and the results of loading, are matters of deep interest to the sportsman. If the gun is not loaded right, neither Bogardus nor Carver can kill with it.

I propose to give you my own experience with loads, etc., some time, and I presume that what is suitable for one calibre in proportion will answer for all others; and, I may say here that while I agree with all others in some respects, in others I do not. R. W. H.

Oconto, Wis.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We cannot attempt to give specific directions where to go for game or fish. Correspondents must keep themselves posted by consulting our news columns.*

J. M. C., Meadville, Pa.—See another answer for waterproofing

Sloop.—See sailing rules of Detroit Yacht Club, published in issue for July 17.

F. R.—Transoms or lockers—either is proper. Two flags or pennants at masthead is not *en regle*, and betokens the lubber. Fly private signal, or club burgee, not both.

C. M. C.—For photos and lithographs, and yachting literature suitable to club-rooms, address Jay V. Olds, Bridgeport, Connecticut.

D. P. Brookline, Mass.—Please give me the pronunciation of Oolile, and the authority? Ans. We answered this question last week.

M. A. D., Olean, N. Y.—Can you inform me where I can obtain "Von Culin's Spike Collar." Ans. Of M. Van Caulin, Delaware City, Delaware.

H. M. G. Philadelphia.—Who is a good man to break dogs and how much does he charge? Ans. We must refer you to our advertising columns.

H. B. A., Rupert, P.—Will you answer through your paper how meshes of nets are measured? Ans. Measured diagonally from knot to knot.

R. E. M., Council Bluffs, Iowa.—Can you refer me to any one having thoroughbreed deerhound pups for sale? Ans. Write to Judge S. T. Holmes, Bay City, Michigan. He has lots of them.

G. E. D.—See present issue for information on canoe building. Also book by Baden Powell, called "Cruise in Baltic." Can be obtained from England for $2,50.

J. H. A.—You will find directions for building all kinds of boats in previous issues of this paper. Or send for copy of Neilson's "Boat Building." Price $1,25.

Seawortby.—Mr. Eaton's yawl lies off the cricket grounds, Staten Island. She was imported from England by steamer. Her owner would probably be pleased to show her to you.

Skipper.—If expense no object, use lead ballast under all circumstances. The relation of lead to iron ballast is the same as of a tin watch to a gold one. One will do, the other is better.

F. L.—Where can Bogardus' fireworks be bought, and at what price for 12 bore. Ans. Not ready yet, when they are ready will be sold by Schuyler, Hartly & Graham.

T. D. Who are the Fish Commissioners for Connecticut? I want to stock a pond with black bass. Ans. Wm. M. Hudson, Hartford; R. G. Pike, Middleton; Jas. A. Bill, Lyme.

C. P., Paterson, N. J.—It is not uncommon for bitches to have the appearance of being in whelp and yet not prove so. Give your dog six grains iron and quinine each day, and a wine glassful of cod liver oil.

J. T. B.—Caulk your vats with "oakum," or if leaks are small with cotton wick, by driving it into the seams with a chisel shaped instrument and mallet. Take care not to force the wood apart in so doing. Then paint or putty up.

O. F. Trapper, Baltimore.—For description of all kinds of bird's nests, and methods of their use, consult J. H. Batty's "How to Hunt and Trap;" or, Gibson's Complete Trapper, both for sale by Orange Judd Publishing Co., this city.

A. O. P., Mt. Plaisted, Iowa.—To waterproof cloth: Take ½ lb sugar of lead and dissolve with ½ lb powdered alum in a bucket of rain water. Soak the canvass well; hang it up to dry; buy a pot of paste and stick this recipe up where it can be easily referred to.

R. M., Plymouth.—No well designed keel yacht should be build without liberal rake to sternpost and round up forward. See previous issues on this subject. The failure of keel yachts in America is due to the fact that we build a center-boad hull and spike a plank underneath, and then expect her to be a success. In ate vessels we have improved much in this respect.

B., East Jaffray.—In skiff, 14 ft. x 3 ft., 6 in., put the center-board 3 ft. 9 in. to 4 ft. from the bow. Make it about 3 ft. 6 in. to 4 ft., long; sail of the sharpie style; mast, 8 ft. 6 in. above rail; boom, 7 ft. 3 in. long; give mast slight rake aft., and boom, 1 ft. 6 in. rise.

C. V. T., Girardville, Pa.—Can you sell me a good work on fish culture, or direct me where to get it? Ans. We can send you Seth Green's "Fish Hatching and Fish Catching," price, $1; or Stone's "Domesticated Trout," price $1,75. Both works are excellent.

T. W. B. Jr.—The best book upon building and rigging small yachts and boats is Kemp's Manual. Can procure it for you upon receipt of price, $8,50. Many other books treat more or less of the same subject, notably Vanderdeckens' "Yacht Sailor," but none are as complete. Experience and practice as well as observation must make up the rest.

C. W. B., Washington.—Price for the Colvin canvass boat mentioned recently in these columns was $30, we believe. You cannot get any other folding boat for less. This is the only one of the kind in the market. Coughtry's folding boat will suit you. See their advertisement and send for circular.

L. W. W.—For photographs of cutters send to Jay V. Olds, Bridgeport, Conn. See his advertisement. You will find dimensions etc., of English yachts by the thousand in Hunt's Yacht List or Lloyd's Register. Can procure either for you; price $2,50, and $8,50. See recent book reviews.

Sexex, Stratford, Conn.—1st. Has the pointer Croxteith, Rev. Mr. Macdona's dog, been used in the stud since he has been in this country? 2d. What is the animal's weight, or in other words, is he ranked among the large sized or small class of pointers? Ans. 1st. Not to our knowledge. 2d. He would come in the large class.

Westchester.—We have never seen the new fangled bowsprits in one with the main boom, and cannot say anything positive about them, other than what has appeared in our colums. Same of flexable rudders. Write to Ex-com. Pratt, of the Newport Yacht Club, who, we believe, introduced these contrivances. Too much machinery to suit our notions.

H. J. Thomas, Greenwood, Wis.—I am the owner of black pointer bitch, Blix, out of Woodbridge's "Nell" and Strong's "Pete." I wish to know where in the West I can find a pure bred black pointer dog for service this fall. If you cannot inform me through your columns, will you please publish this inquiry? Ans. Write to E. M. Gillespie, Columbus, Ohio; or, to A. C. Waddell, Kansas City.

A. I. R.—1st. Is there a breed of setters called the "Blue Belton;" if so, please give distinguishing points? 2d. Where can I buy the American canvass foot ball shirt? Ans. 1st. The term "blue Belton" merely distinguishes a color, not a breed, although it has been applied more particularly to the Laverack than to any other strain. 2d. Probably from Peck & Snyder, No. 124 Nassau street, this city

LEWISTON, Lewiston, Me.—A sportsman of this city well up in ornithology claims the "Bratramian sandpiper," is not a species of the plover family, as the "Bratramian sandpiper" has four toes, while all species of the plover family have but three. Is this a fact? Said sandpiper is found in immense quantities east of Augusta, and the local sportsmen rejoices. Ans. "Bartramian sandpiper, *Actiturus bartramius*, belongs to the family *Scolopacidae*. The plover proper belongs to the family of *Charadriidae*.

W. T. S., Providence, R. I.—Is there any place on the St. Lawrence River near "Thousand Islands" where there is good fishing, and where a man can be accompained by his wife and find good accommodations at reasonable rates? Ans. Plenty of hotels and boarding houses, high price and low, all through the "Thousands Islands," for a distance of thirty miles, and good fishing throughout. Clayton is a favorite place for parties with moderate means.

W. W. A.—For such charts for the Mississippi as are published write to Merrill Sons, 179 Water street, N. Y. No special book on running stern-yachts; must learn a good deal from actual experience. Send to nearest book-seller or to Van Nostrand, 27 Murray street, N. Y., for elementary treatise on marine engine. Stern-wheeler preferable to screw if you propose navigating shallow and unknown waters, but for lakes or rough water, regular propeller is to be used. Boat for ten persons about sixty feet long, though you can get along with a smaller one. Go aboard steamers in your neighborhood, and examine before coming to conclusions.

C. C. W., Atlanta, Ga.—Can I get a book that treats fully on practical gun-smithing? If so, from whom? Ans. We know of no book which approaches so near to what you seem to require as the "Hand-book to the Selection and Management of Fire Arms," illustrated. There are also Greener books and Wilson's Breech-loader, all for sale by the Orange Judd Co., 245 Broadway, N. Y. The difficulty with most works is that they are behind the age. We answered this question in our issue of July 24. Can you give me the address of some one who deals in guns and locksmith's material? Ans. Shoverling, Daly & Gales, 84 and 86 Chambers street, N. Y. See also our other advertisers.

C. B. L., Augusta.—No work published on catamarans. Write to *Scientific American*, N. Y., for supplements containing description of same. Herreshoff has patented the universal socket joint arrangement, allowing each hull to swing separately. We do not think much of them. They are useless toys and not popular Faster than other yachts only under special conditions; slow off the wind, unreliable in stays and slow in light winds. No carrying capacity, no storage, expensive to build. No steam catamaran of any speed built, for the reason that no speed can be got out of them except under sail. Will consider this point in a coming issue. Steam catamarans are a humbug; this you can depend upon.

Enquirer, Staunton, Va.—A few days since we got some gold and silver fish from the pond of the W. Lunatic Asylum, and put them in our Aquarium. Within an hour after they were placed there it was noticed that the eyes of some were out. We watched the rest, and observed that their eyes were swelling. In a short the eye balls popped out, and became entirely separated from the fish. The pond from which the fish came is a sort of hog-pond. It is muddy and filthy, and teems with gold fish. Our Aquarium is supplied with pure limestone water. Can you enlighten us as to the cause of the, to us, strange affection of the fish? Ans. We referred your query to Seth Green, a well known propagator of gold fish, and received the following reply: The probable cause of the fish being affected in the way mentioned is that there is some mineral in the water. I am of the opinion that lime would do it; or the fish may have thrust their heads against something in the aquarium while trying to escape causing their eyes to inflame, thus forcing the eye balls out. I have seen fish with their eyes all swelled out, caused by lime water. I will try a few experiments, and explain more fully at some future time.

FOREST AND STREAM

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

***Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, AUGUST 7, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

THE "THREE FISHERS" AND ITS MUTILATORS.—There is in the English language no more pathetic ballad than Charles Kingsley's exquisite verses of the "Three Fishers." Nor has the wondrous power of the union of poetry and music ever been more touchingly exemplified than in this song, which has subdued to tears audiences of thousands. A beautiful story is told of Kingsley; how one of our American singers visited him in his rectory and sang to him his own ballad, while the preacher-poet's eyes filled with tears. Kingsley had a wonderful sympathy for the working classes. It led him into some mistakes in his early days, but his soul never grew weary of doing for the poor. His love for the sea drew him especially into communion with the hearts of its toilers. He understood the English sailors as few but themselves have ever known them or ever will know them. "Westward Ho!" besides being a marvellous historical study is the best novel of the sea ever written. His "Three Fishers" tells the story of seashore toil, hardship, weary watching, death and sorrow, as few other men ever pictured it. Because the soul of humanity recognizes in these verses the pathos of human toil, it will preserve the poem. Of our shorter nineteenth century poems this will be long and justly cherished.

Because Kingsley's poem is of such a character, which should insure its protection from thoughtless newspaper scribblers, we regret to see it unscrupulously parodied by weak-brained idiots. It takes a true poet to write a good parody. No dabbler in ink but thinks himself smart enough to turn a poem into ridicule. Of literary diversions this is one of the most pernicious and reprehensible. As soon make a leering-faced daub and call it a Raphael; dig up a planted Muldoon and label it an Apollo. The man who perpetrates a wretched parody on a good poem is guilty of a desecration. We have no sympathy with the person who annually starts the slangy, senseless, twaddling parody upon the "Three Fishers" on its travels through the press. We have no tolerance towards the editors who copy the senseless lines into their columns. It betrays lack of taste; a blunted state of the finer feelings. We do have some sympathy for any true poet who must be thoroughly and righteously disgusted to see his inspirations thus maltreated.

—The National Rifle Association Directors at their monthly meeting on Tuesday last arranged for the fall meeting, and so modified the general rules that a big step was made towards a go-as-you-please system in range practice.

☞ Our second Alaska letter will appear next week.

DROWNING ACCIDENTS. — Last Thursday's morning papers contained particulars of the drowning on the previous day, of no less than ten persons. One of these was a young man whose strength and skill tempted him to disregard the cautionary signals posted up for the safety of bathers at a New Jersey seaside resort; he swam beyond the ropes out into the ocean, and, his strength suddenly deserting him, was drowned within sight of eight thousand people, powerless to save him. Two men were drowned by the capsizing of small boats; the other cases reported were those of bathers. All these casualties were placed under the general heading "Drowning Accidents." That heading is kept standing in newspaper offices, and during the summer months it is brought into requisition nearly every day in the week. The aggregate of deaths by drowning in the course of a year assumes frightful proportions. Not all of these deaths, but many of them, are the result of sheer carelessness. Many people perish needlessly, simply because they have followed the foolish adage "Don't go into the water before you have learned to swim." Newspapers tire of repeating annually their sapient cautions to bathers and rowers and sailors to exercise great care when there is the slighest possibility of danger. And there are always plenty of people around, when a man is drowned, to observe, with a shake of the head and a slight accent of blame, that the unfortunate victim "ought to have been more careful." So long as the globe is composed two-thirds of water, a certain proportion of its inhabitants will walk off, or fall off, from the one-third of dry land; and drown themselves. To caution them is of no avail. It would be very wrong, however, to infer that people who are drowned because of carelessness are as a rule any more careless than thousands of people who are not drowned. Not a day passes but that scores of people put themselves into positions where only the special providence, which is said to watch over children, blind men and fools, preserves them among the living.

We may in this connection suggest to the race of "paragraphers" who have of late years achieved such mushroom growth in the American press, that there are some things to joke about which displays very poor taste. If the witty writer of levities happens to stumble upon the report of a drowning accident it is exceedingly out of place for him to turn the occurrence into a butt for his unholy jesting.

ANTIDOTES FOR RATTLESNAKE BITES.—We have in our possession a parcel of a trailing weed, with very fine leaf, which was sent to us by mail by our valued correspondent Captain Charles Bendire, of 1st U. S. Cavalry, now stationed at Fort Walla Walla, Washington Territory. Convinced as we are that this humble weed possesses the most extraordinary virtues, and that it renders the possessor of it absolutely invulnerable to the bite of a rattlesnake, we cannot but regard it with absorbing interest. As long ago as we can remember we read of some medicinal herb known to the Indians as a valuable specific, and, indeed, there are ancient traditions pointing to the same. We are told that rattlesnake weed grows wherever rattlesnakes live, and that a gracious dispensation of nature has planted the antidote in juxtaposition with the bane; that the instinct of bitten animals carries them to the place where the remedy grows, which they eat of and are straightway cured. But all these are but mere hints, vague and intangible; and the identity and *locum tenens* of such a magic cure seem to have been equally uncertain. In India, we know that that active little animal, the mongoose, has frequent battles with the deadly cobra, and that as soon as bitten it hastens to a neighboring weed, *Aristolochia indica*, eats thereof, and presently returns to a combat in which he is almost invariably victor without serious personal injury. The fact is sufficiently well authenticated, while the identity of the weed has been long established. We have not been so sure of the vegetable antidotes in this country, though the *Agave virginica*, or false aloe, the *nebulus alba*, and *Erpygium aquaticum*, have all been credited with subtle powers. There is no doubt that a rattlesnake weed, which would cure the bite of the deadly "Massasauga," has long been known to a limited number of persons. That it has not found its way into the *materia medica*, may possible be explained on logical principles. That its identity has at last, if not heretofore, been fully established by a scientific gentleman most competent to determine, and most reliable to inform, there can be no doubt of; and that we are the happy possessors of some of this wonderful specific we are equally positive. We will now bring forward such proof as we have had furnished us in the letter of Captain Bendire which accompanied his precious gift. It is dated Fort Walla Walla, Washington Territory, June 18th. He says:—

"In a number of your paper, I see where a correspondent asks about the virtues of snakeroot (I presume he has reference to *Sanguinnea canadensis*). I never heard of this plant possessing any virtues; but there is a small creeping weed that does, and I have had occasion to try it myself on a horse bitten by a rattlesnake on the nose. I saw the snake banging on the horse's nose myself. An Apache Indian whom I had with me, made a poultice of this weed, moistening the mass by his own urine and tying the mass over the wound shortly afterward. It acted like a charm, the horses head swelled scarcely at all, and in a few days he was as well as ever. Some of this identical weed grows on our drill ground, and I enclose sample. I used to know the scientific name but can't recall it. Dr. George Engelmann, 3,003 Locust Street, St. Louis, Mo., one of our best botanists, identified specimens for me, which I brought along at the time from Arizona, where the Indians used it in all such cases. A closely allied form grows in the Eastern States, and it is possible that the specimens I may send you differ slightly from Arizona samples. They look alike, however."

Dr. Engelmann has answered our inquiries with the following letter, dated

ST. LOUIS, MO., July 28, 1879.

Editor Forest and Stream:—

Your rattlesnake weed is an *Euphorbia*, a genus of plants well known for the acrid milky juice of all the species. This specimen is *Euphorbia glyptosperma*, described by me in "The Botany of the Mexican and Texas U. S. Boundary," 1859, page 187. On the top of same page I stated that another species, *E. cinerascas*, was called *Yerba de la golondrina* by the Mexicans and "believed to be" a certain cure for the bite of rattlesnake and other poisonous animals.

We have in the eastern parts of the United States several allied species with similar juice, especially *Euphorbia maculata* and *E. hypericifolia*. I understand that the names of "milk purslane," or "spurge," or "spotted spurge," is given to them East. They are all certainly emetic and purgative, but whether an effective antidote to poisonous bites, is uncertain and rather doubtful.

Yours truly,

G. ENGELMANN.

SALMON FISHING IN CANADA.

SIXTH PAPER.

RIVER GODBOUT, LOWER ST. LAWRENCE, July, 1879.

Editor Forest and Stream:—

If this glorious "Upper Pool" which I am now casting over, were in Central Park, it would of itself constitute an attraction sufficient to make the Park famous. Were it accessible to any large city, it would make a watering place which would be forever popular. Every one of its virgin rocks and evergreens, and each drop of its pellucid, sparkling water, would be an inestimable component of the capital stock of a hotel company.

Of course, while I am casting I am not observing scenery, except in a general way. A man's thoughts must be on his business, as more than one good fish may stealthily come to his fly and depart while his attention has been momentarily diverted. I am conscious, however, of most congenial and delightful surroundings. I have that feeling of complete content and absence from care, which go to make up happiness; and I presume I am as near perfect bliss as it is possible for a man to be on this earth. On a previous visit I noted all the features of this charming spot. Here is the oval basin at the foot of the mountains and the streams tumbling into it through the gorge, with a pitch of 60 feet to the 100 yards, leaping wildly over the boulders, and tossing up great volumes of foam and spray. Opposite is the cliff which abuts the mountain above it. On that side the water is very deep, and all that does not immediately pass off at the outflow into the rapids below is set back in a sweeping eddy, to be returned to the falls and again projected down stream. This restless motion, this inky hue, portentous of unknown depths, these mysterious flecks and splashes of foam, this ceaseless din of the pouring, surging billows, are the features which animate the picture and give it a charm to the lover of primitive nature. And this pool is primitive! No tanbark or sawdust beclouding its waters; no slabs, sidings, pieces of broken paddles, worn out baskets, and old straw hats drifting about in the eddy! Where I stand is a beach formed of pebbles and small boulders which have been scooped out from the bottom of the pool by the ice in spring, as it grinds and slowly works its way around. At highest water it is entirely covered, even to the foot of the ledge behind my back. Now it is fully three rods in width, shelving gradually into the pool, and projecting a long ridge or spit, with deeper water on either side. This spit is about midway of the pool, and is a favorite cast, though there is a better one at the tail of the pool below. Here, wading out to my waist, with that comfortable immunity from wet which the Goodyear wading pants secure, I happened to hang a 12 pound salmon at the very first cast. It was not a long cast, but the fly was well delivered, and I saw the fish very distinctly as he rose leisurely from the bottom and fastened himself. He rolled up, broadside on, and took the fly just as daintily as if it had been fed to him with a spoon. The adventure was startling, and the issue unexpected by both of us. It took the salmon several seconds to comprehend that there was trouble: then he ran! I had already elevated the point of my rod well toward the top of the opposite mountain, and was prepared for him.

Elevating the rod makes a yielding arch, which not only responds to the slightest strain, but gives you more power to hold the fish. You can at the outset discover whether your fish be well fastened, or only slightly hooked. If the rod be held horizontally, the fish will be played by the line alone, of which the gut is the weakest portion; and a test at the scales has already shown that it will not stand a dead pull of more than six pounds. Well, my fish went off across the pool toward the swifter current and deeper water with a very pretty run of twenty yards or so; but the tension of the elastic rod made it difficult for him, and so he turned with a wide sweep and ran up the

pool, taking line off the reel *ad libitum*, until he was checked by a pressure of the thumb.

The cautious angler always thumbs his line—that is, he keeps a pressure upon it against the but of the rod while it is passing off the reel, and is thus enabled to feel his fish all the time, and to a degree control him. Fish when hooked generally make for the upper stream. Their instinct is upward. A fish only goes down stream when he is dazed and bewildered. I don't think a headlong pitch down stream is ever a part of his recognized tactics. When a fish gets into a rapid he is swept down like any dead body. He makes no effort to bore his way up, but merely tugs at the line in an obstinate endeavor to get loose somehow, and is swept down until he brings up in still water. As a rule the methods of a salmon on the hook are a series of short runs alternating with circular sweeps. Indeed, what can he do otherwise, with a perpendicular lifting power at his nose, which never relaxes except when he temporarily ceases his own exertions? Then, of course, the angler reels him in at once, passive, and tending toward the shore and the fatal gaff, and there is nothing for him to do but to make another desperate break for liberty, and pull away with all his might. When he does this, he makes the reel sing again, which is the music the angler likes so much to hear. It must be a prodigious exertion which enables him to dive and hold on to the bottom for so long a time as he often does, say twenty minutes or more! People call this manœuvre "sulking." Perhaps it is. Rather let us regard it as dogged obstinacy and sullen determination. I am quite prepared to say that the salmon knows instinctively that if he yields he will be brought to gaff, and that if he runs again he will only exhaust himself. Let us give him credit for some reasoning faculties. He is simply cogitating down there on the bottom—thinking what tactics to try next.

Ha! did you notice that tremendous motion? Did you feel him shake his head? Look out now! he is getting ready for a spurt. Experience has taught the professional angler what to expect, and—surely enough, there he goes, straight for the top, through the surface, and clean out of the water? What a glorious leap! Now drop your tip handsomely. Let your pliant rod make its most obsequious bow. The strategy of the noble captive deserves appreciative recognition. There! that was done well, and the fish is still fast. Had the line been kept taut he would have thrown his whole weight on it and snapped it in a twinkling. Now we feel more certain of a capture. Those double Kelso hooks hold well. Now let us try and tow him to the land. Reel in firmly, and watch carefully; he may make another jump. Walk him up the beach. Just now is a critical juncture, and much depends upon the steadiness of the angler and the dexterity and judgment of the gaffer, and not a little also upon the temper of the fish, which is not always as dead a cock as he seems. Many a goodly salmon has been lost at the very moment when victory seemed most positively won. I have sometimes stood breathless, watching a comrade heaving in steadily on his fish and gradually bringing him to shore, with his rod bent almost double, while the clumsy gaffer floundered in knee-deep, and lunging wildly, barely managed to scratch the struggling fish as he walloped past in full career for the centre pool, ready to prolong the battle.

Not so with my Gregroire. See how the agile Frenchman watches each movement, craning his neck forward, and holding his gaff in readiness. He keeps out of sight of the fish as much as he can; and never makes a false *coup*. Clip! splash! There, he has him! Let your reel run now, and give the rod a rest. A sharp blow on the head with a billet will give the fish his quietus, and you may contemplate him at your leisure. There is no object in nature more beautiful to the eye of the angler.

While I was killing my salmon, my friend Manuel was pitching his fly persistently at the tail of the pool. There was a heavy curl just where the water broke into the rapids, and he felt confident of a fish; but not a reward of merit did he get. Finally, just as he was about to give over in disgust, he was favored with a heavy foil and a sharp tug, followed by a well arched rod, which indicated that business was on hand. As usual, the fish ran up the pool, but with a most desperate rush, half emptying the reel. These desperate rushes are what we mostly read of, but sometimes they do occur, and this was one of them. Manuel ran up the beach as fast as he could, taking in slack as fast as he could all the time; and then for a few minutes it looked as though he were to have an easy capture. The fish was lively enough, and evidently a large one; but he kept in the center pool, and the chances were lovely. However, he soon took a new departure, and ran for the bottom, taking all the line which Manuel had industriously retrieved. Manuel shoved the but of the rod full at him, and checked him for a moment, just at the verge of the broken water; but the full power of the current had already caught him, and a clothes line couldn't have held him there. Down the rapids he went in full career, taking fathom after fathom of line, and making the reel sing like a rattle, while Manuel followed as fast as he could leg it, until he was brought up standing by a projecting cliff. He could go no further, and the salmon was accounted a lost fish. However, just at the critical moment, when the one hundred yards of line had nearly run off, and something had to give way, the salmon got into an eddy behind a big boulder, and hung there. By this time the angler was drfpping with perspiration, and pretty well blown; but he held to his rod valliantly, keeping it well up, while the gaffer scrambled over the rocks, and making a little detour through the woods, came out at the right spot, and succeeded in gaffing him—a fish weighing twenty-three pounds, and a prize well earned.

Very similar was a capture made at the "Shea" pool on a subsequent day, only more brilliant, for there were more boulders in the rapid, by any one of which the line was liable to be cut. The sun was shining brightly at the time, and we could trace the taut glistening line, stretching like a telegraph wire from the tip of the rod away down to where the fish had come to anchor a hundred yards below. His halting place happened to be at the head of an island which formed one side of a pool where another party was fishing from a boat. So the gaffer ran down the main shore, took the boat, paddled over to the island, and after much wading and scrambling over rocks, succeeded in hauling him out with his gaff.

Lunch time came soon, and we proceeded to investigate the hamper which our man had brought with him. There was a little board shelter built against the side of the cliff, with a flat rock underneath to serve as a table. A jet of ice-cold water trickled out of the rocks close by, and all the conditions being favorable, a good digestion waited on appetite. One of the most acceptable items of the supply was a can of fresh beef, prepared by the Boston Beef Packing Company, who had kindly presented us with a lot for use on the expedition. We used this beef on several occasions, serving it in different styles, and found it very palatable and nutritious. I am disposed to recommend it to all camping parties. While we were eating, our guide told us that later in the season the salmon were accustomed to gather in great masses at the head of the pool, just under the grand cascade, preparatory to their ascent of the long chute, up which they have a toilsome journey of ten miles before they reach another pool. Once Comeau, the river guardian, dove into a huddle of them, and brought one out with his hands! An otter could not have done better. How he avoided being sucked in under the fall is a wonder.

After luncheon we went down the river, following the path along the lofty cliffs which overlook the channel, passing the "Chartres" and the "Eagle" pools, which are scarcely pools at all, but merely breaks in the boiling rapids. They are sometimes fished at a low stage of water, but not often. Then we reached the "Indian" pool, and hauled ourselves across to the opposite shore in a boat which is always stationed there, made fast by a strong cable to the rocks above. It is a dangerous place, and nothing could save disaster if the boat should chance to drift into the rapids below. Some excellent scores are sometimes made here. A short walk through the woods brought us to the "Doctor's Stone," which is a famous cast, and generally yields a fish. This is a short pool, not more than twenty yards in length, and the only cast is from a big boulder a little way from shore. The fish must be hooked, if hooked at all, directly from the curl of the rapid at the tail of the pool. Here Manuel made a half dozen seductive casts, and was rewarded with a spanking rise and a firm fasten. I had been asked to try this ticklish pool, but declined. I was now greatly interested to watch the outcome. The game began on the instant. Of course it was impossible to give an inch more line. It was feet foremost and check from the start to finish. Fortunately the fish was only a twelve-pounder. He showed his inches at the very outset by a desperate leap, for the lifting power of the rod was tremendous, and the current very strong. What else could he do but leap against such lateral pressure? Down chucked the rod in a twinkling, and out of sight went the fish! Out into the air he comes again, flying, and again the rod drops! Out a third time, with a shower of spray all around him, and a third time the rod makes deferential obeisance! All this in the brief space of a couple of minutes. Then he dove to the bottom, and made a swift circuit of the pool, but the unrelenting rod soon brought him near the surface again, and he seemed preparing for another leap. Just here came a shout from an unseen presence on the shore, "Slew him!" It was a call from Gilmour. The fish was then surging toward the bank, and instantly the rod responded with a tremendous sweep, which accelerated the impetus of the fish, and actually "slewed" him into the embrace of the ready gaffer, who lifted him to *terra firma* in a jiffy. Time, five minutes.

Satisfied with this exploit, we next walked down to the "Shea." There I was detailed for duty. The Shea is a difficult pool to fish, and requires the same tactics as the Doctor's Stone. The fish must be killed quickly, or no count. The river is wide here, and the pool, which is on the further side, is reached by a series of seven long ladders laid over the boulders. By walking out to the end of these we get an admirable cast. One seldom fails to raise a fish, and it is generally considered good for three or four. It is double the length of the Doctor's Stone, and a rise can only be tempted by a very long cast. Only the longest pole will reach the persimmon. I did my level best, and after a few casts struck a fish, and had the good fortune to lead him up to the very head of the pool, after a severe scramble over a series of rocks. Thereby I gained a very fair margin of advantage, and the fish soon came to gaff easily, without any exciting incidents. Very soon afterwards I fastened to a second fish, and then I had an opportunity to show that I was an apt scholar. I gave my beauty no latitude, but held steadily to my grip. When he leaped, I dropped; when he bolted, I snubbed him; and when he swung across current, I *slewed* him! After a sharp tussel of ten minutes or so, he came to gaff in good form. The applause which followed was hearty and generous.

Before sundown we had the pleasure of seeing some very pretty work at the "Belle," where Farquharson Smith, of the Bank of British North America, was busy. He is a most skillful angler, who knows the pool well. It was good sport to see him fasten to a fish, casting from the shore, and then follow him down to the foot of the rapids, where leaping into a boat, he would kill him at his leisure in the still water below. This he had already done repeatedly, until the day's score reached seven. Fain would I fight all our battles over, and recount on paper the deeds of valor which we jointly and severally performed. The river is so varied in its physical features, and each contest so different in its character, that I could reel off letter after letter in their description if my readers would only carry off line like a fresh-run salmon; but I know that many of them must be already surfeited with fish, and therefore I wind up here. It cannot be always Lent or Friday.

My kind host set me across the St. Lawrence one fine day when the sea was calm and the skies were without a cloud. I bade adieu to the Godbout with a natural regret, and landing at the old French town of Rimouski, made my way to Quebec by the Inter-Colonial railway, and thence homeward. My rod is stowed away in its case, and my reel is mute. While I write, the camp on the Godbout is tenantless. The whole party have left the river, and the salmon have a free run undisturbed. May they never be vexed by net or spear! HALLOCK.

GAME PROTECTION.

CO-OPERATIVE GAME LAWS IN CANADA.—The Quebec Association for the Protection of Game, of which Mr. A. N. Shewan is Secretary and one of its most efficient members, is doing a great deal for the cause in the New Dominion. Indeed, if it were not for this body of gentlemen, protection would hardly be thought of, or at least practically considered. The last movement of the society has been just now to prepare petitions in French and English to be presented to the Governor and Legislature of the Province, for the improvement of existing game laws and their better enforcement, and to send copies thereof broadcast throughout the Province for signatures. The changes which the petition calls for are: that deer-shooting shall be prohibited in the winter months, and that the destruction of black ducks and other ducks which breed there shall not be allowed in spring, when the birds are pairing and nesting. It concludes by saying that "if these changes are carried out, an additional great advantage will be that it will bring the law into harmony, not only with those of other Provinces of the Dominion, but also of the neighboring States."

We are delighted to observe the alacrity with which the Canadians respond to our scheme of uniform close seasons throughout Canada and the United States, and that they are generous enough to refer to the editor of this paper personally us as authority in this matter.

MAINE GAME LAW FOR BIRDS.—"Sec. No. 21 person shall kill or have in his possession, except alive, or expose for sale, any wood duck, dusky duck, commonly called black duck, or other sea duck, between the first day of May and the first day of September; or kill, sell, or have in possession, except alive, any ruffed grouse, commonly called partridge, or woodcock, between the first day of December and the first day of September following; or kill, sell, or have in possession, except alive, any quail or pinnated grouse, commonly called prairie chicken, between the first day of January and the first day of September, or plover, between the first day of May and the first day of August, following, under a penalty of not less than five nor more than ten dollars for each bird so killed, or had in possession, or exposed for sale.

(Approved February 27, 1879.)

VERMONT WOODCOCK SEASON.—*Montpelier, August 2d.—Editor Forest and Stream.*—In the last issue of the FOREST AND STREAM, I notice that you give the time for the opening of the woodcock season as August 1st.

If you will consult the "Laws of Vermont for 1878," you will find that by an act approved November 26th, the close season for woodcock and partridge was extended to the 1st of September. Will you please correct the error, for as your paper is considered as *authority*, it may lead some people into a violation of the laws.

In the last part of the article referred to above, you will find the following clause: "nor shall any person use a dog or dogs in hunting the ruffled grouse or partridge." Our sportsmen are all greatly pleased by the above display of wisdom by our state legislature, and are in hopes to secure the passage of a law at the next session which shall forbid the use of a gun or guns in hunting, as they are confident that the number of accidents will be greatly reduced thereby. Yours truly,

MAJOR.

WORK FOR ORANGE COUNTY SUPERVISORS.—*New York, July* 31—*Editor Forest and Stream.*—If, on the 1st of September, or any other day, until snow falls, the constables, or the game protective association of Orange County, will send a detective to Monroe Station and Greenwood and Southfields Station, they will see every morning shipped from those three stations from twenty-five to one hundred trapped partridges. Those three stations are in Orange County. The last Legislature made trapping, or even setting a trap, a misdemeanor, and there is no reason why those trappers should not be indicted by a Grand Jury the same as any other highwayman or burglar. Let those same officials do their duty and thereby show that they are not afraid of a Youman or a Conkling.

PARTRIDGE.

WISCONSIN.—*Madison July* 28.—*Editor Forest and Stream:*—Almost every day our fish laws are violated with impunity, fish speared and netted with a disregard to law that is astonishing. An organization has just been completed in our city that will no doubt do much good for the protection and preservation of fish in the lakes of Dave county. A constitution and by-laws have been adopted. The members of the association are live, progressive men, and will leave no means untried to see that our laws are properly enforced. The officers are: President, S. W. Botkin; Vice-President, M. C. Clark; Secretary, W. G. Dunn; Treasurer, Dr. Wm. Jacobs.

ROVER.

The Rifle.

THE BOSTON NOMS DE FUSIL.—A member of the Massachusetts Rifle Association writes as follows:

Boston, July 27.—*Editor Forest and Stream:*—I notice that our rule which allows gentlemen to enjoy the pleasure of rifle shooting without advertising it (perhaps to his injury), is not liked by some. Should any club desire to find out what we are about, we shall be most happy, with a short notice, to accommodate them, and we shall be highly pleased if some club or clubs did really want the information. But we believe that in our weekly matches it shall be optional with the participant whether our local papers shall give his name or not. Boston has not been quite educated up to seeing a man's name in the weekly list of rifle shooters without a shrug. We do not quite all believe that a man can't take a few hours of healthy pleasure and do his business properly. Therefore, to accommodate the unbelievers, we have made the rule for our rifle shooters. We think that it injures no one. Our averages are made from our work, not from our published scores.

GALLERY PRACTICE.—*Boston.*—The regular monthly prize shoot is ended at the Mammoth Gallery, with some of the most remarkable shooting ever done in the gallery. Mr. O. M. Jewell heads the list with a clean score of eight consecutive bull's-eyes, in addition to the extra score of 20. H. A. Pickering, of the Walpole Rifle Club, and Mr. E. F. Richardson, of the Massachusetts Rifle Association, are tied for the second and third prizes, both making good scores of 39 each. Following is the summary; 150 feet; 8 rounds; possible 40:—

O. M. Jewell	5	5	5	5	5	5	5	5	5—40
H. A. Pickering	5	5	4	5	5	5	5	5	5—39
E. F. Richardson	5	5	4	5	5	5	5	5	5—39
D. F. Little	5	5	5	5	5	4	5	5	5—38
C. Edwards	5	5	5	5	5	5	4	5	5—39
George Lamb	5	4	5	4	5	5	5	5	5—38
E. Whittier	4	5	5	5	5	4	5	5	5—38
J. N. Frye	4	4	5	5	4	5	5	5	5—37
James Weymyss, jr	4	5	5	5	4	4	5	5	5—37
George Estes	5	5	5	5	4	4	4	5	5—37
M. O. Johnson	5	5	5	5	5	4	4	4	4—36
Charles Tupper	4	4	4	5	4	5	5	5	5—36
A. Babbridge	4	4	5	4	4	4	5	5	5—36
Henry Lowell	5	5	4	4	4	4	5	5	5—36
George M. Smith	5	5	5	5	4	4	4	4	5—36

Beachmont, July 29.—Some good shooting was done at Beachmont to-day by the rifle club bearing that name, and the leading scores in the competition, the distance being 200 yards, will be found below:—

C. M. Gueth	5	5	4	4	4	5	5	4	5—45
E. Bennett	4	5	5	4	4	5	5	5	4—45
J. Wemyss	5	5	4	5	4	4	4	5	4—44

Walnut Hill, July 30.—There was the usual attendance of riflemen and spectators at Walnut Hill, to-day, and again fine work was performed at the long-range distance in the *Spirit of the Times* match. The weather, however, was intolerably warm, the thermometer registering 98 under the shelter tents, and the absence of strong breezes by no means added to the comfort of the marksmen. The wind only just stirred the flags on the ranges, but some consolation was felt in the fact that a better opportunity was thus afforded for the making of high scores, the six leading contestants securing an average of 203 4-7. The result stood:—

J. S. SUMNER.

800	5	5	5	5	5	5	5	4	5—39	
900	5	5	4	5	5	5	5	5	5—39	217
1,000	5	5	5	5	5	5	5	5	5—40	

W. HOWARD.

800	5	5	5	5	4	5	5	4	5—38	
900	5	5	5	5	5	5	5	5	5—39	216
1,000	5	5	5	5	5	4	5	5	5—39	

J. F. BROWN.

800	5	5	5	4	5	5	5	5	4—38	
900	5	5	5	5	5	5	5	5	5—39	215
1,000	5	5	5	5	5	5	5	5	5—40	

SALEM WILDER.

800	4	4	5	5	4	5	5	5	5—38	
900	5	5	3	4	5	4	5	5	5—39	210
1,000	5	5	5	4	5	5	4	3	4—38	

H. L. LEE.

800	5	5	5	5	5	5	5	4	5—39	
900	4	4	3	5	4	5	5	5	5—39	205
1,000	4	5	4	5	4	5	5	5	4—38	

W. H. WARD.

800	5	5	4	5	3	4	5	4	5—37	
900	4	5	4	5	5	5	5	5	5—38	203
1,000	5	5	4	4	5	4	4	5	5—38	

Same range, August 2. The new match inaugurated to-day at Walnut Hill was not so fully attended as anticipated, owing to the extreme heat. The new silverware match began, is open to all comers; 200 and 300 yards; rounds, 7 at each distance; choice of prizes to be won by the aggregates of three scores at both distances. The scores at the two distances will be shot on alternate Saturdays, viz.: at 200 yards, August 2; at 300 yards August 9; and so on. Entries unlimited. Competition to close when the entries equal the value of prizes. Non-members will shoot in the champion class, and the very near members are classified as follows:

Champion class—Arnold, Harris, Hubbard, Hinman, Jackson, Jewell, Kirkwood, Lowell, Osborn, Richardson, Sumner.

First class—A. B. Archer, Frye, Borden, Brooks, Gerrish, Lewis, Noyes, Poland, Ring, Rockwell, Souther, Jas. Wemyss, jr., Winship, Withington.

Second class—E. W. Archer, R. D. Archer, F. N. Brown, Guerrier, Howland, Meiggs, Mortimer, J. P. Parker, C. A. Parker, Saunders, Spofford, Stephens, N. Wales, C. C. Wemyss.

Third class—Buzzell, J. F. Brown, Dickson, A. H. Hardy, E. E. Hardy, Griffing, Kingsman, Jepson, McColl, Rice, Schaefer, Shattuck, Simpson, Stevens, Stevenson, T. C. Wales, jr.

There were twenty-eight entries in this match to-day, the tops being as follows:—

H. L. Lee	5 4 4 4 5 5 5—32	N. W. Arnold	4 4 4 4 4 5 5—30
J. O. Mattoon	4 5 5 5 4 4 5—32	S. Lewis	4 4 4 4 5 4 5—30
J. Borden	5 4 4 5 5 5 4—32	W. E. Guerrier	4 4 3 4 4 4 4—27
E. B. Souther	5 4 4 5 5 4 4—31		

The match at 500 yards had 18 entries, and good shooting was done at the distance by Messrs. Mattoon, Lee, and Arnold, the carton disc appearing often but not counting. The best scores are given, off-hand, 500 yards, 7 rounds:—

J. Mattoon	5 4 5 5 5 5 4—33	N. W. Arnold	4 5 3 3 5 5 5—30
H. L. Lee	5 4 5 4 4 4 5—31		

Medford, July 30.—The Medford Amateur Rifle Association held their weekly meeting at Bellevue Range, to-day. The weather conditions were very good. There were 68 re-entries, of which the top ones are given. Distance, 200 yards; rounds, 10; off-hand firing:—

C. H. Russell	4	4	5	4	4	4	5	5	5	4—44
C. D. Harrison	5	4	4	4	3	4	5	4	5	4—43
H. Sawyer	5	4	5	5	5	4	3	4	4	4—43
E. S. Pipp	4	4	6	5	4	3	5	4	4	4—43
D. N. Howard	5	3	4	5	4	5	4	3	4	5—42
J. R. Teele	4	5	4	5	2	5	3	5	4	3—40
F. Hollis	4	4	4	4	4	4	4	3	3	5—39
H. A. Green	5	5	5	4	3	3	3	4	4	3—39
J. Smith	4	4	4	4	4	4	5	3	3	3—39
F. E. Garden	4	1	4	3	4	4	4	2	5	5—36

Same range, August 1. The Raymond Sportsmen's Club held its regular weekly meeting at Bellevue Range to-day, the numerous members present indulging both in glass ball and rifle practice. There was a good attendance of spectators. The result in the glass ball match was as follows, Mr. Witherell heading the list with a fine 28 out of a possible 30, at the three styles of trap:—

Name.	Single Trap.	Double Trap.	Rotary Trap.	Total.
W. B. Witherell	9	9	10	28
R. F. Schaefer	10	9	9	28
J. C. Smith	9	10	7	26
G. B. Blanchard	8	10	7	25
L. E. Johnson	9	8	7	24
M. Howles	8	8	7	23
J. R. Teele	8	7	4	19
Capt. Nichols	10	5	4	19
R. Ames	6	7	5	18
F. B. Rogers	4	2	4	10

Yesterday's competition closed the series in the first class, Mr. Schaefer taking the gold badge on the largest aggregate of three scores, he and the other contestants, with their scores, taking position in the order named:—

Name.	Single Trap.	Double Trap.	Rotary Trap.	Total.
R. F. Schaefer	29	30	30	89
G. B. Blanchard	26	27	29	82
W. H. Harrison	27	27	28	82
E. E. Johnson	24	27	28	79
F. A. Raymond	26	26	27	79
Arthur Smith	22	25	26	73
W. B. Witherell	24	24	25	73

In the rifle practice of the club the result is as follows, the best scores being given; distance, 200 yards; Mr. Bennett taking the lead for the day's shooting:—

E. Bennett	5	5	4	4	4	4	5	4	5—45
C. N. Gueth	4	5	4	5	5	5	4	4	4—43
Capt. Nichols	4	5	4	4	5	3	4	4	4—40
G. Ernest	5	4	4	3	4	4	3	4	4—39
H. Max	3	5	5	4	3	4	2	5	2—37
L. E. Johnson	3	2	3	2	3	4	4	2	3—30

CONNECTICUT—*Hartford, July* 26.—The special prize shoot of the Franklin Rifle Club at Boardsman Grove today was well attended, and there was some excellent shooting. Marksmen were present from this city, New Britain, Springfield, New Haven, and Collinsville. The shooting was upon the German ring target, an inch and a half center counting 25, and the rings around this measuring three-quarters of an inch. The highest possible score is therefore 75. The distance shot was 500 feet. The prizes offered amounted to $125, divided into fifteen prizes. Following are the scores of the winners:—

	Score.		Score.
Henry Andrus, Hartford	72	O. B. Hull	65
O. E. Pillard, New Britain	70	George Best, Hartford	64
J. D. Marks, Collinsville	69	R. Britton, Hartford	64
S. S. Halstead, Springfield	69	E. F. Whitney, Hartford	63
W. A. Paulding, New Britain	69	John Carroll, Hartford	62
W. W. Tucker, Hartford	67	F. B. Hull, Springfield	59
E. H. Williams, Hartford	67	Andrew Britt, Hartford	59
H. B. Moore, New Haven	66		

J. D. Marks, of Collinsville, made the first bulls-eye of the day, winning $1; E. H. Williams made the last bulls-eye, winning $2; and W. W. Tucker won $3 for making the most bulls-eyes during the day.

Members of the Springfield Armory team who were present did some excellent shooting with the regular Springfield military rifle. In a match of their team with the Maynard rifle team Friday last, the later using target rifles, the Armory team with their open-sight military guns won by five points.

MONOSHUSETT GARDEN—*July* 30.—The following are the scores of the Rifle Club at Hackmatack range to-day, shooting two scores of ten shots each, distance 200 yards, off-hand, ring target:—

	R. C.	R. C.	Totals.
G. F. Ellsworth	77—43	81—45	158—90
H. C. Knowlton	97—53	84—48	151—89
F. E. Nichols	65—44	77—45	142—89
C. O. Bent	66—42	76—43	141—85
Gilman Brown	56—42	77—47	133—89
Carl Zerahn	58—41	74—46	132—87
Fred. McGarvey	57—42	75—44	132—86

CONNECTICUT—*Collinsville, July* 30.—Canton Rod and Gun Club, Riverside Range practice meeting at 200 yards, off-hand:—

											Mass. C.

AUGUST MATCHES AT CREEDMOOR.—Secretary Jas. H. Jones of the N. R. A. announces the following competitions upon the Range at Creedmoor, L. I., during the month of August:

August 2—Col. H. A. Gildersleeve, Executive Officer; Remington Match; sixth competition; prize of $300 in gold. Open to all comers; any Remington breech-loader within the rules; must be loaded at the breech, with cartridges as furnished from the factory of E. Remington & Son; 900 and 1,000 yards; rounds, 20 at each distance. The prize must be won three times before becoming the property of the winner.

August 6—Maj. J. Holland, Executive Officer,; the Diamond Match; fifth competition; prize, a trophy, value $75. The trophy to be shot for monthly, and to become the property of that competitor, who, at the close of the season of 1879, shall have won it the greatest number of times. Open to all members N. R. A., and all members of the N. G. S. N. Y. in uniform. 200 and 500 yards. Five shots at each. Weapon, Remington rifle, N. Y. State model. Competitors allowed two entries in each match, but only the highest score to take a prize.

August 9—Hon. D. W. Judd, Executive Officer; the Remington Shot-Gun Match; second competition; prize, a Remington double barrel breech-loading shot-gun; value, $200. To be competed for twice each month, until twelve competitions have been held. The prize shall be awarded to that competitor having the highest aggregate two scores. Open to all members of the N. R. A. Rifle and position, any. 800, 900 and 1,000 yards; rounds, 15 at each distance. No coaching.

Cowperthwait Match; third competition; prize, $50, or trophy of equal value. To be shot for monthly, and to become the property of the competitor winning it the greatest number of times during the season of 1879. Open to all members of the N. R. A. and N. G. S. N. Y., in uniform. 400 yards. Position, standing or kneeling. Rounds, ten, for competitors using military rifles; nine, for all others. Competitors allowed two entries at each competition, but only the highest score to take a prize.

Handicap—Winners of any first prize or place in any monthly match of the National Rifle Association, shot at Creedmoor, two points.

August 13—Col. H. G. Litchfield, Executive Officer; Ballard Rifle Match; fourth competition; prize a Ballard Mid-Range Rifle; value, $60; all comers. Winners to be handicapped one point for each time won. 100 and 200 yards; any rifle. Rounds, seven at each distance. No cleaning allowed between either shots or distances. The rifle to be won three times before becoming personal property, but any competitor making a *full score* (35 points) at each distance at any one competition to become the final winner.

The Alford Match; third competition. Twenty competitions (semi-monthly), for twenty Remington Military Rifles, N. Y. State model, 50 calibre, or U. S. Government pattern, 45 calibre. 1st prize, to the highest score in each competition, a Remington Military Rifle; value, $18.50. Open to members N. R. A., and to members N. G. S. N. Y., in uniform; 200 yards; any military rifle. Rounds, ten. Two entries allowed, but only the highest score to take a prize. The same person can only win one military rifle. After twenty competitions the competitor who has made the highest score in the greatest number of competitions, will be presented with a Remington Long Range Creedmoor Rifle; value, $100.

August 16—Col. E. H. Sanford, Executive Officer; Champion Marksman's Badge of 1879; fifth competition; prize, a fac-simile in gold of the Marksman's Badge. The prize to become the property of the competitor who, at the close of the season of 1879, shall have won it the greatest number of times. Open to all members N. R. A. and all members of the N. G. S. N. Y., in uniform; 200 and 500 yards. Five shots at each; Remington rifle, N. Y. State model.

August 20—Col. Geo. D. Scott, Executive Officer; Remington Rifle Match; fourth competition; prize, a Remington Creedmoor Rifle; value, $100; open to all members N. R. A.; 200 yards; rounds, ten; any rifle. The rifle to become the property of the competitor winning it three times (not necessarily consecutive). Handicap, 1, any competitor using other than a Military rifle, four points. 2, competitors who have in any N. R. A. monthly or other match at Creedmoor made at 200 yards: A, with a sporting rifle, two points over an average of centers (if using such a rifle in this match), two points. B, with a military rifle, over an average of centers (if using such a rifle), two points.

Handicap Match; fifth competition; $50 cash, or trophy of equal value. To be shot for monthly, and to become the property of that competitor winning it the greatest number of times during the season of 1879. All comers; rounds, ten. Competitors allowed two entries, but only the highest score to take a prize. Handicap—1, rifles, other than regular military, 3 points. 2, winners of any first prize or place in any monthly or other match of the National Rifle Association, shot at Creedmoor, 2 points.

August 23—Capt. J. G. Story, Executive Officer; the Alford Match; fourth competition.

Winchester Rifle Match; fifth competition; prize, a Winchester Repeating Rifle (new model, 75 grains); at the running deer target; 100 yards.

"We Will" Match; third competition; prize, a Long-Range Rifle; value, $125. Open only to members of the

National Guard of any State; 300 and 600 yards; seven shots at each; the authorized military rifle in use by the organization of which the competitor is a member.

August 27—Capt. Chas. Robbins, Executive Officer; Everybody's Match. Open to everybody. Re-entries allowed to extent of two, provided time permits. Only highest score to count for prize. "At least seventy-five prizes." Pool targets open all day; 200 and 500 yards. Five shots at each. Rifle, any. Those using N. Y. State pattern, Remington, or U. S. troops who may be armed with Springfields, will be allowed but 5 shots at 500 yards, all others 4 shots. A supplementary programme will be published about August 15, with details.

August 30—Capt. William C. Casey, Executive Officer: Remington Shot-Gun Match; fourth competition.

Secretary's Match; fifth competition; prize, $50 cash, or trophy of equal value. Shot for monthly, and to become the property of that competitor winning it the greatest number of times during the season of 1879. Open to life and annual members N. R. A., and active members of any regular military or naval organization in the United States. 200 and 500 yards; position at 500 yards, any, without artificial rest; any military rifle (excluding specials); five shots at each distance. Competitors allowed two entries, only the highest score to take a prize.

—The affiliated clubs will practice at Creedmoor as follows during the month of August:

Empire Rifle Club, August 6.—*Spirit of the Times* Match; 200 and 300 yards. Ten shots each distance, off-hand.

August 13.—Daly Trophy Match; 300 and 500 yards. Ten shots each distance, off-hand.

August 29.—Competition for N. R. A. Bronze Medal; 800, 900 and 1,000 yards. Ten shots each distance.

August 27.—All-Comers' Class Match; 200 yards. Ten shots. Military rifles allowed three points. Entrance fee, 50 cents; 25 cents, unlimited.

Amateur Rifle Club, August 6.—Competition for the Short-Range Badge: 200 yards. Five shots. Open to club.

August 13.—Competition for the Mid-Range Badge; 600 yards. Fifteen shots. Open to club.

August 20.—Competition for a French Clock; value, $35; 800, 900 and 1,000 yards. Fifteen shots at each distance, with two sighting shots at 800 yards only. Open to club.

Seventh Regiment Rifle Club, August 9.—Competition for the Shells; 500 yards. Five shots. Open to the regiment.

August 13.—Diamond Badge; 200 and 500 yards. Seven shots at each distance. Open to the club.

Twelfth Regiment Club, August 12.—12th Regiment Rifle Club Match; 200 and 500 yards. Five shots at each distance. Open to club only. Remington military rifle. Entrance fee, 25 cents.

August 26.—13th Regiment Rifle Club Match. Conditions as above.

—The New Jersey State Rifle Association have issued a report of their matches for the year 1878. It gives full particulars of the doings of this strong young organization.

NEW JERSEY—*Brinton Range, July* 29.—The highest score that has ever been recorded in a rifle match at 200 yards was made to-day in the fifth competition for the Ballard prize. Corporal E. E. Lewis, of Flushing, L. I., opening with a center, made nine consecutive bull's-eyes—49 out of 50 points. Forty-eight has been made several times by Messrs. W. M. Farrow, S. T. G. Dudley, J. M. Dart, and others. Mr. W. H. Jackson, of Boston, who was a member of the American Team of 1877, and captain of that of 1878, also made an equivalent average of 73 out of a possible 75 points, and full scores of 7 rounds have been made. Mr. Lewis had the weather in his favor when he made his record, which practically makes him, for the time being, champion short range shot of the world. There was hardly a breath of wind, elevations were steady, and the light was strong, without glare or mirage. In addition to his leading score to-day, he made a string of 45 and one of 40, giving him a record for the day of 134 out of a possible 150 points. He never shot at Brinton but once before yesterday and had no previous practice with the gun he used. His charge was 40 grains of powder and 330 grains of lead. The match was the third of twelve competitions for a Ballard mid-range rifle, open to all; 200 yards; position, standing; weapon, any breech-loading rifle; 10 rounds, without cleaning. The entire record of the match was good, the highest scores being as follows:—

E. E. Lewis	4	5	5	5	5	5	5	5	5	49

E. M. Squier, 46; L. R. Grove, 43; D. F. Davids, 43; J. W. Todd, 42; P. Bonnett, 41; C. Nance, 41.

—The Frelinghuysen Rifle Association, of the First Regiment, N.G.N.J., met the Sterling Rifle Association, of the Fifth Regiment, N.G.N.J., on Friday, August 1, and had a short-range match with 10 men per side.

NEW JERSEY.—The Stockton Rifle Range Association announces a liberal list of matches for August on the grounds at Camden. The following is a summary of the competitions:—

Aug. 9 *and* 23—Winchester Repeating Rifle Match. Fifteen competitions for fifteen Winchester repeating rifles. All comers. 200 yards. 10 rounds. Any rifle.

Competitors using military rifles as such without cleaning, shall receive an allowance of three points, the highest score in the greatest number of competitions shall be entitled to a Winchester repeating rifle, model 1876, value, $32.00

Aug. 11, 18 *and* 25—Champion Marksman's Badge of 1879.—Open to all members of the Second Brigade, N.G.S. N.J. 200 and 500 yards. Five rounds at each. Weapon, the military rifle in use by the State. Target at 500 yards. Prize.—A fac-simile in gold of the Marksman's badge issued by the State of New Jersey. This badge will be awarded to the competitor who, at the close of the season, shall have won it the greatest number of times.

Aug. 14 *and* 21—Ballard Match, twelve competitions for a Ballard mid-range rifle. All comers. 500 yards. Any breech-loading rifle. 10 rounds without cleaning. The three best scores of any competitor, whenever made, to take the rifle.

Aug. 14—Stockton range match, one competition. All comers. Any military rifle. 500 yards. Lying, head towards target. 10 rounds. Prize—a silver trophy.

Aug. 21—Horstman match. Sword and belt. Open to members of the National Guard of any State. 100, 200 and 300 yards. Any military rifle. 5 shots at each.

The officers of the Association for the present year are:—President, Gen. E. Burd Grubb; Vice-President, T. B. Baldwin; Treasurer, Major Wm. M. Palmer; Secretary, John S. Lee.

DIRECTORS—Gen. E. Burd Grubb, Gen. Wm. J. Sewell, Alex. Van Rensselaer, T. B. Baldwin, Col. Daniel Lodor, John S. Lee, Col. Daniel B. Murphy, Major Wm. M. Palmer, Capt. E. D. French, F. C. Arnold, Geo. Potts.

NEW JERSEY—*Brinton Range, August* 2.—Sharps Match; 11th competition: rifle won by F. J. Donaldson; J. M. Dart leading all competitors, but having previously won a rifle scored one competition for final prize; 38 entries; and the following being the best scores:—

J. M. Dart	43	W. A. Robinson	41
T. J. Donaldson	42	Lt. L. W. Fisk	40
D. F. Davids	42	H. Farrand	39
F. Alder	42	Col. G. E. P. Howard	38
H. Fisher	41	Col. C. H. Houghton	31
E. M. Squier	41		

Same day, Association Match No. 2, 4th competition; 21 entries. The following are best scores:—

E. M. Squier	48	Col. C. H. Houghton	43
F. Fitz	45	O. McLaughlin	42
F. Alder	44	D. F. Davids	41
J. W. Todd	44	T. J. Donaldson	38
F. H. Holton	44		

LOUISIANA—*New Orleans, July* 27.—The seventh competition for the new Lilienthal cup took place to-day at Frogmoor under the most favorable circumstances.

The scores of the two leaders were very fine—that of Mr. Renaud being the highest yet made in the contest for this cup. The shooting at 200 yards was exceptionally good all around, all but three of the marksmen scoring 19 and over.

The following is the summary: New Lilienthal cup; seventh competition; military rifles; 200 and 500 yards; five shots at each and two sighting shots; three winnings to entitle to possession of the prize; first contest won by Bercegeay, score 41; second, Weiss, 39; third, Arms, 41; fourth, Gowland, 40; fifth, Arms, 42; and sixth, Bercegeay, 43:—

	200 Yds.					500 Yds.					
Renaud	4	4	3	5	5—21	4	5	5	5	5—23	44
Bercegeay	5	4	3	4	4—20	5	5	5	3	5—23	43
Bradford	4	3	4	5	3—19	4	3	3	4	4—18	37
Arms	4	4	4	3	4—19	4	2	4	3	4—17	36
Gerais	3	5	3	4	3—18	4	5	4	3	5—17	35
Gowland	5	5	3	4	4 21	0	2	4	4	3 13	34
Weiss	4	5	3	4	3—19	2	3	4	4	0—14	33
Spearing	4	5	2	4	4—19	3	4	4	2	0 13	32
Mannion	3	4	5	2	3—17	3	0	2	3	3—11	28
Fortner	3	4	3	3	3 16	2	0	0	4	0 6	22
Thomas	3	2	with	d	—5						

Another individual match was started to-day, the prize being an elegant pair of field glasses, presented by the Crescent City Rifle Club; 200 yards, 5 shots and unlimited entry. Thirty entries are necessary to decide this match. Only fourteen entered yesterday, and the contest will be continued next Sunday. At the conclusion yesterday, Weiss led by a score of 22 out of 25.

SCHUETZEN NOTES.—A new shooting club has formed at Patterson, N. J., and elected the following officers: Anton Muller, Captain; Otto Stutzbach, Secretary; Jos. Ettinger, Treasurer; J. Ruetten, Shooting-master.

The shooting club of Salinejees has the following officers: Fridolin Landott, President; Stephen Burill, Treasurer; Fred. Oswald, Corresponding Secretary; G. Winter, Financial Secretary.

At a meeting of the Shooting Association of Carroll, Iowa, the following gentlemen were elected for the ensuing year: Nic. Beiter, President; Aug. Staak, Vice-President: Hy. Fisher, Chs. Braun, Shooting-masters; Sebast. Walz, Treasurer; Chs. M. Lueck, Secretary.

The Portland, Oregon, Shooting Club has the following officers: Peter Essen, President; H. F. Schreiber, Vice-President; Joseph Wilms, Treasurer; —Helbrock, Shooting-master. The club numbers ninety members and has a park of its own with a shooting stand of 200 yards distance.

Game Bag and Gun.

GAME IN SEASON FOR AUGUST.

Woodcock, *Philohela minor.*
Black-bellied plover, ox-eye, *Squatarola helvetica.*
Ring plover, *Aegialitis semipalmata.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Red-breasted snipe, or dwitcher, *Macrorhamphus griseus.*
Red-backed sandpiper, or oxbird, *Tringa americanus.*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tattler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

*In New York and Oregon only.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15.

FINE GUNS.—We were shown to-day in the office of Messrs. Schuyler, Hartley & Graham two of the finest specimens in the gun line that we have seen for some time. Both the guns were of the manufacture of W. & C. Scott & Sons, the celebrated English makers. One of the guns, a Hammerless 12 bore 30 inch barrel with all latest improvements, was presented to Mr. R. V. R. Schuyler of the above firm, by the Messrs. Scott. The other gun is one of the premier quality, 20 bores weighing only five pounds. This gun was built to order for Prof. Scott of Princeton College, to be used for collecting specimens for the museum of the college. These guns can be seen by calling at the office of Messrs. S. H. & G., 17 and 19 Maiden Lane.

—Having received a large number of enquiries in relation to the Leroy tin-coated and burnished shot, we can freely say that it was extensively used at the recent tournament of the New York State Association, at Rochester, with evident satisfaction, and predicts a successful future.

MASSACHUSETTS—*Worcester, August* 2.—Members of the Sportsmen's Club may now be seen winding their way toward the retreats of the plover at early morn, and returning at night-with plump specimens of that toothsome bird.

NEW YORK—*Hornellsville, August* 3.—Weather too warm for woodcock shooting. Burt Elliott yesterday P.M. killed 7.

Cazenovia, August 2.—Woodcock shooting opened yesterday with fair success; two got 10, two 19.

"HAMMERLESS."

KENTUCKY—*Stanford, July* 28.—Too hot for gunning. In riding less than two miles a few evenings since, I heard more than thirty cock quails whistling. Scarcely a drop of rain in June; not a thunder shower, and never a more favorable nesting season. They're now as thick as reported in the wilderness, a few years ago, during a Hebrew campaign. Unless protracted dry weather necessitates their migration in quest of food, there'll be extraordinary sport.

A neighbor, who borrowed my rifle a few days since, brought me half a dozen squirrels and a young partridge, killed along the road as he came a mile to return the gun. I have seen and heard of half a dozen bevies of ruffed grouse within a mile. The foliage of undergrowth is too dense for successful hunting, even if it were practicable to go. A rattlesnake, translated on either side of my house recently, and one whose tail was ornamented with fifteen rattles was killed near the turnpike a few miles from our metropolis. J. T. B.

OHIO, *Woodstock July* 8, 1879.—"Bob Whites have had a glorious season for hatching their young, May and June being very dry months. I wintered and turned loose on the 27th day of March 93 Quail out of 96 cooped on December 3. One died from unknown cause, one caught by rats, and one of them got away while being fed. Some of them nested within 100 yards of my house. I for one do not intend to respect the granger law of last winter, but intend to shoot quail after November 1st, on lands which I control and see what is to be made out of it. No man is willing to do more than myself for the protection of all game in a reasonable close season, but to be shut out entirely by a few numb-sculls who by chance have got into our law-making body, is something I will not submit to, and for one will see who has the right to say what shall or shall not be done on lands bought and paid for, and the taxes on same paid out of my own money.

My wild pigeons that I brought from Pennsylvania last year have been an interesting study to me. They mated the last half of February and laid their first eggs in the last half of March. In 29 days from the day they hatched the first bird they had laid and hatched again, and so on until they have now laid the fourth time, and the strange part of it is, they change mates at every nesting. Whether this is the case in a natural state I am not able to say, but it is so in my coop. T. M. OWEN.

INDIANA—*Newport, August* 1.—There is an abundance of prairie chickens on our prairies this summer, and the shooting will be splendid if we have rain at the opening of the shooting season. Weather very dry at present.

R. E. S.

GAME OF NEVADA—*Mason Valley, Esmeralda County, Nevada, July* 10, 1879.—Our shooting here is mostly confined to quail, jack-rabbits, ducks, geese, and an occasional swan. Quail are very plenty of the kind known as the California valley quail, and shortly after the crops are harvested they get as fat as butter-balls upon the stubble. The sage brush is about breast high, and although thick enough to afford excellent cover, is still sufficiently open to permit easy progress through it in any desired direction, and a bag of two or three dozen of these charming little birds can be secured any day by a fair shot without the assistance of a dog.

Mallard and blue-winged teal are the most numerous amongst the water fowl; and I have often brought to bag three or four brace of these in a half-day's time. Strange birds that I think are rare in any part of the United States visit us, now and then; and early this spring I was fortunate enough to secure two specimens of the beautiful glossy ibis, from a flock that stopped for a few days in a marsh near by. FORKED DEER.

A NEAT DOUBLE SHOT—*Ashland, N. H., July* 28—*Editor Forest and Stream*:—A friend of mine who went last fall to Dacotah hunting, related an extraordinary double shot he had. In going up over quite a sharp roll of the prairie he saw about forty yards ahead, a fox creeping along very slyly, as only a fox can. He stood still fun a minute trying to find out what the fox was about before he once thought of his gun. When he did think of it he remembered it was loaded with only No. 8 chilled shot. He threw his gun to his shoulder, fired and rolled the fox over stone dead. At the moment he fired, up got a fine chicken that the fox was after within a yard of the fox's nose, when he again thought of the other barrel, and had the satisfaction of seeing the chicken tumble to the grass, both making a very rare double shot. MASON.

FULL CHOKE GUNS AND THE NEW METHOD OF LOADING.

Editor Forest and Stream:—

I noticed in your impression of the 22d May a letter from your correspondent "Mataban," in which he introduces to your columns in a concise and telling form the important facts relating to wads, which were first discovered by that most talented and accomplished sportsman, "Stonehenge," the editor in chief of the London *Field*. In the course of his communication "Mataban" intimates that he has been unable to put this system of loading to a practical test, and it may therefore prove of interest to him if I relate some recent experiences with full choke guns and the new kinds of wads.

I received a best quality full choke gun from England last November, and—as I take nothing in gunnery upon

trust—at once set about subjecting it to a critical trial. In this I was ably seconded by a gentleman who is a very skilled engineer and machinist, and to whom sporting weapons have been objects of study and interest for many years. He brought to the target a 17-pound 7-gauge muzzle-loader as the competitor of my 7¼-pound 12-gauge full choke. At first sight it seemed absolute nonsense for me to shoot my little gun against this ponderous wide-bored weapon, but I had seen before what a first-class full choke could do, and did not altogether despair.

The first trial for both pattern and penetration was at eighty yards. The targets for pattern were sheets of paper six feet square, and those for penetration some Pettit pads I had procured from England. My friend charged his 7-gauge M. L. with 12 drs. of powder and Ely's wire cartridge, with the end removed so as to prevent the cartridge from balling. In my B. L. I used 3⅜ drs. of mixed Curtis & Harvey, 5-6ths of which were coarse powder and the remaining 1-6th very fine grain. Of shot I used 1¼ oz., while in this instance the wads were of the ordinary kind and size.

It would occupy too much of your valuable space to give the full details of the trial; suffice it, therefore, to say that the pattern and penetration of the 7¼-pound gun quite equalled those of the 17-pound weapon, notwithstanding the very disproportionate disparity in charge, gauge, and weight. Doubtless many of your readers whose experience with guns has been confined to those bored upon the old system will deem my statement willingly incredible, but I can assure them that they may confidently accept it as representing a fact. Three instances at the target—of what it is scarcely exaggeration to call the terrific penetration of my gun—may be of interest, viz.:

At eighty yards I put pellets of No. 1 shot through eighteen sheets of the Pettit pad.

At 100 yards I put pellets of B. B. shot through nineteen sheets of the Pettit pad.

At eighty yards I put pellets of B. B. shot through the entire pad of thirty sheets, and then through two paper pattern targets behind the pad, thirty-two sheets in all, and yet the shot not arrested.

To these examples I will add two instances of the power of the choke at game. Last month I visited, with two other sportsmen, the shores of the Bay of Miramichi in pursuit of wild geese. The first shot I got was at a goose, certainly nearly seventy yards away, which I brought down, badly hit. A shot through the bend of the leg enabled us to pick out this bird from among the remainder of our bag, and on my return home I gave orders to my cook to bring it to me when picked. She did so, and I then ascertained that I had hit the bird with eleven (11) pellets of No. 1, and driven two of them into one side of the breast and out at the other! One of my companions was armed with a 9¼-pound 10-gauge "paragon" "giant grip," in which he used 4½ drs. of orange lightning No. 6 and 1½ ozs. of No. 1 chilled shot, and with this weapon and charge I saw him kill geese which were quite 100 yards distant. It is, perhaps, requisite to add that I am necessarily a good judge of distance in consequence of having done a great deal of target work. The fact is that a great many good sportsmen have hardly realized to the full, as yet, the vast revolutions in sporting weapons which choke-boring has effected in less than five years. Perhaps the best way of illustrating this is to contrast the winning gun at the "Field" trial of 1866 with the winning small bore at the one that has just closed.

	Gauge.	Weight.	Charge.	Pattern.	Penetration.
1866	12	7½	3 drs. 1¼ oz.	157	[illegible]
1879	20	5 lbs. 13 oz.	2 drs. ¾ oz.	91	22 sheets.

I should estimate 224 force ounces as being quite equivalent to thirty sheets of a Pettit pad.

As some of your readers (their name is legion) interested in guns may like to have the full particulars of my gun, I give them below: 7¼-pound, 12-gauge, with thirty inch best "fine Damascus" barrels, full choked, giant grip action, "Paragon" brand, rebounding locks; length of stock, 14½ inches; drop, 2½ inches.

With regard to the "Stonehenge" method of loading, I would state for the information of "Matabar" that I procured a stock of 1¼ gauge (not 1⅛ nor 1½) wads some time since from Messrs. Tolley for experimental purposes, and that the results I obtained fully confirmed the opinions expressed by "Stonehenge." The regularity of pattern secured is, indeed, something remarkable. At times not a single wild pattern will occur in sixteen to twenty shots, and the evenness with which the pellets are distributed over the target is most satisfactory.

I note with much satisfaction your intention to reproduce in your columns the particulars of the most pregnant and important trial of guns that has ever been carried out. I have, as you know, insisted for years upon the practical superiority for ordinary shooting of small bores, and I confess that it is not without a (I trust) pardonable feeling of self-gratulation that I find the correctness of my views now so emphatically confirmed.

28th May. FOREST AISLE.

PIGEON MATCHES.

GOOD SHOOTING FOR A LAD—OR ANY OTHER MAN.—Mr. R. F. Schaffer, age 17 years, a member of the Raymond Sportsmen's Club, and a son of the celebrated gun dealer, W. R. Schaffer, of Boston, won the fine gold medal with a remarkable score of 89 out of 90, on glass balls shot from the rotary, single and double, a score never equaled before here by so young a sportsman. He is also very famous in breaking glass balls with a small 22 cal. rifle, and a sportsman hard to beat on ball shooting with a ball or with shot, and a capital shot in the brush.

Yours truly, W. E. J.

The above has been sent us by a Boston friend. We congratulate Brother Schaffer on being the father of such a proficient son. He does honor to his training. Perhaps young Eugene Bogardus will find a competitor in this young man worthy of his attention.

THE MAINE STATE SHOOT—*Lewiston, July 29—Editor Forest and Stream:*—Applications are being received from members of Massachusetts clubs, for membership to our Maine clubs. They desire to join in order to participate in the State shoot which comes off early in September. The action is caused by the prohibition of pigeon shooting in Massachusetts,—a law to that effect having been passed last winter. The Androscoggin Sporting Club have a contract with one party in Aroostook County for two thousand wild pigeons, besides several others, for "all you can trap." LEWISTON.

MAINE—*Topsham, July 24,*—Riverside Club shoot; Card's trap; second match:—

[illegible] 1 1 0 0 0 1 1 1 0 1 0 1 0 1 1— 6

" " " Winslow....0 0 1 0 0—2

W. A. S.

Lewiston, August 1.—The Androscoggin Shooting Club, of Lewiston, who at present hold the gold badge for the "champion glass ball shot of Maine" (as well as the diamond badge for pigeon shooting), have arranged that it shall be shot for at the coming State shoot as follows:

Twenty shots each man; 10 single balls from a Card rotary trap, and five double rises from a Card set stationary, and a Huber trap, placed 5 yards apart; 18 yards rise for single, and 16 yards for double balls. This badge was won last winter from the Cushnoc Heights Gun Club, of Augusta, who donated it, by the Androscoggins, who have held it to the present time, although open to challenges once a month. A lively interest is felt as to who will win it at the September shoot. LEWISTON.

Lewiston, August 1.—The Cushnoc Heights Gun Club, of Augusta, have a field-day to-day, and are bent on the destruction of an unlimited number of Bratramian sandpipers, which are found in immense quantities just east of the city, where they breed and flock, and where they remain some two weeks after flocking. They are hunted incessantly by enthusiastic sportsmen from Augusta and Hallowell while they remain. LEWISTON.

Topsham, July 24.—Riverside Club shoot; Card trap, second match:—

ARCHERY.

HIGHLAND PARK ARCHERY CLUB.

July 28th, 1879.

Editor Forest and Stream:—

When one has had a pleasant experience it is natural that he should imagine that every one else would be pleased to hear about it, and he is prone to become loquacious upon the subject. To the lover of archery a visit to the grounds of a first class club, and the privilege of participating in their practice, and of receiving their hospitality, is one of the choicest blessings of archery. Having enjoyed such a visit with rare relish after a long term of severe work, I beg the reader to bear with me while I babble about some of the events of my visit.

Most of the readers of the FOREST AND STREAM have heard of the "Highland Park Archers," one of the oldest and best societies in America. Among them, in the beautiful village of Highland Park on the shore of Lake Michigan, twenty-two miles north of Chicago, I passed the "White day" of my archer life for 1879.

Having passed several days in Chicago, in Committee work for the furtherance of the cause of the National meeting to be held there in August, I gave myself into the hands of Mr. H. C. Carver, the Corresponding Secretary of the Association, and by his kindness was enabled to enjoy all pleasure it is possible to crowd into one day. During the afternoon of the 25th of July the gentlemen of the "H. P. Archers" and myself shot the Single York Round at two targets over the fine range at Mr. Carver's residence, and some very creditable scores were made. Several members of the club did not shoot, and several only a portion of the round, and I am unable to give the scores. I only remember that of Dr. Weston, who made the leading score as follows: hundred yards, 83; eighty yards, 103; sixty yards, 80; total, 266. The Dr. claimed this as his best round, but it will not long remain his best if his style of shooting continues improving as rapidly as it has since I saw him shoot in June. Among the gentlemen who made high scores were Mr. Henry C. Carver, Wm. Ford, P. Hall, Mr. W. B. D. Gray, Mr. Wm. M. Goodridge, and Mr. C. G. Hammond of the Highland Park Archers, and Mr. John Wilkison of "The North Side Archery Club" of Chicago. The latter gentleman astonished me by the fine shooting done at eighty and one hundred yards. He has only attempted archery since last May, and had never before made a shot at a target at longer than sixty yards range. The flight of his arrows was most beautiful, and extremely low considering that he uses a thirty-eight pound bow. The bow, however, is a very extraordinary one for the smoothness and quickness of its spring; a Spanish Yew of a very fine wood. The "Highland Park *Team*" composed of Mr. Henry C. Carver, Mr. Ford P. Hall, Mr. W. B. D. Gray and Dr. Weston, is one of the strongest in the Association, and the team which intends to take first place at the August Meeting will have a splendid contest with this team. They will require the winning team to score sixteen hundred at the American Round. About six o'clock P. M. Mrs. Henry C. Carver kindly took me in her carriage to the residence of Mrs. Wrenn, where we found several of the lady archers assembled before a clean new target in the shade of the fine trees. Only three of the ladies were armed, however, and of these three I only preserved the scores of two. The distance was thirty yards, and from the twenty-four arrows shot the following scores were made. Miss Janie Street, 24 hits, 108 score. Mrs. Henry C. Carver, 20 hits, 100 score. This is very fine shooting, but I was informed that Miss Street had on the same afternoon scored 135 with the same number of arrows at the same range. I do not know of this score being exceeded in America but once, and then only by one point. Mrs. Nichol Halsey, with one score I did not preserve, was engaged in experimenting to obtain a better style of drawing, rapidly accommodated position and drew to my direction, and I was very glad to see one who is the impersonification of grace and ease, so easily adapt herself to the difficult attitude and movement and correct "draw" in archery. I readily discovered that she possessed the three most valuable qualities of a good archer; patience, good nerve, and a desire to be criticised. She has hitherto achieved some fine scoring, and when she has thoroughly overcome the novelty of the different style of shooting which she has assumed, no doubt can be entertained of the accuracy as well as grace of her shooting. Miss Street has naturally found a fine position, and draws and looses her arrows with the utmost ease. She used a twenty-four pound bow and so perfectly is it under her command, that she shot the score above given after she had shot *two hundred and thirty* arrows on the same afternoon. This is a marvelous exhibition of nerve for one who is apparently far from strong. She shoots with perfect ease and imperturbable coolness, and is an adversary to be dreaded on the target field. Her scoring at the National Meeting will be very high. Miss Hattie Dennison shot a few arrows of which no score was kept, but nearly all of which found the middle of the target. She is one of the finest shots in the club, and, like Miss Street, she seems to have fallen naturally into a fine position, and shoots with great ease and force. Sixty yards is readily under the command of her bow, and while she has had very little practice she scores finely, several times having passed one hundred points with twenty-four shots at thirty yards. Among the persons gathered to witness the shooting, I had the pleasure of meeting Mrs. Wrenn, the Hon. W. A. James, Speaker of the House of Representatives of Illinois, and his accomplished wife; the Rev. G. L. Wrenn, and Mr. George Hall. The latter gentleman has unfortunately lost his left arm, and being fascinated with archery, has experimented with drawing a bow while holding it with his feet, and has actually succeeded in thus making some fine scores. At our request he shot a few arrows at thirty yards, striking the target with every one. If one under such difficulties can learn to shoot, who in the possession of all his or her powers, shall say "I cannot learn?" And how fascinating a mistress must archery be to thus allure her lover over such an obstruction? Being compelled to return to Chicago at 9:30 A. M. on the next day, the ladies kindly assembled at the residence of Mr. Henry C. Carver at eight o'clock the next morning, (how great a self denial to meet so early) and shot a score at forty yards. I was compelled to leave before the shooting was over, but the scoring was very fine. Mrs. Carver, who shoots with a most "taking" style, leading in the score at this range. Some very fine shooting was done by Mrs. Goodridge and Miss Polsen, but each of them was called away from the grounds before the shooting was concluded. Mr. Elisha Gray, the inventor of the telephone is president of the club, and Mrs. Gray is one of the most enthusiastic members. Mrs. Swartout, the Lady Paramount, Mrs. W. S. Lasher and Mrs. Weston, I did not meet at the targets, but I heard much of their skill from other members of the club. Even the younger people have become infected with the contagion of archery, and Miss Gracie Hammond, who is only twelve years of age, has become a very expert archer, vieing with the older ones, and taking a high place in the score lists. Even my little friend, Master Winnie Carver wields the bow with great skill, having passed one hundred points with twenty-four arrows at thirty yards. I rejoice to see our most refined and cultured ladies adopting archery as their out-door pastime. No exercise so displays their gracefulness or so develops that fine nerve and springiness that is the richest dower of beauty. The world cannot produce a picture so perfect or entrancing as a beautiful lady standing before the gaily painted face of a new target on the lawn of her old home; about her the "shadow of great trees and color of glad grass," her springy bow drawn back till it curves like a wand of willow, the whole form dilated with joy, the faintest blushes of pink flocking up to the eager face, made splendid by the glad and luminous eyes. No one who has ever seen such a vision will deny its surpassing beauty. The Public Tournaments of of the British archer draw together the finest crowds of spectators of any class of outdoor exhibitions in the Isles, and the National Meeting on the 12th, 13th and 14th of August, at Chicago, will be witnessed by the largest assemblage of the refined and polished element of Chicago society ever drawn together, and it is needless to add that the fact that the ladies are to participate in the shooting will be the chief attraction. They will be the loadstars of the meeting. The English ladies have so thoroughly mastered the bow that their scoring at fifty and sixty yards is much better than that of the gentlemen at the same ranges, and now that the American lady, strong of purpose, persistent and patient, has bent her intelligence to the subjugation of the refractory bow, we shall see new wonders performed with it ere many years, for when she has set her mind and heart upon the accomplishment of a purpose,

"What shall charm or force
Her spirit from its destined course?"

WILL. H. THOMPSON.

AN EASTERN ARCHERY ASSOCIATION.—A number of archery clubs sent representatives to a meeting held at the Parker House, Boston, Mass., July 30, for the purpose of organizing an Eastern Association somewhat like the National Association and for the same objects. Among the clubs represented were the following: the Pequossett Archers, of Watertown, Mass.; the Waltham Archery Club; the Orchard Archers, of Fitchburg, Mass.; the Oritani Archers, of Hackensack, N. J.; the West Newton Archery Club; the Toxachs, Newton, Mass.; the Greenfield Archers; the Maple Grove Archers, Spring-

field, Mass.; the Massasoit Bowmen. The following officers were elected: President, Mr. A. S. Brownell, Boston, Mass.; First Vice-President, Miss Maud Bunks; Second Vice-President, Dr. E. P. Miller, Fitchburg, Mass.; Recording Secretary, Mr. N. Abbott, Watertown, Mass.; Corresponding Secretary, Mr. J. Worcester, Waltham, Mass.; Treasurer, Miss Walker, Watertown, Mass. Executive Committee:—A. S. Brownell, B. S. Tollman, Dr. E. P. Miller, W. Holberton, J. W. Rollins, Jr.; E. P. Bugbee.

Rules and regulations were adopted very much the same as those of the National Association. The initiation-fee is $5, and it is to be hoped that the Eastern clubs will join so as to build up a strong society. A meeting will be held in Boston the last week in September, when medals and prizes will be shot for at the double American and Columbian rounds. Clubs in the vicinity of New York can address W. Holberton, of the Executive Committee, 65 Fulton street, New York, for further information.

ARCHERY SCORE BOOKS AND CARDS.—The thing for archery scoring is Tac. Hussey's archery score books. They are arranged for the various regulation rounds, are neat, handy, durable and as near perfection as can be attained.

SOMETHING NEW IN BOWS.—The latest thing in archery is a wooden bow backed with rawhide. Mr. John W. Sutton took his cue from the Indians, whose short bows, backed with sinews, possess wonderful power. To afford some idea of what the rawhide-backed bow will do Mr. Sutton called at this office, and in our presence pulled one of them to thirty-eight inches repeatedly, it springing back straight when relieved. See the advertisement in another column.

OHIO—*Cincinnati, July* 24.—The following scores were shot at Westwood, near Cincinnati, July 18, 1879; ladies, thirty yards, and gentlemen forty yards; forty-eight-inch target: thirty arrows.

	Hits.	Score.		Hits.	Score.
Miss Miller	29	185	Mr. Healy	28	134
Miss Simms	24	126	Mr. F. Miller	24	120
Miss Poungsford	21	109	Mr. Charles Miller	27	111
Miss Holmstade	23	101	Mr. Barclay	24	98
Miss Pierson	21	95	Mr. Barker	25	91
Totals	118	616	Totals	128	554

Grand Totals—Hits, 246; score, 1,170.

I have never seen a score published ahead of that by Miss Miller. She has beaten it in private practice since then. SAGITTARIAN.

PEQUOSSETT ARCHERS—*Watertown, July* 30.—Thirty arrows; thirty yards.

CRICKET.

FIXTURES.

Aug 7-8—Ottawa.—Toronto vs. Ottawa.
Aug 9—Staten Island.—Staten Island vs. Manhattan.
Aug 9—Frankford.—Wakefield vs. Frankford.
Aug 16—Staten Island.—Staten Island (2d.) vs. Manhattan (2d).
Aug 19-20—Ottawa.—United States vs. Canada.
Aug 21—Staten Island.—Germantown (2d.) vs. Staten Island (2d).
Aug 25-26—Hoboken, N. J.—Hamilton vs. St. Georges.
Aug 27-28—Staten Island.—Hamilton vs. Young America.
Aug 29-30—Staten Island.—Hamilton vs. Staten Island.

THE UNITED STATES ELEVEN.—At a meeting of the Executive Committe of the Cricketer's Association of the United States, held at Philadelphia, on August 1st, the following gentlemen were selected to represent the States in the international match, United States vs. Canada, to be played on August 19-20, at Ottawa: C. B. Calvert, Peninsular, C. C. of Detroit, Mich.; R. W. Clay, Philadelphia, C. C.; F. L. Bailey and J. M. Fox, Merion C. C. of Philadelphia; C. A. and D. S. Newhall, Young America C. C. of Philadelphia; J. L. Soutter and R. J. Cross, St. Georges' C. C. of New York; F. E. Brewster, Henry W. Brown and R. N. Caldwell, Germantown C. C. of Philadelphia.

The choice of the above players has been in the hands of a thoroughly competent committee, and we have no criticisms to make, but there must have been some special reason for leaving out R. S. Newhall, America's best batsman; Lane, of the Staten Island bowler, and one of the Hargreaves. *Nous verrons!*

On the second, the Secretaries of the Hamilton, Toronto, Ottawa and Montreal clubs decided upon the following gentlmen to represent Canada; E. Kearney of Halifax, N. S.; E. Sprague and Ogden of Toronto; B. W. Wand, H. C. Simmons and R. Terrie of Hamilton; Rev. T. D. Phillipps of Ottawa; W. Armstrong of Orillia; S. Ray of Whitby; and E. H. Gough and J. C. Bagley of Montreal.

MANHATTAN vs. STATEN ISLAND.—On July 17 the first eleven of these clubs met at Prospect Park for the first time this season. The Island team was not on hand at the appointed time. Half an hour late they presented four players, and it was past noon before they were ready to play and then had only seven men. Staten Island went in and were disposed of in short order for 44 runs. The only double figures in their score were made by Ronaldson. Their opponents who had an eleven on the ground at 10:30, then went to the bat. Hulbert, Scott and Greig getting double figures, and the innings closed for 102. The Staten Island second inning produced 118 runs for six wickets, and at 6:45 P. M., they had eight men on their team when time was called. Score:

STATEN ISLAND.		MANHATTAN.	
Lane, c Greig, b Brewster	0	Greig, b Lane	15
Jones, b Greig	2	Jenkins, b Lane	4
Sprague, run out	8	Hosford b Jones	0
Stevens, b Brewster	0	Hulbert, run out	20

YOUNG AMERICA (of Wis.) vs. WILLOW.—These clubs of Milwaukee, Wis., met at the base-ball park on the 15th inst., and played a closely contested and interesting match. The Young Americas are all lads under eighteen years, and their club has been organized scarcely twelve months. The following score will therefore indicate a very tolerable result from their brief practice. The Willow club was re-enforced by Messrs Martin and Ashley of Racino, Wis., and the Young America allowed sixteen players:—

WILLOW.		YOUNG AMERICA.	
Perrine, l b w Oxborrow	2	Scherer, b Potter	3
Bristol, c Hathaway, b Parkes	1	Ellis, c Graham, b Porter	1
Peacock, b Oxborrow	0	Nushall, c Rollington, b Potter	3

SIMCOE CRICKET CLUB.—County of Norfolk, Providence of Ontario, Canada. Honorary President, Sheriff Deeds; President, W. W. Livingston, Esq.; Vice-President, W. H. Fitzgerald, Esq.; Secretary—Treasurer, W. L. Walsh, Esq.

Executive Committee: Messrs. Lemon, Pennigton, Sinden Osborne and H. O. Fitzgerald.

Thus far the club has only played two foreign matches this season; one at St. Thomas, the Capital of the County of Elyn, against the club of that city of the 24th of May; the other at Norwich in the County of Oxford, on the 4th of July. In the former match the Simcoe team was victorious; the score standing: Simcoe, 1st. inning, 64; 2d. inning, 72; total 136. St. Thomas, 1st. inning, 69; 2d. inning, 59; total 128. Simcoe wining by 8 runs. For the victors, W. H. Fitzgerald scored 17 (not out) and 24; Lemon, 23 and 7; A. Grasett, 10 and 6, and E. Greaset, 9 and 10; For the vanquished, Jekes scored 19 and 22; G. H. Moore, 16 and 2; and N. G. Leslie, 8 and 7. At Norwich the Simcoe team was defeated by nine wickets. The following is the score of a match played on the cricket ground, Simcoe, on Wednesday, July 23, 1879, between the married and single members of the club:

MARRIED.		SINGLE.	
Thomas Lee, b Walsh	1	C. M. Foley, b Linden	10
G. B. Jackson, b Curtis. c L. Jackson	18	H. O Fitzgerald, b Linden	12
Joseph Black, b Walsh c Foley	2	W. L. Walsh, run out	7

Total			108

MERION (2d) vs. STATEN ISLAND (2d).—On the 24th July, at Staten Island the home team was defeated by the visitors by 23 runs. Hole's defensive innings was the feature of the Staten Island's play. Moore contributed a good 12. For the Merion, Williams obtained a quick hit 35; Peace, a slow scored 21, and Ewing a good 17. The Island team was decidely weak, while we learn from a Philadelphia source that the Merion eleven was a representative one. The game was interesting. Morris, Ewing and Satterthwaite bowled well, and "the noble captain" Moore, made a grand one-handed catch. Score:—

STATEN ISLAND.			
Satterthwaite, b Ewing	1	Davidge, b Ewing	1
Dodge, c Morris b Ewing	4	Farber, b Ewing	0

THE GAME AT HALIFAX, N. S.—The 101st. defeated the 97th. regiment by 6 wickets, on the garrison grounds on July 15. The 97th took the bat first scoring 61; the 101st followed with 139; 62 of which were contributed by Major Jervis. In the second inning the 97th rapidly ran up a total of 151; leaving the 101st a score of 54 to win, which they effected with the loss of 4 wickets.

PORT HOPE vs. COBOURG.—The above match was played on the Port Hope grounds on the 17th inst., resulting in a draw. For Port Hope Wirchhoffer played a fine innings of 41, I. G. Hall, Wadsworth, and Baines getting double figures. For Cobourg, Hayden, Wood, Hill, and Kennedy played well. Following is the full score:—

ANOTHER NEW CLUB.—The Columbus Cricket Club was organized last month at the capital of Ohio. The following officers were elected for the ensuing year: President, F. O. Hubbard; Treasurer, W. P. Little; Secretary, R. O. Smith. The club started with over thirty members. We wish them all success.

THE UNITED PORTSMOUTH CRICKET CLUB of Portsmouth, N. H., is talking of visiting New York and vicinity. Secretaries of New York, Paterson, and Newark clubs, are requested to communicate with Wm. Sladen, Sect'y, of W. P. C. C.

—We learn from a Montreal paper, that the cricketers of that city are endeavoring to get up a team to visit England. The subject is being submitted to the various clubs in the country, with a probability of the scheme being carried through.

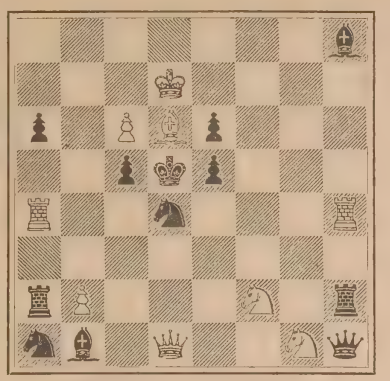
—A new club has recently been formed at Bradford, Penn.

CHESTER CITY CRICKET CLUB.—At a recent meeting of this organization, the following officers were elected for the season: Thos. Harrison, President; Thos. Johnson, Vice-President; Harry Brooks, Treasurer; Isaac Rodgers, Secretary (address P. O. Box 456, Chester City, Delaware County, Pennsylvania); John Griffin, Captain.

TOUR OF THE HAMILTON, ONT., CRICKETERS.—The eleven of the Hamilton Cricket Club intend visiting New York and Philadelphia during the last week in August. They will play the St. George's of New York, on the 25th and 26th; the Young Americas at Philadelphia, on the 27th and 28th, and Staten Islands on 29th and 30th.

COLLINGWOOD CRICKET CLUB.—This club of Collingwood, Ont., at a recent meeting elected D. J. Liddell, President; H. McDonald, Vice-President; and J. E. Moberly, Secretary and Treasurer. –

—The next international walk opens at the Madison Square Garden, this city, September 22. Weston, Rowell, Blower Brown, Ennis, and a Yuma Indian from California, are to compete.



SCOTTISH-AMERICAN ATHLETIC CLUB.—Handicap games, open to all amateurs, will be given on the club's grounds, August 16, commencing at 5:30 P.M. The programme will consist of two mile handicap walk, one mile handicap run, one hundred yards handicap run.—W. S. CONNELL, Secretary, 329 West 54th street.

NAHANT SPORTING CLUB—*Nahant, August* 2.—Foot Race; quarter mile run; for silver medal. Open also to Harvard Athletic Association and Union Athletic Club. T. H. Simmonds (H. A. A.), first; T. R. Lord's, "Unknown" (U. A. C.), second; G. C. Adams, third. Time, 53¾. Impromptu 100 yards dash. T. R. Lords, "Unknown," first; G. G. C. Adams, second; R. S. Codman, third; Ware, Peabody, and others. Time, 11¼. G. B. I.

The Game of Chess.

Problem No. 58.

Motto: Be Patient.

White to play and give mate in three moves.

Game No. 119.

A game in the International Tourney match between William Contes, of Cheltenham, England, and Max Judd, of St. Louis, Mo.

White. Coates.	Black. Judd.	White. Coates.	Black. Judd.
1—P-K4	1—P-K4	5—Kt-Kt5	5—B-Kt5 ch
2—K Kt-B3	2—Q Kt-B3	6—B-Q2	6—Q tks K P ch
3—P-Q4	3—P tks P	7—B-K2	7—K-Q
4—Kt tks P	4—Q-R5	8—Castles	8—K Kt-K2

Poor

9—Q Kt-B3 | 9—Q-R5

Bishop takes Kt would have been a better move.

10—P-Q R3 | 10—B-B4 | 11—P-Kt3 | 11—Q-K B3

The only move at Black's command.

12—Kt-K4 | 12—Q-B4 | 14—Q B-B4 | 14—P-K3
13—K tks B | 13—Q tks Kt | 15—P-Q B4

At this early stage of the play White not only has much the best position, but almost a forced won game.

15—P-Q R4

Not good; still is there any better move?

16—Q-Q2 | 16—R-R3

While this is another poor move we are unable to find anything stronger.

17—Q R-Q | 17—Q Kt-Kt | 18—P tks P | 19—Q-B3
18—P-Q Kt4 | 18—P tks P | 20—Kt tks Q P

From the fourteenth move White has played very much the best game.

20—B-R6

If P tks Kt, then P-Kt5.

21—Kt-K4 dis ch | 21—Kt-Q2 | 23—Kt-Kt5 | 23—R tks B
22—B-B3 | 22—R-Kt6 | 24—Kt tks B | 24—P-B3

Black cannot save the game.

25—K R-K

The best move.

25—P-Q B4

For the second time the only move at Black's command.

26—P tks P	26—Q tks P	28—Q-Q6ch	Resigns.
27—B tksP ch	27—K tks B		

—*Hartford Times.*

CURSORY JOTTINGS.

—We take from the *Nuova Rivista* the appended score of the leading contestants in the tourney recently held at Rome, Italy:

	Won.	Lost.	Dr's.		Won.	Lost	Dr's.
Bellotti	27	5	6	Tonetti	21	9	1
Farlico	41	11	3	Cantoni	30	10	2
Schultz	38	9	3	Marchetti	23	9	3
Sprega	35	9	2				

From the same source we obtain the award in the recent Italian problem tourney, viz.:

First prize, M. Niccolo Tsardotsch, Trieste; second, M. G. Salvioli, Venice; third, M. G. Liberali, Patros; fourth, M. Le Compte Guicciardi, Spezia.

The publishers of the *Nuova Rivista* announce a third "*Concorso Internazionale Problemi.*" The prizes are 100*l.*, 50*l.*, and 25*l.* Problems to be in sets of two, one of which shall be in three moves and the other in four moves. A "*Bizzaria,*" or Puzzle Tourney, is also announced; prizes 15*l.*, 10*l.*, and Klett's or Valle's Book of Problems. Special prizes are also offered for the best three-move problem and the best four-move problem. Sig. N. Tsardotsch, of Trieste, will act as umpire. Address (sealed envelope, solution, etc.) sets *Nuova Rivista degli Scacchi*, via Vitorio Emanuel 35, primo piano, Livorno, Toscana, Italy, before November 1, 1879.

—A flourishing chess club has been established at Cork, Ireland. A member of this club scored the only win against Herr Zukertort in his recent blindfold performance at Dublin.

—The award of the Paris International Problem Tourney Committee, has been, or is to be changed, we understand, and we therefore delay the publication of the award for the present. Our contemporaries all agree that the judges' report is "a masterly" one, but as yet it has not been translated into English, nor has any chess editor had enterprise to publish the prize winning sets and honorable mention sets. The *Ayr Argus*, however, has devoted no little space to this tourney, and we yet hope to see the translation above mentioned appear in its entertaining and *instructive* chess column. Perhaps our contemporaries may feel inclined to retort in a "practice what you preach" manner, and to avoid allusions of that character, we inform them in advance that *La Stratégie* no onger reaches our table, and that we have not seen a copy of the judges' report on all of the sets mentioned in their report. The *American Chess Magazine* promised this, but failed in the performance of its editorial on that subject, unless Mr. Lloyd's criticism—it strikes us that he now sees not only the efficacy of criticism, but the necessity of a critic—is no doubt not entirely uncalled for, but at present we cannot assent or dissent thereto. We are glad to note that Mr. Lloyd—to judge from the criticism in the *Journal*—is no longer so umpire sensitive as hitherto, and that he does not dare to raise his voice, unless it be in unqualified approval, because forsooth an award is inviolable. When we publish the above promised synopsis, we may touch the question of an inviolable award, etc., in an incidental way.

—Our new dress appeared—at least we think so—"perfectly splendid," notwithstanding the presence of an unnecessary "Queen in mourning" at King Rook's light square. We at rare intervals correct our proof, as was the case last week, when we obliterated a white King on this self-same square, indicating on the margin that a white Queen should be substituted therefor. The compositor possibly has a preference for "dusky maidens," consequently the black Queen was introduced to supplant the "'tother one."

—From the Chicago *Tribune* we learn that a match between the two "giants," Capt. Mackenzie, of New York, and Mr. H. Hosmer, of Chicago, may be considered a settled fact, as the minor details are now perfected. The match is to be played in Chicago, but the date has not yet been decided upon.

—Another Chess Congress is "talked" of extensively by our contemporaries, the Charleston *News*, edited by J. K. Orchard, having set the ball in motion. Belden's advice to the promoters of this scheme in last week's *Times* is sensible, although uncalled for in this instance, we imagine. Belden is a "queer sort of a fish," anyhow, if we be permitted to thus allude to the self-styled "pin-fish and pollywog"—of course the royal diadem is to be found in his pond—judging by his luck whenever he drifts into a squabble with a brother editor. Our Derbyshire friend, without hardly a blow in self-defence, found, to our great surprise, refuge in protestations of friendship when Belden commenced hitting right and left in lively style. Recently the *Turf* and *Times* "squabbled," or at least they thought so, and Belden thereupon took off his gloves and extended an invitation to Allen to come up and toe the mark, but the latter declined, and Belden is now a foot taller. "Who'll be the next?"

—In Tchigorine, the editor of the *Russian Chess Monthly* recently defeated by a score of 7 won, 4 lost, and 2 draws. Mr. Scheiffers, the reported strongest player of Moscow, in a match played at St. Petersburg, Moscow, however, was the victor in a telegraphic match with St. Petersburg.

—Through the liberality of Rev. H. R. Dood, the *Huddersfield College Magazine*, Huddersfield, Eng., has inaugurated a novel problem tourney—the conditions are that the following and no more pieces shall be employed in the construction of a three move problem, viz.: White, a K, a Q, a R, a Kt, and three P's; Black, a K, a Q, a R, a B, and three P's. Only one problem is to be entered by a composer, and the prizes conform in number. Address, on or before November 30, 1879, John Watkinson, editor of, etc.

—The Great Unknown—two of them: Gladen's, of the Hartford *Globe*, and White Queen, of the Holyoke *Transcript*, both of whom are New York chess correspondents.

—In the Patten vs. Mason match at London, Eng., the score now stands: Patten, 2 won; Mason, 1 won and 5 games drawn.

CURE BY ABSORPTION.

"SAPANULE."

THE GREAT EXTERNAL LOTION AND FLUID ABSORBENT. Nature's Remedy Applied by a Natural Method. Used in Sponge or Foot Bath it Immediately Relieves Pain and Soreness of Body and Limb from whatever cause. It also brings a refreshing coolness, and destroys offensive perspiration. It is the only Lotion offered to the public to be used through the Bath. "SAPANULE" is a sure and specific remedy for Rheumatism, Neuralgia, Lumbago, Headache, Burns, Scalds, Bruises, Sores, Piles, Boils, Chilblains, Bunions, Corns, etc. Cures all Eruptive Disorders of the skin, leaving it smooth and soft. Soreness or Inflamation of Feet from whatever cause, immediately relieved and permanently cured by using "SAPANULE" in Foot Baths.

"SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

MESSRS SAMUEL GERRY & CO.:
A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.
HEADQUARTERS OF THE SOCIETY, FOURTH AVE., COR. 22d ST., New York, March 4, 1879.
HENRY BERGH, President.

MESSRS SAMUEL GERRY & CO.:
For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.
MRS. W. H. KINSLEY, 158 West 22d St., New York.

SAMUEL GERRY & CO.:
GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully.
FROM HON. JOHN BEATTIE.
JOHN BEATTIE, Providence, R. I.

MESSRS SAMUEL GERRY & CO.:
GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I sufferred intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE."
Truly yours, N. ORMS, 59 West 22d St., New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS.

SAMUEL GERRY & CO., Proprietors, 237 Broadway, N. Y.

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-working at Washington, Richmond, and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly Printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1.75. Orders for five copies and upward filled for $1.40 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.

Glass Balls and Traps.

CARD'S

Last Patent Target Thrower.

WITH IMPROVED SPRING AND NEW RUBBER STOP.

Protected by two United States Patents and one in Great Britain.

Patented May 7, 1878, and April 22, 1879.

THE only rotating trap that throws *every way*, or can be made to throw in any *desired* direction, or that can be made to throw *every way, except at shooters and spectators*, all of which are covered by the above patents. Remember you got no balls (unless you wish them) in your face, but have *rights and lefts, and all other angles*. Send for circular. Price $10 at factory. No charge for boxing.

EDWINSON C. GREEN,

Winner of London "Field" Gun Trial

OF 1879.

Distancing all his Competitors Greener, Malcham, (Scott's), Lesson (Wehley), and the Whole Competition.

"In the second class for 16-bores Mr. Green distanced his competitors in all the three classes, beating Mr. Greener's 12-bore by 32-28 points—a most marvelous performance truly. In the third class for 20-bores, Mr. Green again beat the winning 12-bores."—Editorial London *Field*, May 10.

Feather Filled Glass Balls,

PATENTED AND INVENTED BY

IRA A. PAINE.

THE ONLY SUBSTITUTE EVER INVENTED FOR A LIVING BIRD.

Awarded the Medal of Progress and Grand Diploma at the American Institute Fair, 1878.

A sweeping reduction in price. Ask your gunmaker for the FEATHER FILLED AND TAKE NO OTHER. **SPECIAL NOTICE TO DEALERS.**—Owing to the great demand for the FEATHER FILLED BALL, we will from this date pay strict attention to our factory and the careful production of the ball only, and have appointed the well-known house of **HAGERTY BROS. & CO., 110 Platt Street, New York,** as our authorized agents, to whom all orders and communications may be addressed. ALSO MANUFACTURERS OF THE BEST PLAIN BALL IN THE MARKET.

Office of the Bohemian Glass Works, 214 Pearl Street, New York.

Attention, Sportsmen!

Kay's Improved and Perfected Ball for 1879.

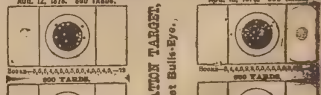
[PATENTED OCTOBER 13, 1877.]

A SUBSTITUTE FOR GLASS.

HAVING succeeded in producing a Ball for professional and amateur use at the trap, we offer the same with the following recommendations, viz: In breakage, the equal and superior to any glass; Uniformity, being of an exact uniform thickness of 1-20th of an inch, is superior to any blown material; Durability, is not affected by their solubility; Residuum, can be used anywhere, and on finest lawns, leaving neither injurious or unsightly refuse. Packed in barrels by a device peculiar to us, we guarantee against breakage in shipment. For particulars see circulars. Price, $2 per 100. All orders addressed to dealers, or **A. B. KAY & CO., Newark, N. J.,** Manufacturers of Buck and Heavy Drop Shot, Cartridges for Long-Range, viz.: Deer, Duck, and Geese, $3 50 per 100; also, the Clip or Expansive Concentrator, $1 25 per 100. A box of 50 sent on receipt of 75 cents by mail.

THE CARVER TARGET BALL.

[CAVEAT FILED.]

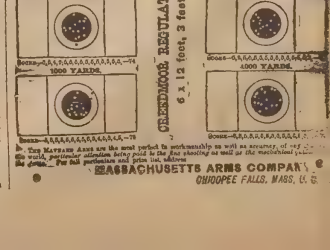


GREENVILLE, PA., May 26, 1879.

DEAR SIR:—We take pleasure in notifying all admirers of Target and Ball Shooting that we have introduced a COMPOSITION TARGET BALL for Trap Shooting that is perfect in every particular. It has been thoroughly tested by many of the leading Sportsmen, and pronounced by all as the only perfect and unobjectionable Target Ball in existence. This Ball is very uniform in weight and standard size, and when broken leaves no *debris*, but will EVAPORATE in five days and acts as a FERTILIZER. They can be used on Lawns, Gardens, Fields or Parks, thereby doing away with the danger and annoyance consequent in using Glass Balls. We are now prepared to fill orders. Drafts or P. O. Order must accompany all orders. Organized clubs are invited to send for Sample Box, (25 balls) and Circular free. J. H. WAUGH, Inventor.

PRICE LIST.—Per thousand, $12. No charge for packages. Address

CARVER TARGET BALL CO., Greenville, Mercer Co., Pa.



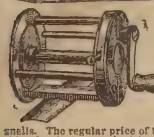
Maynard Creedmoor Rifle.

THE MAYNARD AHEAD!

The following Targets were made by Prof. Chas. E. Dresser of Wheeling, West Va., at Bowie, August 13th, 1878, with his *Maynard Long Range Rifle*, and are the MARKING OF RECORD. The great load of 102 in a possible 400, the shots at the bull has never before been accomplished by any Rifle-man, or Rifle, in the world.

These scores were made in two competitive 5o positions on the American team for 1876; positive best choices of the United States, and were shot under the rules of the N. R. A. Full conditions of either distance. These scores were all witnessed and sworn to by JAMES TUE, Secretary *Maynard Rifle Club*, Wheeling, West Va.

The MAYNARD ARMS are the most perfect in workmanship as well as accuracy, of any in the world, *particular attention being paid to the fine shooting as well as the mechanical construction.* For full particulars and price list, address



MASSACHUSETTS ARMS COMPANY,
CHICOPEE FALLS, MASS., U. S.

DON'T READ THIS!

UNLESS YOU WISH TO SECURE A BARGAIN.

COMPLETE FISHING OUTFIT.

Having made special terms with the manufacturers, I am able to offer to the patrons of this paper the following **Complete Fishing Outfits** at the lowest prices ever offered.

OUTFIT NO. 1 Consists of a three-jointed Ash Rod, finely varnished, with brass mountings. A well-finished brass reel which fits the rod perfectly, an extra laid linen line and half a dozen hooks on good single snells. The regular price of this outfit is **$1 90** and I offer it for **$1 00.** This is just the thing for the boys and girls who want to do things right, and is bound to please all who receive it.

OUTFIT NO. 2. A fine three-jointed Rod, dark polished butt, Brass mounted with Reel Bands and guides. An elegant large brass reel with stop, and extra laid linen line with half a dozen hooks on single snell and half a dozen extra tied and finished on **double** snell. An elegant patent Bait-box (as shown in cut) finely painted, and warranted to suit every one, also a lead sinker and float, making a complete outfit for any one. At the regular price this outfit would cost **$4 50** and my price is only **$3 00.**

OUTFIT NO. 3 Consists of an elegant three-jointed **Bass Rod,** with finely polished dark butt and middle joints, and **lance wood tip,** full brass mounted with reel bands, guides, etc., and is a rod good for any fish up to twenty pounds. A finely finished brass **Multiplying** reel (as shown in cut) made with stop and perfect in every way, an extra finely finished linen line with one dozen best double snelled hooks and bait-box, sinker and float. Regular price of this outfit **$7 50.** I offer it for **$5 00.** This outfit is just the thing for every angler who may want to fish for any kind of fish and yet have tackle suitable for all, as it is made throughout of the best material and in the best manner.

OUTFIT No. 4 Consists of a four-jointed BASS ROD, finely polished hollow butt, extra Lance, wood Tip in butt, best Multiplying Balance handle. Reel best quality Braided Linen Line; one dozen Best Double Snell Hooks; Bait Box, Sinker and Float. Regular price of outfit, $10. I offer it for $7.

OUTFIT No. 5. General Rod. Hollow Butt; can be used with three joints, for Bass, or with four joints for trout. Has two light Lancewood Tips and one heavy Tip, finely finished. One best Multiplying Reel, with balance handle. One Best Braided Linen Line. One dozen Best Double Snell Hooks. One Double Gut Leader; Bait Box, Sinker and Float. Regular price of outfit, $12.50. I offer it for $9. Goods warranted as represented. Mention this paper to receive these outfits at the above price. Any of them sent by express on receipt of price. Send stamp for 64 page Catalogue of Fishing Tackle, Camping, Archery, Base Ball and Sportsmen's Goods.

O. F. WOODWARD & CO.,

MANUFACTURERS OF

BRITTLE TRAP BALLS, WOODWARD'S MEDICATED NEST EGG, And Woodward's Medicated Bird Swings.

ASK YOUR DEALER or GUN-SMITH for WOODWARD'S SOLUBLE COMPOSITION TRAP BALL, pronounced by professionals and amateurs superior to all others.

No more trouble and danger from sharp and insoluble fragments, which cause so many to object to the use of glass balls, except in fields and galleries specially set apart for trap-shooting. WOODWARD'S SOLUBLE COMPOSITION BALL possesses great firmness, always breaks when hit, and owing to the quick dissolution of the fragments can be used wherever convenience may dictate. Write to your dealer for circulars and terms, or address O. F. WOODWARD & CO.,

Le Roy, N. Y., Manuf'rs and Sole Prop'rs.

MEDICATED NEST EGGS, sure death to hen lice, $5.00 per gross, 60 cents per dozen. Medicated Bird Swings and Perches, for Bird Cages, keep them free from vermin. Address as above.

Laflin & Rand Powder Co.,

No. 26 Murray Street, N. Y.,

Sole Proprietors and Manufacturers of

ORANGE LIGHTNING POWDER.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

ORANGE DUCKING POWDER.

For water-fowl, strong and clean. No. 1 to 5, in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

ORANGE RIFLE POWDER.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ¼ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. BOGARDUS, the "Champion Wing Shot of the World."

Blasting Powder and Electrical Blasting Apparatus.

Military Powder

of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood-cut, sent free on application to the above address.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 50 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ¼ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,

88 WALL STREET, NEW YORK.

A GOOD PLAN

The most profitable way of dealing in stocks is by combining many orders and co-operating them as a whole, dividing profits *pro rata* among shareholders, according to the market, monthly. Each customer thus secures all the advantages of immense capital and experienced skill, and can use any amount, from $10 to $10,000, or more, with equal proportionate success. "New York Stock Reporter" and new circular mailed free. Full information for any one to opperate successfully. Lawrence & Co., 57 Exchange Place, N. Y.

PURE TIN-COATED AND BURNISHED

DROP AND BUCK SHOT.

American Standard--Eagle Brand.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM:— NEW YORK, Jan. 13, 1879.

HAVING been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 5,000 ball match Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD MANUFACTURING COMPANY, NEW YORK.

United States Cartridge Company,

LOWELL, MASS.,

MANUFACTURERS OF THE

BRASS, SOLID HEAD, CENTRAL FIRE, RELOADING SHELLS, AND CARTRIDGES.

ADAPTED to all military and sporting rifles and pistols, and in use by the ARMY AND NAVY OF THE UNITED STATES, and several foreign governments. Rifle-fire ammunition of all kinds. Special attention given to the manufacture of

Cartridges for Target Practice.

SEND FOR ILLUSTRATED CATALOGUE.

THE DELAWARE SHELL.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange.
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

Address, **Delaware Cartridge Company,**

Wilmington, Delaware.

TRADE— **"BEATS THE WORLD."** —MARK.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

A GREAT INVENTION!

IMITATION

STAINED GLASS.

Patented December 3, 1878.

CURTAINS, SHADES, AND BLINDS

Dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Public Buildings, Churches, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented,* and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of **$1.00.**

Agents Apply to **L. Lum Smith,** 717 SANSOM ST., PHILADELPHIA, Pa. Patentee & M'f'r. Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald:*

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

The Largest, Spicest, and only

REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

by over 200 responsible advertisers in this month's issue of the *Agents' Herald.* Grand fourth inducing circulars, terms, and a beautiful 10x14 engraving of the *Smithograph,* sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's *Agents' Herald,* all for 10 cents. Yearly Subscription, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste,

A CROWD OF BOYS.

WE live in a bit of a cottage,
With rooms neither many nor wide;
Yet we're rich in possessions—at table
Our children count three on a side,
There are brown eyes and blue eyes and hazel,
And with various gifts they're endowed;
But the school boys agree that our Bonny
Is the jolliest boy in the crowd.

My neighbor, who has only daughters,
Came in with her sewing one day,
And while we were pleasantly chatting,
The children came in from their play.
She paused in the midst of a story,
Unused to hear voices so loud,
But smilingly added: Your "Benny
Is the noisest boy in the crowd!"

Their grandpa drops in of a morning,
And is often invited to stop,
To tell them some story or other,
Or mend up a wagon or top.
He is always amused at their sayings,
And seems of them all to be proud;
But he says, *sotto voce*, that Benny
Is the smartest of all in the crowd.

And grandma, who dwells in the quiet,
Unmoved by earth's clamor and noise,
Comes in with her sweet, placid manners,
For an afternoon's talk with the boys.
She sets them at peace, if a quarrel
Breaks over their joys like a cloud,
She is fond of them all; but thinks Benny
Is the prettiest one in the crowd.

Aunt Jane, from her stately old mansion,
O'ershadowed by poplar and elm,
Came down to the city last winter,
To visit my turbulent realm.
"I am glad," she assured me, at parting.
"Such blessings to you are allowed;
But keep a tight reign on that Benny,
He's the sauciest boy in the crowd!

Ah! me! what a mixed reputation
For any one boy to possess!
As the others have talents unnumbered,
We're a Babel, I frankly confess.
A philosopher, asked to appraise them,
At the task would be puzzled and cowed.
Though at dinner might reason that Benny
Is the hungriest boy in the crowd.

At night, when they all have been settled
In crib and in cradle and bed,
I go on a tour of inspection
And pillow each slumbering head;
And, while I commend them to heaven,
With spirit in reverence bowed,
I am sure I can never determine
The dearest or best in the crowd.

FRANCIS E. POPE, *in Independent*.

[*For Forest and Stream and Rod and Gun.*

PRACTICAL HINTS ON TROUT FISHING IN THE RANGELEY LAKES.

HOW many fishers with an angle first learned of the Androscogin Lakes through the magazine articles which appeared early in the year 1877, and as a consequence found themselves, during the following summer beside the limpid waters of Rangeley, Mooselucmaguntic, and Cupsuptic, I know not, but that there were four at least, I, for one, can vouch. Rangeley came to us like an inspiration. We harkened to the tales of its wonders with astonishment, tinged with incredulity. But when at the shop of a Philadelphia taxidermist we *saw* a trout which had left its Rangeley home but a few days before, and which must have weighed at least eight pounds when caught, our skepticism disappeared in growing wonderment. We looked upon the stuffed trout as the grandees of Spain gazed upon the Indians marching in the train of Columbus. It gave us a realistic vision of Angler's Paradise; it was the bunch of grapes from the promised land. He who had experienced the inexpressible sensation of landing a pound trout on the gravelly banks of Tolbhanna, Loyalsock, or Sinnemahoning, transported himself in fancy to the Rangeley region, and multiplied these delights by ten. Ordinary tackle, whose compeers had done faithful service in days gone by, was discarded with a sneer, and stouter materials took its place. The hearts of dealers were made glad by a lavish purchase of heavier lines, doubled and twisted leaders, larger reels, and mammoth creels. Yet, arrived at the lakes, we found ourselves encumbered with much that was useless, and, alas! without many items that were essential to success. And while it is true that the Rangeley Lakes hold out possibly greater attractions to the angler than can be found in any other quarter of the country, while a skillful hand will in all likelihood be rewarded with a greater number of pounds of fish than he ever took in other waters, and while the sport of capturing them is unquestionably fine, yet it is a fact that the chrystal waters of these same lakes, in the month of June, 1877, reflected the faces and forms of four disappointed anglers. Now, why was this? Partially because deprived of some of the conveniences of tackle, but mainly because they had expected one thing and got another. The fact that the thing received was quite as good as that which they had gone in quest of, was of no avail. The heart had been set on one particular kind of sport, and nothing of a different kind could take its place, or prove a salve to wounded anticipations. If Jones orders mutton chops at the eating house, and the waiter brings him steak, he feels personally injured, and berates the waiter, and warns the proprietor that such treatment will result in the transfer of his patronage to a rival. If he eats the steak at all he does it mechanically, without relish or zest. Let the waiter beware how he stands behind Jones and extols the merits of the dish he has served, its tenderness, its flavor, its unparalleled cookery, all that is but an aggravation of the trouble. As Jones walked up from his office he had settled his mind on chops, and that he did not get them is the one thing impressed on his mind to the absolute exclusion of all else. Now, if our four disciples of the gentle art could find themselves once more beneath the hospitable shelter of Camp Kenebago, their former experiences would teach them better what to expect, and how to obtain it, resulting in the elimination of their disappointments and the vast increase of the pleasures of Rangeley angling. Can a portion at least of that experience be imparted to others by the pen? Can the tourist angler, who turns his steps northward be taught in advance to check too ardent anticipation, and therefore to realize more perfectly the pleasures this region holds out to him with bountiful hand? To accomplish somewhat of this is the hope of the writer, for every true hearted follower of Isaak Walton joys in the success of a brother of the angle.

Now, one thing must be impressed on the mind of a frequenter of the mountain streams of Pennsylvania and New York; do not expect merely an exaggerated form of your favorite style of fishing; you wont get it. The streams thereabout do contain trout, even in the summer months, but though more plentiful, they are hardly larger than the product of streams further south, and perhaps not so gamy. Do not, therefore, go to Rangeley in the summer months to fish the streams; you will find waters more accesible which will furnish you with sport equally good. The natives to be sure vouchsafed the information that in September the large trout ascended the streams, and were captured with the fly in the pools and riffles, but in the summer months they certainly only yielded the smallest fish, with chub in abundance. To capture the six and ten pounders you must have a guide, a boat, and infinite patience. Our experience was gleaned about the middle of the month of June, and the surface water of the lakes was already thoroughly warmed, and through it the large trout would not rise to sieze the most tempting fly cast by the most skillful hand. A few small trout were the rewards of hours of casting. But here again rumor stepped in with the information that large trout were to be captured with the fly on the lakes during some indefinite periods before and after the time of our sojourn in the region. An examination of the camp records, however, showed the most successful anglers to be inveterate bait-fishermen, who rarely used the fly at all. Follow their example if you seek for like results, and fish in some selected spot from an anchored boat, or troll along the most promising shores, with a bait of minnow or worm. The latter is the least desirable, capturing more chub than trout. But the tackle! Well, take your fly-rod with you, you'll want to try it any way. Supply your fly-book with larger and more gaudily colored flies than you have perhaps ordinarily used, tied on about a No. 6 hook (that is a hook measuring about fifteen sixteenths of an inch from the shank to the extremity of the bend). An addition of a few of the most successful salmon flies, reduced to the same size, may not come amiss. Your greatest success, however, as before implied, will, in all probability, be achieved with the minnow. It is essential, therefore, that you should have with you a rod suitable for bait fishing and trolling; long—fifteen feet will do—stiff, powerful. Your lines, water proof silk, letter G, is stout enough; your leaders, what you ordinarily use, for remember the fish you have struck, though large and strong, is in big waters. There is no need for checking his rushes suddenly, for there are no falls for him to dash over, and no roots or bush in which he can entangle your line. Yet let the line be of good length, fifty yards may at times be useful, though seldom will you need more than twenty-five. The truth is, let it be written boldly, the Rangeley trout is *logy*. He is broad and fat, beyond comparison with his cousins of other waters. The lakes are full, swarming with minnows, and his troutship is at all times gorged with food. When a twelve inch trout is captured, if hit sharply on the head three or four minnows will often pop out of his mouth. When struck, he ordinarily comes like a lamb towards you as you reel in; not, indeed, until he has caught sight of the angler or the boat does he seem to realize his danger or make any effort to escape. Though you may have been trolling with twenty-five yards of line out behind the boat, yet you will be able to recover many yards before his rushes begin, and rarely will he capture more than the length of line first allowed him. Your leaders should be of good round single gut; neither double or twisted leaders are of any use. You can capture the largest trout in the lakes, with careful handling, on a single strand of gut. Wherever you may expect to fish, be careful in choosing your gut. Select only such as is perfectly round. Try it by turning it between your forefinger and thumb; if it does not turn freely reject it. A first-class article of gut when tried by the teeth is hard like wire. It should be stiff and elastic, and, before staining, colorless and transparent, free from unravelled fibers, knotted roughness, or flashing lights when seen in a slanting direction. Your reel should be the ordinary click, not a multiplier, and, if you are buying new, large enough to hold sixty or seventy yards of G line. In trolling everything depends on the proper spinning of the bait, and your lines should be, therefore, rigged with care. Fasten to the line a small box swivel, and to the other end of the swivel a section of gut four or five feet long. At the lower end of this leader fasten a swivel sinker, and to the sinker again another leader eighteen inches long. To this fasten the snalled hook, and you may, if you choose, put in between them another box swivel. These swivels should be small, carefully made, and of brass, as being less liable to rust than steel. Examine them carefully when you buy, and still more carefully before rigging your line, rejecting every one that does not work with perfect smoothness, or appears defective in strength in the lightest particular. A drop of lubricating oil in the joints may be advantageously applied when arranging the tackle. The sinkers should be always of the swivel pattern; they cost a trifle more perhaps, but, as before noted, whatever tends to perfect spinning of the bait may be advantageously employed. Have half a dozen sizes with you, some being heavy, for you may at times find it to your advantage to troll in deep water. Select three or four sizes of hooks, say numbers 19, 20, 21, and 22, of the improved trout pattern. Leave behind your trolling spoons and all gangs of hooks, for the laws of Maine do not permit the use of other than natural baits, or allow you to use more than a single hook. Let a clearing ring of brass be among your traps, for your hook is liable to become fast upon some sunken ledge or water soaked log, and the possession of this little convenience will save you not a little time and annoyance, and perhaps more than its price in bottom tackle. You will need a landing net, but not a gaff. Let the ring of the net be sixteen or eighteen inches in diameter, with a handle at least five feet long, which may be jointed for convenience of carriage. The meshes of the net should not be less than an inch and a half, and two inches would probably be better, for thus made it creates less resistance in the water when used, and quick work is often desirable. Your meshes need not be small with the idea of using it for a bait net, as your guide will supply you with bait, and procure the apparatus necessary, both for catching and preserving the minnows. You may safely leave in the shops the drags, floats, and disgorgers. The latter, Mr. Roosevelt dryly observes, "is of about as much use to the angler as a jack-plane." It is always the part of prudence, however, to add to your store wax and silk for repairing damages to rod or tackle. Your creel need not be transported to the lakes unless you expect to fish the streams. The guides carry with them, floating in the wake of the boat, a trap or cage, in which the trout are kept alive until you return to camp. A little vial of lubricating oil is often useful to coax up a refractory reel, or for keeping your snoods in good order. And another kind of oil is essential, that which is designed for the benefit of the black fly. I do not know what is *best*. There are dozens of varieties recommended by sportsmen and dealers, and, as far as my experience goes, they are all to about the same extent useful. You will do well to supplement your oil with a fine gauze head net. It will occupy but little room, and may be worn at night with *comparative* comfort, as a protection against mosquitos. Some use a close fitting havalock during the day, the cape fastened underneath the coat, and leaving exposed only the eyes, nose, and mouth. It will have to be made to fit with great care to be of much service, for the flies will crawl through any possible opening. It will, however, be eminently useful from another point of view, as a protection from the burning rays of the sun reflected on the waters of the lake. To those who are in the least liable to sunburn it will be the part of wisdom for them to protect both face and hands from the sun. Muslin gloves, with gauntlets, with no opening at the

wrist, and made to tie over the cuff of the shirt, will be found a cool and an agreeable covering. The attacks of the flies alone are bad enough, but if supplemented with sun blisters the sufferer may as well give up at once, and go home and be nursed. Again, he who carefully consults his personal comfort may find advantage in bundling up with his traps a rubber coat, and also, if he chooses to run the risk of being considered a dillettante angler, an air cushion. The propriety of this last addition to his outfit will, perhaps, be appreciated after a full day or two of restlessly trying to find the softest position at the stern of the boat. In case of sudden squalls of rain, which are liable to come upon one at most any hour, these articles will aid the sportsman in keeping himself dry and comfortable. Without them, to adopt the words of Dame Juliana Berner, "Yet soryly dooth he fare. At morn-tyde he is wette shode unto his taylle."

If you have come to the lake after a big fish or two, and must have them, instruct your guide to bait a point for you. He will procure a quantity of chub, cut them into bits, and deposit them in some promising locality, and marking the spot with a buoy, will leave them over night, for the attraction of the fish. This may be continued for several days, and if you drop your baited hook among them you are reasonably sure of punishing one or two of the mammoth gormandizers. All this has a pot hunter look about it to be sure, but as the darkey fisherman said, "if you go a cattin', go a cattin'."

The reader of the aforementioned magazine articles is impressed with the belief that he has only to once get to the lakes and cast his fly to daw out

2 trout of 7 lbs. each,
7 " 7½ " "
1 " 7¾ " "
¼ " 7⅞ " " etc., etc.,

according to the insinuating manner of the scores there given, but let him cut off the big ends of these lists, and make up his mind in advance to be satisfied with a few fair fish, and one or two big ones, and he will have a much better chance of leaving the lakes satisfied, than if he let his ambition soar unchecked. In our party the most enthusiastic, persevering, and therefore the most successful member, made the following score in five days:

June 15, 4 trout of ¾, 1¼, and 1½ pounds.
" 16, 1 " 2¾ pounds.
" 17, 5 " ¾, ¾, 2, 2¼, and 6 pounds.
" 18, 1 " 1 pound.
" 19, 3 " ¾, 1½, and 2 pounds.
" 20, 7 " ¾, ¾, ¾, 1¼, 1½, 1½, and 3¾ pounds.

This does not include a number of fish weighing less than three-quarters of a pound. Now, you enthusiast, bring your hopes down to the level of this score, and with proper tackle, possessing your soul in patience, you may not be disappointed. But take heed of this, in your anxiety for slaughter hasten not unduly your journey. Remember that *all* the pleasure of your vacation is not at the other end of the stage line, but may be found, do you but seek, at every step of your way thither. Enjoy to the uttermost your freedom from care, and the troubles of money-getting, as you journey. If a part of your way lies across the sea, receive with a grateful heart the life-giving breezes. Let the beauties of hill and dale, of wavy tree, and glistening water, upon which you may feast your eyes as you ride beside the sandy river, inspire within you a calm contentment, a quiet, peaceful joy, for, mayhap, the vision of nature's beauty will prove to you in after days the source of greater pleasure than the hooking of the six-pound trout in the waters of the Rangeley Lakes.

A. MORCE.

BURT'S LAKE.

Editor Forest and Stream:—

The Solid Comfort Fishing Club of Mercer County, Pa., started for the Lake on the 7th inst., via A. & G. R. R. to Mansfield; thence to Fort Wayne, by P. Ft. W. & C. R. R.; thence to Petoskey, by Grand Rapids & Indiana R. R. Thence over Crooked Railway, a small wooden Railroad, six miles long, just completed, to a boat landing on Crooked Lake called Conway, where Capt. Andrew's tug and scow were chartered for our journey across Crooked Lake, through Crooked River and to Indian Point on this Lake, where we pitched our tents and called "Camp Comfort." That it is worthy of the name, none can doubt; for it is as beautiful a place to camp as can be found anywhere. We are about twenty feet above the level of the lake, in a birch grove which extends many miles north of us. Burt's Lake lies to the east, south, and west of us; about a mile north of us is an Indian village where the Chippewas and Ottawas reside. They are peaceable; can talk English, furnish us with milk, etc., and are willing to row or do anything they are requested for small compensation. The beach is fine for bathing, and the water very agreeable.

To the right of our camp we have two springs, one of pure cold water, principally used for keeping butter and beer cool in, the other rises in a bed of white pebbles-stones with almost icy coldness and is impregnated with minerals; is clear, of excellent taste, and healthy.

Boats running between Petoskey to Cheboygan land at Camp Comfort daily, upon which we get our mail, provisions, etc.

There are nineteen persons in our camp; but few of us are experienced fishermen. Fifteen of our party believe in the motto, "Live and let live," the others, however, have succeeded in catching more fish than supplies our camp. They have caught large quantities of bass weighing four and five pounds, pickerel, six and nine pounds, perch and sun-fish larger than we ever saw before. Pigeon River was visited for grayling with excellent success, some few muskalonga were caught at Cheboygan. Trout were caught without number on an average weighing about one pound.

We were furnished tickets from Greenville, Pa. to Petoskey, Mich. and return for $15, a distance of over six hundred miles; and were furnished with a camp car from Fort Wayne to Petoskey by G. R. & I. R. R. We found the officials and employes along the several lines courteous and accommodating gentlemen; so much so, that we regret our inability to repay them for their many kindnesses. From General passenger Agt. A. B. Lees and Capt. Fred. Heath on G. R. & I. R. R. we received kind attention and valuable information, as also at the hands of Mr. Matheria, Supt. of Crooked Railroad.

From the beginning we have had a jolly time. We have found everything even better than it was represented to us, and to all lovers of a few weeks of camp life and of fishing, we would say: Hie away to the lakes of Michigan, for it is an excellent healthy sport that all can enjoy at a trifling expense.

A SOLID COMFORTER.

Fish Culture.

NEBRASKA FISH COMMISSION.—The following gentlemen were appointed June first ult. as the State Fish Commission of Nebraska: W. L. May, President; R. R. Livingston, Plattsmouth; H. S. Kaley, Red Cloud. The younger States and the Territories display comendable enterprise in fish cultural projects. They do not always wait until the streams and lakes have been wholly depleted of food fish before beginning a work which the older States have found so important. We recommend the carp and its congeners to our Nebraska friends, as very desirable food fish. We cannot all have salmon and trout in our waters. The temperature, natural food, character of stream, and other conditions in many sections of the country are more favorable for some of those species, which, while less gamy, are just as valuable in an economic sense. Carp culture in this country, we believe, has been attended with most satisfactory results. As the merits of the fish become more widely known, demand for its breeding will be large. The salmon has such a prestige that when its restoration to a stream is assured the fact is heralded with such *eclat* that fish culturists are inclined to slight less famous or fame-attending species, and so put forth their efforts to salmon culture, when work in other directions would repay them four-fold.

TROUT IN THE GODBOUL.—During the month of June the mouth of the river Godbout, (a river some 200 miles or more below Quebec, of which a correspondent has written at length,) swarms with large sea-trout. Indeed, the whole river is more or less occupied with these fish, which, so much esteemed elsewhere, are here regarded as so great a nuisance that the owner of the river is endeavoring to wipe them out. It is believed that they destroy the salmon spawn; and as salmon are the especial care and consideration, the trout occupy secondary place. Indeed, the salmon anglers can hardly be tempted to fish for them at all, no matter with tackle however light. We learn that the river guardian in obedience to orders, recently took out some six hundred trout in hauls, many of them scaling up to five and six pounds in weight. He is also nettling out many of the male salmon which are out of all natural proportion to the females, and interfere materially with their sporting business.

Natural History.

ARE THE ROBINS TOPERS?

HOUSTON, TEXAS, May 13, 1879.

Editor Forest and Stream:—

St. Clair's article in FOREST AND STREAM of the 8th, on the habits of several of our common birds, interested me very much—as indeed everything does that comes from his pen. But he states some things that I can't accede to. Thus, he states that the robin red-breast gets drunk on China berries—so drunk in fact that he falls from the trees in a state of beastly intoxication and becomes an easy prey to the little niggers who, knowing his habits, are on the watch-out for him. He states that one drink does not satisfy robin at all, but that he will get drunk every day as long as the China berries last. In other words, he states robin red-breast to be a confirmed drunkard who will never miss an opportunity to get his "skin full." Well, I have heard this of poor robin all my life and I never saw one drunk yet. Has St. Clair ever seen one drunk? If he will say so point-blank I will believe it, but don't think he can be screwed up to that sticking point.

Last winter, while hunting in the "Big Thicket," east of Houston, I came to a row of China trees on the edge of an abandoned field, which trees were loaded with ripe berries and robins by scores and, hundreds were feeding upon them. Feeling tired, I took a rest under a wild peach, not more than ten yards from the China trees, and kept my eyes upon the robins to see if any would get drunk. I sat there two mortal hours and watched those robins closely, but not one of them got drunk. Or if they did get drunk they had a most successful way of hiding it. Now and then a number of them, having filled their crops with berries, would come to the ground; but instead of keeling over in a state of drunkeness, they would skip along over the ground in a most lively manner, hunting worms. Had they been drunk I am sure they would not have had such lively locomotion. I departed from that place feeling sure that robin had been greatly slandered.

And that is not the only time that I watched robin to solve the problem of his imputed addiction to drunkeness. In the home of my childhood in the "Old North State," there was a large China tree growing against the window of the bed-room in which I slept. I could sit in the window and pluck the berries. The robins came there daily to feed. Old "Uncle Cæsar," the negro gardener, told me that if I would watch those robins I would see them all get drunk and fall to the ground so I could catch them. "Now," said he, "maybe they won't fall right under the China tree, but you keep your eyes on 'em and follow 'em; they'll be sure to fall before they go far." Well, I watched and followed those robins a whole blessed day, but I did not catch a single one. Old Cæsar laughed and told me to try them the next day; that the robins, seeing me watching them, took the precaution not to eat enough to make them drunk, but next day they would be very hungry and would surely get very drunk. I tried them on next day with no better luck and concluded that old Uncle Cæsar was a fraud.

Now, St. Clair, I believe, is a Virginian by raising, and I dare say he got his idea about the robin's drunkeness from the negroes in his childhood, just as I got mine from old Uncle Cæsar. The negroes used to tell me that every Friday all the jay-birds went to hell to bear letters to the Devil, and that on Fridays none could be seen except early in the morning and late in the evening. I firmly believed this and hated the jay with prodigious hatred until I grew old enough to think and observe for myself. Truly, the negroes had many strange notions, and do have to this day. They infiltrated the minds of the southern youth with many superstitious doctrines, which we have found it rather hard to grow out of.

St. Clair says the red-headed woodpecker does not nest in the South. But they do here. Only a few days ago I found one's nest. They are very numerous with us in the spring and early summer, but disappear almost entirely later on. In winter I do not recollect ever seeing one in Texas. Where do these birds hibernate anyhow? Their gay plumage seems to bespeak them of the tropics.

St. Clair states the crow to be a great thief, whose chief desert is to be killed as a nuisance. We do not so regard him here. On the contrary we regard him as a benefactor to the farmer, and our Legislature has lately thrown around him the ægis of its protection. It has made him a sacred bird whom no man may shoot. This on the ground that he is supposed to be a great annihilator of bugs and worms. Our Solons would not have erected him into this sacredness if there was not strong testimony that he does infinitely more good than harm.

N. A. T.

WHEN DEER FEED.

Editor Forest and Stream:—

There was one matter under discussion in the September and October numbers of your paper that interested me very much. That was as to whether deer were or were not influenced by the moon in feeding. Now, there are many hunters, including myself, who are firm believers on the affirmative side of the question, although very few of us were ever in Florida or know anything about the opinions of hunters there upon the subject.

Several years ago I found myself in San Diego Co., Cal., with but little money and nothing to do; so I spent the winter hunting for the market there, the principal game on the land being deer and quail. The country for many miles around the bay is destitute of timber but covered with a low brush that is seldom found over three feet high. Deer could therefore often be seen feeding at the distance of half a mile or more. I did only still hunting and I became so well convinced there that the deer fed most when the moon was above the horizon that I hunted them only at such times, and devoted the remainder to quail shooting. On one occasion I watched two large bucks when, according to the almanac, the moon would set about four o'clock in the afternoon. It was about one o'clock, P.M., when I first saw them and they fed during the hottest part of the afternoon, lying down both at the same time within half an hour of the setting of the moon.

Of course this one instance establishes nothing. I mention it because I watched them with the object under discussion in view, but I found by experience that I could seldom get sight of a deer there when the moon was down unless I started him from his couch.

In your issue of October 24th, "Ned Buntline" expresses his opinion that deer feed "when they are hungry." Very sensible; but in the same article he gives the following as evidence that they pay no attention to the moon. He says: "How many of us, who used to be up early for trout along the lakes and streams in the Adriondacks, have startled them at dawn as our boat washed along the shores? How often at sunset have we watched them cropping the tender grass on the glades near by our camp?" Now, with all due respect for "Ned's" forest lore, I cannot see that this touches the point in question. He says nothing as to where the moon was at these times. It certainly was just as likely to have been up as down, and it is very possible that he knew nothing at all of its whereabouts upon the occasions he writes about.

FORKED DEER.

☞ The author of the Grand Menan Notes, published in our last issue, and once read before the Linnean Society of this city, writes that the paper was never intended for publication, and in its present form does him great injustice. Owing to the absence of our Natural History editor we are unable now to ascertain by whom the paper was sent to us for publication; but we need not explain that we have acted in good faith in using it, and heartily regret any wrong which may have been done to the author by another party.

THE MIGRATORY QUAIL.—We are beginning to receive reports from the migratory quail which were received early in June through Mr. H. P. Tobey, of Boston, and planted out. Personally we feel much indebted to the correspondents who have sent us these notes, and who may not be aware of the eager avidity with which each line will be scanned by hundreds of sportsmen. We observe that these birds build their nests, so far as known, in meadows, selecting localities not far from farm houses. The scythe and mowing machine are, therefore, their most fatal enemies, and we know not by what instinct the honest farmer may be able to avoid cutting them up. We hope other friends will have more to report:—

ROCKLAND, ME., *July* 25.

Editor Forest and Stream:—

At your suggestion I kept eight quail and put them into a pen, hoping they would lay and batch out some chicks, but though there was plenty of love-making they did not lay, and I let them go. When I received the quail I had no way of distinguishing the sexes, and after I had learned to tell the males from the females, I found that I

had five females and three males. The males have the whole breast fair, something like the breast of the woodcock, with the dark, almost black markings in some. At the throat the females have the same color, with darker specks over the breast, which cease at the throat, leaving the throat fair, with no marks that are noticeable.

About the 21st of this month I learned that nests had been found near where I released the quail. I visited the place, and on inquiring of the farmer, we were shown the nests. The first one was in a field where the hay had been removed. The nest contained seven eggs, but I am sorry to say that owing to the hen being disturbed, and deprived of all cover, she had left the nest, and the eggs were cold, and the upper sides exposed to the sun were bleached out whiter than the rest. The next two nests on the adjoining farm were some three rods apart, on pretty high land, and were also in a mowing field. Each contained fifteen eggs, and presented a very pretty sight, but I am very sorry to say that in mowing the grass one of the quail was injured, so that she also left her nest. On breaking one of the eggs we found that it contained a full grown chick, which would have hatched in a day or two longer. The other one was discovered in season to place a bunch of grass around it, and I think the eggs have hatched by this time, or will soon hatch. The next one was in a field much like the others, all near farm houses. The last one contained eleven eggs, and although the grass had been removed the hen stuck to the nest. These are all the nests I have heard from, but think there are many more in the grain fields and pastures, and I think the eggs will be hatched out before the grass is harvested. If any come back next spring they will undoubtedly build and hatch out the chicks before haying. All of the farmers where we let the quail go have taken great interest in them, and would have left a spot of grass standing to conceal the nest if it had been found in season. Some of the quail have moved two or three miles from where they were let out. On the whole, I think things look encouraging, but it all depends upon their coming back in the spring. JAMES WIGHT.

London, Ont., Aug. 4—Editor Forest and Stream:—Enclosed find a clipping from the London *Advertizer* of to-day, about the migratory quail. I know you take a great interest in this subject, so I send it. I will endeavor to get more information.

"The migratory quail which were imported and released at Strathroy last spring, appear from the accounts we have heard, to have become acclimatized and are rearing their progeny in a manner that will soon render the supply of this game bird abundant. The birds subsist largely upon grasshoppers and insects, and are believed to be identical with the variety of quail mentioned in Scripture. Recently a nest with fifteen eggs was found in a meadow, but the passage over it of a mower and hay rake caused the parent bird to forsake it." J. D. NIVEN.

A FLORIDA MANATEE.—A huge sea cow has been received at New York, *en route* for Europe. Concerning its capture and habits a correspondents writes:

TITUSVILLE, FLA., *July* 26.

Editor Forest and Stream:—

A live manatee or sea cow (*Trichechus manatus*) was shipped from here to New York on the 18th inst. It was captured in St. Lucie River, one hundred and ten miles south of this place, by Messrs. August Park and John Kelly. It was estimated to weigh 1,000 pounds. The manatee is an amphibious animal, distantly allied to the *phocus* or seals, but differing in very many points. Unlike the *Phocas*, which feeds on fish, the manatee live off aquatic grasses and lily pads. They are very fond of the turtle grass that grows abundantly in the shallows of Indian River. They also eat parsely when they can get it. The head of the manatee resembles that of a large calf, especially about the mouth. The eyes, however, are small. In the place of fore-legs they have two flippers, resembling the similar organs of locomotion possessed by the *Cetatians*, the whales, and porpoises. The tail is more like that of a *Cetatian* than a *Phoca*. It is a powerful instrument, lying horizontally in the water, and being semi-circular in its terminal outlines. The body is covered with a very few short scattered hairs, averaging perhaps an inch apart. The skin is pachydermatous, fully an inch thick. The ribs are ivory. The manatee is only found in tropical countries, Florida being the only place in the United States where it occurs. They are caught in immense seines, made of rope. Sometimes one is shot when coming to the surface to blow, or when feeding in shoal water. They are often seen in the ocean near the mouths of the Indian River and Jupiter Inlets. They resort to the St. Lucie River (fresh water) to breed. They are found also on the gulf coast of the State. They are an inert, sluggish mass of flesh, easily handled in the water, but very awkward to manage on land. They are not vicious or dangerous at all. A person can get into the water with one, lift up his head or take other liberties, but must keep out of the way of his powerful tail.

AL. I. GATOR.

FOSTER HENS FOR QUAIL'S NESTS:—*Cleveland, August* 3, 1879.—Like "Miles," your correspondent who found an old hen and a quail occupying the same nest I also found several amalgamations of this kind, when a boy, in search of eggs. The most remarkable of the lot was one near the old barn, by the side of a rail fence. It contained five eggs of the quail before the old hen made her first deposit. This mutual deposit of eggs continued daily until the quail laid fourteen and the old hen ten. The hen dropping the last egg, making, big and little, twenty-four eggs, when the nest, for some reason, was abandoned, and fearing putrefaction or destruction to the deposit by skunks, I carried the eggs home for the family table.

Dr. E. STERLING.

DEFENDING THEIR YOUNG—*St. Leonard, Province of Quebec, July* 19, 1879.—Yesterday I heard a great commotion amongst the birds in the trees round my house, and upon going near to ascertain the cause of the row, saw a squirrel springing through the branches of a small pine tree, closely pursued by a couple of small gray birds. The birds attacked the squirrel bravely, uttering shrill cries, and seemed to be trying to take from the squirrel something he was carrying. Upon my approach the birds fled, and I then saw that the squirrel was engaged in eating a young bird, that no doubt he had just dragged from the nest. As the tree was a small one I managed to make him drop his prey, though he tried hard to carry it away. The young bird was about half fledged, and its breast and neck were much torn and eaten. The squirrel sat near by chattering angrily, and I noticed that his throat was covered with blood. The squirrel was one of the small red sort, the only kind we see in this part of the country. Is this an unusual case? W. HAMMERSLY.

SINGING MICE.

WASHINGTON D. C. JULY 15, 1879.

Editor Forest and Stream:—

Sir:—Several years ago I read in your paper a few letters and extracts in regard to singing mice. Since then I have been on the lookout for one. At 10 o'clock P. M., June 25, in my room, I heard a sound which seemed to proceed from under some trunks in the corner, and resembled the faint *chuck! chuck! chuck!* of a chipmunk in its hole. This incident aroused my curiosity and set me to musing. After hearing this sound, I was on the alert and listened; For several nights I heard this peculiar note but nothing more, concluded it must come from some insect and thought no more of it. On the 30th of June, I was startled upon hearing the same noise louder than before, and at the same moment a rustling of paper in the trunk. This thing drew my attention, whatever it might be, as it worked its way out of the trunk, and passed rapidly over the bureau, uttering all the time the same chucking note. The bureau is near the window, and I was on the other side of the room. The sound ceased when it reached the bureau, and I turned over to go to sleep. A few moments later I heard the sweetest, softest *trill* and warble, and thought of the canaries outside of the window, but the warble continuing, I was brought to understand that it was in my room, and under the bureau. Then thinking of the chucking note of a few moments previous, I pronounced it a singing mouse. It continued singing several moments, then passed back under the trunk and sang no more.

I did not hear it again until the third of July, when I called my mother in to hear, and she was delighted. So far I had not seen it, and was not absolutely certain, although confident it was a mouse, and made up my mind to catch it if possible.

On the fourth I set a "Novelty" trap, went to bed and listened with eager attention. Soon it began singing and came out of its hiding place over the bureau where the trap was set. I heard it enter the trap and begin to nibble the cheese, but strange to say, the act of nibbling did not interfere with the song, for it was constant. It nibbled on and warbled, until I thought that the trap was a failure, more than once thinking of getting up to smash it. At last I heard the little tin door slide down with a *clink*, and the singer was captured. I jumped up and lighted the gas to examine this thing which had excited me so. It looked to be nothing more than an unusually large house mouse. (The size will be explained hereafter.) Seeing no monstrous form or gaudy color, which my excited mind led me to believe would be the case, I concluded that the charm of this little creature was in its song. So placing a large book on the trap to make secure, I retreated to my couch for the purpose of listening. I lay some time listening to its frantic efforts to release itself, and this spirit-like music which gradually toled me into a land of dreams. Next day I started after a large cage before looking at the mouse, and did not get back for several hours. Returning I peeped in the trap and found there nine mice. Alack-a-day for that disconsolate family—the "Novelty" trap had done the business.

There are two apartments in this infernal machine. The first mouse caught, by passing on to a platform which is attached to a lever, is precipitated into the second apartment, the trap reset and comunication shut off. This is the predicament in which I found this mother and her young. The young were born in the first apartment, and the mother, probably in her anxiety to find a bed, passed into the second and was shut off. During this calamity and all this woe, I had slept like a log. The naked little things were all alive but one, and thinking I had struck a bonanza, I hastened the mother into the presence of this nude assembly in a new and larger apartment with a turning gymnasium attached. She cared for them tenderly, but they pined and died one by one, and were devoured as they expired. I don't think she committed infanticide once, but the fact remains, I have in my possession a caged singing cannibal. I have handed the mouse to Dr. Couesprobably we will hear from him ere long.

GAINES R. DONOHO.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING AUG. 9, 1879.—1 Salle's Amazon (*Chrysotes Sallæi*) *Hab.* St. Domingo, presented by Mrs. M'Callan, Brooklyn; 2 Turkey Buzzards (*Cathartes aura*) captured at Richmond, Va., presented by Masters Joseph A. and Charles Johnson; 2 Quails (*Ortyx virginianus*) presented by Mr. Isaac J. Pache; 2 Lions (*Felis leo*); 1 Mexican Deer (*Cervus mexicana*); 1 East India Goat (*Capra hircus*) all born in the Menagerie; 1 Brown Pelican (*Pelecanus fuscus*) purchased.

W. CONKLIN.

—IT has been considered of sufficient importance to telegraph to the daily papers the fact that a bantam hen killed a rat which had attacked her brood of chickens at Port Jervis. She gave him one well-aimed peck with her bill which went straight to his heart.

SOUTH CHICAGO, JULY 10, 1879.—C. Dittmar, Esq.:—I write to inform you that I got five cans of powder from Eaton and used the same, shooting snipe, and had good success also on duck. I convinced some of the shooters here that Dittmar's powder will do as good execution as the black, with less recoil and no smoke. I use five drachms, the same as in black powder. Respectfully yours,

ABE. KLEINMAN.

N. B.—Mr. Vancott and myself got arguing about the powder, he contended that the black was the best, and he could kill more game with black powder than any man could with Dittmar's. I made him a small wager that I could beat him with Dittmar's powder. I will give you the score of one day's shoot: Vancott, 12 snipe, 9 ducks. A. K., 50 snipe, 22 ducks. We shot snipe together on the same ground. I killed snipe that he would not shoot at, as they were too far off. I think you will hear from him through the papers on the result of our day's shoot.

A. K.

—The Merchants' and Exchange Club of Augusta, and a team of nine from the Charleston Sporting Club, had a friendly contest on the 23d ult., which resulted in a victory for the home club by 4 points. Charleston making 225, and Augusta 229, out of a possible score of 270.

The Kennel.

ST. LOUIS DOG SHOW.—Mr. Chas. Lincoln writes us that the preparations for this show are progressing rapidly, and that the prize lists are now in the printer's hands, and will be ready for distribution in a few days. They can be had by addressing him, care of Brown, Hilder & Co., 604 North Fourth Street, St. Louis. The St. Louis Kennel Club dogs will not compete for the prizes.

A NEW KENNEL.—Mr. John Johnson, of North Manchester, Conn., has lately purchased some very handsome and well-bred setters, with a view to establishing a kennel in that place. Three of the animals were bred by the veteran Ethan Allin, of Pomfret Centre, which is sufficient guarantee of their quality. They include the dog Ethan," by Boss, out of Cosey; bitch Pansey, by Cush, out of Fan, and bitch Prink, by Mort, out of Cosey There is also trouble, bred by G. F. Rich, and by Ethan, out of Pansey, whose pedigree on both sides is traced for many generations through the Allin strains. With these dogs Mr. Johnson ought to breed some very fine stock.

A BIG DOG CORPORATION.—We find in the advertising columns of the English sporting papers notices of a new club which is being formed in that country with the title of "The Sporting Dog and Field Trial Club" (Limited). The projector, and also the manager and secretary, is Mr. T. H. Scott, a gentleman who will be remembered as having brought some dogs to this country last year, and who was one of the judges at the first show of the Massachusetts Kennel Club. The capital of the company is to be £6,000, divided into £5 shares. Holders of shares are to have certain privileges, proportionate to the number of shares they hold, such as shooting over the company's moor, and over its dogs; also obtaining the services of the company's servants at dog shows. The idea is not a bad one, and if properly worked out may be made very attractive.

IMPORTANT SALE OF DOGS.—A very important sale of dogs was held at Aldridge's, London, on July 19. Twenty-two pointers were sent from the kennels of Mr. G. Moore, a well-known breeder, and a number of celebrated animals of the Drake family from Mr. Lloyd-Price's kennels. Mr. Moore's dogs must have been very fine, two of them being bid in when *bona-fide* bids of 120 and 105 guineas had been made. Mr. Price sold Mind and Dandy Drake, two well-known field-trial performers, for sixty-one and sixty guineas, respectively. Although some of the dogs realized high prices, the figures brought by some of the setters were ridiculous, many not going beyond a guinea each. The following is a list of the pointers sold and the prices obtained:—

Pointers, the property of Mr. G. Moore.	Gs.
Mike, six years, by Duke—Midge	Mr. Yates 16
Mark, four years, by Duke—the late Rev. J. Holden's Moll	Mr. Arbuthnot 12
March, one and a half years, by Marl—Midge	Mr. Wilmington 27
Move, one year, by Mr. Edge's Brag—Midge	Mr. A. Brown 15
Mac, one and a half years, by Marl—Mop	Mr. A. Brown 21
Mole, one and a half years, by Marl—Mop	Mr. Bourne 10
Mump, ten months, by Mr. Lowe's Y. Bang—the late Rev. J. Holden's Moll	Mr. Leslie 10
Met, ten months, by Mr. Edge's Brag—Mona	Mr. Crimidi 19
Mint, puppy, by Marl—Mite	Mr. Rawlins 3
Mule, pudpy, by Marl—Mite	Lord Waterford 34
Mend II., puppy, by Marl—Mite	Mr. B. Field 6
Mail, three months, by Mr. Price's Wagg—Moss	Mr. B. Field 64
Mock, three months, by Mr. Price's Wagg—Moss	Mr. B. Field 12
Mouse, three months, by Mr. Price's Wagg—Moss	Lord Waterford 13
My, three months, by Mr. Price's Wagg—Maggie	Lord Waterford 22
Pointers, the property of Lieut.-Col. Cornwall Legh.	
Spot and Shot, liv w, by Lord Sefton's Sam—Col. Legh's Bonnie	Mr. Romer 24
Major, eighteen months, by Col. Legh's Bounce—Mite	5
Pointers, the property of Mr. R. F. Lloyd-Price.	
Juno II. (pupped May, 1877), by Don Juan—Juno	Mr. Arbuthnot 20
Grog (pupped Nov., 1875), by Grog—Belle, by Rap	Mr. Townsend 21
The Irrepressible Drake (pupped Feb. 9, 1877), lem w, by Old Drake—Nimble Ninepence	Mr. Bass 25
Mend (1878), liv w, by Mr. Shield's Duke—Mr. Moore's Midge, by Mr. Holden's Romp	Lord Waterford 61
Dandy Drake (pupped Feb. 9, 1877), lemon w, by Old Drake—Nimble Ninepence	Mr. Bass 60
Pointers from Mr. C. C. Cotes, M. P.	
Don, by Shot	Mr. Townsend 25
Patchbitch, by Shot	Mr. Smith 22
Don II., by Shot—Doll	Mr. Wood 16
Sam, by Shot II	Mr. Brown 17
Beppo, sixteen months, by Beppo—Don, by Duck	Mr. Humphries 24
Dick, two years	Mr. Bass 25
Juno, by Shot II	Mr. Brown 10

DISAPPROVED OF.—Perhaps there is something in the following extract from an English contemporary, which, if referring to a custom not yet established among us, yet comes in as a warning. Our system of advertising crack dogs through the medium of the large prices paid, or said to be paid for them, is but little less reprehensible. We question also whether this kind of puffery does not in many instances affect the decisions of judges at dog shows. The following is the extract alluded to:

Unfortunately the practice of awarding prizes to the progeny of certain stud dogs is taking root amongst us. A certain fox-terrier of renown has materially increased his master's banking account by the special prizes given to his stock, and other owners are following the baneful example set. It is not right that our leading shows should be made the direct agents of owners by the adver-

tisement of their dogs, and we sincerely trust that committees will awake to the gravity of the offence, and formally decline to pose as the rivals of the local bill-sticker in his advertising transactions. We understand that a sheep-dog owner was informed by the Kennel Club that they declined to permit his giving a cup to the best dog fathered by a sire he had at stud; why, therefore, do they not protest against similar advertisements emanating from other owners, and thus save themselves from inconsistency and the public from eventual disappointment?

Mr. Chas. S. Keller, of Washington, D. C., claims the name Porte Crayon for his white black and tan setter dog Puppy, by Druid, out of Leader, purchased from C. Z. Wiley, Esq.

—Mr. James R. Tilly's Gordon setter bitches Dream and Whip have been bred to Mr. G. S. Sedgwick's Gordon dog, Jock, Jr.

—Mr. N. Elmore, of Granby, Conn., has bought the fawn, tan and white. English pure beagle Drive, by New Jersey Fly, out of imported Centennial Lucy, winner of first prize at Centennial Show.

MR. HENRY W. LIVINGSTON, of this city, has purchased from Mr. George P. Armstrong the Willoughby pug dog, "Punch," by Nunns' champion "Baron," out of Lady Fanny Fitzwigram's Willoughby bitch. "Punch" was imported by Mr. Armstrong in April last, and was whelped August 19, 1878.

F. S. WOLF'S (Bath, N. Y.) spaniel bitch whelped Friday night, July 25, three gyps and twelve dogs, by Wallace's Sport. All brown and white.

OUR LONDON LETTER.

Editor Forest and Stream:—

Would you very kindly request your astronomers, your star gazers, and those amongst you who are wise in winds and weather, and can see farther through a milestone than a mason, to confine their attention to their own side of the herring pond, and leave us alone. For ever since your prophets have taken to wiring us to look out for squalls we have not had a decent day. To-day is the 10th day of July. Of summer, or even of moderately warm weather, we have as yet had none; and as I write the rain still pours down in torrents, as it did yesterday and every day for the last six weeks: every day, in fact, since it left off snowing. All the opprobrious terms that could be thought of have been hurled at the head of this state of affairs, and ancient dictionaries ransacked for additional words of obloquy. People have taken to cursing and swearing who never said bad words before; thus reputations have been lost, and it is even hinted that the safety of the soul of the oldest inhabitant is, to say the least, only problematical.

Well, sir, the great Alexandra Palace show is past and gone, as no doubt you know by this time. Over twelve hundred specimens were ranged upon the roomy benches, built on purpose for them in the spacious music hall of the palace. The judging, which was not quite finished until the forenoon of the second day, was got through with as much care and particularity on the part of the adjudicators as human beings could exhibit; but a chosen band of angels couldn't please some of our English exhibitors.

The bloodhounds were, as they ever are at our great national shows, quite a grand sight. Brutus, Rollo and Don appeared in the arena to contest for the champion cup. The brows of these champions have been crowned many times and oft with laurel wreaths. Different judges agree to differ as to the merits of each. I know which of the three I should prefer myself, but I shall think twice ere I plunge myself into the midst of the bloodhound war now so bitterly raging among English breeders. The language and vituperation which is permitted to appear in the otherwise useful columns of one or two of the lesser London sporting papers are, to say the least, very intemperate. Such language, indeed, is more suited for Billingsgate than Belgravia. No, I don't go in. *Inter medias tutissimus ibis*; but this doesn't hold good as regards dunghills. One of the principal admirers of Don, the chief I might say of the Cossacks of the Don, is the Rev. G. Hodson; but whatever others think, I haven't a doubt this gentleman really believes Don is the right dog in the right place. One of the oldest breeders of the bloodhound in England is Mr. Nicholls, and in his time he has turned out some of the most wonderful creations that ever existed. Probably the youngest, and certainly this year the luckiest, exhibitor is Mr. Singer, carrying off no less than four firsts, a thing which, says another noted breeder, may never be done again. "We'll see," says Singer. "In the bright lexicon of youth, etc., etc." Other breeders of distinction are Messrs. Brough, Ray, Beaufoy and Morrell, the latter gentleman belonging to a race of people long distinguished for their love of the pure old English bloodhound.

Among the mastiff men, and hovering near the benches of their favorites, the owners of such noble dogs as the Emperor, Beau, the grand brindled Cardinal, Young Lady Love, and the lovely Lurline, etc., will be found. And here, in all probability, you shall also find "t' ould Squire Kingdon," author of the "Lyme Hall Mastiff." His form, action still, though slightly bending under the pressure of years, will certainly be the centre figure of a group of laughing listeners, to whom he lays down the law, and says and tries to prove that there isn't a single mastiff in all that vast assembly. Quite a character is Kingdon, in his old frieze coat and his too scanty breeches, which keep proudly aloof from his purser's shoes; and his very broad-brimmed old felt hat, and the invariable bag hung over his shoulders. I never saw Kingdon otherwise, and I declare to you honestly I believe he sleeps with that ancient bag around him, and if he be sent to his grave without it, he will rise again, and mool around to hunt it up. At one great show a quick-footed wag ran swiftly round the benches telling everybody, "Here comes Kingdon, with a new hat." And sure enough, never did you see so excited a mob rushing to a door to meet a man.

"Hurra!" everyone cried. Bloodhound men ran, and mastiff men ran, and even skye men forgot their animosities for the time being, and rubbed shoulders as they rushed towards the entrance hall; and the very judges left the ring and joined the mob of excited exhibitors. And when the crowd reached their destination, what did they see? Why, t' ould Squire coming along, and looking the picture of placidity, chewing a straw and wearing *the same old hat*.

Past the mastiffs, you came to the benches where stood or lay the princely St. Bernards. And here Gresham rules the greatest sway, and will; but let him look well to his laurels, for Dr. Russell is hard at his heels. The kennels of either of those gentlemen are well worth a visit, and I believe they would make a Yankee visitor welcome.

Here at this Palace Show the pointers, setters and spaniels would have pleased the eye of the most fastidious sportsman that ever handled a gun, and among the rows and rows of fox terriers a stranger would get bewildered. Dachshunde mustered strongly, and were carefully judged by the Rev. G. F. Lovell, a conscientious clergyman. A novice would get a bit mixed among the collies, but here too the judge managed to pick out the best. In walking round this show you come at last to the orchestra, and climb up amongst the toy and fancy dogs. This is a little show itself, presided over by its own peculiar interests, and the points of these pretty pets are just as fiercely contested by their fair owners as are the points of the bloodhounds far away at the other end of the hall. This is a part of the show which is a kind of purgatory to the reporter. The ladies watch his coming as the spider does the fly, and when he walks into their parlor, then, oh my! at one end of a row of cages he is caught by Mrs. B. who breeds the same dogs and is at daggers drawn with Lady C. Mrs. B. has been fortunate to-day and she is delighted with the judging.

"Hodson did quite right in putting me first?" she says.

"Oh? decidedly," says the reporter; "it was a walk over for you."

"And isn't Poppets looking charming?"

"Oh, delightful!" replies the reporter.

"And what do you think that nasty, spiteful old thing, Lady C., has been saying?" asks Mrs. B.

"Don't know, I'm sure; she would say anything."

"Well, she's gone and told everybody that Hodson never looked at the dog, but nearly all the time at me."

"Why," says the reporter, "such audacity I never heard! Hodson look at a woman! Why he never looked at a woman in the ring in his life."

But while he says so the reporter has to bite his lip vengefully to keep back the laugh.

Hardly has he escaped the clutches of Mrs. B. before he is hooked by Lady C. She has been crying.

"Did you ever see such judging in your life?" she asks.

"Shameful!" says the reporter.

"My Topsey to be beaten by a wretched thing like Poppets. Just look at the little love."

"Sweet wee Topsey," says the reporter; "dear little pet."

"Did you notice what awful ears Mrs. B. has?"

"Oh! shocking," says the reporter. (N. B.—Mind it is Mrs. B.'s dog, not herself, that is referred to.)

"And she's quite mangy about the forearms."

"Yes, indeed," the reporter says.

"Oh! but," says Lady C., as she screws away a tear with the corner of an embroidered kerchief, "I could have forgiven *all* that, but *did you observe how Poppets carried her tail.*

GORDON STABLES, M.D., R.N.

THE SPIKE COLLAR.

DELAWARE CITY, Del., *June* 27, 1879.

Editor Forest and Stream:—

In the Chicago *Field* of May 24, 1879, I noticed a letter from "Badger," entitled "Retrieving," in which he advocates the use of "force" when the dog refuses to be persuaded. He asks, "What course would the advocates of the coaxing system take in such a case? What would 'Mr. Killbird' do?"

In the issue of June 14, of the same paper, Kit Killbird says, "The fact of my believing that Badger never broke a dog in his life, nor owned perhaps not more than two or three, is sufficient in itself for foregoing any lengthy discussion with him on the subject of dog-breaking." How nicely he would slip around the corner and away from the argument. But, Kit, this won't do. In one of your letters on the "spike collar" you tried the same dodge. I refer to that of Jan 5, 1877, speaking of "Signal:" "Did he ever refuse to bring?" Oh, yes, repeatedly; and once for a few days, from a circumstance that occurred, abandoned it entirely. How did I get him to resume this important branch of learning? Well, *I object to the question* [my italics]. We are arguing the efficacy of the spike, and not my own theory. Suffice it to say, he did resume, and in better style than before." *Dear* Kit, can't you see the entire absence of logic in this eel-like manner of wriggling out of your own side of the question? You attack the spike collar—the advocate of the spike defends it, and attacks your theory. You say, "We are arguing the efficacy of the spike and not my own theory." It is plain to be seen that you give no *argument* in favor of your own theory. But who ever heard an argument which had not two sides? Would it do to say to Mr. Edison, "Your telephone will not transmit sounds, no matter how many learned men of the electric profession have seen, heard and used it successfully for that purpose; no matter if the press does pronounce it a success—I say it won't do its work. "It *does not* attain all the ends, nor perfect its work (in your letter April 20, 1878, "a dog in every branch of tuition") in every branch which he and its other advocates claim for it (your own words touching the spike collar). I have a way of my own which will and does do it successfully." *How* do you do it? You answer, "I object to the question. Suffice it to say, I can and did do it."

Now, in the name of common sense, is this argument—is it reason—*is it common sense?* Now, Kit, don't you get your fur up, and "cuss," for I give you my word I won't "cuss" you back. Let us get at the matter systematically. You say the spike collar *won't* do what is claimed for it. I say it *will!* You have made a statement and so have I. Prove the truth of yours, and so will I of mine. I hereby challenge you to send me a setter or pointer dog, no matter what his age is, provided he has full use of his limbs and head, is not blind or deaf, that I cannot teach to retrieve by use of the spike collar, and that without drawing one drop of blood. I will agree to send you one or a dozen dogs which you cannot teach to retrieve without using force. You to forfeit $100 if you fail with your system, and I will forfeit $100 if I fail with my system. One-half the amount to be deposited with the editor of FOREST AND STREAM by each of us, and as soon as you please. Put up, or "close" up. Now, don't think that I *prefer* force to persuasion—not by any means. If a dog can, by a reasonable amount of persuasion, be induced to do your bidding promptly, that is all you want; but if he *won't?* Ah, there's the rub! *If he won't*, now what are you going to do about it? Oh, Kit, I am afraid you will take that spike collar off that nail and *make* him do it. Or will you, as you suggest in one of your letters, wait until he is more in the humor of obeying? Methinks it would be very gratifying to take a friend out hunting, and if the dogs did not feel inclined to hunt satisfactorily, make your friend wait until another day when your dogs are in the humor of doing your bidding. I will not argue (?) in your style, as you do in speaking of those "pioneer breakers" who speak for the spike collar: "I'll be ratted if I believe anything they say, and I am just going to say quits and get away." I will say that I *do* believe you can do what you say, but *how?* Prove it! Prove that you *can* break the most stubborn and headstrong dog that can be produced, by persuasion without force, and that I cannot break the same dog with the spike collar, and it will not take me long to acknowledge the superiority of your system.

"I never dispatched a line to your journal touching upon the art of handling the dog, that was not prompted by a sense of duty."—KIT KILLBIRD in *Chicago Field*, June 14, 1879.

Now, friend Killbird, if you have a secret locked within your bosom, which enables you, by a mysterious means unknown to your brother sportsman, to teach a stubborn, headstrong or vicious dog to retrieve promptly, without using force, it is your bounden duty as a promoter of the interests of field sports, to disclose it to the thousands of sportsmen who would gladly receive it?

"Ye advocates of the spike collar are continually harping on the whip, the whip, the whip, just as if a man couldn't own a whip without handling it with the instinct of a brute."—"KIT KILLIRD, in *Chicago Field*, April 20, 1878.

Just so, Mr. Killbird, with the spike collar. Is it necessary to hang your dog by the neck to a gate-post just because you have a piece of rope in your possession? You would have people believe that every man who uses a spike collar is a brute. We do not rule by force alone, but by a judicious blending of force and persuasion—we caress our dog while we tell him he *must*. And I defy you to find greater affection existing between man and dog than exists between myself and my dogs. Does a father punish his son for disobedience from brutal and selfish motives? Is it kindness toward a child to enforce obedience only when it pleases the child? For instance, "Johnny, go to school, and I'll give you some candy." "All right, sir, we've got an easy lesson to-day, and I'll go." Next day, "Papa, I want to go swimming?" You cannot go swimming to-day; go to school, and I'll give you some candy." "I don't want any candy; I'd rather go swimming," and away he starts. Now, what will the parent who loves the boy do—let him go this time, and depend upon his being more in the humor of going to school next time? Not by a good long shot—will he? Won't he take down his spike collar (in the shape of a birch) and with it persuade him that he must obey. Now, you must not say "bosh," and slip around the corner again, but come right up to the "scratch," and present such argument as will completely shatter mine, and send it flying to the winds.

"Kit Killbird's Dog Paths to Success," page 23:—"It may answer very well for old, hard-headed dogs, whose education has been neglected, where 'severe cases require severe remedies.'" How does this tally with the statement that "it *does not* attain all the ends which its advocates claim for it?" Then on page 24 of the same work: "I know I rub the grain of a few trainers when I denounce the use of the spike collar upon young dogs. Nevertheless I am entitled to a right of opinion *when based on the grounds of experience* [my italics again]." "On the grounds of experience," when up to the date of writing your book you had never used one? "On the grounds of experience," when you "hung the collar on a nail, and would not put it on your 'Brunette's' neck for fifty dollars in gold?" "One little 'Kit' has lost his nit (wit), and he can't have any pie." Now, doesn't it look like it? I fear you have launched your bark without a compass, and with a near-sighted captain at the wheel. Thousands of sportsmen are standing ready to help you right your ship if you will only admit that the light-house is a light-house and not a passing vessel. Throw aside your prejudices—your—I was going to say pig-headedness, but I won't—and give the spikes a fair trial. *Then* tell the sportsmen of America what you think of it. Don't ever again condemn a thing untried. Page 24 of your book:—"The use of the spike emanated with professional breakers, who train and educate dogs for a pecuniary consideration, and whose aim is to attain their ends in a given period or short a space as possible." Just so, Mr. Killbird: by its use the dog can be brought to the highest degree of perfection in the shortest possible time. I knew you thought so, and am glad to hear you say so. "Tell the truth and—" You cry for names of dogs broken on the spike collar, and from testimony from those who have used it to their satisfaction. Here are a few of the dogs:—Sanborn's Nellie, Horace Gause's (Wilmington, Del.) Fire Fly and Kelpie; Collender's Rory O'Moore, Burges' Rufus, cured of gun shyness; M. Von Culin's Queen, Duke 2d, Duchess 2d, Old Imported Duke; M. Von Culin's two Bismarck dogs, Count and Mack; Saml. Armstrong's (Del. City) Bismarck dog, Sam; Wm. A. Price's (Del. City) Scott; Geo. A. Clark's (Del. City, Del., P. M.) Mack, and a host of others. If THE FOREST AND STREAM gives the space, will send testimonials sufficient to fill your pages in solid agate, or by applying to the inventor a printed list will be sent to any sportsman.

I did not intend taking up so much valuable space in your columns when I started, but each time I refer to Mr. Killbird's letters another point appeaas upon my spike collar, until from sheer fear that Kit will invent a collar with more spikes on than Von Culin's, I must stop.

NEW YORK YACHT CLUB.—Full account of the cruise of N. Y. Y. C. will appear in next issue.

ATLANTIC YACHT CLUB.

ANNUAL CRUISE, JULY 26 TO AUG. 3.

In obedience to orders from Com. Latham A. Fish, the yachts of the Atlantic Y. C. collected off Whitestone, L. I., July 26, preparatory to sailing in squadron on the usual annual cruise to the Eastward. The fleet got underway in a heavy rainstorm and brisk wind, all hands making harbor for the night in Glen Cove. No sooner were their anchors down than the wind jumped around and came out a living gale from the S. which caused some lively veering on the chains. The wind subsided and next day, being Sunday, the fleet remained at anchor until the afternoon, no service being held aboard the flag ship in spite of the liberal allowance of Rev. gentlemen the club is blessed with. The fleet comprised the schooners *Agnes*, 60 ft., Com. L. A. Fish; *Atlanta*, 93 ft., W. R. Vermilye; *Peerless*, 73 ft., J. R. Maxwell; *Petrel*, 68 ft., S. L. Husted, Jr.; *Vision*, 66 ft., G. H. Seeley; and *Triton*, 66 ft., G. A. Thayer; also the sloops *Orion*, 54 ft., Vice-Com. W. Cooper; *Sadie*, 52 ft., H. E. Cole; *Pirate*, T. A. Howell; *Stella*, H. H. Hodgins; *Winsome*, 47 ft., Rear Com. A. Morton; *Dolphin*, 51 ft., J. W. Cooper; and the *Daisy*. The sloop *Gracie*, formerly belonging to Mr. Waller, and which has been purchased by Mr. C. Flint, had come around from Whitestone with the fleet but did not join as a regular in the cruise. The light westerly breeze was too much even for the most devout, and so a little after noon the whole fleet got underway for Black Rock on the Connecticut shore. *Triton* however sailed for Cow Bay and *Gracie* put in at Norwalk Island. It was a good sailing breeze all the way across and light canvas was in requisition. Barring a little luffing business between *Stella* and *Peerless* and the latter and Mr. Vermilye's big schooner, nothing of note occurred. The *Orion* led the fleet almost as a matter of course; *Dolphin* and *Stella* both showed up well. The squadron came to off the George Hotel.

July 28.—At 6.30 A.M. the preparatory gun from the Commodore roused out all hands to make sail for New London, and shortly afterwards *Winsome* and *Stella* were under weigh, followed a little after by the first class craft. The wind was very light from N. E. and *Peerless* got up her big main topmast staysail, *Stella*, *Orion* and *Dolphin* set club topsails, while the rest were content with working sails. *Peerless*, always smart with her balloons, soon had a telling big one set forward and boomed out, which caught all there was going of the light airs coming off the Connecticut shore. *Sadie*, with somewhat modest rig, was not upholding her old time reputation, but it was hardly her weather. After whistling up and down the mast for a time, a breeze finally struck in from the eastward which sent along the fleet at a five knot gait and promised to whisk them into New London with a tack or two off shore for more room. New Haven harbor was passed at 11 A.M. After a smart sail, in which the big ones began to feel their bearings, the wind again dropped away and *Orion*, still in the van, began drifting tactics once more. A southerly breeze off the Long Island shore again lifted the fleet out of quandary and sent them along to the Cornfield, which they passed at a spinning gait with scuppers awash. *Orion* cut inside the light, *Atalanta* and *Peerless* took the ontside course. Mr. Maxwell hung on well to the big schooner in spite of the latter having a good whole sail breeze. When near Plum Gut, the sloop *Imperia*, 46 ft., Mr. C. F. Pierce, lately from Greenport, joined the fleet. *Orion* had, as a matter of course, to give way to *Atalanta* in the stiffish breeze, and so the latter took the lead until the Bartlett's Reef light-ship was made. Here the wind played the squadron the usual trick it does in this latitude, by completely dying out, leaving the yachts a tedious job of it to work their way up the harbor. All except the *Atalanta*, went up to the city, the latter remaining off the Pequot House. Fireworks, illuminations, etc., took place in the evening.

July 29.—As it is only a short run from New London to Greenport a late start was made by the fleet, giving stewards a chance to "fill up" with ice and fresh provisions, which can always be had in abundance at low rates in New London. With a good breeze from the S. S. W., the yachts got away a little after 11 A.M. After some tedious beating out of the river, a smart breeze was struck outside, which soon died away. At 1:30 P.M. a solid sea breeze from the S. fetched across the sound, and the day's work began. After an hour luck changed again, as the breeze did not hold, but skipped about the compass. As usual in such cases, all hands kept their eyes peeled for some "working schooner away off to the so-and-so, with a cracking breeze," and sure enough, the self-same schooners turned up as sure as fate. They were driving along with a bone in their teeth, before a S. W. wind to the eastward of Gull Island. So for the slant *Dolphin*, *Peerless*, *Daisy*, *Pirate*, *Agnes*, and *Winsome* went with what speed they could in the baffling wind. *Orion* and *Stella*, however, still held their course for the passage between Gull and Plum Islands, but with very scant air. *Agnes* shook *Pirate* after a bit of luffing, and followed the leaders for the wind. *Dolphin* and *Peerless* struck into "the race," and away they went to leeward like a kite with her cable snapped. The rest soon followed suit, excepting cable snapped. *Vision*, who hardened in for the Penn Island channel. Once through the string of islands, which run from the Gut on Long Island to the Connecticut shore in a N. E. direction, all hands had to beat up across Gardiner's Bay and hug Long Beach light to fetch into the anchorage off the town of Greenport. *Orion* having chosen the western passage of the Gulls was well to windward and showed the rest the way into port, the schooners bringing up the rear. *Orion* came to at 6h. 0m.; *Winsome* having worked through the "Gut," dropped anchor at 6h. 18m.; *Stella*, 6h. 44m.; *Dolphin*, 7h. 32m., *Peerless*, 7h. 40m.; *Vision*, 7h. 41m.; *Agnes*, 7h. 43m.; *Atlanta* next, followed by *Sadie*, *Pirate*, and *Daisy*. The sloops *Elephant* and *Niantic* beat up the harbor in company with the fleet, the *Elephant*, one of Ellsworth's models, showing her remarkable speed and close-windedness by holding all the larger sloops of the Atlantic Y. C., and weathering in fine style upon such a good ship even as *Niantic*.

July 30.—A little after daybreak the squadron was under way once more, bound for Newport, with a light wind from the S. W. The craft tailed down the harbor and across Gardiner's Bay, making by slants and flukes what they could. The sloop *Annie*, of the Brooklyn Y. C., with skipper "Joe" Ellsworth at the wheel, undertook to tann the lot, and did so in a short run of ten miles, whereupon she hauled her wind for Plum Gut, bound for New London. The U. S. schoolship *Saratoga* called all hands, and to the merry tune of the fife catted her ponderous hook, hoisted topsails, stook out royals and topgallant sails, then squared away after the fleet. In the mild breeze, which held bretty steady all day, an uneventful run was made to Newport, the American Cowes, and snug berths were picked up inside the breakwater during the evening hours. The next day was quietly passed at anchor.

August 1.—In response to the cordial invitation of Com. Hawes, of the New Bedford Y. C., it was resolved to sail for New Bedford and accept the hospitalities tendered. Consequently a start was made at 6:30 A.M. The ebb and club topsails took the squadron out of the harbor after *Vision* and *Sadie* had fouled, without doing damage, while casting. Out to the Brenton's Reef light-ship the work was dead to windward, and thick fog settling down in the meantime, with the strength of the wind picking up. The dull music from the government regulation foot power fog-horn, down to the penny fish-horns, which economy and a disregard for safety causes some to substitute, was in order till the bell of the light-ship gave skippers a chance to take their departure. An easterly sweep in the tide set them all inshore, and off Saughconnet Point, *Orion* in the lead, had to luff sharp to clear the breakers, a move which was followed by the rest in order. *Stella* having doubled up her iron spreader was obliged to shift to a working topsail. After the Hen and Chickens light-ship was put astern, helms were put up and sheets eased, the schooners running wing and wing. Though headed at times, the smart *Orion*, from the "blind-man's" yard, retained the lead of big and little. When nearing the Dumpling light the dense fog lifted, and a very fine spectacle was presented by the fleet as they sailed up the harbor for the old whaling town, in close order, with the wind dead aft. Nearing Clark's Point booms had to be jibed over for the final stretch of the N. The *Silvie*, Mr. Nye of the N. B. Y. C., came out to meet the visitors and escort them in to the anchorage, which was reached as under: *Orion*, 1h. 56m.; *Genia*, 2h. 8m.; *Pirate*, 2h. 8m. 30s.; *Agnes*, 2h. 10m.; *Atalanta*, 2h. 10m. 30s.; *Stella*, 2h. 12m.; *Winsom*, 2h. 27m.; *Vision*, 2h. 30m.: *Sadie*, 2h. 39m.; *Daisy*, 2h. 50m. The club was welcomed by Com. Hawes, and a reception took place in the evening at the club house. Here we may say that the genial hospitality of Com. Hawes and his associates has made New Bedford a most delightful port for cruising yachtsmen, and we are certain that the courtesies extended them are fully appreciated. No one now thinks of "cruising East" without bringing to in the snug harbor of this picturesque and interesting city, and the pretty scenery, handy fishing grounds, and many attractions ashore, not the least of which is the far famed beauty of the fair sex, should always make New Bedford one of the objective points of cruisers from the east or west. Besides, it takes yachtsmen out of the narrow confines and placid waters of the sound, and may give them some hints as to open water sailing.

August 2.—At 8 A.M. *Orion* sailed for Block Island, and *Sadie* made for home, while the *Winsome* proposed staying at New Bedford. This reduced the fleet under the commodore to the schooners *Agnes*, *Atalanta*, and *Vision*, and the sloops *Pirate*, *Stella*, *Genia*, and *Daisy*, the *Peerless* and *Petra* having remained over at Newport, where the *Genia* had joined. With a light southeast breeze and a fair tide the gun was fired for the start to Martha's Vineyard. The sloops got away from the big schooners in the short work of the harbor. Once outside, the wind went around to the S. W. and came out fresh. *Vision* carried away main topmast stay, and had to luff and clap on a tackle to set it up again. This mishap lost her much time, and gave *Agnes* a big start. A southerly course was held across Buzzard's Bay with sheets well aft. Through Quick's Hole the fleet went, with a dash, in obedience to the race of the ebb, the *Agnes* in the lead, followed by *Pirate*, *Stella*, *Atalanta*, *Genia*, *Vision*, and *Daisy*. When the buoy off Payne Island had been fairly weathered, sheets were eased and balloons boomed out, the schooners trying it wing and wing. *Atalanta* was making up with the wind, and ran ahead of the lot. The West and East Chops were passed in succession, and the yachts finally come to an anchor off Oak Bluffs after a very pleasant day's sail, in the following order: *Atalanta*, 2h. 26m. P.M.; *Agnes*, 2h. 45m. 30s.; *Pirate*, 3h. 2m.; *Stella*, 3h. 12m.; *Vision*, 3h. 14m.; *Genia*, 3h. 17m., and *Daisy*, 4h. *Daisy* was unfortunate, for she carried away topmost shrouds and parted her mainsheet, something which the strength of the wind certainly did not warrant. In port the little cat boat *Wind*, Wm. Peet, from New York, was found, and she joined the squadron. This brought the cruise to a formal close, most of the yachts being obliged to return to the westward. The next day, August 3, the *Stella*, *Pirate*, *Agnes*, and *Vision* got under way in the order named, bound for Block Island. It was a nose ender after hauling round the buoy off the East Chop, and in the windward work size soon began to tell, for *Agnes* screwed out on *Stella's* weather, and was overhauling *Pirate*, when the wind fell lighter and gave the sloop a better chance. *Stella* stood well into Tarpaulin Cove and got out of the tide, for where she crossed tacks with *Pirate* she had planted herself well to windward. With Gay Head under the lee, the swell began to be felt and the schooners again came to the fore. As it came on rather thick in the afternoon, *Agnes* bore up for Newport, and it was not long before her example was followed by the sloops. Our yachts are not fitted for an all day thrash to wind ward, either in model or in rig; so when it comes on to blow a bit, we always find it best to "cut and run." Whether *Vision* made Block Island or not, we do not know, but presume she too put in somewhere for sunshine.

WEST BRIGHTON YACHT CLUB.—The union regatta of this club was sailed July 31, and the numerous yachts entered show how fast these open matches are becoming popular. Owing to light winds, however, only seven made the line in time, which were sent off in light airs from the south; course from West Brighton around Robbin's Reef buoy, thence around Fort Lafayette and return. Shifting live and dead ballast unfortunately did much to detract from the merits of the race, and a summary will be all that is necessary. In the first class *Breeze*, C. Maine, won, beating *Excelsior* (J. H. Dilks). In second class *Hi Pi*, J. H. Dilks, won, beating *Bulldozer*, F. Stodart, *Camille*, J. Phillips, and *Lizzie Van Name*, C. Van Name. Latter did not finish.

MATCH ON LONG ISLAND SOUND.—The sloops *Deane* and *Sophia Emma* sailed a match July 24 over a course from North Brother Island to Throgg's Neck buoy and return, sail over twice, distance twenty-eight miles. Wind light from southeast and dying away, then variable. Won by the *Geo. B. Deane* by 39s.

BEVERLY YACHT CLUB.—The 49th regatta, the second championship race of the season, of the Beverly Y. C. was sailed Aug. 4th at Beverly. The *Ariadne* of the E. Y. C. was used by the judges, Messrs. Geo. P. Gardner and W. Lloyd Jeffries. Courses, the regular triagular courses, 8¼ miles in first class; 5½ in second and third classes. Wind very light from the east at the start, followed by a dead calm, and later by a very light south-east air, which only reached part of the fleet, leaving *Clyde* and *Bluebell* in an absolute calm.

The time was very slow; first class had to complete the course in 3 h., 11 m.; second and third classes in 2 h., 12 m. The following is the summary:—

FIRST CLASS.

Name	Owner		Water Line.	Actual Time.	Corrected Time.
			FT. IN	H. M. S.	H. M. S.
Fanchon	Arthur Burgess	Sloop.	25 6	2 55 26	2 51 40

Frolic	N. H. Gibbs	"	16 8	Not timed.	
Bluebell	Com. Jeffries	"	16 6	"	"

In the second class all except *Hoiden* and *Peri* crossed the line after the five minutes were out, and had their time taken from the end of the five minutes; *Psyche* also owing to an accident to her throat halyards lost five minutes at the start.

Hoiden had carried away her large hollow mast a day or two before the race, and had to use a small mast and sails. The dead calm of the morning kept yachts from a distance out of the race; *Ariel* would have taken second prize if she had crossed the home line.

The prizes were given as follows:—1st class, 1st prize, *Fanchon*; 2d class, 1st prize; *Fancy*; 3d class, 1st prize, *Nora*; 2d class, 2d prize, *Peri*; 3d class, 2d prize, *Psyche*.

Fanchon takes the pennant in her class for the second time and consequently holds it; in the second and third class *Fancy* and *Nora* take pennants, tieing with *Hoiden* and *Psyche*. REEF POINT.

The open regatta of this club will be sailed off Swampscott, Aug. 23d, at noon. It will be the fiftieth regatta of the club, and is open to all yachts not over 40 ft. water line. Prizes in cash, ranging from $25 to $5. Second, third, and fourth prizes, only if three, four, five, or more yachts start. Club time allowance; start flying; If weather unfavorable, the races will be sailed the following Monday. Classes: schooners from 21 to 40 ft. in special class; first class, for sloops and cats, 28 to 40 ft. water line; second class, 21 ft. to 28 ft.; third class, 17 ft. to 21 ft.; fourth class, under 17 ft. In second class, separate prizes to centre-boards and keels. No shifting ballast and limited crews. Entries free, to be made before 2 P.M., Aug. 22d. to Com. W. Lloyd Jeffries, 78 Devonshire St., Boston, from whom further information can be obtained.

BUNKER HILL YACHT CLUB.—The eleventh annual regatta of this club was sailed August 4 in Boston Harbor. Wind light from southeast, shifting to southwest. Course —From judges' boat off Long Island wharf, out Broad Sound, leaving fog whistle on the northeast ledge off the Graves on the starboard, Green Island on the starboard, Shagg Rocks on the starboard, Lovell's Island and Sound Point Beacon on the starboard, George's Island, Gallop's Island, Nixe's Mate buoy on the port, to judges' boat; distance thirteen miles. Won by *Lillie*, Bond, beating *Annie M.*, Tolman, *Clara B.*, Thomas. *Brilliant*, Musgrave, and *Nettie* (Morris).

NAHASSET YACHT CLUB.—The twelfth regular regatta of this club was sailed off Nahant July 19. Open to yachts under thirty feet sailing length. First class over twenty-two feet, second class eighteen to twenty-two feet, third class under eighteen feet. Wind steady from northeast.

Course.—First and second classes, from judges' yacht, leaving Red Buoy No. 2, off Winthrop Head on port hand, fog buoy off the Graves on port hand, to judges' yacht—ten miles. Third class, from judges' yacht, leaving Red Buoy No. 2 off Winthrop Head on port hand, to judges' yacht—seven miles.

Judges.—Messrs. Saml. Hammond, Tucker Deland, Elliot Hubbard, W. Y. Peters, H. Bryant, W. D. Hodges and J. P. Hawes. Judges' yacht, the *Addie Voorhis*. The following yachts started :—

First class—*Muriel*, C. G. Wedd ; *Waif*, King & Clark. Second class—*Fancy*, P. Grant, Jr.; *Hoiden*, R. W. Burgess ; *Peri*, George Lee ; *Josie*, C. H. Minot, Jr.; *Neried*, —— Brown ; *Alga*, C.W. Longfellow ; *Thisbe*, —— Litchfield. Third class—*Psyche*, R. D. Sears ; *Avis*, W. C. Haskell. First prizes were taken by *Muriel*, *Hoiden* and *Psyche*, and second prize by *Fancy*. No second prizes to other classes, there not being three starters, as required. The annual dinner at Taft's Hotel was then partaken of by members of the club.

BOSTON MOSQUITO FLEET.—The third regatta of this club was sailed off City Point July 19 with the following result :—

FIRST CLASS.	Time. H. M. S.
Yacht.	
Sport	1 00 25
Lizzie	1 04 04
Nettie	1 07 30
SECOND CLASS.	
Daylight	1 04 01
Lena	Distance'd
THIRD CLASS.	
Egeria	00 59 53
Sadie	1 04 01

There were two money prizes in the first class, one in the second class and one in the third class.

SOUTH BOSTON YACHT CLUB.—The moonlight regatta of this club turned out a complete success. It was sailed July 20, off City Point. Course, from judges' boat to Cow Pasture Bay Buoy (6), leaving it on the port, to Buoy No. 7, off Fort Independence, leaving it on the port and passing to windward of the judges' boat, distance, five miles. Most yachts had ladies on board and canvas was restricted. The result is appended : *Violetta*, J. T. Lanney, 1h. 21m. 30 s.; *Lydia Adams*, H. Davenport, 1h. 22m. 10s.; *Shamrock*, M. J. Driscoll, 1h. 22m. 32s.; *Fearless*, A. Kidd, 1h. 24m. 33s.; *Posie*, H. J. McKee, 1h. 25 m. 22s.; *Whitewing*, Charnock Bros., 1h. 33m. 40s.; *Annie*, G. Martin, 1h. 29m. 29s.; *Nettie*, W. H. Nicholson, 1h. 30m. 2s.; *Veronica*, S. Chamberlain, 1h, 31m. 58s.; *Wasp*, D. Wallis, 1 h. 32m. 37s.; *Wave Crest*, W. H. Pryor, 1h. 34m. 42s.; *Echo*, W. W. Keith, 1h. 35m. 47s.; *Gamecock*, R. H. Hamilton, 1h. 36m. 9s.; *Eugenia*, C. West, 1h. 40m.; *Water Witch*, H. Hutchins. 1h, 41m. 21s.; *Belle*, R. Disbrow ; *Champion*, M. J. Driscoll, and *Chiquita*, M. Colburn, did not finish.

HAVERHILL YACHT CLUB.—The champion flag of the club was sailed for July 19 over a course from the city to Groveland Bridge and return, six miles. Starters :—*Pinafore*, Simonds, *Twilight*, Meadowcraft ; *Josie J.*, Jutras ; *Linnie May*, Reid ; *Hornet*, Doane ; *Abbie M.*, Harris. *Emma L.*, Tuxbury, and *Empress*. *Twilight* won in 1h; 11m. 13s.

PROVINCETOWN YACHT CLUB.—The second annual union regatta of this club was sailed July 24 in Provincetown harbor, open to all yachts. Wind light and first and second classes failed to finish within the time set. Course for third class, eight miles. Entries : *Sam Weller*, *Eva May*, *Pinafore*, *Blanche*, and *Centenary*. Won by the *Weller*, the rest in their order named.

NEW BEDFORD YACHT CLUB.—The first race for the challenge cup presented by Com. Hawes of the N. B. Y. C. was sailed in New Bedford harbor, July 24. Course, from the judge's boat, anchored south of Eleven Foot Bank Buoy, leaving Black Rock on port, Bush Buoy on starboard, Great Ledge Buoy on starboard, rounding Wilkes' Ledge Buoy, leaving it on starboard, leaving Dumpling Light on port, Butler's Flat Buoy on port, thence to starting line—distance, fifteen miles. Judges : Messrs. David A. Caldwell, Geo. R. Gray, Arthur Cummings and Job Almy. Wind variable, and topsails were set all around, the *Gleam* being the only boat without one. The buoy was rounded by the *Pointer* first, followed by *Addie*, *Clarise*, and *Pasque*, The winning line was passed by *Pointer*, with a lead of 6m. 20s., *Addie* next, and *Pasque* third. After applying time allowance, the race was awarded to *Pasque*, a new Brooklyn-built sloop. The following is a summary :

	Sailing Lengths.	Actual Time.			Corrected Time		
	FT.	IN.	H.	M.	S.	H.	M. S.
Pasque	24	2	2	49	26	2	40 45
Metric	25	¼	2	50	34	2	49 21
Pointer	29	6½	2	50	32	2	49 56
Addie	27	7¼	2	55	38	2	52 23
Mystery	23	5½	2	02	59	2	53 05
Clarise	26	1	2	59	56	2	54 24
Gleam	21	11¼	3	13	59	2	54 56
Medea	21	2	3	11	47	2	57 29
Bonnie	24	¼	3	07	03	2	59 10
Sunlight	26	1	3	17	06	3	11 34

QUINCY YACHT CLUB.—The second of the series of championship races of this club was sailed off Quincy Great Hill, July 24. Wind light from east. Courses : for first and second classes from judges' boat, off Mear's Hotel, to the red buoy between Bumkin Island and Downer Landing, leaving it on the port ; thence leaving Sheep Island on the port to buoy on Channel Rock, leaving it on starboard, thence leaving Racoon Island on the port to judges' yacht. Third class, from judges boat to red buoy mentioned, leaving it on the port, to buoy off Hull, leaving it on the port, leaving Sheep Island on the port, to the judges' boat. Starters in first class, *Muriel*, C. S. Weld ; *Folly*, J. F. Shepard ; *Allie*, A. S. Wattles ; *Waif*, A. J. Clarke. Second class, *Wildfire*, H. A. Keith ; *Elf*, W. P. Barker ; *Thistle*, W. H. Litchfield ; *Dream*, C. Barnard ; *Glance*, — Knight ; *Fancy*, P. Grant, jr. Third class, *Dandelion*, J. Q. Adams ; *Rocket*, B. F. Bass ; *Imp*, G. C. Adams ; *Nattie*, W. H. Nicholson ; *Dolly Varden*, A. B. Cleverly ; *Zip*, G. W. Martin, and *Elmer*, P. Chubbuck. In first class, *Muriel* and *Folly* won. In second class, *Wildfire* and *Elf* ; the *Fancy*, though leading, being disqualified for turning wrong buoy. In third class, *Dandelion* and *Rocket* take prizes. The *Elmer* did not finish.

DORCHESTER YACHT CLUB.—The fiftieth regatta of this club was sailed July 27, off Commercial Point. Weather, thick and rainy, wind fresh from north-east. Courses : for first class, the Sculpin Ledge course, nine and a half miles, and for third and fourth classes, the Half-tide Rock course, seven miles. In the first class keels, *Fairy* C. A. Perkins, won, beating *Volante*, G. S. Rice. In first class centre boards, *Fanchon*, A. Burgess, won, beating *Waif*, King and Clarke. In third class centre boards, *Dream*, C. Brainard, won, beating *Curlew*, G. H. L. Sharp, and *Hoiden*, S. W. Burgess. In fourth class centre boards, *Rocket*, B. F. Bass, won, beating *Nettie*, W. H. Nicholson,

NEWBURYPORT YACHT CLUB.—The first annual union regatta under the auspices of this club was sailed July 26 in thick weather and fresh wind from northeast. The first and second class yachts were not started, as the water was too rough and the sailing directions did not seem to be clear. In third class *Keturah*, B. G. Davis, won, beating *Nell*, C. W. Cooke, and *Gazelle*, J. H. Walton. In fourth class *Psyche*, Mr. Whitehall, won, beating *Maud*, S. Lowell. The first and second classes resailed July 28 in foggy but light weather. The stake-boat did not go out but anchored off the bar, thereby shortening the course six miles or more. In first class *Lizzie Warner* won, beating *Bohemian* and *Dauntless*. In second class *Clytie* won, beating *Hard Times* and *Blanche*.

SOUTH CAMDEN YACHT CLUB.—This club sailed a race July 28 from Kaighn's Point to Chester buoy and return. Starters :—First class—*Gnang*, *Schuck* and *Feeney*, of the South Camden Club ; *Norcross*, *Cohill* and *Holland*, of the Cooper's Point Club, and the *Viola*, no club. Second class—*Espen*, *Anna* and *Ashton*, of the South Camden Club ; *Entwistle* and *Moore*, of the Philadelphia Club ; *Sparks*, of the Southwark Club. Third class—*Pooley* and *Conklin*, of the South Camden Club, and *Riddell*, of the Philadelphia Club. *Gnang* went to the front off Gloucester, with *Cohill* and *Feeney* hunting her close. The buoy was rounded with *Anna* in the lead, followed by *Gnang*, *Feeney* and *Cohill* close together. After a sharp squall the wind died out and the race became tedious, men being sent ashore at the Block House to lighten up the boats. *Gnang* finally won the first prize, *Sparks* the second and *Pooley* the third.

MATCH RACE.—The yachts *Mitchell* and *Ledyard* sailed a match July 28 on the Delaware over the Chester course. *Mitchell* capsized in a squall and the prize went to the *Ledyard*,

MATCH ON THE DELAWARE.—In a sweepstakes race from Allen's wharf, Philadelphia, to Chester buoy and return, July 21, wind fresh from southwest, the *D. H. Schuyler* beat the *Thos. Ledyard*, *Harry Moore*, *Wm. Disston*, *W. S. Flick*, *Amos Jones*, *Alfred Rust*, *Hugh Boyle*, *W. S. Douglass*, *Jas. Mitchell* and *Geo. S. Campbell*, in the order named. The latter did not finish.

RACING ON THE POTOMAC.—In a light breeze July 11, over a sixteen-mile course from Ninth street to Fort Foote and return, the *Sea Foam*, Clarvoe, beat the *Goodenough*, Raynor, *Harkaway*, Vaux, *Hawkers* Thomas, and *Harry Hall*. The latter capsized in a collison at the start.

SOUTHWARK vs. PHILADELPHIA YACHT CLUB.—A very interesting race was sailed between selected tuckups of these two clubs from Kensington Water Works wharf to Chester buoy and return. Eleven boats entered for the contest, as follows :

Southwark Club—*Douglass*, *Boyle*, *Ledyard*, *Campbell*, and the double-ender *Mitchell*.

Of the Philadelphia Club there were entered : *Schuyler*, *Jones*, *Rush*, *More*, *Flick*, and *Disston*. The boats deposited ten dollars each ; the winner was to receive the whole sum.

The boats were started at 9:30 A. M., with the last of the ebb. The *Mitchell* took the lead, followed by the *Ledyard*, with the balance of the fleet pretty well bunched together. *Boyle* carried away her throat-halliard bloek, and the Jones also broke down. The wind was blowing fresh from the southwest, and it was a "long leg and a short one."

The boats of the Southwark Club seemed to know but one course to sail (along Jersey shore) and, although there was more wind upon the Pennsylvania shore, they kept on, down towards Billingsport, the *Mitchell* still leading. The *Schuyler* worked the shore down by short stretches, keeping out of the strong tideway until she madé Hog Island, then, crossing to Maiden's Island, worked the slack water down along Tinicum, and went for the buoy. The balance of the fleet worked along Jersey shore. The boats rounded the bouy as follows ; *Schuyler*, 2:31¼ ; *Campbell*, 2:36½ ; *Douglass*, 2:38 ; *Ledyard*, 2:38¼ ; *Mitchell*, 2:39¼ ; *Moore*, 2:45½ ; *Rush*, 2:48.

On the home run the boats had the wind and tide in their favor, and made good time. The *Schuyler* had a lead of about a mile, followed by the *Campbell* ; this distance was gradually lessened by the latter until Gloucester was reached, when the *Campbell* capsized, and left the *Schuyler* without any competitor to speak of, and she rounded the home-stake boat at 4:54 and takes the money.

RACING IN LOUISIANA.—Over a triangular course of five miles, sail three times over, July 19, in a young gale which moderated considerably, the *Maggie*, Brewster, beat the *Juniata*, Israel, and *Gipsey*, Maginnis. Latter gave up after first round. Over the same course July 13 the *Emily* A. J. Lucich, beat the *Rolie*, F. Lucich, and *Mathilda*, S. J. Bosetta. Latter carried away some gear and the *Emma* spilled her crew at the start.

OCONOMOWOC (WIS.) YACHT CLUB.—A new organization under this euphonious name sailed its first regular regatta on Lac La Belle, Wis., July 19. Course ten miles and wind variable. *Mystic* won, beating *Buda*, *Pearl*, *Sortie*, *Magic* and *Nautilus*.

JERSEY CITY CANOE CLUB.—The Jersey City Canoe Club regatta occurs August 28 off the Idle Hour, a summer resort on New York Bay, a few minutes walk from Pamrapo, a station on the Central Railroad of New Jersey. All canoeists are invited to participate. Canoes will be divided into two classes—sailing and paddling. The *Rob Roys* and similar models comprise the class of paddling canoes ; the *Shadow*, *Nautilus*, and *Herald* the class of sailing canoes. There will be a sailing and paddling race for each class. The prizes will consist of gold and silver medals. The regulations will be substantially those governing the Staten Island and Lake George regattas. The times of starting are : Sailing race, of class of sailing canoes, 1 P. M. Paddling race, of class of paddling canoes, 2 P. M. Paddling race, of class of sailing canoes, 2:30 P. M. Sailing race, of class of paddling canoes, 3 P. M. Canoes may be sent to the Idle Hour at any time before the races.

The entrance fee of $2 admits one canoe to either or both races. Entrees may be sent to Chas. E. Chase, Com. J. C. C. C., 287 Broadway, N. Y. Rev. Chas. A. Cressy of Lake George, who won the recent Lake George Canoe Regatta, has been elected a member of the club.

TRENTON CANOE CLUB.—The second annual regatta of this club took place on the Delaware, July 31. Course, mile and a half. Won by Harry B. Anderson in 16m. 18s.; beating Geo. Whitehead, R. R. Whitehead, and John Manning.

THE LAKE PROSPECTS,

Although only in its second year, the Buffalo Y. C. exhibits an amount of life and spirit which is already producing the most satisfactory results. The club has got underway on the right track, and should the rest of the lake clubs take their cue from the operations of their brethren in Buffalo, it will not be long before we will have on the great chain of inland seas a well organized association of all the clubs which may even become the pattern for an eastern association to mould its shape by. In no year has yachting made such strides upon the lakes as during the present season. Old clubs which had almost sunk out of sight, have sprung into life again and new ones at other ports have been formed. Our Canadian friends are calling for a federation of the clubs along the northern shores, while those in the United States already feel the need of concerted action and universal sailing rules. We trust that it will not be long before the present desire for progress in the right channel will lead to the formation of a Lake Yacht Racing Association, and should the western clubs take the lead in this all-important matter, it will be a feather in their cap indeed. The Buffalo Y. C. has led off by appointing a committe consisting of five, including Mr. Thos. Kean of the *Courier*, Mr. Earl D. Berry of the *Express*, and Mr. Arthur Austin of the *Commercial Advertiser*, to arrange immediately for a grand "union regatta" to be sailed August 26, at Buffalo, under the club's auspices, and open to all legitimate yachts on the lakes. Subscriptions have been received, so that over $400 will be offered in cash for prizes, two to each of three classes. Invitations and circulars have been sent among others to the Detroit Y. C., Cleveland Y. C., Put-in-Bay, Toledo Y. C., Dunkirk, Erie, etc. We hope the liberal programme as well as the excellent management presiding will draw a large list of entries to the coming matches, and that a fleet of clippers will assemble in Buffalo waters during the latter part of August which will make a lasting impression upon the good citizens of that place, and add many a member to the enterprising B. Y. C., as well as induce a big crew of landsmen to don sea togs and ship for a cruise which will make yachtsmen of them instead of loungers about billiard parlors and saloons. No waters on the globe offer greater inducements or more charming variety of scenery afloat and ashore to the yachtsman than our lakes, and with the revival of prosperity now ringing through the land, the time has come when a few leading spirits can do much to place this sport upon a sound and lasting basis in the north-west. Buffalo, Detroit, and Belleville, are taking hold in earnest ; so let them all lend a hand at the coming union regatta and see to it that their pennants are represented at the line, August 26.

In the mean time, the various clubs will facilitate matters if they send addresses and useful information to Mr. Keene, Chairman of the Committe. Mr. Chas. M. Cordell has been elected Secretary of the Buffalo Y. C. to fill vacancy by resignation of former incumbent. A great deal of active cruising has been indulged in of late by members of this club, generally upon praiseworthy Corinthian principles. The sloop *Curlew*, Capt. J. Parker, left port July 26, fully provisioned for a fortnight's cruise to Detroit, a distance of 230 miles. From the latter place, the cruise will extend to Put-in-Bay, Cleveland, Erie, and home. The Corinthians manning the craft are, besides the skipper, Messrs. Geo. T. Chester, John F. Ellsworth, Frank Jones and Geo. Squires. The schooner *Corsair*, left Buffalo for a week's cruise up the Lake, July 29, with Capt. P. G. Cook, jr., as skipper, and a crew composed of Messrs. H. N. Vedder, Joe W. Cook, Ed. P. Field, and Will Pardee of Pittsburg, Pa. The *Corsair* is one of the smart ones of the fleet, and was awarded third place in the recent club regatta instead of the sloop *Arrow*, the latter having made a wrong course. She put in at Van Buren's Point, and then sailed for Presque Isle Bay, where she made an anchorage July 31, early in the morning match. Hove up that P. M. and continued on the cruise. Many new members have joined the Buffalo Y. C., and its future looks bright. It is the only one of the Lake clubs which publishes a regular annual club book, has a rule of measurement for first-class yachts, based on area obtained by multiplying length and beam, while smaller craft are measured by length only; and besides, this is the only club in America, excepting the Royal Nova Scotia, Y. S., which has as yet introduced the interesting feature of "mixed rig" races. For young clubs, those of the Lakes possess an amount of vitality which augurs well for the future.

ROYAL NOVA SCOTIA YACHT SQUADRON.

The racing Saturday promised at the outset to be of an interesting character. The day was cloudy, but the wind, instead of freshening, as expected, lightened, and the races were finished in a light breeze, so paltry as scarcely to enable the yachts to cross the line. *Daphne* was off first, and led down wind to Litchfield, which she rounded half a minute ahead of *Psyche*, and a minute ahead of *Phantom*, the same distance being preserved in the reach across to Thrum Cap, when she hauled her wind and was passed by *Psyche* and subsequently by *Phantom*. She, however, regained second place after tacking off Mar's Rock, and kept it to the end. *Seafoam*

of course had no chance of winning off the sloops in a light breeze and dead smooth water, but she nevertheless made a good fight for place. On the beat home the sloops had the advantage; yet *Seafoam* managed to secure third place, actually beating *Psyche*, which only came in fourth.

The course was from the Lumber Yard round Litchfield and Thrum Cap bouy and home. The following yachts started :—

			H.	M.	S.
Daphne,	sloop,	6 tons, A. E. Jones	1	54	22
Seafoam,	schr.	27 " Vice-Com. Hussey	1	54	37
Phantom,	sloop,	7 " W. H. Troop	1	55	14
Psyche,	sloop,	7 " W. H. Brookfield	1	55	35
Volante,	schr.	9 " F. Rudolph	1	55	37
Kate,	sloop,	9 " W. B. McSweeny	2	3	53

They all went off with the wind aft, spinnakers set to starboard; *Seafoam* with mainsail to starboard and fore spinnaker to port. *Daphne* led to Litchfield.

On the reach to Litchfield, *Seafoam* drew up rapidly and tacked round neck and neck with *Phantom*. *Kate* and *Volante* also pulled up on the leaders. After rounding Thrum Cap it was a beat home. *Psyche* took the lead and kept it to Mar's Rock, when *Phantom* went to the front and stayed there. The race ended as follows :—

	H.	M.	S.		H.	M.	S.
Phantom	5	5	30	*Psyche*	5	18	58
Daphne	5	9	9	*Kate*	5	27	0
Seafoam	5	17	17	*Volante*	5	29	46

Phantom winning easily, after allowing time to *Daphne*, by 3m. and 41 seconds.

The race for five-tonners was started at 2:25 P. M. Course, round Mar's Rock and back. Only two yachts started—*Muta*, sloop, 5 tons, Lt., Dunlop, R. A., and *Vixen*, sloop, 3 tons, R. T. O'Donoghue. *Muta* led across the line, with spinnaker to starboard, and went down wind past *Vixen*, spite of a bad start, caused by the spinnaker tack carrying away and holding her well to the buoy; but once sheets were flattened aft *Muta* left her rival, and, sailing splendidly, came in half an hour ahead of her. *Muta* is still the champion five, and flew her second winning flag of the season. Summary :

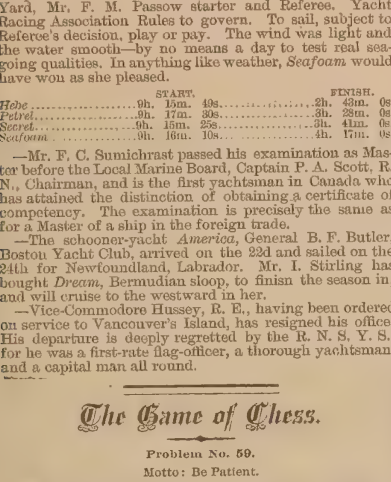
	START.	MAR'S ROCK.	FINISH.
Muta	2h. 27m. 00s.	3h. 10m. 50s.	4h. 43m. 59s.
Vixen	2h. 27m. 40s.	3h. 12m. 30s.	5h. 39m. 8s.

Muta therefore takes the prize.

—A race round Sambro and back was sailed on Friday, 25th July, Mr. J. T. Wood, sloop-yacht *Secret*, having challenged any three yachts of the squadron to sail for a sweepstakes of $25 per yacht. The challenge was taken up by the *Seafoam* schooner, and *Spray*, *Hebe*, and *Petrel* sloops. The start was made at 9 A. M. from the Lumber Yard, Mr. F. M. Passow starter and Referee. Yacht Racing Association Rules to govern. To sail, subject to Referee's decision, play or pay. The wind was light and the water smooth—by no means a day to test real seagoing qualities. In anything like weather, *Seafoam* would have won as she pleased.

	START.	FINISH.
Hebe	9h. 15m. 49s.	2h. 43m. 0s.
Petrel	9h. 17m. 30s.	3h. 29m. 0s.
Secret	9h. 15m. 25s.	3h. 41m. 0s.
Seafoam	9h. 16m. 10s.	4h. 17m. 0s.

—Mr. F. C. Sumichrast passed his examination as Master before the Local Marine Board, Captain P. A. Scott, R. N., Chairman, and is the first yachtsman in Canada who has attained the distinction of obtaining a certificate of competency. The examination is precisely the same as for a Master of a ship in the foreign trade.



—The schooner-yacht *America*, General B. F. Butler, Boston Yacht Club, arrived on the 22d and sailed on the 24th for Newfoundland, Labrador. Mr. I. Stirling has bought *Dream*, Bermudian sloop, to finish the season in, and will cruise to the westward in her.

—Vice-Commodore Hussey, R. E., having been ordered on service to Vancouver's Island, has resigned his office. His departure is deeply regretted by the R. N. S. Y. S., for he was a first-rate flag-officer, a thorough yachtsman, and a capital man all round.

CURSORY JOTTINGS.

A new chess magazine, *The Chess Monthly*, is to make its appearance next September. It is to be edited by the brilliant Paris champion, Dr. J. H. Zukerfort, whose editorial experience and rare analytical talents well qualify him for this position, and Mr. L. Hoffer, an unassuming chess genius whose reputation has, notwithstanding his persistent efforts to avoid notoriety, reached this country—in fact, is known throughout chessdom. We hope its Problem Department will be an extensive one and placed in competent hands. Subscription monthly, one shilling; yearly, ten shillings. Address Mr. Leopold Hoffer, 18 Tavistock Street, Covent Garden, London, England.

A fine chess column is conducted in the *Town and Country Journal*, of Sidney, Australia, by Mr. Crane, but its slow and irregular appearance is somewhat annoying, especially when one wishes to avail oneself of the abundance of chess news that appears therein. We should be obliged to Mr. Crane for complete copies of that journal from May 17 last, as we have not received a copy since that date.

The American gold medal to the American problematists who stood highest in the Paris International tourney is not to be awarded. Of the $36 subscribed $24 was upon the condition that neither J. B. McKina, S. Loyd nor C. C. Moore was to receive the medal.

The problem pages of the *Chess Players' Chronicle*, are now in charge of H. J. C. Andrews and C. W., of Sundbury." Since the accession of these gentlemen this department has been greatly improved—two additional pages each month of diagrams is, we think, still required.

The Ayr *Argus* and Derbyshire *Advertiser* "*discussion*" is apparently drawing to a close, with victory still seated equi-distant from the belligerants; victory's eye, we must confess, is looking longing towards the Highlands.

SHOOTING BULL BATS.

MONROE, N. C., *August* 2.

Editor Forest and Stream:—

We have a kind of shooting here which we have never seen any account of in your paper. It is bat-shooting. We call them bull-bats; some call them night-hawks. They usually appear about the first of May, and begin to lay in that month, and their young are grown and on the wing before or by the first of August. Their times and habits of flying are very much like those of the leather-wing bats; hence, we suppose, their name. When flying they look as large as a pigeon; measuring fully twelve inches from tip to tip of their wings, yet their body is not larger than a robin. They usually secrete themselves in the fore and middle part of the day, and begin flying about six in the evening. Shooting at them seems to attract them, as their numbers often increase indefinitely after you begin. Their flight is somewhat varied, like that of the leather-wing bats; sometimes sailing smoothly over you, offering a beautiful shot, then dodging like lightning here and there. They will rise rapidly ten feet or more, then quickly descend ten or twenty. Now within gun-shot, and then gone far out of reach. As night draws near they become more numerous, but the sportsman must quit, as he can no longer see. No matter how many you kill, more will come, but not in great numbers at once. They usually select different grounds, rather air spaces, every evening for their manœuvers. Their whereabouts can be easily ascertained, as they can be seen at a long distance seeking their favorite resorts; and their squak-squak, and booming whirr made in their rapid descents are readily distinguished. They subsist entirely on gnats, flies, mosquitoes, etc. I have shot them with a wad of gnats in their mouth as big as the end of my thmb. Some people relish their meat very much, but many (myself among the number) are prejudiced against them on account of their food. They are very much like the whip-poor-will. A careless observer would see no difference; but Wilson makes them quite a different bird. Like the whip-poor-will they lay but few eggs on the bare and often open ground, sometimes near a stump or clod of earth. If they ever rest in trees or on fences, as the whip-poor-will does, we have never recognized the fact. Shooting at bull-bats is much better sport than shooting at glass balls, and more difficult, more true to nature.

H. S.

REMARKS—Shooting at bull-bats is certainly most excellent practice, but it is a wanton sport, and we would not recommend it, even though ten birds rise up for each one slain. Night-hawks are most serviceable creatures, and for this reason we pray to spare them. We have been asked of what use black flies and mosquitoes are. We reply: "As food for the night-hawks." Now, of what use are the night-hawks? "To destroy the flies and mosquitoes." Don't shoot 'em. Fortunately the night cometh, when no man can shoot; so that, as our correspondent remarks, there is immunity for them after dark. That is lucky. And after all, any man who can hit a night-hawk in its erratic flight may be called an excellent wing shot.

Township 39, *Hamilton Co., Aug.* 1.—The fishing in the Adironacks has been very good this season. One of the many fine ones taken by our party was caught by Mr. Robert Lawrence, of Flushing, who, while trolling with a 10½ oz. fly-rod and small minnow gang in Brandreth Lake (four miles north of Raquette, struck a large lake trout which he landed after one hour's fight. The weighing was presided over by General J. W. Husted who was "high fish" of the party, he having taken one in Raquette weighing 19¼ lbs. The present fish, however, weighed 20½ lbs. A handsome fish to have been taken on such light tackel.

SUBSCRIBER.

Answers to Correspondents.

S. W. B., Bath.—Send particulars as to the trouble with your dog's eyes and will try and give you a remedy.

N. B. W., Peekskill, N. Y.—Robins cannot at any time be killed in New York State.

How, Meadville, Pa.—My pointer bitch whelped eight pups, five bitches and 3 dogs, on July 12th, and their eyes are not opened yet. What is the cause? Ans. Never heard of such a case.

H. D. E., M. D., Washington.—Your item about your gun bursting needs further explanation. It may have been from causes which would ensure the bursting of any gun.

A. G., Woodville, Ohio.—Could you inform me of a breeding kennel where they keep curs and hounds for hunting? Ans. No. You can get beagles from the Montclair Hunt, Montclair, N. J.

E. P. W., Hartford—Can any one make and use a patented article without infringing on the law? Ans. If purely for experiment, yes. If for use, or for sale, so as to obtain the practical or cash benefits of the patent, no.

C. A., Wolf Run.—Give suggestions how to fish for bass without fly, length of pole and in what kind of water, swift or slow? Ans. Your queries are replied to in our Sea and River department.

J. W. C., Danville, Ill.—We are of the opinion that your dog wants more exercise. If this will not cure him we know of nothing that will unless his diet is made very simple. Allowing him to go to a bitch, would, we think, only aggravate the trouble.

F. B. J., Plattsburgh.—Find enclosed the bill, foot, and wing of a bird shot by me on a mud flat while after plover. Can you tell me what it is? Ans. Your bird is the common lesser yellow leg, (*Totanus flavipes*).

H. H. S., Bridgeton, N. J.—How can an old dog be taught to retrieve? Ans. Very much depends upon the disposition of the dog, and also the trainer. We believe some men could teach the average dog to retrieve at any age.

Q. Rious, Monroe, N. C.—Do you consider a sixteen gauge breech loader large enough for quail and dove shooting? Ans. Certainly. 2. Can you furnish me back numbers of FOREST AND STREAM, one to twenty-one inclusive, Vol. ten, 1878, and at what price? Ans. We can furnish them at price ten cents a number.

J. B. B., Wallingford, Conn.—1. Can an honorary member of a club shoot with the club against another club? Ans. No. 2. Can an honorary member of a club contend with the members for a club cup? Ans. No; a non-paying member has no acting privileges.

J. O. F., Hornellsville, N. Y.—Did any base ball club or clubs ever beat any cricket club in England? Ans. The Boston and Athletic Base Ball Clubs went to England in 1874, where they played seven games, winning five and drawing two. De Witt's Cricket Guide will give you full information.

B. H. S., Frederick, Md.—I have a fine young male Maltese cat four months old that is quite sick, looks bad, and sits around all day, and has no desire for food. Yesterday it threw up a large quantity of worms, some one or two dozen about an inch long. Ans. Give him on an empty stomach 20 grains of areca nut and follow it in four hours with ½ oz castor oil.

A. W. P., Stockbridge, Mass.—I send to you to-day, by mail, a white bird that was caught day before yesterday, but died this A.M. Before it died its eyes were pink. Will you be so kind as to let me know through your paper what kind of bird it is? Ans. Your beautiful specimen was an albino green-crested fly-catcher. We desired very much to mount it but it was not in fit condition.

EGAR.—Please inform me through your valuable paper if in any of the back numbers you have published the game laws of the State of New York, and the name and price of a good work on sporting? Ans. Published game laws of New York in our issue of July 3d. The best general work on sports is "Hallock's Sportsman's Gazetteer," 909 pages, price $3.00, for sale at this office.

B. C. W., St. Louis, Mo.—Please inform me in your next how I can learn the art of "Casting;" have read several articles on the subject, and followed the directions as nearly as I could from reading them, but cannot get the idea. Would like to purchase an illustrated work on the subject if there is one published? Ans. Hallock's Sportsmen's Gazetteer gives full instructions.

W. J. E., Birmingham, Ala.—You will find a most valuable and exhaustive monograph on Carp Culture, with diagrams of ponds, dams, etc., in the United States Fish Commissioners' Reports for 1875-6, to be obtained by applying to the Smithsonian Institution at Washington. The name of the Maryland Fish Commissioner is Maj. T. B. Ferguson, Baltimore.

E. C. H., Springfield.—Will you be kind enough to inform me how a person is measured for a gun so as to give length of stock, etc. Ans. It is better to try several guns until you find one that seems to "come up" right, and then measure the gun. As a rule tall men require long stocks with considerable drop, but this does not always hold, as much depends upon the shooter's attitude.

Q. RIOUS, Monroe, N. C.—My setter bitch, nine months old and in heat last week, was lined by a hound. Of course I do not want the puppies. Would it be safe to have her spayed before she whelps; say one month from this time? Ans. No. You would probably lose the bitch. Let her have the puppies and drown them.

EMIGRANT, St. Leonard, Canada.—Will you please name any book giving good description of Oregon, its climate, population, etc., and where such a publication can be obtained? Ans. The best book describing the physical geography of Oregon is entitled "Oregon and California," published in 1839. Probably can be bought of Sabin & Sons or Henry Miller, Nassau st., N. Y. Also the "Great West and the Pacific Coast," Sheldon & Co., New York.

A. B. S., New York.—I have a very fine beagle slut pup fifteen weeks old. She has on her belly, about where her navel was, a swelling or a little bag about the size of a bean; it seems to be filled with water or blood, and is very soft. On softly pressing it it disappears in the belly, leaving a small cavity. It does not seem to bother her at all. What is it, and will it injure her? Ans. Your puppy has umbilical hernia. A bandage tied tightly around the part may reduce it, or it can be removed by operation, but it will probably do no injury if not touched.

E. D. L., Salem, Missouri.—There is within a short distance of our town, a splendid spring, which discharges into a little natural basin about 150 feet long by thirty feet wide, and gravel bottom, with an average depth of about two feet of pure, cold water. The outlet is into a sluggish dirty creek. The spring discharges about twenty gallons of water per minute, and is at the extreme head of the basin. If, by putting in a weir at the foot of the basin to prevent their escape, do you think a few trout could be successfully raised? Ans. Trout would probably thrive, provided there is sufficent natural food in the basin, and if the spring is not mineral. The experiment would be worth trying. We do not believe that the culture of brook trout can ever attain much prominence in Western States. Would advise attention to culture of Carp and the *Cyprinoids* indigenous to those waters.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY,

AT

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

***Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, AUGUST 14, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

—We publish this week the Index to Volume XII, and again call attention to this semi-annual exhibit of our field and scope. The variety of topics discussed in FOREST AND STREAM during the past half year amply illustrates the value of the paper to sportsmen and naturalists.

THE POET LONGFELLOW'S ESCAPE.—It is said that during the late tornado near Boston, Prof. Longfellow was out sailing with his family and some friends, and met with quite a narrow escape, but managed to reach the shore, where a family took them in for the night. Their friends were very anxious, fearing that the party were lost.

ACKNOWLEDGMENT.—The editor of this paper hasten to express his high appreciation of the honor conferred on him in the following note:—

ITHACA, N. Y., August 7.

Charles Hallock, Esq.

SIR:—I take pleasure in informing you that at a meeting of the club, held Monday, August 4, you were unanimously elected an honorary member. Yours very respectfully,

WM. H. DENHAM, Secretary Forest City Shooting Club.

ABANDONED CATS.—Under this heading that paper entitled *Our Dumb Animals*, which is the organ of The Society for the Prevention of Cruelty to Animals, is discussing the best plan for feeding those cats of our city dwellings which have been deserted by their occupants who have gone off for the summer. Now this is very kind—very kind, indeed—and Tabby and Grimalkin ought to feel very much obliged. Respectable house-bred cats like these ought to be kept at home, and not be allowed to go out with the midnight marauders who disturb men's slumbers with their hideous caterwauling. In fact, the proper thing would be to send the cats down for a sea-side vacation, while the families remain at home.

NEBRASKA GAME LAW.—The game law of Nebraska as it now stands is essentially the old law before the clause prohibiting all wild bird shooting except water fowl, snipe, waders, and woodcock was introduced. The close seasons now are: Buffalo, elk, mountain sheep, deer, and antelope, January 1st to October 1st; pinnated grouse (prairie chicken), February 1st to August 15; quail, December 1st to October 1st.

—Conroy, Bissett & Malleson's split bamboo bows are rapidly gaining favor among archery clubs. They cannot be broken; that is where they differ from glass balls.

A PLEA FOR WOODCOCK.

He sung where woodcocks in the summer feed
And in what climates they renew their breed.
Gay.

DURING the closing hours of the last New Jersey Legislature a bill was introduced to change the close season prohibiting the killing of woodcock from January 1 to July 4, to January 1 to September 1. It was thus intended to do away with what is called summer shooting. A comprehensive letter, written by a sportsman of experience, setting forth why and wherefore woodcock should not be killed in July and August, was read and attentively listened to, and had time permitted this protective bill would have become a law. Early in the coming session the same bill will be taken up, and it is to be hoped that it will receive the support it deserves.

Already there has been two much tinkering with the game laws, at which every "gunning" tyro takes a shot until a complete muddle is the result; both the protecting farmer and land-owner and the devastating "hunter" clash, and matters arrive at a dead lock. But before going into the pros and cons of the case it will be well to make a record of what we have recently seen, which convinces us more than ever how unsound was the existing law.

On July 5 two of us were beating out a large tract of high timber land which is watered by a well-known stream of Morris County, when our attention was called to a woodcock which our companion had almost stepped upon, and which still sat crouching within a few inches of his foot. There, on an open, dampish piece of ground, squatted a hen bird with a tiny one by her side. Making our dogs down charge we both stood watching the two, the mother from time to time moving her head sideways and rolling up her beautiful large brown eyes to our faces, as if in supplication, and the chick nestling more closely by her. Perhaps five minutes passed while we were admiring this gamy bird, when a move made by one of the dogs caused the beauty to start and flip down about ten yards away, where she alit chirping and whistling. Quick as a wink did the little downy bird wheel where it sat and raise its head and watch the path the old bird had taken. But it made no attempt to follow. Picking it carefully up we looked the young thing over, and were much amused on replacing it on the ground to see the little chap paddle off over the moss-covered roots in the direction from whence the sound proceeded. Soon it gained its parent's side, and under her sheltering wing we left him. May no bungling "hunter," with a halo of mosquitoes about his head, perspiring as if he was the father of some mighty river, with his companion, a poor panting brute with fevered breath and blood-shot eye, trail them to that hidden spot. May the little fellow live to tackle the largest kind of angle-worm and wash it down with many a julip sucked through the straw with which Nature has provided him. May he grow and wax strong, and long after he has passed through the unhealthy period of moulting may he tower away through the scrub-oak and birch, leaving behind only the screaming whistle of his flight. Autumn is then at hand, at which time—

Some think to southern coasts their flight they tend,
Or to the moon in midnight hours ascend.

It is then they weigh eight ounces, and as Josh Billings might say: "Are just as tall on toast."

Would, however, that all shooting men were alike unto a stoutish friend of ours—now, alas! no more. Before a cosey fire, and when the sleet and snow were pattering on the windows, it was his wont to extol in a most enthusiastic way the glories of summer woodcock shooting. Numberless engagements would be made and plans mapped out for the coming Fourth, then many months away. The jolly chap would even go so far as to instruct his charming wife to save all his old trousers, saying, at the time, "Mother, they will do for woodcock shooting." But when the nation's birthday drew nigh and my friend's collar drooped and responded to the call of "all down below," there was no man in Jersey who would curse the "heathenish, slaughtering law," as he was pleased to call it, more than himself. This weathercock (not woodcock) performance was carried on with exacting sameness for many years—even up to the time of his death. Several months after that sad event, while making a visit at the house, we were led one morning by the lonely widow to make an inspection of the relics of her departed lord. Guns, rods, fly-book and pouches were all looked through until we came upon a mighty mountain of garments, such as the innermost crypt of a Chatham street clothier would be unable to disgorge. With a crystal tear trickling over the lovely dimples of her face she said, with a trembling voice, "Poor Gus' woodcock pants." It was a fact—and he had passed away without taint of butchery on his hands—he had never killed a bird. No motherly bird nor brood of nestlings did he destroy. A requiem for the true sportsman that has gone.

But to resume, is it not a wretched law that enables the vile pot hunter to kill with impunity and without fear of detection the cheeping grouse? Is it not a wretched law that causes the trusty farmer, with pitchfork in hand, to execute a *pas de demon* as he sees the gang of "hunters" with racing dogs plough through his standing grain and grass in pursuit of a scattered bird? We know it is, and call for September 1 as our opening day. The change is the more necessary now that adjoining State governments have wisely prolonged the close season in their territory. Woodcock should not be shot in either July or August. We saw in one day (August 8, 1873) seven broods in a swamp in Warren County that were too young to fly or care for themselves. Because woodcock are shot at all winter in the Southern States is no argument why they should be slaughtered here while they are breeding and raising their young. Summer shooters kill the goose to get the golden egg. The speedy extermination of this king of game birds is consequently inevitable, unless a saving hand, backed by the strong arm of the law, is put forth in its defense.

DOG SHOWS AND THEIR INFLUENCE

It is possible that after careful consideration and argument the good and evil effects of dog shows might be found to be very nearly balanced. The good is to be found in the increased interest in dogs taken by the general public, in the pleasant re-unions of sportsmen and breeders, and in the opportunity for comparison, and the instruction afforded those who would learn as to points, etc., but who would have no other opportunity. The evil effects, if they can be so called, are found in the disposition to breed to dogs possessing no other qualifications than those which natural beauty and careful conditioning have succeeded in bringing to show perfection, and in the evil results to very young dogs, such as may arise from infection, contagion, or the natural consequences of change of air, diet, etc., connected with undue excitement. Indeed, while we would not suggest a departure such as was made by the Philadelphia Kennel Club in excluding puppies under eight months of age, we hope that at future shows six months will be the lowest limit at which premiums will be offered for competition. And dog shows, perhaps, have had other pernicious effects. They have increased the number of "breeders" to an extent which has become not only almost ridiculous but positively baneful. A fortunate winner of a prize in a puppy class immediately indulges in further investment, and becomes a breeder. The same result has followed from the establishment and increase of pigeon matches. Why are there a hundred so called sportsmen to-day to where there was one twenty years ago? Because each accidental spectator at a pigeon match who is induced to take a shot, and happens to kill a bird, immediately blossoms forth into a full-fledged "sportsman," a result which, while working much good for the gun trade, has had a very serious effect upon the numbers of our game birds. Nor are we sure that the establishment of sportsmens' clubs has not had a share in the same matter. In many instances mere good-fellowship has been the inspiring cause for men to join, and the result the development of an interest which takes out one more seeker for game.

But to return to dog shows. That they are the cause of many heart-burnings and much ill-feeling cannot be denied, and he who accepts the position of judge must be either callous to all revilings or else suffer more in spirit than the disappointed exhibitor. The question of judges is one which will trouble future committees not a little, and he who accepts the office, notwithstanding that he be worthy to stand by Cæsar's wife, must expect to have abuse heaped upon his head by every disappointed scribbler who can gain for his lucubrations admittance to the columns of the sporting papers. But judges, of one kind or another, will be found, and dog shows will not die out for want of this element. The evil caused by injudicious breeding we consider of much more importance, and the necessity in breeding of considering other qualities than those which go to make up a mere show winner cannot be too strongly impressed. By this we mean that the dog's general record should be scanned. We have but little more faith in field trial winners in this country than we have in bench show business, except that we believe that, considering the way they have been conducted, the chances of the best dog winning are less in the former than they are in the latter. As far as field trials are concerned, they have been run, as a rule, too much on the "ring" principle, and an exposé of some of the manipulations of scores, etc., (and we do not by any means refer to the Minnesota trials,) would astonish the general public.

It is an undeniable fact that there is a very considerable mortality among dogs which have been exhibited at shows, and a close examination into the causes which have produced this mortality is a matter of duty on the part of committees of clubs under whose auspices shows are held. Young dogs are the ones most seriously affected, and with them many natural causes can be found which would result in disease. A greater susceptibility to contagion—for no matter what precautions are taken, it seems absolutely impossible to keep infected dogs from getting into shows—the results of nervous excitement and change of food. Still, much could be done by those having charge of shows, by attending strictly to ventilation, by seeing that disinfectants are freely used, and

that the dogs whose owners are absent are regularly exercised.

The next show to be held is that at St. Louis, for which preparations are being made on an extensive scale. Occurring as it does at the time of the State Fair, when almost the population of the State is assembled, it can hardly fail of being a financial success, particularly as it is in the hands of the energetic gentlemen comprising the St. Louis Kennel Club. With the immense number of dogs in the West to draw from, it should equal in magnitude any show yet held. There is some talk of a show in Washington, and there will undoubtedly be one in Pittsburg. Whether Baltimore, Philadelphia or Boston will have shows next spring, we are not informed. We presume that the latter two cities will have them notwithstanding that the last were not financial successes in either. New York will have its fourth annual show under the auspices of the Westminster Kennel Club, and no efforts will be spared to make it more successful and attractive than any of its predecessors.

FOREST AND STREAM AMONG THE CLERGYMEN.—It was the Rev. J. Hyatt Smith (we think), who was once pleased to say in his pulpit, that he always prepared himself for the duties of the Sabbath by reading FOREST AND STREAM on Saturday nights. Its influence was quieting to the nerves and stimulating to the mind. He went into his pulpit-work with new ideas and renewed vim, but steady on his pins, pulsating as evenly as the pendulum of a clock. We have a great many clergymen who are readers of this journal, and some who are constant contributers. Occasionally one of them will break loose in a fit of enthusiasm, inspired by rhetorical habit, we suppose, and tell us how much he thinks of the paper. A great many people of other callings do this too, and do it constantly; but we seldom allow our vanity to parade all these pleasant compliments before the public. Sometimes we do, as for instance, the following letter. It is written by a Pennsylvania clergyman, and is equal to a benediction:—

Editor Forest and Stream:—

FOREST AND STREAM came to me on Friday morning in the freshness and beauty which new type alone can impart. May I be allowed to present my congratulations upon this improvement. It is a clear indication of the course which has always been pursued by your paper, namely, to give its readers *the best*.

FOREST AND STREAM AND ROD AND GUN has always been a welcome visitor. In my quiet home in Pennsylvania, on the plains and in the mountains of Colorado, and amidst the shadows of the Sierras of California, your paper has been more anxiously looked for than any other. It has always contained something to amuse, something to entertain, something *to instruct*. I have never opened its pages and been disappointed. Since becoming a reader my interest in the various branches of natural history has been greatly quickened and deepened. Indeed, I may say that so far as some branches are concerned, my interest in them has been *created* by reading FOREST AND STREAM. For this I am under a lasting debt of gratitude to you, and I wish to express my sense of obligation.

Then, too, I must not omit to say how much pleasure I have derived from the lighter parts of your paper, the articles upon the use of rod and gun, the various accounts of the experiences of others, the valuable hints, suggestions and instructions. Long years ago when a boy, the greatest "fun" I could have was to carry my gun through the fields and meadows, or to quietly drop a fly or worm into the rushing stream that ran near the old home. Then came the more serious duties of an active life with all its cares and responsibilities, which left little time for the recreations and enjoyments of my more youthful days. But the fire was there, only hidden for a time: shut out from sight by what seemed more imperative, the love of these sports was still burning warm in my heart, and it only needed the advent of FOREST AND STREAM to fan it into a bright blaze. For me, the coming of your paper has been indeed "Juventus Redivivus." And for this too, I must thank you; thank you, not only for the pleasure I have had in renewing the pleasures of my earlier days, but for the physical benefit I have received in the pursuit of these pleasures.

The thanks of all honest and true sportsmen should be yours for the steady, persevering effort you are making, not only elevate the tone of the sportsman's literature, but of the sportsman himself. Go on in this direction as you have been going, cut out and reject all that is coarse and lowering, publish only that which is pure and elevating. In the words of a former correspondent, "Leave out the whiskey," discountenance its use, or rather its abuse as you have so often done, and if you shall even accomplish nothing else than to teach your readers that a bottle is not a necessary accompaniment of a hunting or fishing trip, your labors will not have been in vain—you will have accomplished a glorious work.

Heartily wishing you prosperity in your great work, I am, Yours very sincerely, C. B.

July. 28th, 1879.

A physician up in northern New York who is of a rather practical turn of mind (bless him) sends us $4, and the accompanying note. We wish all our subscribers would follow his beneficent example: then we would be happy indeed:—

KEESEVILLE, July 2d.

You say in your editorial "Nothing makes an editor so happy as a new set of type, especially if it be paid for"—therefore I send my mite in the draft enclosed for another year's subscription to add my humble share to make you happy—and I trust that every subscriber will do the same—and then you will still be happier. J. R. R.

GAME PROTECTION.

THOSE DISCREPANCIES.—*Editor Forest and Stream*:—Why will FOREST AND STREAM persist in making *August* an open month for woodcock in Vermont? An act, passed by the Vermont legislature of 1878, makes the close time for woodcock from *March* 1st to *September* 1st. Till the passage of this act the close season ended with July. For this year and next at least, as our legislative sessions are biennial, there will be *no* game shooting of *any* kind between *May* 1st and *September* 1st. Please make a note of this. R. E. ROBINSON.

Ferrisburgh, Vt., Aug 2d.

REMARKS.—It is quite beyond our power to answer the conundrum of our attentive correspondent, contained in the first sentence of his note. We would rather watch the thermometers when on the rampage, or a weather-cock in March, than to attempt to follow the changes of the game laws. Three or four different times have we attempted to prepare a correct table of close seasons, but have never been so fortunate as to succeed. In our last effort, we obtained an official copy of the game laws of each State, and had them verified over the name and seal of each Secretary of State; but before we could get them printed, the acts had been tinkered again at a new session of the legislature, and we were all at fault, as before. Until we simplify our game laws and make them uniform, we have little hope of preventing some shooting out of season. We depend now chiefly upon the honor of sportsmen and upon their good sense not to shoot at unseasonable game: and we are glad to know that so little shooting is done, comparatively speaking. When all people, farmers and shooters together, can comprehend and become convinced that it is unwise and wasteful to destroy game out of season, they will abstain, and thereby voluntarily become conservators of game, without regard to discrepancies which may exist in the letter of the law, or in the codes of various States. Having become educated or self-taught to know where the laws are defective or onerous, they will unanimously rise up soon, and with one voice demand that they be made right. We are waiting patiently for that time to come.

Meanwhile we all recognize the necessity of an observance of the laws as they exist, and we hope that farmers owning land where game is sought will do all they can to keep off violators of the law, and by so much aid in preserving the game. If they choose to forbid shooting on their premises *in open season*, that is their own personal affair. The only point we make is this: If all farmers would become self-constituted custodians of the game upon their own premises during the *close* season, there would be very little territory left which would be called public, or which any one could claim the right to shoot over without permission. And thus, with every farmer a constable and prosecutor, there would be very little illegitimate shooting, and consequent less destruction of game. We believe that if sportsmen were sufficiently considerate of farmers' prerogatives, the two classes would soon become friends; and thus a common feeling and a common interest would induce them to co-operate together for mutual benefit, rather than struggle and antagonize for personal selfish ends, in and out of the legislatures. We conceive that the chief reason why the laws are at variance, is because of the hostile attitude of farmers and sportsmen to each other, and partly to the mean selfishness of cliques to which another correspondent refers at some length in his letter to-day. Gradually, but surely, the laws are becoming unified, and this affords us gratification; but so long as there are a dozen different fence times for woodcock, grouse, and all other games throughout the United States, we shall not cease to hear of loud and indignant and reasonable complaints. It affords us great delight to know that Vermont is one of the first (perhaps the first) of all the States to make the open time on game of all kinds whatever, to begin on September 1st. Now let all the other States rally around Vermont. It is a bright and growing nucleus of vantage.

NEW YORK.—The Watertown (N. Y.) *Dispatch* is waking up its readers to the propriety of providing against the depletion of the St. Lawrence fishing grounds. The number of anglers and visitors to the popular resorts of that river is annually increasing, and a correspondingly large catch is each year recorded. To begin restocking operations now would be a sensible move.

CALIFORNIA STATE SPORTSMAN'S CONVENTION.—There is talk of holding a grand State sportsmen's convention in San Francisco, some time during the coming Fall. California musters a large force of armed men. If any fair proportion of them gather, there will be abundant material for a rousing time.

THE NOVA SCOTIA GAME LAWS.—Many changes were made in the game laws at last session of the legisature. Amongst others, woodcock shooting commenced 1st of August, instead of 1st September; partridge shootiug 1st October as formerly; hares and rabbits cannot be shot before the 1st October, instead of 1st September as last last year. The season for shooting moose and cariboo will commence on the 15th September instead of 1st October, closing 31st January. The price of game licenses for non-residents has been increased to fifty dollars.

GAME LAWS AND PROTECTIVE CLUBS.

Editor Forest and Stream:

Never before in the annals of sporting has there been so great cause for wrangling over so-called "game laws" as at present. The ignorant theories which have from time to time been ordered printed as a guide for respectable and intelligent citizens are indeed too much of an imposition for a freeman.

Has the Republic come to such a crisis that one State—behind the age in every acquirement except fever and ague and monstrous blood-suckers—declares its right to prevent native-born citizens from the enjoyment of constitutional rights?

Has this age turned out such learned ornithologists as those who have taken the liberty of acquainting us with their (conceited) opinion that a woodcock *is* such a bird in a certain season in one county, and something else in another county, though in the same season and State?

Has any legislative body the right (though not questioning at all the power) to foist through the Legislature a political law for themselves and another one for the guidance and alleged welfare of their neighbors? Whatever the answer, the foregoing is nevertheless true.

We are emphatically informed that the law of New Jersey prohibits a gentleman from any other State from pursuing a lawful pastime, unless he, as I understand the matter and have been told, becomes a member of the club of that State.

Everyone, who has ever made even causal observations upon the habits of birds in general, knows very well—in fact better than they can be told—that woodcock do not obtain their full growth in the month of July: and yet our Jersey brethren, with an aim to protect the game of their confines, exclude non-residents, and then slaughter half-fledged birds on July 4th.

I question the harmony of such movements, since I am confident that the only way in which game is to be preserved is to protect it until it gains sufficient strength to wage battle with the sportsman, and he give the bird fair play; and if the game be not plentiful, limit the number for a day's shoot, and if they still decrease, prohibit shooting altogether for a term of years. Certainly no such tomfoolery as now exists will benefit aught in the least, except the craving of a selfish spirit. Note the law:

"CHAPTER CLXXXIV.

"An act for the protection of game and game fish.

"1. Be it enacted by the Senate and General Assembly of the State of New Jersey, That from and after the passage of this act, no person or persons non-residents of this State, shall kill, destroy, hunt or take any doe, buck, fawn or any sort of deer whatsoever, or shall kill, destroy, hunt or take any partridge, moor fowl, ruffed grouse, quail, woodcock, Wilson or gray snipe, reed bird, rail bird or rabbit, at any time, or shall catch any speckled brook trout, or speckled river trout, black bass or salmon, at any time in this State, without complying with the by-laws of the game protective societies, organized or to be organized under the laws of this State.

And all acts and parts of acts inconsistent with this act are hereby repealed; provided, that nothing in this act shall prevent residents of this State from taking game or fish, subject to the existing laws of this State.

"4. And be it enacted, That this act shall be a public act and shall take effect immediately.

"Approved April 4, 1878."

From a few other paragraphs I infer that the "non-resident" must be an acknowledged member of some New Jersey club. New Jersey may ere long limit the number of applications for membership, and I have yet to see the day when a national decree will prohibit any one whomsoever from rambling *ad libitum* into the wilds of an adjoining State for the enjoyment of, as I have already said, a lawful pastime.

Some one too, at Albany, thought he never did so wise an act as when he influenced the exception of the counties of Kings, Queens and Suffolk (Long Island, for short) to the game laws. Confident am I, though I may lack the means for immediate proof, that such an amendment was certainly counseled for the benefit of a few, and not for the sporting fraternity at large.

This, however, has been corrected of late, but if a sportsman wanders off to the "Wallkill," where upon August 1st the law of the State of New York says he may shoot woodcock, he will have killed but one bird, when officers commissioned for preserving the peace will clutch him and drag him off to Middletown to pay a fine of twenty-five dollars for killing birds OUT OF SEASON, as Orange county has a law of its own, which prohibits said shooting until the first of September! Since the hour has not yet arrived when sporting clubs have a word in legislative matters, their members have no right to beg from Assemblymen partial rights to indulge in foolish whims or to make the residents of one of the foremost cities in the Union an exception to the Game Act, simply because the utopian paradise where their rambling pleasures exist is, perchance, separated from the mainland.

The proper time to shoot woodcock is the first of September. I am no authority myself other than observation has taught me; so my assertion is borrowed from the best sources and authorities; and their judgment has precedence before that of any assemblyman who may have, through pecuniary influence, obtained a seat in the Legislature; though it may not be altogether improbable that he was employed as a dry-goods clerk, or sold jalap for a livelihood previous to the attainment of his eminence.

Such men, entirely lacking jurisprudence, have their "game acts" prepared for them by incompetent and unconscionable self-styled "sportsmen," of which I must admit that New York and her neighbor's quagmire have an over-abundance.

It was not long since, at a fashionable dinner given at the seaside (Coney Island), that an honorable of Brooklyn remarked that he could not see why the lake in "Prospect Park" could not be an efficacious medium for the breeding of "brook trout." "The woods are full of them;" or, as "Tom Draw" would say, "Leastwise I guess there be over to Jarsey ways."

HARRY FENWOOD.

We agree with our correspondent that (save in such particular cases of newly introduced fishes, etc., as we have already stated in previous discussions of this question) county game regulations conflicting with the general law of the State, are unwarrantable and productive only of confusion. But had our friend reflected upon the two New Jersey laws of which he complains he would have

spared himself some indignation. It was the tremendous influx of shooters from other states who poured in upon the New Jersey shooting grounds that compelled that State in self defence to pass a protective statute. This incursion of foreign hordes was in great measure owing to the earlier season for woodcock. Men, who could not afford to wait until the 1st of August in New York State, crossed the ferry and speedily found themselves in a game country where they might kill to their heart's satisfaction without fear of constables and magistrates. The difference in date is unnecessary and, we trust, may soon be remedied. The non-resident regulation is wise. It is coming into favor elsewhere. There is no just reason why the residents of one State—especially of such a small State as New Jersey—should have their game pillaged by their neighbors.

ALASKA IN SUMMER.

SECOND PAPER.

FROM OUR CORRESPONDENT ON BOARD THE JAMESTOWN.

SITKA, *July* 13.

Editor Forest and Stream:—

Some day there is a steamer coming to bring to us exiles news from the outer world; that is, we hope so. She is due once a month, on the 9th inst.; last month the 23d brought her, and this, the 13th, has not been enlivened by her presence. So we live on, hoping. Our last dates are June 1st.

A sojourn in Sitka is an era in a man's life time. He may have before, in the solitary wilderness of the Adirondacks, or among the woods and mountains of Maine, or the Provinces, shantied out under the bark roof, with his guide, and perhaps a companion and his dogs alone for company, fancied that he was "far from the madding crowd," but he was not. A few days at the utmost would bring him again into the domain of the newspaper and telegraph, the hotel, cars, boats, and other elements of life. Here we are beyond the reach of all such luxuries. You see I rate the least of them now as higher than necessities. We lie here moored head and stern; four anchors ahead to the south-east (from whence, some day in the fall, we may expect strong gales), and two to the rear, in imitation of our old time mariner, St. Paul, who, I believe, set the example of anchoring over the stern. Ahead of us and to the right are beautifully wooded islands, so close that with my Remington a 10 degree elevation lands the bullet in the eight-inch bulls-eye of the target erected on the beach, in a spot where a rocky bluff, in the rear, saves us from the probability of slaughtering clam-digging and berry-hunting squaws. In our rear, a mile distant, where the Straits of Olgo turn to the northward, a high wooded hill turn the bit of sea into a seeming lake. On our left is a row of high, densely wooded peaks, the summits of many of them still canopied with snow, which at times is visible, and at others hidden by dense banks of clouds and mist, which, like the sable cloth of Sable Mountain, roll over and envelope them. At the foot of these moutains nestle two villages. The one to the left is the Indian Ranche; that to the right the white settlement. The former is composed of one story log cabbins, built of very heavy timber. In the front of each is a round hole at the head of a flight of steps, through which entry and exit are made. This row fronts the sea, and consists of perhaps fifty houses. Back of them the foot hills are dotted with little smoke-house like structures, painted red and white and blue, in which repose the ashes of their cremated dead. Between each pair of houses, canoes, both great and small, some of which will hold twenty or thirty paddles, are hauled up and covered with matting. These and blankets constitute wealth in this country.

Just now the ranche is like the "Deserted Village." In winter perhaps a thousand Indians dwell there; now there are not a hundred. In all directions they are scattered, hunting the seal and sea otter, and fishing for their winter's supply of food. Our great guns bear frowningly upon them, but a corporal's guard could with safety undertake the task of quieting all sources of disorder, except the tongues of drunken squaws. These Indians are rapidly paying the penalty which all uncivilized races must pay when they come in contact with civilization. We christianize a very little, but we poison and kill a great deal. As the islanders of the Pacific have wilted away through the rum and diseases brought to them by "Christians;" as the Chinese millions have yielded to the opium curse, taught them by Christians; as our red men of the plains have fallen through the fire-water, and frauds of white men, so are these tribes suffering from the curse! They are not Indians, according to the ordinary acceptance of the term; nor warriors, but simply a quiet, hard working lot of inferior men. Were it not for the vices they have learned from us they would not be as apt to commit outrages on whites or others, as would the same number of low class white men tempted by want, and unrestrained by every form of government.

But in branching off from the legitimate track for a FOREST AND STREAM letter, I'll tell you what the Indians are doing for the country, if development of great resources can be so called. Yesterday and the day before one boat, manned by eight Indians, caught in their seins *thirteen tons* of salmon, which they delivered to the salmon canning establishment at Port Hunter. Now, if these Indians received, as I believe they do, one dollar each per day, and the white men in charge of the boat three, it becomes a simple problem. If thirteen tons of salmon cost $22, what does it cost per pound? and at what price per pound can this be furnished to salmon eaters in the East? Throwing off one-third for wastage, we have 20,000 pounds of raw salmon for $22. Of course, to this must be added the usual cost of manufacture, tinning, interest, freight, etc., but the fact remains that these items paid, the raw material cost but little over one-tenth of a cent a pound! This may have been an exceptional catch, but a bad day's work is still more exceptional. I do not believe that, all things considered, a tinned pound of salmon, delivered in San Francisco, will cost its producer above three cents. Upon a visit I saw over ten tons lying upon the floor; so said the superintendent, and I could well believe him; and at the hour some eighty men had been at work two hours reducing the fish to pound packages. The salmon are in profusion here. At times the water is alive with them, but none of us have as yet been able to persuade one to take hold of anything. When we see them they are too busy taking care of themselves. Huge herds of porpoises are among them, and black fish, all with an unlimited capacity for fish diet.

The canning process is interesting. At a long table stands six or eight Indians, and to each a boy hands from the heap a salmon. With half a dozen rapid swishes with knives so sharp that they make one shudder at the probabilities, the fish is beheaded, disembowelled, and unfinned (to coin a word), and slipped into a big tank of fresh water, from which another gang, on the opposite side, are constantly lifting them, and putting them through a final careful, but very rapid cleaning. So far, it is about as we clean our trout at noon-day lunch and pipe on a trout brook, and the cook in the morning before serving recleans. Then comes the cutting-up process. The length of a pound can is a fixed number of inches, and at these distances apart on a cylinder are revolving chopping knives, and at one turn of the crank the salmon is cut into as many pieces as his length permits. These are passed along to other Indians, who insert in each can its load, consisting of a transverse section. From this out the process is the same as used in canning other meats, and all is performed by Indians. I have not yet seen a large fish. Mr. Hunter tells me that their biggest so far weighed forty-four pounds. None that I have seen would go over twenty, and generally speaking a fifteen pound fish is counted a big one. There are, however, many such. If one but reflects that *all* of these fish are taken in the spawniug season, and that a large proportion are females, it becomes evident that either the supply must be eventually exhausted, or that it is practically inexhaustible.

Hallock: this counting salmon by the ton is demoralizing to a disciple of Father Isaac. All the poetry is knocked out of the lordly "*salmo salar*," and as for trout! One of my hopes of future happiness (in this world—I mean the other part of this world), is gone forever. I don't believe that ever again I will be willing to tramp all day in a trout brook, and come home, tired, wet, and *pleased* because my ten pound creel is full. Why, I have only to drop this pen now and take it up again in two hours, and in the interval have caught as many half to a pound and a half trout as I could of cunners in the same length of time, were I off Cape Ann instead of here. I have though still one new sensation in store. Next month the salmon will crowd up the little rivers, where I now catch trout, so thickly that the Indians and bears and boys and hawks and squaws will scoop them out. And in a few weeks the ducks will come, and grouse be in condition, so there is something left.

We have a curious climate here. It rains considerably, but as yet we have had more pleasant than unpleasant weather; but in the rainiest day the atmosphere is not damp. Wet clothes hung under the awnings will dry; our cigars and tobacco remain free from mould and mildew, and our guns keep easily in good order. I have suffered more from dampness in one day at New York and other places in the Sound, than I have here altogether. We have a healthy temperature, 54 to 64 degrees, and all keep in good condition, and hope to till we see you again.

Yours truly, PISECO.

—SHARP'S RIFLE CO., of Bridgeport, Conn., have just issued a new illustrated catalogue of their arms, &c., in which large reduction in prices are noted. It contains much matter of interest to sportsmen, notably that relating to *Express Rifles* and ammunition, in which the much discussed subject is briefly but intelligently and exhaustively treated. Military marksmen will find the article relative to steel shells for short range and gallery practice, of practical benefit. We advise our readers to send to the Sharp's Company for a copy, which will be mailed to any one on application.

The Rifle.

A WORTHY OFFICER.—The *New Haven Register* of August 11th, says that Major James E. Stetson, brigade inspector of target practice on General Smith's staff, being about to leave that city for three months on an extended tour of the extreme western States and Territories, tendered his resignation to the General, who, instead of accepting it, forwarded it to the Adjutant-General disapproved, but recommended and requested that the Major be granted leave of absence for three months instead. By this course the services of a superior officer will be saved to the brigade. Capt. J. L. Woodbridge was appointed to fill the temporary vacancy. Major Stetson is not only one of the best shots in the State, but has been inspector of rifle barrels for the Winchester Arms Co. of New Haven several years, and his western tour is for the purpose of explaining and introducing the new Hotchkiss or Bolt gun, which bids fair to revolutionise the military arms of this country. As an expert on arms or ammunition the Major has but few equals. Capt. Woodbridge, who fills his vacancy in the interim, is a veteran shot, thoroughly posted and equal to any emergency. The Major is having made a handsome gold badge or medal, to be presented to the member of the Connecticut National Guard making the highest score in the "Individual Match," upon the occasion of the brigade rifle tournament, occurring about October 1. It will be valued at about fifty dollars.

CREEDMOOR PROSPECTS.—At the regular meeting of the Board of Directors, National Rifle Association, held Aug. 5th, the Committee on programme presented the following schedule of contests for the seventh annual fall meeting of the association, which will commence on Tuesday, Sept. 16th: 1. Directors' Match, 200 yards, directors only; 2. Judd Match, 200 yards, military rifle, all comers; 3. Short Range Match, 200 yards, any rifle, all comers; 4. Champion's Match, 200, 600, and 1,000 yards, any rifle, ten rounds at each range, all comers, gold, silver, and bronze championship medals and cash prizes; 5. Cavalry Matches, 200 and 300 yards, five rounds at each, for carbines and State troops armed therewith, teams of six; 6. Cavalry (State) Match, same, but teams of seven men and seven rounds, stated prizes; 7. Gatling Match, teams of twelve men from all companies of New York State troops, 500 yards, prizes, a Gatling gun and other prizes; 8. *Army and Navy Journal* Match, teams of twelve from any military or naval organization in the United States, rifle issued to corps, 500 yards, prizes, a trophy worth $750, and other prizes; 9. New York State Match, teams of twelve men from all New York State organizations, usual military conditions, four prizes, worth $750; 10. First Division Match, same conditions, but for First Division troops only, prizes valued at $222; 11. Second Division Match, same conditions, but for Second Division only; 12. Laflin & Rand Match, military, but seven rounds, individual members of military corps, prizes aggregating $370; 13. Inter-State Match, one team from troops of each State or Territory, military conditions, prizes, "Soldier of Marathon" and other prizes; 14. Short Range Team, teams of four from any rifle club or military organization in the United States, 200 and 300 yards, stated prizes; 15. International Military Match, teams from Army and National Guard and any foreign country; 16. Military Championship Match; 17. Inter-State Long Range Match, teams of four men, usual conditions; 18. Wimbleton Cup Match, all American citizens, 1,000 yards, thirty rounds, for the Wimbledon Cup and other prizes; 19. A match at 600, 800, and 1,000 yards; 20. The Running Deer Match. Seven rounds in all matches when not otherwise stated.

The committee believe that cash prizes would be more acceptable than the usual trophies. Col. J. H. Cowperthwaite was elected Executive Officer; Major James H. Jones, Statistical Officer; and Hon. D. W. Judd, Financial Officer of the meeting. The amendments to the general regulations governing matches at Creedmoor were then taken up, and the following changes made: Movable rear sights are to be permitted on military guns; sights may be colored in any manner; slings may be used to assist in lessening the recoil of guns; fixed rests will be allowed at distances over 600 yards, where the conditions of a match do not prohibit their use; no more than four competitors will be allowed at a single target; two competitors will not be permitted to use the same gun in a match; no match shall be shot with less than ten competitors. Major Jones, the Secretary, was authorized to submit a new plan for deciding "ties" at the next meeting of the board.

CREEDMOOR—*July* 30.—The New York Rifle Club met at Creedmoor to-day to shoot for the "Donaldson" trophy under the following conditions: 200 and 300 yards; off-hand; number of shots, seven at each distance; winners once will be handicapped one point at each distance; winners twice will be handicapped two points at each distance,

FRED. ALDER.

Mr. Howlett having won the badge twice, was handicapped four (4) points, leaving Mr. Alder the winner.

CREEDMOOR—*August* 6.—The New York Rifle Club met for weekly practice to-day. In shooting for the "C. E. Blydenburgh Badge," 200 yards, off-hand, at the word of command, the following scores were made:—

	HANDICAP.	TOTAL.
E. B. Barker	3 4 4 4 4 3 4 4 4 5—39	39
F. J. Donaldson	4 4 4 3 4 4 4 4 4 5—40 1	39
W. H. Dunlap	4 4 5 5 2 4 4 5 4 3—40 2	38
J. W. Mangan	3 4 4 4 3 5 4 3 4 4—38	38
A. J. Howlett	4 3 4 2 3 4 4 4 4 2—34	37
Fred Alder	5 4 3 4 4 3 4 3 4 4—36	36
V. Daly	4 4 3 4 4 4 3 4 4 5—35	35
N. O'Donnell	4 3 4 2 3 4 4 4 4 2—34	34
A. McInnis	4 3 3 0 4 3 3 0 3 1 27	27

In shooting off the tie on 39 Mr. Barker won. In the competition for the J. B. and H. D. Blydenburgh Badge that followed, shooting off-hand, at 500 yards, the following were the best scores made:—

N. O'Donnell	4 4 5 5 4 5 4 4 4 5—45
A. J. Howlett	5 5 3 5 3 5 5 3 4 5—42
V. Daly	5 5 4 5 3 2 4 4 4 4—40
W. H. Dunlap	2 1 4 3 5 5 5 4 2 3—37
E. B. Barker	4 5 2 4 2 3 3 2 5 4—34
A. M. McInnis	3 2 0 4 2 2 3 5 3 4—28

In a match that followed between Mr. F. J. Donaldson and Mr. J. W. Mangam, at 500 yards, off-hand, both using open-sight military rifles, Mr. Donaldson won, making 23 out of a possible 25.

SCHUETZEN FESTIVAL.—The New York Schuetzen Corps, Captain D. G. Yuengling celebrated their 22d annual festival at Union Hill August 4, 5, and 6. Mr. J. Himer, last year's König, and the Schuetzens of Bridgeport, Conn., were present.

VERMONT—*Brattleboro, August* 8.—Fort Dummer vs. Fuller Battery. The Battery used the Springfield musket, and the Fort Dummer sporting rifles. The match was concluded at 2 o'clock this afternoon, the score standing as follows:—

FORT DUMMER.

Rogers	4 5 4 5 2 3 4 3 4 5—39

Lewis	2	9	5	8	8	11	11	11	8	10	83—40

—Mr W. H. Jackson, captain of the American team of 1878, is making a tour of the Canadas, partly with a view, it is said, of getting a Canadian team to visit Creedmoor the coming fall. At the same time the "gallant captain' intends showing the "Knuckers" how to handle a rifle before the butts, he purposing, it is given out, to participate in a few matches before returning home.

MASSACHUSETTS—*Walnut Hill, August* 6.—The long-range match went on to-day with a fairly large attendance of riflemen and spectators. The weather was delightful, but the wind, a "9 to 10 o'clock," proved somewhat annoying to the marksmen, at the 1,000 yards distance especially. In consequence, Mr. Sumner, who had gone back from the 900 yards with a fine 148 out of a possible 150, had to content himself with 211 at the three distances.

J. S. SUMNER.

Walnut Hill, August 9.—There was not so large a number of riflemen present as usual, owing to the absence of many prominent marksmen in the country. Forty-three well-known shots faced the "butts," and took advantage of the weather conditions to put in good scores in the first competition at 300 yards, in which brilliant shooting was done by Mr. J. C. Mattoon, who achieved the elegant score of 34 out of a possible 35 at 300 yards, off-hand, and this is believed to be, by the shooters here, the best score on record at this distance. The day was propitious for good scores, the wind giving no trouble, blowing at the beginning of the match from the north down the range and indicating 12 o'clock. The sky was overcast, and the dark clouds which flitted across the horizon made the light exceedingly bad for good sighting, and the little eight-inch bull at this distance looked very, very small, and was very hard to find by the "bulls-eye destroyers." The range presented an animated appearance, as the long-range targets were occupied by a party of Lawrence gentlemen, and the military were out in large numbers. Among the many spectators was Mr. A. A. Parker, of Chicago, whose reputation as a first-class shot is well known here. His capital shooting at mid-range, off-hand, was thoroughly enjoyed by the riflemen. The spectators were numerous, and many ladies graced the range. The best stood:—

J. O. Mattoon	5 4 5 5 5 5—34	J. Borden	4 4 4 3 4 5—28
E. B. Souther	4 5 5 4 3 5 4—30	E. F. Richardson	4 5 3 4 4 4 4—28
C. U. Meiggs	5 3 3 5 4 5 4—29	W. E. Guerrier	4 4 3 5 4 4 3—27

Medford, August 9.—The mid-range match at Bellevue range was well attended. The light proved exceedingly bad, and the wind also added to the discomfort, blowing in all directions and very unsteadily. Messrs. Withington and Teele carried off the honors of the day, cartons counting six. Below is the summary, 500 yards:—

H. Withington	4 5 5 5 5 5—36	W. Henry	3 4 4 5 5 6—33
J. R. Teele	5 4 4 5 5 6—36	H. Edmands	3 5 5 4 4 5—30
T. R. Jones	5 6 4 5 4 5—34	J. Richardson	3 5 6 4 2 3—26

—Natick *vs.* Cochituate. The Cochituate Sportsman's club accepted the challenge of the Natick Sportsman's club, and the match took place at Whitney's grounds, Natick, on the 9th. The conditions were: 30 balls, ten Bogardus, ten double, and ten rotary, with eight contestants, four on a side. The Natick team carried off the honors by two balls, as the following score will show:—

NATICKS.

W. W. Clark	B 1 1 0 1 1 1 1 1 1 0—8 / D 1 0 0 0 1 0 0 1 1 1—5 / R 1 1 1 1 0 1 1 0 0 1—7	20

—A sweepstake match for prizes followed, with the following result out of a possible 5: C. W. Gill, 5; C. W. Hall, 5; J. Hall, 4; J. N. Cochran, 4; F. Stevens, 4; J. Locker, 4; J. H. Wright, 3; Ralph Bent, 3; G. A. Leach, 2. The first prize lies between C. W. Hall and C. W. Gill, who tied on 5, while the second went to J. Locker, and the third to J. H. Wright, M.D.

Medford, August 8.—There was not so large an attendance as usual at the last meet of this growing and popular organization, owing to the weather conditions. However, capital results were obtained. In the glass-ball shooting Mr. G. B. Blanchard carried off the honors of the day, followed closely by Mr. Kirkwood, from single, double, and rotary traps. Below is the result:—

G. B. Blanchard	10 8 9—27	A. L. Smith	9 8 8—25
D. Kirkwood	9 9 8—26	J. R. Teele	7 7 8—22
W. B. Witherell	8 7 10—25	M. B. Morriss	6 5 5—16

Boston, Mammoth Gallery.—The regular August monthly prize shoot has begun with good shooting, several competitors following closely in each other's steps for leading place. Following is the summary, 150 feet; rounds, 8; possible, 40:—

U. A. Pollard	4 5 5 5 4 5 4 5—37	
S. S. Bumstead	5 4 4 4 5 4 4 5—35	
George W. Morse	5 4 4 4 4 4 4 5—35	
H. A. Hopkinson	4 4 5 4 4 4 4 5—35	
Charles Tupper	5 4 4 5 4 4 4 5—35	
O. W. Clapp	4 4 4 4 5 5 5 4—35	
George Estes	5 5 4 4 4 5 4 4—35	
M. O. Johnson	5 5 4 4 5 4 4 4—35	
George M. Smith	5 5 5 4 4 4 4 4—35	

NEW JERSEY—*Brinton Range, August* 9.—Winchester match; third competetion; thirty-two entries; best scores; 200 yards:—

1,000	5 5 2 4 5 5 5 5 5 5 4 4 3 3 3—67	

COLUMBIA RIFLE ASSOCIATION—*Washington, D. C.*—The second announced contest for the Harkness Badge on the all-summer series, took place at Benning's to-day. Light clouds gave the steady gray light that so overjoys the old rifleman's heart, but the wind was provokingly tricky from seven o'clock, and strong enough to cause "mag.," or even an outer for the unwary. All the contestants led off at 800 yards with centers; but on the next round the Colonel "got on" for a fine bull's-eye, and, with one close exception, on his fifth round, staid on for the remainder of the string, making 78. Laird followed with a hard-earned 71, while Lauritzen, who was treated by a sudden puff to an "unaccountable," got but 65. At 900 yards the Colonel found the bull on the first round, got off it on the third, again narrowly missed it on the eighth and eleventh rounds, and wound up with a total of 73 to Laird's 66 and Lauritzen's 64. The 1,000 yards' stage was very trying, but Colonel Burnside fought through pluckily and dropped only two points in the string, winding up with 73 points to the good and an aggregate of 218, the best yet made in a regular match on the Columbian range. The scores are as follows:—

COLONEL J. O. P. BURNSIDE.

800 yards	4 5 5 5 4 5 5 5 5 5 5 5 5 5 5—74	
900 yards	5 5 4 5 5 5 5 4 5 5 4 5 5 5 5—73	
1,000 yards	5 5 5 4 5 4 5 5 5 5 5 5 5 4 5—73	
Total		218

C. H. LAIRD.

800 yards	4 4 4 5 5 5 5 5 5 5 4 5 5 5 5—71	
900 yards	4 5 4 4 3 3 5 5 5 5 5 5 5 5 5—66

Total		201

P. J. LAURITZEN.

800 yards	4 5 5 4 4 5 0 4 5 5 4 5 5 5 5—65	
900 yards	4 3 4 4 5 5 3 5 5 5 5 3 5 4 4—64	
1,000 yards	4 4 5 3 5 4 5 4 4 3 5 5 1 4 4—63	
Total		192

The Harkness badge match will be shot every Saturday, weather permitting, until November 1, when each contestant's best three scores will be aggregated, and the one having the highest will be declared winner of one of the finest and most valuable badges ever shot for in this country. The prediction has been ventured by some of the members of the C. R. A. that the winning scores will aggregate over 650 points.

On Saturday, August 2, the Columbias had their third shoot for the Harkness Badge. Out of the seven or eight long-range men who belong to the Association, only four entered, one of them being the new comer, Dr. Scott. A very warm day made things favorable as far as low trajectories were concerned, but the glare gave a "gin-and-sugary" unsteadiness to the "bull," so that his "eye" fairly winked at times, and the wind was shifty in direction and force, standing oftenest at seven o'clock. Time being called, Colonel Burnside went to the firing point and handled his shooting-iron for a fiver. So did Dr. Scott and Laird. On his fourth round a momentary inattention to the pennants gave the Colonel a "mag," followed up by a center before he got the hang of things again; but all the while Dr. Scott banged the "bull" and netted a clean string to the Colonel's 72. At 900 hundred yards, however, Burnside turned the tables; and, while the Doctor got blown off twice into the center circle, and once as far as the magpie's nest, the Colonel rolled up fifteen bulls without a break. Neither was able, however, to hold the fine start thus gained at 1,000 yards, the wind proving too treacherous, and Laird came in ahead with a capital 69 considering the difficulties in the way. The Doctor came next with 68, and Colonel Burnside toted up 67. The result was a tie for the Doctor and the Colonel, at 213, the former leading with the fewest inners. Laird's 208 should have been better, but for a gusty "outer" at 800 yards. The following are the leading shot-for-shot scores:—

DR. S. SCOTT.

800 yards	5 5 5 5 5 5 5 5 5 5 5 5 5 5 5—75	
900 yards	5 5 4 5 5 5 5 5 4 5 5 5 5 5 5—71	
1,000 yards	4 5 3 4 5 5 5 5 5 3 5 5 5 4 5—68	
Total		214

COLONEL J. O. P. BURNSIDE.

800 yards	5 5 5 3 4 5 5 5 5 5 5 5 5 5 5—72	
900 yards	5 5 5 5 5 5 5 5 5 5 5 5 5 5 5—75	
1,000 yards	3 4 5 5 5 5 5 5 5 4 4 5 4 3 5—67	
Total		214

C. H. LAIRD.

800 yards	5 5 5 5 5 5 5 5 5 4 5 5 5 5—71	
900 yards	5 5 5 5 4 5 4 4 4 4 5 5 5 5 5—68	
1,000 yards	5 5 4 3 5 5 5 5 5 5 5 4 4 4—69	
Total		208

Colonel Burnside's score in this match is now the leading one, with an aggregate as follows:—

Saturday, July 19	203
Saturday, July 26	218
Saturday, August 2	214
Total	635

—M. T. Partello, of Washington, D. C., the celebrated long-range shot, is an applicant for one of the vacant second lieutenancies, U. S. A., and has been ordered to West Point for examination.

ILLINOIS—*Chicago, July* 26.—At the shoot for the Giles Brothers' silver cup by the George H. Thomas Rifle Club to-day the following was the score:

Austin	4 5 4 4 5 5 4 4 5 5 5 4 4 5 4—67
Terrell	4 3 5 5 5 5 4 5 4 4 4 5 4 4 5—66
Church	4 3 5 4 5 4 4 4 4 4 4 5 4 4 4—63
Freeman	4 4 4 4 4 4 4 5 4 5 5 4 3 4 5—64
Smith	4 4 5 3 4 4 4 5 4 4 4 5 4 4 4—62
Drury	4 5 4 4 4 4 4 4 4 4 4 3 4 4 5—64
Hobbs	4 4 4 4 4 5 4 4 5 4 3 3 3 3 5—61
Chenwith	3 5 4 4 4 4 4 4 3 4 3 4 4 4 4—59
Birchardt	3 4 4 4 4 5 5 4 3 4 3 4 4 4 4—59
Higby	5 4 4 3 4 4 4 3 4 5 4 3 4 4 3—58
Nye	3 4 3 4 4 4 4 4 3 4 3 2 3 3 3—52

200 yards; off hand. O. K.

MINNESOTA.—The Minneapolis rifle club have elected the following officers: President, Dr. A. F. Elliot; Vice-President, S. W. Hankinson; Secretary, H. L. Ashley; Treasurer, E. Bachner. An executive committe was also selected to take charge of the recently secured rifle range on the East Side of the river, provide targets, etc. This committe consists of Drs. Elliot and Skinner, Hoblet, Hankinson and Quam.

The club decided to have practice meetings at 2 o'clock each Friday afternoon. The club propose during the first week in September—during the great northwestern Agricultural Exposition and Trotting Circuit—to be held that time, to hold a grand tournament for the riflemen of the north-west.

CALIFORNIA.—The rifle tournament of regulars for positions on the Creedmoor team was concluded at Presidio range, August 2d. The following are the highest twelve scores, the makers of which will represent the Pacific division:—Sergeant Woodall, 246; Sergeant Wells, 243; Lieutenant Landis, 240; Lieutenant Boutelle, 239; Lieutenant Gordon, 238; Sergeant Hickey, 232; Captain Miller, 229; Lieutenant Anderson, 229; Lieutenan: Bloom, 226; Corporal Harman, 226; Corporal Wilson, 225; Private Jackson, 225.

The California marksmen have found a new idol in Mr. John Ruth of Oakland. Recently, at Piedmont Springs, Mr. Ruth in shooting at glass balls, broke 48 and 49 out of 50, and 98 and 99 out of 100. He also broke 42 out of 50 by raising and firing the rifle with one hand. Preparations are being made for a match between Ruth and a noted shot of Utah, for a purse of $200. The gentlemen are to shoot at 500 glass balls, Mr. Ruth using a Ballard rifle and his opponent a shot-gun. Mr. Ruth opens a challenge to the world. He proposes to beat the best record ever made by Carver, 885 out of 1,000 glass balls.

LOUISIANA—*New Orleans, August* 3.—The chief interest to-day centered in the contest for the Mobile trophy. The absence of the Louisiana Field team, which on three consecutive occasions made the highest scores, and which yesterday was off with the command on an official visit to Donaldsonville, left the field open to the Washington and the Continentals. As will be seen from the scores given below, some good scoring was made, especially by Rosenberg, Selph and Arms. The winning team's score,

363, is equal to the best score yet made, while that of the Continental team is the best it has yet made. The summary—Inter-State and Mobile trophy; fifth competition, under the new rules, which require five winnings to entitle to possession; distance, 200 and 500 yards; teams of eight; seven shots at each range, with military rifles. The prize was won the first, second, and third times by the Louisiana Field Artilery team, the scores being 365, 396, and 345, and the fourth time by the Washington Artilery team; score, 345:—

—The individual match for the handsome pair of field glasses, the donation of the Crescent City Rifle Club, distance 200 yards, five shots and unlimited entry, which was started last Sunday, and left at the mercy of Lieutenant Dudley Selph, with his score of 22 points out of possible 25, was continued yesterday. Lieutenant Selph's score was not overcome. The match will be finished next Sunday.

The German Shooting Society, of Charleston, S. C., also elected new officers, viz.: A. Melchers, President; J. F. Meyer, First Vice-President; H. W. Mollenhauer, Second Vice-President; W. Fischer, Third Vice-President; D. Lilienthal, Shooting-master; C. F. Luebs, Treasurer; A. F. Melchero, Secretary.

THE ELCHO SHIELD SCORES.—This match, of which the general results have already been given in our columns, took place on the 24th ult. A heavy rain storm had set in during the preceding night, continuing well into the morning, but before mid-day the wind shifted, the hazy clouds were driven across the sky, and the afternoon was all that could be desired. As the teams secured positions at the 800 yards firing points, there was a very large attendance of spectators. Prophesy was fulfilled, for the Scotch team held a lead of 12 at this first distance, and although they fell off 22 at 900, they handsomely covered. The men were on their metal from the very first round, and, although the wind was troublesome, the shooting was steady. At the close Scotland had 521, Ireland 509, and England 503 points. After a short luncheon the work was continued at 900 yards. The misses of McKenzie, soon followed by a slip for Thorburn and another for Caldwell, were pulling down the Scotch figures. At this range England was virtually out of the match, while Ireland had covered the loss, and now led by ten points, viz.: Ireland, 1,018; Scotland, 1,008; England, 999. The shooting at the last distance was excellent, considering the state of wind and weather. The shooting was steady, and, although not brilliant, was careful, while to the Irish team fell the ill-luck of breaks and misses. Humphrey, of the English team, made the best individual score in the match, 200 out of a possible 225, Boyd, of Scotland, second, with 198, and John Rigby, of Ireland, third, with 195. Last year there were twelve individual scores of 200 and over. The following are the scores,

SCOTLAND.

T. Boyd.				Private McVittie.			
800	65			800	65		
900	68	198		900	61	188

CONNECTICUT WOODCOCK SHOOTERS.—The communication referred to below was sent to us by a most reliable and trustworthy correspondent who, we have had every reason to believe, has the facts in his possession. If any of the New Haven Gun Club members have been wrongly accused, we should be the first to relieve them from any stain. But it is a notorious fact that woodcock have been killed. Can our friends tell us who did kill them?

NEW HAVEN—*Aug. 6.—Editor Forest and Stream*:—In your issue of July 31st, you published a communication in which the writer claims to have been informed on good authority that members of the New Haven Gun Club have been shooting woodcock since the middle of June. I doubt very much if your correspondent can prove or back his statement. I have been investigating this matter very carefully, and have not found any reason to believe that any member of the New Haven Gun Club has shot woodcock or any game birds this season. One member has had the name of shooting woodcock for the last month until now, but I know it to be a fact that he has been shooting only plovers. If a report of a gun is heard outside of the city limits, members are accused of shooting birds out of season. The East Haven party and the well-known restaurant keeper of New Haven are not members of the New Haven Gun Club. I have been informed by good and reliable authority that the East Haven party has not shot a bird this season. I would advise your correspondent not to jump at conclusions, or believe all the floating rumors he hears, but to confine himself more to facts. I have traced several of these rumors, and find in most cases that they came from parties who are poor shots. I have no doubt that if your correspondent knew of any members of the club who have been shooting game this season, and would report their names to the chairman of the business directors, it would be investigated, and the rules and by-laws would be enforced. X.

GUN PATTERNS.

AUBURN, June 2, 1879.

Editor Forest and Stream:—

I have read with interest the various gun tests as given from time to time in the FOREST AND STREAM, and am led thereby to furnish some experiments which lately have been made with my gun. This is a 10 guage, double barrel, made to order by Messrs. Nichols & Le Fever, of Syracuse, N. Y., for which I paid $125. It is a beautiful gun, is 30 inch, Damascus steel barrels, and weighs 9¾ pounds. Both barrels are choked, and the left is an extreme choke.

A few days ago, John Rozecrans, Esq., of this city—an ardent sportsman and a fine shot—made the following targets with the gun in my presence. The powder used was Dupont's FFG sporting. The shot were common soft shot and 1¼ oz., measured by Dixon's measure, and struck off even with the top, was used at each distance.

The experiment was made at various distances and with Nos. 4, 5, 6, 7, 8 shot. Each ounce of shot by actual count contained the following number of pellets to the ounce; 154, 186, 222, 306, 468. It will be seen that the shot were under the usual size and numbered more to the oz. than Tatham's shot.

The distance from the shooter to the target (which was common target paper pinned on to a high board fence and each marked with a 30 inch circle) was, by careful measurement, 40 yds.. 55 yds., and 86 yds. The gun did its work as follows:

At forty yards, using 4 drachms of powder and 1¼ oz., No. 4 soft shot (firing each barrel once), the right barrel placed in the circle 155 pellets; while the left placed in a similar circle 164 pellets. At the same distance and target, using 4¼ drachms of powder and the same charge (1¼ oz.) No. 6 shot, the right barrel gave a pattern of 167 (firing once), while the left (fired twice) gave 221 and 247 pellets in the circle. At the same distance and target with 4¼ drachms of powder and 1¼ oz. No. 7 shot, the patterns were in right barrel, 208 (firing once); left barrel, 264 and 290 (firing twice). At the same distance and target with 4 drachms powder and 1¼ oz. No. 8 shot, the patterns were: right barrel, 370 (firing once); left barrel, 381 and 462 (firing twice. The last pattern with the left barrel was evenly distributed, and was a very close pattern.

A brass 2¾ shell for this shot was loaded with 4 drachms powder, and then two pink-edged wads were evenly placed over it (not rammed), then a dark felt wad was placed over the shot, and the pattern was much closer than the first discharge with that barrel which was loaded with a paper shell and No. 9 black felt wads, two being placed over the powder and one over the shot.

At 10 rods, using 4 drachms of powder and 1¼ oz. No. 6 shot, the left barrel made a pattern of 174 pellets (firing once). The right barrel was not fired with this size of shot. At same distance and charge, with No. 4 shot, the left barrel made a pattern of 113, and the right barrel a pattern of 69. But one experiment was made with this number of shot at this distance. At the same distance and charge of powder and shot, but using No. 5 shot, the left barrel made a pattern of 91 (not quite so close a pattern as with number fours).

At 12 rods, using 4¾ drachms of powder and with 1¼ oz. No. 4 shot, the right barrel (fired twice) gave patterns of 30 and 36; while the left barrel, fired once, gave a pattern of 50. At each of the last above distances (10 and 12 rods), a robin or smaller bird, if at the centre of the target, would have been certainly killed.

At 86 yards, with 4¾ drachms of powder and 1¼ oz. No. 4 shot, the targets were as follows: left barrel (fired three times) gave patterns of 32 and 38 and 36 pellets, placing from two to four pellets in or very near the centre of the circle; the right barrel (fired twice) gave patterns of 19 and 21 pellets. At the same distance and charge, but using No. 5 shot, the right barrel gave a pattern of 35, and the left a pattern of 39 pellets, each placing several pellets at the centre or very near the centre.

It may be observed as to these patterns that, at the longest distance (86 yards), the shot from the right barrel with No. 4 shot, each time would have struck a hawk of average size with more than one pellet had it been at the centre of the target, while the shot from the left barrel, at the same distance, would each time have struck a pigeon had one been at the centre of the circle, and with from two to four pellets.

At the same distance with No. 5 shot, a pigeon would also have been struck at each discharge of each barrel with several pellets if it had been at the centre of the circle.

The penetration at this long distance was (with 4¾ drachms of powder) all that would be necessary for effective and fatal execution at ducks or large birds.

While this gun shoots the larger sizes of shot with great power and with them makes good patterns, it makes the most effective patterns for ducks at long shots with numbers four and five. It will be seen by reference to the targets that with number four shot the left barrel excels the right in closeness of pattern in the ratio of nearly 2 to 1, while with number 5 shot the pattern is nearly equal.

As the distance lessens, the patterns correspondingly increase, and in every pattern several shots were placed in or very near the centre of the circle. With small shot, number 8 at forty (40) yards, it will be noticed that one of the two patterns made with the left barrel is 462, which is also 15-19 of the whole charge.

For my use (for I desired to use this gun for duck shooting rather more than for other game) the patterns made with numbers four and five shot are most desirable, for at 40 yards several pellets of either size would be placed in the centre of the target; so many, indeed, that a duck would be riddled at that distance, while at fifteen rods it would be almost certain to execute on a single duck if held truly on the mark. At forty yards nearly the entire charge of each barrel is placed within a 30 inch circle, while at 86 yards each barrel would, I think, be almost certain with number 5 shot to kill a pigeon, and with number 4 the left barrel could be depended upon to do similar execution at the same object. May I ask the FOREST AND STREAM to tell me and others through the paper, how the execution of this gun, as shown in these targets, compares with that of the best close shooting English guns? Your views on this question would interest myself and I think others.

If the owners also of close shooting guns would through the FOREST AND STREAM give the patterns they are able to make with different sizes of shot, it will be of interest to all.

You will not understand me as stating more than a simple fact, when I say that the FOREST AND STREAM weekly grows better and better, and is par excellence, the best paper on fishing, shooting and sailing in the Union.

F. D. WRIGHT

LOADING GUNS—*Oconto, Wis., July 24.*—There is a great deal said about loading shells for the best effect at a target and at game, and the undersigned, for the benefit of those who use *metallic* shells, would like to give his experience. First, let me say, I believe that for wing shooting there is one load best for one man, and one for another. For those who pitch their guns ahead of a bird according to distance, I would recommend a shell for a 12-guage gun to be loaded as follows: 3½ drachms of powder with one pink-edge wad, or two common Eley wads No. 10 firmly on it; two pink-edge wads will do on powder, best, then I would use No. 11; on this put 1 oz. of shot and one pink-edge 10 wad. This first load will kill more *general* game, such as ducks, partridge, quail, prairie hen or snipe, than any other load that can be used in a 12-guage gun.

Now, if the hunter is in the habit of aiming right at the cross-flying bird (which I maintain is not the right way), I would say use 4 drachms powder and a little less than 1 oz. of shot. This last is an effective load for duck. Again, you can use 4¼ drachms of powder, one No. 10 pink-edge wad as above, and 1 oz. shot with great effect at duck—I prefer this for duck load in a 12-guage gun—being sure to use coarse powder. If the gun won't stand it, it isn't worth having. First-class American manufacturers cannot afford to make a *poor* gun at any price. A few accidents from poor workmanship would ruin the sale of their guns.

For partridge, quail, chickens, and brush shooting, the load first stated is by all odds the best. A *muzzle*-loader, 12-bore, may also be loaded with great effect in the manner first described, putting one wad down at a time on the powder, being sure that the ramrod rebounds. A poor muzzle-loader may be made to shoot exceedingly strong by this method, and the writer claims to have discovered that fact to his immense satisfaction long before the breech-loader came in vogue.

The object of using the first load by those who invariably pitch their gun ahead of the bird is that the second, which elapses between pulling the trigger and the shot striking the bird, is not entirely compensated by the distance aimed ahead of the bird. If the gun is loaded so that at eight rods there is no perceptible interval between the report and the striking of the shot (as in the second manner of loading stated), you will invariably shoot ahead of the bird. This is noticeable in duck-shooting at cross shots, of course, and although the gun shoots "wicked" and close at a target, you wonder you can not kill at a cross shot. It is simply because you aim ahead just far enough for the first load described to pepper him, and just far enough for the second load mentioned to pass ahead of him. Again, there is no use of a "pattern" so called without penetration. It may look well on paper, but it won't bring down the bird dead. You may fill a duck full of shot, but, without a dog, you cannot find him unless he is dead—at least "hardly ever.

The above methods of loading, with the use of fine shot as a rule, will give satisfaction in hunting game, all the fine theories of target shooters to the contrary notwithstanding. R. W. H.

NEW HAMPSHIRE—*Centre Harbor, Aug.* 8.—Have had fair sport during the past week with woodcock. My red Irish setter "Ben" has worked finely, pointing his birds straight and holding them fast. Have bagged 9 out of 13 birds flushed. Partridges are very plenty, and this section must be a paradise for sportsmen during September and October. Have hooked several fine bass in the lake, and pickeral abound. I go to the Hampton marshes to-morrow for snipe and upland plover. Will acquaint you with my success. WILLIAM W. JOHNSON.

Hampton Beach.—Arrived at Boar's Head at 12.15 P.M. yesterday; went direct to marshes, and by 3 P.M. had bagged a fine bunch of yellow legs and brown backs. Prospects are goods for heavy flights. W. W. JOHNSON,

NEW YORK—*Good Ground, August* 4.—We have had some of the best flights of snipe that I ever saw, and I think the good shooting will continue until the middle of October. To-day, August 4th, Mr. Dexter and party, of Providence, R. I., killed 125 large snipe, among which were considerable numbers of willet, jacks, and sickle bills. About the first two parties from my house bagged 150 large snipe in a half day's shooting. I notice a great many young birds among those shot to-day. W. L.

MONROE COUNTY CLUB.—At a meeting of the Monroe County Club, of Rochester, August 8th, the reports of the various committees showed that the total value of the prizes awarded at the late tournament was $2,800; the total number of pigeons procured, was 9,000 and odd, 3,953 wild and 5,442 tame. They cost $3,274,21.

A WOODCOCK BOUQUET—*Philadelphia, August* 8.—*Editor Forest and Stream.*—In its report of the game prospects about the Lazaretto, the *Evening Star* of this city remarks:

"A down-town sportsman who has just returned from a gunning expedition in the vicinity of the Lazaretto, reports woodcock scarce. The birds are moulting their feathers, and easily elude the dogs, as there is a certain single feather which carries the scent, and that one is always shed in the process of moulting; hence the dogs have no means of scenting the birds. One day's hunt was, however, rewarded by the capture of four of the largest sized birds, which the sportsmen declared were almost as big as chickens and in prime condition. These had not yet begun to moult. The season lasts until the first of January next.

"A few grass or upland plover reached the city yesterday from Salem, N. J. These were killed more than a week in advance of the season, which begins August 15, and lasts till the first of January. The birds are reported very scarce, even in their regular haunts, where they are usually found most numerous."

A bouquet formed of a collection of these "certain single" feathers would be something of a curiosity.

J. W. H.

SHOOTING MATCHES.

ST. PAUL TOURNAMENT.—We have full scores of the St. Paul Glass Ball Tournament shot last week, but are obliged to defer it until our next issue, on account of its length.

SHOOT BETWEEN CORNING AND DANSVILLE CLUBS WITH CARD TRAP.—NEW YORK—*Dansville, Aug.* 5.—*Editor Forest and Stream:*—July 25 the Corning Gun Club and Dansville Sportsmen's Association shot a match at Corning, New York, at which time the club tied; Dansville winning in the shooting off. To-day Corning visitied Dansville for return shoot. Everything passed off very pleasantly, as at Corning, there being no dispute at either place during the two matches. It will be seen by score below that both clubs did much better shooting, in fact making fine scores; Dansville winning by two balls:—

G. W. R., Secretary.

MARYLAND—*Baltimore, August* 8.—The following matches were shot here yesterday. Messrs. Mills and Wagner, from Washington, were too strong for our boys, carrying off five of the six prizes competed for. Mr. Mills shot a very fine 12-guage gun, weighing eight and three-quarter pounds, built for him by John A. Nichols, of Syracuse, N. Y., and his success with it at the trap goes far toward sustaining his prediction that the 12-gauge will eventually supersede the heavy 10-bores for trap shooting:—

First match—Conditions, 3 birds; 31 yards rise:—

Mills	1 1 1—0	Wagner	1 1 1—0
Kell	1 1 1—1	Hax	1 1 0
Linthicom	0		

Second match—Conditions as above:—

Kell	0 1 1	Linthicom	0 0 1
Mills	1 1 1	McWhorter	0 1 0
Wagner	0 1 1		

Third match—Conditions as above:—

Mills	1 1 1—1 1 1	Linthicom	1 1 1—1 1 0
Wagner	1 0 1	Coulson	1 1 1—1 1 1 0
Kell	1 1 1 0		

Fourth match—Conditions, miss and out; 31 yards:—

Wagner	0	Linthicom	0
Mills	1	Kell	0

Fifth match—Conditions, miss and out:—

Mills	0	Hax	1 1 0 0 1 0 1 0
Kell	0	McWhorter	0
Wagner	1 1 0 0 1 0 1 1	Coulson	1 1 0 0 0
Linthicom	0		

Sixth match—Ten balls each:—

Mills	1 1 1 1 1 1 1 1 1 1	Hax	1 1 1 0 1 1 0 1 1 1
Wagner	1 1 1 1 1 1 1 1 1 1	Wertsner	1 1 0 withdrew

Mills and Wagner divided. A. F. H.

For Forest and Stream and Rod and Gun.

THE FABLES OF ARCHERY.

While it might be very interesting to look up many of the old stories about Robin Hood and William Tell, and other of the real and mythical heroes of the bow, I do not propose to deal with the unbelievable tales told of their marvelous shots, but to come home to our own day and land, and call attention to the strange fact that hundreds of otherwise good and reliable persons will relate with the most unblushing mendacity the most utterly improbable and even impossible things which they have either done, or seen done with the bow and arrow. What archer is there in the United States who has practiced through this season who has not been repeatedly told by his white haired friend who strolls over of an afternoon to see him shoot, that he "has seen the Indians stick a copper in a split stick, and then hit it at every shot at a distance of thirty to sixty yards." Now the old gentleman is a very good man, he is not considered a liar, but the truth is he has never seen an Indian in his life! In the next place, if he had chanced to see an Indian he would, ten chances to one, have been armed with an old rifle instead of a bow, and lastly, if he had been armed with a bow, he could not have hit the copper at thirty yards at forty shots! Now, to the reader who has never seen an Indian, an Indian bow, or an Indian arrow, and who does not know anything about archery, and who has heard such tales dinned into his ears from his boyhood, all this may sound a trifle surprising. It is, nevertheless, very true. The North American Indians are very poor archers. They use worthless bows and worse arrows. There are very few of our archers who have had this season's practice only, who could not discount the best of them at a target at sixty yards. Your old friend has told that tale about the cent in the split stick until he actually believes it! I do not, however, and I always tell such persons that they are only making themselves ridiculous by reiterating such bosh. The Indian-split-stick-cent tale has for its principal foundation the fact that about some of our frontier posts and villages the Indian boys, and sometimes the men, in order to obtain whiskey, or other articles for their use, would shoot at pennies or other small objects thus placed in the split end of a stick, which would be stuck in the ground, not at a distance of forty yards, but usually at about four or five yards. They used small bows, of about four feet in length, which they kept strung for months at a time, and clumsy, heavy arrows, with large knobs at the head, which they could not shoot one hundred yards at a flight, and which no amount of skill could have driven thirty yards in a straight line. Generally there would be about a dozen of them doing the shooting, and instead of one shooting at a time, the whole dozen would discharge their arrows at once, and in the melee of arrows, some going sideways in the air, some bouncing along the ground, and all clattering along together, the little stick would be raked out of the ground, and a "hit" claimed! Even with all the tangle of a dozen arrows at five yards, the cent escaped as often as it was knocked out of the stick. Sometimes a squad of the Indian archers have travelled the States, exhibiting their skill in this way, but I have yet to learn of their shooting at a greater distance than thirty feet. Such archery is simply contemptible. But some will ask, "How do Indians kill buffalo, and even our American soldiers with their arrows, if they are such poor archers?" This is easily explained. The bows used are very short, rough, and strong. The arrows short, slender, and pointed, with very keen steel spikes. Riding at full speed at the very flank of a buffalo, they will shoot arrow after arrow into its back, neck and side, until it sinks from twenty wounds. With their short rough bows they can shoot with great force, but very little accuracy is ever attained. They will lie in wait, concealed by high grass or masses of rock, until the luckless soldier or mail carrier passes close by, when a dozen arrows will be shot at him from a distance of three or four yards, and the poor fellow either falls from his horse, or carries three or four of their arrows into camp or station, sticking through his arms, shoulders or legs. The reason they did not become expert bowmen was because they had no reliable weapons. One might as well take a Mexican Escopette and shoot at Creedmoor with Jackson and Sumner, as to take one of the miserable sticks called Indian bows, and shoot at a National Archery meeting of English archers, against the Fords, Fishers, Palairets, and Remingtons of the

present day. Now, instead of striking a copper cent every shot at even *twenty* yards, no Indian or white man has ever lived who could strike an eight inch circle every time at that distance with an arrow, and such a circle contains about one hundred and fifty times the area of a cent piece. Not only do we continually hear this Indian fable repeated, but we are vexed with the endless babble about how well "I could shoot when I was a boy!" how "I used to kill birds at forty yards, almost every shot!" Yet he never saw the day when he could hit a bird at twenty feet one shot out of fifty. He doubtless did, in fact, stand under the low spreading branches of his father's cherry tree, and shoot up at the red heads as they came to steal the cherries, missing fifty shots at six feet distance, to where one bird was struck. He knows all this, he well remembers all the particulars, but he stands up before you with serious face, and innocent, truthful looking eyes, and avers that he could then shoot much better than you can now, though you are putting four arrows out of five into your four feet target at sixty yards. He even imagines that he can beat you now, and takes your bow and one of your arrows and faces square front to the target! He holds the bow horizontally, draws feebly with his thumb and forefinger, flirts the arrow about one-third of the way to the target by a sort of toss of the bow, and subsides. If you put six straight shots into the blue and red rings, he does not think much of it, but if you miss with four, and put two in the gold, he cheers you lustily. He is an unbearable nuisance and should be suppressed. To show the utter fallacy of all those idle tales would require a volume, but even when all of them were refuted the curious fact would still remain that men, otherwise truthful, would still relate the marvelous tales of the Indian and his little bow.

NEW YORK ATALETIC CLUB.—The regular monthly meeting will be held at Solari's, Eleventh street and University Place, on Wednesday, August 13th, at Eight o'clock, P. M. Amendments to By-Laws, General Rules, Laws of Athletics, &c., will come before the meeting for consideration. The contest for 100 yards swim, and one mile sculling race, club championships, will take place the first week in September. The the captain will name the day. Each event is open to two kinds of entries, champion and handicap. The championship entries to be placed on scratch, the handicap entries to receive a start. The tenth annual fall games of this club will take place on Saturday, September 20th, at 2:15 P. M.

FIXTURES.

Aug 7-8—Ottawa.—Toronto vs. Ottawa.
Aug 9—Staten Island.—Staten Island vs. Manhattan.
Aug 9—Frankford.—Wakefield vs. Frankford.
Aug 18—Staten Island.—Staten Island (2d.) vs. Manhattan (2d).
Aug 19-20—Ottawa.—United States vs. Canada.
Aug 21—Staten Island.—Germantown (2d.) vs. Staten Island (2d).
Aug 25-26—Hoboken. N. J.—Hamilton vs. St. Georges.
Aug 27-28—Staten Island.—Hamilton vs. Young America.
Aug 29-30—Staten Island.—Hamilton vs. Staten Island.

UNITED STATES vs. CANADA.—Both teams are now selected, and both are unquestionably weak. The American team is by no means representative, and we learn from the best authority in Canada that the same is true of the Canadian eleven. The difficulty of picking out the best players has always been a stumbling block in the way of the international match. It exists to-day as it did many years ago, and it was this that caused the St. George's Club to resolve the match to inter-club games. The selecting powers seem to feel it their duty to give every club representation, in a laudable desire to tickle everyone under the small rib, and while doing this they tread, so to speak, on the toes of the game. We believe in the best men being sent to the fore, whether they are "Roosian, French, or Turk, or Proosian, or, perhaps, 'I-tal-i-an!" and fortunate it is for the club that can furnish the most. It is the player, not the man with the pocket book, that should represent his side in these games, and in the future we trust to see this looked after. And now good luck to both sides, and may the best team win. We have arranged to have a full account of this match reported by one of the best cricket writers in Canada; it will appear in our number of August 28.

SYRACUSE CRICKET TOURNAMENT.—*Monday, July* 21.—Onondagas *vs.* Oswego Falls.—The three days' tournament arranged by the Onandaga Club of Syracuse was brought to a successful termination on the 23d ult. The President of the Onondaga Club, Major Alexander H. Davis, donated a handsome silver cup, value $50.00 for competition. The following were the competing clubs:—Utica, Oswego, Oswego Falls, and the Onondagas of Syracuse. The Oswego Falls Club had but recently defeated the Onondagas, and the chances for taking the cup were considered good. Notwithstanding their defeat the Onondagas decided to meet the Oswego Falls players first in the tournament. This they did on Monday the 21st. Oswego Falls won the toss and took first innings, scoring 42 runs. Of this number Mr. Miles Ellis scored 19 by real good play. The Onondagas in their first innings scored 56, being 14 more than their opponents. No double figures were scored, but every batsman made runs. The second innings of Oswego Falls lasted but a short time, the bowling of Milward and Newick, backed up by good fielding all round prevented any stand being made, the whole team being disposed of for 21 runs. The Onondagas, with 8 runs to get, won the match, with 7 wickets to spare.

Tuesday 22d.—Utica *vs.* Oswego.—On Tuesday Utica and Oswego met. Dr. Clark, Captain of the Utica Club, won the toss, and took first innings, which closed for 35 runs. Oswego followed, making 55. In the second innings Utica scored 49, leaving the Oswegos 30 to win. The first two wickets fell for 16 runs, which made matters look well for Oswego, but their next 5 wickets fell for 5 runs leaving the two last men to score 9 to win. The Oswego captain at this time refused to send in another man owing to a slight rain which had been falling throughout the innings. The umpire, after waiting the usual time, gave the game to Utica. Oswego batted with but 10 men.

Wednesday, July 23d.—Uticas *vs.* Onondagas.—On Wednesday the deciding game was played between the Onondagas and Uticas. Utica winning the toss, took first innings, scoring 27 runs only. The bowling and fielding of the Onondagas was good all round. The Onondagas in their first innings scored 49 runs; Millward by some fine batting scored 25. Utica in their second innings tried hard to turn the tide, but the bowling of Millward and Newick for the Onondagas was too good for large scoring, no less than 195 balls being bowled for the total of 34 runs, leaving the Onondagas 13 to win, which they obtained without the loss of a wicket, winning the match with 10 wickets to spare. The Onondaga club achieved a well-earned victory in the tournament, and great credit is due to their Secretary and Captain, Mr. C. H. Millward, who was instrumental in arranging and successfully carrying through the first tournament ever held in central New York. The Onondagas hold the prize cup for one year, when it will be again offered for competition. Mr. Flint of Rochester and Mr. W. Hamilton, late of Toronto, umpired the games.

STATEN ISLAND *vs.* MANHATTAN.—The return match between these clubs was played at Staten Island on the 9th inst., when the home team defeated the New Yorkers by 9 wickets. Neither team was represenative, the Manhattan's being unusually weak; they have lost their best bowler in Brewster, who has been engaged by the Patterson, N. J., Club, and it will be difficult to replace him. Lane for the home team bowled effectively—14 wickets for 59 runs. The score tells the story:—

CHATHAM vs. WINDSOR.—The return match between the above clubs was played at Chatham on the 16th inst., and resulted in a "Waterloo" defeat to the visiting club; Chatham winning by an inning and 70 runs. The playing of Chatham was a fine exhibition of cricket. W. B. Wells, Jr., distinguished himself by the large score of 48 and not out; H. H. Atkinson's 22, W. Crowe's 13, and Nicholl's 11 were put together without giving a chance. Edgar and Scott of the Windsor team scored well for their side. We append the score:—

White Perch, *Morone americana.*	Bonito, *Sarda pelamys.*
Weakfish, *Cynoscion regalis.*	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES FOR AUGUST AND SEPTEMBER.

GRAY COFLIN, NO. 10 AND 11.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's herl; wings and setæ, hyaline.

BROWN COFLIN, NO. 10 AND 11.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's herl wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wings.

The white moth, for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season

At this season use the small flies for day fishing, and the large flies for evening and night.

FLY-FISHING FOR BLACK BASS.—The reader of our paper who asked for instruction in fly-fishing for bass will find the whole business defined at great length by referring to back files of FOREST AND STREAM, or to the *Sportsman's Gazetteer*. The latter will be preferable, because full instructions are given as to selection of tackle, structure of flies, methods of fishing, places to choose, etc. However, we may say that for our own fly-fishing, we invariably use an eight-ounce bamboo trout rod and rig, with a fly dressed on a hook large enough between the shank and the point to admit a pencil. Flies are either gaudy or under-toned. Our best fly is a drab body, with scarlet wings, overlaid by a mallard wing. The effect is an undecided purplish tint, as any one will discover upon trial. With such a fly we waded out last year, on the sand bar at the confluence of the Chippewa and Mississippi rivers, and took seventeen two and a half-pound bass, never failing to fasten a rise, or to land the fish when hooked. There are numberless patterns, and you can wind feathers and floss in combinations of color to suit your fancy. Swift water is the most suitable for fly-fishing. A novice will catch few fish in still water, because his fly will splash, and because he will most likely fish where no fish are. Would be glad to extend instruction, but space will not admit of repeating what has been often told.

FUR, FIN, AND FEATHER contains all the Game and Fish Laws for 1879, hunting and fishing localities, and many other good things for sportsmen. 172 large 8vo pages. Price, 50 cents. Address, Fur, Fin, and Feather, New York City. All gun and fishing tackle stores, and news agents have it.—[Adv.

LARGEST SALMON ON RECORD.—Without doubt the largest salmon on record, in foreign or American waters, is referred to in the following memorandum, which has been sent us by a thoughtful San Francisco reader. Such favors as these are what make FOREST AND STREAM valuable. Readers interested in weights will do well to preserve the slip for reference. The fish was caught in British Columbia:—

Victoria, June 26.—A salmon that weighed *ninety-eight* pounds when caught has been received here from the Skeena River fishery by Mr. Turner, Mayor of Victoria. Its length is five feet eleven inches from nose to tail. It is said to be the largest salmon ever caught.

NEW YORK—*August* 9—*Editor Forest and Stream*:—Have just returned from the Adirondacks, and as many of your readers are familiar with the Ausable Ponds, I will pen a few lines of my visit there. In company with

LOCAL NOMENCLATURE.—A good instance of the perplexity by numerous different names of an insect is afforded by the following assertment contributed to a Philadelphia paper, which are applied to the belgramite or dobson. This is called Conniption bug at Towanda, Pa.; clipper, Honesdale and Port Jervis; stone crab. Milton, N. J.; water grampus, Lambertville, N. J.; goggle goy, Tumble, N. J.; black crab, Belvidere, N. J.; bogert, Portland, Pa.; crock, Interior points in N. J.; hell-devils, Monroe, N. Y.; flip-flaps and stone devils, parts of Virginia; alligators, Western N. Y; crawler, Perkiomen, Pa.; ho Jack, Carlisle, Pa.

MASSACHUSETTS BASS FISHING—The Cambridge (Mass.) *Press* reports that on Saturday last, James C. Carter, Esq., of New York, now stopping with his brother, Hon. George P. Carter of that city, at Marblehead Neck, caught a striped bass weighing fifty-five pounds, while fishing off the rocks at that place. The fish was exhibited during the first part of this week in Quincy Market, and has been pronounced one of the largest if not the largest ever hooked in the vicinity of Boston.

Many heavy fish—50 lbs. and upwards—have also been taken at Block Island.

Frank C. Parker, the guide of Keene Valley, we struck the Lower Pond late in June. Parker rowed us to the rapids at the carry, where we footed it to the Upper Pond. This is the prettiest sheet of water in the mountains, and one duly patronized. After striking camp, we settled down to a good old time fishing, and, it is to be had there. Our luck in trolling for speckled trout in the Lower Pond and deep fishing and trolling in the Upper Pond was unusually good, never failing to tally a good mess at every effort. We stopped there four weeks, and on our way home spent a day trouting on John's Brook in Keene Valley, where we had fine sport and good luck, having caught about fifteen pounds. The prospects for deer hunting the coming fall are flattering, and Keene Valley is an excellent place to start from. W. W. J.

Shelter Island, August 7.—The bunker-fishing has not been very successful the past week. The Peconic works took 392,000, and the Hawkins works 472,000. McL.

MOVEMENTS OF THE FISHING FLEET.—The seiners continue to meet with good success "down east," but although the quality of the catch shows an improvement over last year's supply, the fishery still fails to produce what is most wanted by the trade, a good proportion of handsome No. 1 mackerel. Several good fares have been reported since our last issue. The number of arrivals for the week has been 21, and the receipts 3,950 bbls. The news from the Bay is not of an encouraging character.

The halibut receipts from Grand Bank continue small, and are taken readily at fair prices. The number of arrivals for the week has been 10, and the receipts 275,000 lbs. 4 Bank arrivals from codfishing trips have been reported since our last, with 365,000 lbs. The number of arrivals from the Shore codfishing grounds has been 8, and the receipts 78,000 lbs.

The Georges fishery continues to employ quite a fleet, and the returns are very good for midsummer trips. 27 arrivals have been reported the past week, bringing 459,000 lbs. codfish and 19,000 lbs. halibut. Whole number of fishing arrivals for the week, 66.—*Cape Ann Advertiser, August* 8th.

NEW JERSEY—*Forked River, August* 8—*Editor Forest and Stream*:—Those of your readers who are seeking for a summer resort, combining all that is desirable for families as well as sportsmen, can find a most enjoyable abode at the Riverside House, Forked River, Ocean Co., New Jersey. The house is beautifully situated on the river, about three-quarters of a mile from the celebrated Bay of Barnegat, in the immediate vicinity of the best hunting and fishing grounds on this coast. This house was built by the late Chas. E. Carman for a club house, and purchased soon after his death by the present owner, Chas. A. Smith. Fishing now very good, boats coming in with 150 or more weakfish, weighing from one to three pounds. There are also plenty of bluefish in the bay, and some king-fish and striped bass. A.

WISCONSIN.—Messrs. C. H. Morse and George W. Munger, of Chicago, arrived from White River Tuesday, where they had been for the past fourteen days fishing and hunting. During their trip they visited Long Lake, where they enjoyed some of the finest bass fishing to be had in the northwest. On White River they took 546 brook trout—four hundred of which they brought down the river in a crate alive, a distance of seventy-five miles. They landed them in nice shape at the railroad bridge, where they were packed in ice and forwarded by express to Chicago.—*Ashland Press, Aug.* 6.

CANADA, *Sherbrooke: Aug.* 2—I returned from Lake Megantic last week. Plenty of small trout on the Upper Spider. Bais do not rise well to a troll on Spider Lake, as the season is rather late there. I am putting up a shanty on spider, and hope to have it ready for occupation by the end of this month. I have engaged a man (with family) to occupy it a year and do settlement duty, so that any of your friends who may visit Spider lake, can have a place for headquarters, with grub and lodging of the kind. I shall be there for Jack-shooting first day of open season (Nov. 1st). W. T.

REPLY.—Possibly some readers of the paper may incline to accept this liberal offer, which will afford a rare opportunity for sport. The writer is a high county official.—ED. F. & S.]

—From a camp with a terrible name (called Assametquaghan), somewhere on the Metapedia, an enthusiastic salmon angler writes to Messrs. Conroy, Bissett & Mallison of this city: "What think you of my catching three salmon one evening, within two hours? Glorious, was it not? And with one of the best rods, the very best, that has ever cast a fly on this or any other river. It is the admiration of all who examine it. My guides are in raptures over it, and its action with a salmon is magnificent."

"SAPANULE contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY, FOURTH AVE., COR. 22d ST., New York, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:

A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering. HENRY BERGH, President.

MESSRS SAMUEL GERRY & CO.:

For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it. MRS. W. H. KINSLEY, 158 West 22d St., New York.

SAMUEL GERRY & CO. FROM HON. JOHN BEATTIE.

GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully, JOHN BEATTIE, Providence, R. I.

MESSRS SAMUEL GERRY & CO.:

GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I sufferred intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE." Truly yours, N. ORMS, 59 West 22d St., New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle. SOLD BY ALL DRUGGISTS.

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-working at Washington, Richmond, and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly Printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for **$1.75**. Orders for five copies and upward filled for **$1.40** cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for **$1.50.**

Feather Filled Glass Balls.

PATENTED AND INVENTED BY

IRA A. PAINE.

THE ONLY SUBSTITUTE EVER INVENTED FOR A LIVING BIRD.

Awarded the Medal of Progress and Grand Diploma at the American Institute Fair, 1878.

A sweeping reduction in price. Ask your gunmaker for the FEATHER FILLED AND TAKE NO OTHER. **SPECIAL NOTICE TO DEALERS.**—Owing to the great demand for the FEATHER FILLED BALL, we will from this date pay strict attention to our factory and the careful production of the ball only, and have appointed the well-known house of **HAGERTY BROS. & CO.,** 110 Platt Street, New York, as our authorized agents, to whom all orders and communications may be addressed. ALSO MANUFACTURERS OF THE BEST PLAIN BALL IN THE MARKET.

Office of the Bohemian Glass Works, 214 Pearl Street, New York.

Attention, Sportsmen!

Kay's Improved and Perfected Ball for 1879.

[PATENTED OCTOBER 13, 1877.]

A SUBSTITUTE FOR GLASS.

HAVING succeeded in producing a Ball for professional and amateur use at the trap, we offer the same with the following recommendations, viz: In breakage, the equal and superior to any glass; Uniformity, being of an exact uniform thickness of 1-20th of an inch, is superior to any blown material; Durability, is not affected by their solubility; Residuum, can be used anywhere, and on finest lawns, leaving neither injurious or unsightly refuse. Packed in barrels by a device peculiar to us, we guarantee against breakage in shipment. For particulars see circulars. Price, $2 per 100. All orders addressed to dealers, or **A. B. KAY & CO.,** Newark, N. J., Manufacturers of Buck and Heavy Drop Shot. Cartridges for Long-Range, viz.: Deer, Duck, and Geese, $3 50 per 100; also, the Chip or Expansive Concentrator, $1 25 per 100. A box of 50 sent on receipt of 75 cents by mail.

THE CARVER TARGET BALL.

[CAVEAT FILED.]

GREENVILLE, PA., May 26, 1879.

DEAR SIR:—We take pleasure in notifying all admirers of Target and Ball Shooting that we have introduced a COMPOSITION TARGET BALL for Trap Shooting that is perfect in every particular. It has been thoroughly tested by many of the leading Sportsmen, and pronounced by all as the only perfect and unobjectionable Target Ball in existence. This Ball is very uniform in weight and standard size, and when broken leaves no *debris*, but will EVAPORATE in five days and acts as a FERTILIZER. They can be used on Lawns, Gardens, Fields or Parks, thereby doing away with the danger and annoyance consequent in using Glass Balls. We are now prepared to fill orders. Drafts or P. O. Order must accompany all orders. Organized clubs are invited to send for Sample Box. (25 balls) and Circular free. J. H. WAUGH, Inventor.

PRICE LIST—Per thousand, $12. No charge for packages. Address

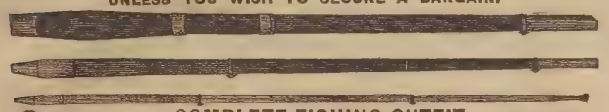
Maynard Creedmoor Rifle.

THE MAYNARD AHEAD!

The following Targets were made by Prof. CHAS. E. DUDLEY of Wheeling, West Va., on Rogers, August 19th and 20th, 1879, with a *Maynard Long Range Rifle*, and are the AVERAGE OF RECORD. The grand total of 97 in a possible 100—50 shots at 1000 yds has never before been accomplished by any Rifleman, or Rifle, in the world.

These scores were made in the competition for position on the American team for 1876; and will settle beyond question all disputes as to which is the best rifle for long range shooting. Send for circular, containing *Maynard Rifle Score*, made by Prof. Dudley, Wheeling, West Va.



Ten MAYNARD ARMS are the most perfect in workmanship as well as accuracy, of any Rifle in the world, particular attention being paid to the *trueness* as well as the *smoothness* of the BORE. For Gallery practice and fine cut, address

COMPLETE FISHING OUTFIT.

Having made special terms with the manufacturers, I am able so offer to the patrons of this paper the following **Complete Fishing Outfits** at the lowest prices ever offered.

OUTFIT NO. 1 Consists of a three-jointed Ash Rod, finely varnished, with brass mountings. A well-finished brass reel which fits the rod perfectly, an extra laid linen line and half a dozen hooks on good single snells. The regular price of this outfit is **$1 00** and I offer it for **$1 00.** This is just the thing for the boys and girls who want to fish this fall, and is bound to please all who receive it.

OUTFIT NO. 2. A fine three-jointed Rod, dark polished butt, Brass mounted with Reel Bands and guides. An elegant large brass reel with stop, and extra laid linen line with half a dozen hooks on single snell and half a dozen extra tied and finished on **double** snell. An elegant patent Bait-box (as shown in cut) finely painted, and warranted to suit every one, also a reed sinker and float, making a complete outfit for any one. At the regular price this outfit would cost **$4 50** and my price is only **$3 00.**

OUTFIT NO. 3 Consists of an elegant three-jointed **Bass Rod,** with finely polished dark butt and middle joints, and **lance wood tip,** full brass mounted with reel bands, guides, etc., and is a rod good for any fish up to twenty pounds. A finely finished brass **Multiplying** reel as shown in cut made with stop and perfect in every way, an extra finely finished linen line with one dozen best double snelled hooks and bait-box, sinker and float. Regular price of this outfit **$7 50,** I offer it for **$5 00.** This outfit is just the thing for every angler who may want to fish for any kind of fish and yet have tackle suitable for all, as it is made throughout of the best material and in the best manner.

OUTFIT No. 4 Consists of a four jointed BASS ROD, finely polished hollow butt, extra Lancewood Tip in butt, best Multiplying Balance handle. Fine best quality Braided Linen Line; one dozen Best Double Snell Hooks: Bait Box, Sinker and Float. Regular price of outfit, $10. I offer it for $7.

OUTFIT No. 5. General Rod. Hollow Butt; can be used with three joints, for Bass, or with four joints for trout. Has two light Lancewood Tips and one heavy Tip, finely finished. One best Multiplying Reel, with balance handle. One Best Braided Linen Line. One dozen Best Double Snell Hooks. One Double Gut Leader; Bait Box, Sinker and Float. Regular price of outfit, $12.50. I offer it for $9. Goods warranted as represented. Mention this paper to receive these outfits at the above price. Any of them sent by express on receipt of price. Send stamp for 64 page Catalogue of Fishing Tackle, Camping, Archery, Base Ball and Sportsmen's Goods.

R. SIMPSON, 132 Nassau Street, N. Y.

O. F. WOODWARD & CO.,

MANUFACTURERS OF

BRITTLE TRAP BALLS, WOODWARD'S MEDICATED NEST EGG,

And Woodward's Medicated Bird Swings.

ASK YOUR DEALER or GUN-SMITH for WOODWARD'S SOLUBLE COMPOSITION TRAP BALL, pronounced by professionals and amateurs superior to all others.

No more trouble and danger from sharp and insoluble fragments, which cause so many to object to the use of glass balls, except in fields and galleries specially set apart for trap-shooting. WOODWARD'S SOLUBLE COMPOSITION BALL possesses great firmness, always breaks when hit, and owing to the quick dissolution of the fragments can be used wherever convenience may dictate. Write to your dealer for circulars and terms, or address O. F. WOODWARD & CO.,

Le Roy, N. Y., Manuf'rs and Sole Propr's.

MEDICATED NEST EGGS, sure death to hen lice, $5.00 per gross, 60 cents per dozen. Medicated Bird Swings and Perches, for Bird Cages, keep them free from vermin. Address as above.

Sportsmen's Routes.

DIRECT RIVER ROUTE

TO Ottawa.

TAKE THE OTTAWA RIVER NAVIGATION CO'S STEAMERS, to or from OTTAWA CITY. The Capital of the Dominion may be reached from MONTREAL, by *DAY BOAT*, leaving daily at 7:15 a.m., and from PRESCOTT (opposite Ogdensburg, on the St. Lawrence, the point where the great stream of American travel diverges), by St. L. & O. Ry. Every Tourist should make the trip UP or DOWN the River Ottawa. The scenery of the Ottawa River is very picturesque, and has been compared to the famous "blue" Danube; the approach to Ottawa City by the river is grand in the extreme, and unsurpassed. The steamers of this line are new, comfortable, and well-appointed.

THIS IS THE CHEAPEST and ONLY DIRECT RIVER ROUTE TO OTTAWA.

First Class Fare from Montreal to Ottawa...$2.50
Return Fare from Montreal to Ottawa..... 4.00

A. W. SHEPHERD, Pres't,

Ammunition.

Laflin & Rand Powder Co.,

No. 26 Murray Street, N. Y.,

Sole Proprietors and Manufacturers of

ORANGE LIGHTNING POWDER.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers are specially recommended for breech-loading guns.

ORANGE DUCKING POWDER.

For water-fowl, strong and clean. No. 1 to 5, in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

ORANGE RIFLE POWDER.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. BOGARDUS, the "Champion Wing Shot of the World."

Blasting Powder and Electrical Blasting Apparatus.

Military Powder

of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood-cuts, sent free on application to the above address.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE.

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 50 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,

88 WALL STREET, NEW YORK.

ENGLISH

Sporting Gunpowder.

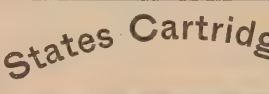
A GOOD PLAN

The most profitable way of dealing in stocks is by combining many orders and co-operating them as a whole, dividing profits *pro rata* among shareholders, according to the market, monthly. Each customer thus secures all the advantages of immense capital and experienced skill, and can use any amount, from $10 to $10,000, or more, with equal proportionate success. "New York Stock Reporter" and new circular mailed free. Full information for anyone to opperate successfully. Lawrence & Co., 57 Exchange Place, N. Y.

DITTMAR POWDER.

PURE TIN-COATED AND BURNISHED
DROP AND BUCK SHOT.

American Standard--Eagle Brand.



CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM:— NEW YORK, Jan. 13, 1879.

HAVING been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

CURTAINS, SHADES, AND BLINDS

Dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Public Buildings, Churches, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of $1.00.

Agents | **L. Lum Smith,** Patentee & M'f'r.

717 SANSOM ST., PHILADELPHIA, Pa.

Apply to | Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald:*

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

The Largest, Spiciest, and only REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS Given **EMPLOYMENT** GOOD EVERYWHERE

by over 200 responsible advertisers in this month's issue of the *Agents' Herald*. FOREST AND STREAM
ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

[Entered According to Act of Congress, in the year 1879, by the Forest and Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.

Terms, $4 a Year. 10 Cts. a Copy. Six Mo's, $2, Three Mo's, $1.

NEW YORK, THURSDAY, AUGUST 21, 1879.

Volume 13—No. 3. No. 111 Fulton Street, New York.

For Forest and Stream and Rod and Gun.

FREEDOM.

QUIET hours in shady bowers,
Jolly hours in heather;
Free is all where rod and gun
Make high life together.

Nature's voice there bids rejoice,
Man's here bids thee sorrow;
Cheery nature lauds to-day
Man's weak tones to-morrow.

Hearken, then! the forest calls;
Stream and tree alike invite;
Speed, thee! Speed thee! Far away,
Lurk the spirits of the day;
Glowing sun and star-beams bright
Only these ye know aright,
Canopied by Heaven's blue,
None than thee more joyance feel
In expansive Nature's sway.
Mind and heart alike respond;
Ye are happy all the day.

WAYFARER.

For Forest and Stream and Rod and Gun.

Three Weeks in the Rocky Mountains.

THE Judge and I had been loafing and fishing the best part of a month; the former at and about Hot Sulphur Springs, in Middle Park, and the latter at Grand, Williams, Frazer, and other rivers and creeks of the neighborhood. We had wound up by a four days' excursion to Black Lake, which was to conclude our holiday, and got back to our rallying point on a warm, dusty Sunday. From crowding a day's ride of forty odd miles into the forenoon, we came in tired and hungry. On arrival we learned that the advance guard of a new hunting party from Denver had arrived that morning; were now across the river, but would be back to our cabin for dinner, and that they had already filed an application for the writer to join them on a three weeks' bear hunt to the Yampah. Over a famously good dinner the question was discussed at length and decided in the affirmative. The Judge had to go home, fearing that some of his clients might escape if he protracted his absence longer. In the afternoon the "outfit" arrived and went into camp; the party, Col. H., Attorney W. and Capt. K., with an Irish teamster, who responded to the cognomen Tom, and a Dutch cook, who sometimes answered when some one yelled, Mike. However, they were good servants. The transportation was a monstrously heavy wagon, with four good mules, a Concord buggy, and three or four saddle horses. They had started from Denver with the idea that two mules would draw a four-horse wagon with a six-horse load, and the other two could pull the buggy with the colonel, the guns, and the demijohns. The latter part of the calculation was good, but the other part failed. It worked all right across the fifteen miles of level plain from Denver, but when it came to climbing up a couple of vertical miles over the backbone of the continent, the team was found entirely too light for the load, so all the mules were hitched to the wagon, and the buggy trailed behind it. Thus they reached the Springs. By supplying another set of harness and pressing a couple of the saddle horses into team service, the transportation was improved so that the mules had only the wagon to draw, and there was generally a pair of horses or ponies for the buggy. The impendimenta was a 13x16 feet wall tent, a folding table, folding camp chairs, a four story East India patent camp cooking range, mattresses, bedding, a large and varied assortment of supplies for a month, cupboards and cases, a rubber boat that sometimes did service as a bath tub, miscellaneous tools and personal effects.

My acceptance of the invitation was coupled with the condition that I must have time to send to Georgetown for a pair of boots, requiring two days. So it was arranged that the party should start Monday morning, move leisurely down the Grand and up the Muddy, and wait on the hither slope of Gore Range until I came up. The boots came as expected, and on Wednesday morning I mounted to follow. By taking trails here and there that cut off long sweeps of the wagon road I saved much in distance, and just as the sun was sinking behind the crest of the range before me, I came up with the camp in a little glen to the left by a grove of aspens on the brink of a brook of icy cold water. A meadow in front with luxuriant grass to the saddle skirts, and a rivulet through the middle of it, was dotted with the horses of the party. Mike was in charge of camp. He reported the gentlemen out hunting; the mules run off, and Tom and the dog on hunt of them. He also gave a racy account of camp experiences for the preceding three days. They had moved down the Grand almost to the head of the cañon, where the river becomes wide, deep, and sluggish, and where they expected to find good shooting and fishing. The Colonel and the Attorney (whom I shall designate hereafter as Judge) went out with their guns. The former soon found a fine flock of geese and knocked down two or three. On going to pick them up he found red ribbons tied round their necks, and later had the pleasure of paying for the birds—domesticated wild geese. The Judge got some ducks, having to employ a boy as retriever to bring them out of the river. The captain went fishing, and got lots of "bites" but few fish. The next morning his eyes were swollen shut and he said mosquitoes always served him that way. In sheer disgust they harnessed up and pulled out, never camping until they got within four miles of the summit of Gore Mountains, out of the range of mosquitoes, tame wild geese, and annoying settlers. The next morning the mules were gone—gone back—which Tom thought "mighty strange, as they never done so before." He had been acquainted with them about a week. But the strangeness of that proceeding grew on Tom for two days, at the end of which he found them taken up by the ranchman of whom the Colonel purchased the geese. Tom afterwards told me that the mules found a certain kind of grass at that camp which made them run away. Upon my laughing at his belief, he said that eating such grass was what always caused horses and mules to wander off, and I found that this was gospel to him.

About dusk the hunters came straggling in, all empty handed. The Judge said that he had killed a deer, dressed it and hung it up on a tree. He then followed on to get another shot, failed and on returning could not find his venison. He searched for it until dark and then came in; upon noticing certain incredulous smiles around the circle he pulled out his belt knife and triumphantly directed attention to its bloody condition. I had carried out a later mail for the party, and among the missives was a bill for the patent hunting boots ordered from London, England, by the Judge and Captain expressly for this trip. Including premium and exchange their understandings cost about $22.50 per pair as I understood it. The Colonel also received a letter calling him back, but by next morning he was persuaded that he had not received it, and he said it wasn't urgent anyhow. Tom got back after dark without the mules or any trace of them, but with the dog (a shepherd, simply to watch camp and drive in stock) completely worn out. Thenceforward that dog could not be enticed out of sight of camp.

Thursday morning was bright but everything glistened with white frost. Notwithstanding, the Judge and the Captain punished themselves by an ice cold bath all over before sunrise, and they repeated it almost every day afterwards. After breakfast we saddled up and struck out north for a long pine-covered spur of the mountain in search of the Judge's deer or some other one. It was now two or three days past the middle of August. The season had been very dry and everything was parched and brittle. The woods were thick and the ground covered with dry leaves and sticks. Although deer were evidently quite plentiful it was almost impossible to get sight of one. Several shots were fired at vanishing figures among the trees but no game secured, and early in the day all were wending campward. On the way I had to cross a little stream, not a step in width, in which trout were visible. Dismounting and procuring a willow "greenheart" rod, I attached a line and fly, and in a few minutes was "yanking" out fish at a lively rate. They were small but numerous. The stream was bordered by a continuous thicket of willows and frequently interrupted by beaver dams. Dodging through the willows I came face to face with a "baby" beaver, half grown, with glossy black coat dripping from the baths, and sparkling eyes. He looked at me a moment in surprise and then plunged over the bank into his pool. I reached camp with hunting-coat pockets full, to find some wagons loaded with fish from Yampah river camped near, in which the colonel had been fishing with a "silver hook." As night settled down Tom arrived with the mules. He picketed them short and nevermore on that expedition had those "animules an opportunity to eat "runaway" grass and escape out of sight.

Friday there was an early breakfast and at sunrise the horsemen were on the road. The country was new to all of us. We had heard of a famous soda spring just over the summit of the range. It was reported two miles below the road near the first stream running southwest. The explorer who thus described it had large ideas. A creek nearly a rod wide escaped his notice or didn't count. The Judge and I turned down it in search of that spring. We scrambled along hillside and through brush; the valley gradually changing to a cañon, and the way growing rough and difficult. We traveled the two miles and then two or three more and gave it up. We tried fishing and failed; then struck for the road in a direction which we thought would save us several miles, rather than retrace our difficult steps. Followed up a long draw that changed gradually from a grassy opening to a bushy hollow and then to an almost impenetrable forest of timber, much fire killed and fallen. It came on to rain, first gently and then heavy. We became tangled in the windfalls and had a most tedious and laborious journey for hours. At length searching the crest of the mountain ridge we found the forest on the north slope mainly green and the traveling correspondingly better, but it was so steep that we had to dismount and lead our horses, and then they slid more than they walked. Once down the mountain we reached a more open country traversed by long grassy glades. The distance seemed so great that we concluded the wagon road must have turned abruptly north instead of continuing west as it should, so we turned northeast up a little valley to its head, crossed a low ridge and came into the head of another and parallel valley, and down the middle of that was the road and the fresh, broad tracks of our wagon. We had been traveling toward the preceding night's camp only separated from the road by a narrow timbered ridge. We galloped forward briskly on the fresh trail and at the foot of the little meadow came to Rock Creek and knew in a moment that it was the stream down which to look for the famous spring. But the creek was full of fish, and although we were suffering with hunger we could not resist the temptation to catch a few. Off our horses and at it we went, with willow rods three or four feet long. The stream is a beautiful one, with clean gravel bed and water as clear as crystal. Its banks a smooth grassy meadow without bush or tree in the way. And the trout are doubtless the most beautiful in the world, specked with black and dashed with crimson. They are small; say five or six to the pound, and different from any others I have ever seen in the Rocky Mountains, or anywhere else for that matter. All are of the same variety, whereas, in most streams there are two or three varieties, and sometimes more. After fishing half an hour and catching twenty-five or thirty apiece, we determined to make another search for the fabled spring, and set out down stream along an old trail. This time we found it, and its water is the most delicious mineral water I have ever tasted in any country. Retracing our steps to the road, it was just sun down when we resumed the chase of our camp, not knowing where it might be. Up and down long meadow valleys, over sharp wooded ridges, and, at length, along a close rugged cañon we rode, galloping when we could, until we came to Egeria Park, and down it two miles or so caught the gleam of a camp fire which proved to be ours. It is needless to say it was welcome. Over fourteen hours in the saddle or on foot, laboring every moment, without a mouthful to eat, makes any kind of a resting place acceptable. Dinner was soon ready, and after it was over two of that party formed a resolution that was kept—to always take a pocket lunch from the breakfast table, no matter if the camp was going to remain where it was all day and we were going to stay right in it.

This camp was on Tim-po-nas Creek, in the south end of Egeria Park. The creek is full of beaver dams and the beaver ponds are full of trout. In the park there is no timber near the creek except willows, which are plentiful enough. Beavers find them sufficient for house-building and for food. Our folks, who had camped early in the afternoon, had taken a good supply of trout, and the Colonel had made a long shot at a deer. Just north of the creek is a remarkable rock, called by the Indians Tumben-ar-row, or the "sleeping lion." By some it is called The Sphynx, and it bears a striking resemblance to the famous Egyptian figure. But the likeness is more that of an animal lying upon the ground with left fore leg extended and head and neck erect in a watchful attitude. Its length is probably near a thousand feet, and the height of the head fully two hundred feet. It faces the west and seems to be looking out over the park. The formation is basalt; an isolated mass thrust up through the stratified rocks. Grassy meadow extends to its foot on all sides.

Saturday our road led northward, lengthwise of the park, which is really the crest of a divide; the south end being drained southwardly to Grand River and the north end furnishing the extreme sources of Yampah River, which in the first part of its course flows due north. Toward the north end of the park, say twelve miles from our last camp, there is another remarkable outburst of basalt; a single slender shaft, which at a distance resembles a lofty shot tower or furnace stack. The Indians call it Tim-po-nas, or Finger-Rock. White men are getting to call both these monuments Tim-po-nas rocks. Further on we came to the main stream of the Yampah, an impetuous mountain torrent thirty feet wide and two feet deep on the rapids. Wishing the outfit a prosperous journey and having a lunch in my pocket, I stopped to fish. At the first cast, letting the fly float down under a bunch of alders on the further side, I hooked a seven inch trout and landed him safely. At the next took another nearly as large. Then a third yet a little smaller. Walked down the gravel bar ten steps: dropped in on the other side just in time for a monstrous fellow who walked off with my tackle as though it was a cotton thread.

Withdrew for repairs and went in again. The banks are almost continuously lined and overhung with willows, alders and black birch twenty feet high, making terribly hard work. The only way to halt fish the stream is to wade it, and then the fisherman may count safely on getting wet all over and the coldest kind of a wet at that. I picked along from place to place, fishing a little and bushwhacking a good deal. Deer had taken refuge in the willows and weeds to escape the flies and were constantly jumping up before me and crashing through the brush, though seldom visible. In a quarter of a mile I filled my creel, which held over twenty pounds; walked back to my horse; mounted and again took the wagon trail. It came on to rain. The camp was six or eight miles further down the valley in a beautiful and very luxuriant meadow, where most of the river banks are clear of brush and the fishing very comfortable. My eagerness had cost harder work, but secured, probably, more and finer fish. At camp they had caught quite a number, and among them several mountain herring (here called grayling).

Sunday morning it was decided to remain in camp until noon, in order to hunt and fish. The Judge set out at daylight for a deer or an elk. Taking my rod and basket I walked back up the river a couple of miles to a large grove of tall cottonwoods, where I had decided the evening before there must be lots of big fellows. As it was too early for the fish I improved some of the leisure time in catching a few grasshoppers, in order to give those of epicurean taste a little variety. Yet I was too early and waded wet grass and bushes to no purpose until drenched to the neck. Then I lunched on raspberries and sarvis berries and rested. At length they began to rise and, oh! what sport I had. There are no big holes and inexhaustable schools of fish; but at every bend, under every overhanging tree and behind every sheltering rock in the current were one, two, three or more, up to seven or eight, magnificent fish. The biggest one—from sixteen to twenty inches long—would generally be caught first, and then they would grade down. Sometimes after exhausting the fly by putting on a grasshopper I would secure a big one, or two, that would not touch a fly. I filled my creel and my pockets and went to camp, tired enough of my load. At noon it rained hard. The Judge did not get in. After the shower I went out again three hundred yards up stream and filled my basket again by the time I reached camp. Then it rained again; the Judge came in empty handed and we had dinner. The shower over, I started in at camp. The first fish I caught was a herring. I had not caught one above camp, but my evening catch was about half herring. At dusk my basket was nearly full again, making over sixty pounds for the day. A good many were taken by others of the party, and by the men, and the next morning we had nearly half a barrel of dressed fish to salt down. Our camp marked exactly the head of the herring run, but the best trout were above it.

Monday morning opened fair, but the high mountains off to the west were covered with fresh snow. The road follows down the valley half a dozen miles further and then bears northwest across the arc of a great bend of the river over a hilly country. I stopped at the point of divergence for some more sport, but it was an "off day" with the fish and I got but few—about evenly trout and herring. Whilst loitering here a terrific storm of hail and rain came on. The best shelter obtainable was a bunch of willows, re-enforced by saddle and blanket, under the lee of which I shivered it through, holding my horse—driven almost frantic by the pelting hail stones—by the bridle. When it was over I rode out of that valley through two inches of hail to find the road over the clayey hills so slippery that my horse could not keep his feet and had to take to the grass. It was a long, chilly, cheerless ride, relieved only by the discovery that the balance of the outfit had been struck by a worse streak of the storm and had a terrible time with the big wagon among the hills. They had stuck, broken chains and ropes, unloaded and "backed" the freight over one or two of the worst places. Just before dark I came up with the camp in the pretty little valley of Trout Creek. The storm had spoiled the fishing there, too, but the Colonel, the Judge and the Captain had knocked over a fine lot of grouse and a capital dinner was just about ready for attack.

Tuesday brought nothing of note. The route was over a hilly country with but little timber. A number of grouse and sage hens were killed from the road. About three o'clock we reached the Yampah below the cañon, as the point is designated, and pitched camp. The river is lined with cottonwood of the balm of Gilead variety, very tall and straight; the valley fertile with a great abundance of wild fruit—currants, cherries, sarvis berries, and red haws—just then fairly ripe. A good supply of fish were caught, including a new variety to us, which we afterwards learned was called squaw-fish. It contains more bones to the square inch than any other fish that swims and is utterly worthless. Next morning was frosty and Mike found a snake in his kitchen cupboard—crawled in for warmth.

Wednesday we moved down the river six miles to Hayden and spent the day visiting, examining the coal measures and surveying the country. In the evening caught a few fish, but we were ahead of the fall run and they were not plentiful. The river is here from one hundred and fifty to two hundred feet wide, with long reaches of deep still water, separated by short sharp ripples over bars of boulders and gravel on which the water is from one to two feet deep.

Thursday we moved back up the river to the mouth of the cañon and selected a most delightful camp. Some ducks were shot near camp. A rope was stretched across the river, the rubber boat got out and a ferry established, which resulted in a few duckings and lots of fun for the fellows on shore. The Judge went deer hunting but killed nothing. In the afternoon I took a basket of fish—trout and herring—and among them had the good luck to secure the largest one of the trip, and a famous struggle I had with him. The river bank, about four feet high, is covered with brush so dense that it is almost impossible to get through it. The bushes are from fifteen to twenty feet high, and there is not a foot of open space. I had stepped out upon a slender cottonwood tree that the beavers had cut down and the top extended some twenty feet over the water—the under branches in it. Had dropped my fly twice and allowed it to float down to the brush without seeing a fish, at which I was rather glad, because if I hooked one I didn't know how I would secure it. But I have a rule of casting three times and then, if not successful, moving on. So I skipped the fly up the stream for the third time. The current was like a mill race. As the painted feather danced over the ripples a cavernous opening rose up beneath, and the feather disappeared. He didn't flip it into the opening with his tail—not any. Then I realized that I had business on hand, and I recollected that I had a frayed snell that had given way but a few minutes before on a big grayling. I had patched it up knowing that I ought to throw it away, but I thought "it must do once more in this infernal brush." Well, at the first dash my new acquaintance went under the tree and I thought the game was up and I was euchered, but the line held and I wanted that fish "awfully." I edged out along the yielding tree top, an inch at a time, until the tip of my rod reached past its extreme branches and then began to lead him up stream. The strong current tired him fast, and it was not many minutes until he was broadside on and I was holding his head half in the air. But then how to get him ashore was the question. I edged back along my friendly cottonwood pole until I got one foot on shore, and then I drew in my fish until he was gasping on the surface four feet below my toes. Slack was all in and rod perpendicular before me. I reached out and took the line in my fingers, abandoned the rod to its lodgment in the brush and then—rested and meditated. I knew that if I lifted the fish and he made the least "wriggle" that snell would part. At the same time, I knew the fish would not climb up the bank and into my basket. At last I eased him out of the water and he started up beautifully. Half way, a flirt of his tail, and down he went. But he sunk to the bottom like a stone and lay gasping between the boulders. I dropped almost as fast. Feet and hands reached the river bed at the same instant, and with the latter I seized the fish and threw him upon the bank. In the dive I lost my hat, and the next thought was that there was not an extra tile within a hundred miles. I reached for my friendly cottonwood again, swung myself upon the bank, tossed the fish back into the woods, and tore away down the river through the brush; passed the bend and saw a black speck bobbing on the billows; seized a dry sapling as I ran, again jumped into the river and could just reach the fast vanishing head covering and steer it ashore. Then I found my basket that I had been carrying in my hand from place to place through the brush, my fish, and the wreck of my tackle. Repaired damages, found a naked gravel bar at the foot of a ripple on which I took my stand and filled up my creel with grayling. In the evening my big fish weighed four and a quarter pounds—not large for a lake denizen, but good size for a small river. Just above camp in the river bottom was a wonderful orchard of sarvis berries. Many of the trees were fifteen to twenty feet high, and all bending under their loads of ripe fruit.

Friday.—It had been arranged whilst we were at Hayden to go to the mountains about the head waters of Elkhead river, ten or fifteen miles north of our present camp, on a deer hunt. This morning Messrs. Smart and Thompson of that place came up to join us. Under their guidance we crossed the river and struck directly north, over high rugged hills, covered with dwarf oak and other shrubs. The primary object of the expedition had been to hunt bear in this very neighborhood, but the unusually dry season had blasted the fruit crop and bruin had migrated. In ordinary seasons the bushes which cover the hills are loaded with cherries, sarvis berries, acorns and other fruits and nuts. There bears are plentiful and easily found. Instead, we found the earth parched and cracked open so that in places it was dangerous to ride over. But little grass had grown, and the weeds were dry and rattled like corn blades in a winter gale. Most of the water had dried up which would account for the disappearance of game if there was no other cause. As we climbed higher and higher, the country became more favorable, and after riding two or three hours, several deer crossed our course just in front and disappeared in the woods. Near the crest of the range, or spur of mountains that divides the waters of Elk river from those of the Elk Head, we found a spring and a little meadow of green grass where we camped. Took a hasty lunch and set out for an evening hunt. Three of us together crossed over the divide to the east, to the head waters of a creek near which it was said there was a deer lick, but we failed to find it, and agreed to beat up the valley, or ravine, to its head. One took the bottom of the hollow and one on either slope, three or four hundred yards from the gulch. We were to keep abreast as nearly as possible, and get together before returning to camp. I understood the rendezvous to be at the head of the hollow. The man on the opposite slope got a running shot or two; the others didn't see a deer. I reached the top of the ridge about sundown, and waited for the others—who did not come. As dusk came on, I started back and began hallooing; got one or two answers away below me and then could get no more. I then struck over the summit of the mountain for camp, through the little "sag" by which we had come, as I thought. There was an old dim trail but it was too dark to find tracks or prove their absence. I found the descent all right, seemingly, but the bottom of the "draw" was densely timbered, choked with brush and weeds, and dark as a pocket; so I took the slope, keeping the gulch on my left, which would bring me all right to camp which was on that slope. That is, it would if I had been in the right hollow—but I wasn't. There was a fire away off thirty or forty miles in the west that was a good landmark, and I kept that on my "port quarter." The "track" was not good, being filled with logs, brush, weeds, and rocks; but I made fair time, having a down grade. I ran into a bunch of deer but could'nt see a shape. They kept along parallel with my course for some distance. When I stopped, they would stop and stamp. If I then spoke or rustled a bush, one or more of them would make a leap or two and then stand still. I am not certain whether they escaped from me, or I from them. At length I struck the oak belt, and then I knew that I was far below camp, and that I didn't know where I was. In a little grassy opening beside a wall of rank oak and cherry bushes, I halted; gathered a lot of wood and started a fire; made a bed of cherry boughs and lay down to sleep. Toward morning it became cold and I started another fire on the opposite side of my bed and finished the night between two fires—had to replenish them almost every hour. At daylight I started up the mountain again and soon came in sight of a basaltic peak that we had passed the day before and near which, on the opposite side. I had finished my "beat" of the evening; I struck for that, and near the summit breakfasted on raspberries. Around the point in the laurel brake I came upon my tracks of the day before, and soon after plumped into a band of blacktails that were feeding among the mountain ash; made a running shot in the bush and struck for camp. A mile from there met three of the party starting to look for me; told them where I left my herd, and we parted. At camp found the colonel and the captain saddling up to go back to the camp on the river. I got breakfast, saddled my horse, and struck for Henne's peak mines on a tour of exploration; crossed over the mountains by the trail of yesterday, and followed down the creek. Four miles below our then turning-back point, found the deer lick—a number of salt springs at the foot of cliff, about which the ground was tramped to the hardness of a sheep fold. At the debouchure of the stream into the valley of Elk river is a wide alluvial deposite planted with yampa, antichoke, sa-ga (you printed it *sage* in a letter of mine not long ago) and other edible roots for which the bears had been digging until it was like a potato field that hogs had harvested, and this extended over hundreds of acres. At Elk river I turned up it, due north, and in two or three miles came to a hay ranche, where men, armed with a mowing machine, were putting up large quantities of that article. An invitation to dinner was not declined, and we had grouse, sage hen, trout, gayling, (herring) and new potatoes. Four or five miles further up, and at the very head of the valley, passed Reed's ranch where grain and all kinds of garden vegetables were growing luxuriantly. Then climbed up and up almost to timber line and the mining camps, where there is nine months winter and three months very early spring to the year. But you don't care about mining camps. I spent Sunday there, and the only sporting event of the day was the appearance of a deer that came to a salt spring three hundred yards down the hill in front of the camp. Everybody saw it and half a dozen went after it with guns, but nobody brought in venison.

Monday I rode down the valley of the Elk to its junction with the Yampah and up the latter to Steamboat Springs where I was to meet camp. It did not come and I put in the day and most of the next catching trout and herring. Tuesday evening the party arrived, and pitched camp. The day I left them they killed three or four deer and still had plenty of meat. They had also knocked down a large number of grouse during the day. In the evening the four story cooking range was fired up for the first time with grouse, sage hens, venison, and potatoes in the respective "flats." Though dinner was late, the result was quite satisfactory, but after that first and only appearance the new fangled arrangement staid in the wagon.

Wednesday—Breakfast at 3.30 and then off for bear. We were now so near the snowy range that drouth had not affected vegetation so seriously, though the berry crop was not luxuriant except in spots. We rode north three or four miles into a cove almost surrounded by steep, "choppy" hills covered with oak and fruit bearing shrubs. Left our horses, and at daylight were clambering up a forty-five degree slope. The plan was to follow along the crests of the ridges as quietly as possible and scan the opposing slopes with field-glasses. The fall before an English party, headed by Sir George Prescott and accompanied by the Colonel, had killed five bears in this immediate neighborhood in one or two days. We walked over miles and found nothing. At last, high up and where the brush was so thick and high that an elephant would have been hidden by it, we came upon the feeding place of a single bear. Fruit was abundant and luscious, and his walks led in every direction through an orchard of several hundred acres. At the foot of the slope, in a glen carpeted with grass and shaded by aspens was a spring, and here bruin had his drinking fountain, his kitchen, cistern and his bathing tub, as the boys named three separate pools that he had hollowed out. He had left his card, but the proprietor was out. We called again in the evening; the next morning at daylight, but there was no meeting. It was rapidly becoming a "ground hog case" with us and we needed that bear in our business. So we moved camp up nearer to his lines and planted guns—an English double "express" with string and trigger attachment, intending that he should be his own executioner. The first night he flanked our works and not a shot was fired. The plan was improved and the string carried along six inches above a log that he had to cross; the gun planted a rod away. This was Friday night, and on Saturday we must start home, bear or no bear. It was thought we could hear the gun, though it was two miles away and behind a mountain ridge. Every body slept with an open ear to windward, but nobody heard anything. At 3 o'clock camp was roused, breakfast cooked and eaten, and the Colonel and the Judge set out with the understanding that if the bear was killed or found they were to fire a signal. The others packed up camp, and just as the last traps were going into the wagon and the rising sun was gilding the mountain tops, it came. Mike, with the wagon, rolled out toward home, and the balance of us went the other way with pack animal and butchering tools. The plot had worked well. Bruin was very dead, though still warm and limber. He was a young cinnamon, though very black, and his weight was variously estimated at from five hundred to seven hundred pounds. Hide and head were taken off; a quantity of fat and a few pounds of tenderloin saved. Then we set out, and late in the evening overtook camp near the head of the Yampah on the very spot where we had camped two weeks before. At the bear camp we were away from any stream except a group of little springs that sent off a feeble rivulet for a few rods, where it disappeared. About it were a thicket of willows, a grassy meadow and a grove of aspens. By the natural course of drainage it was full two miles to a running stream. Water was generally dipped from a pool five or six feet across, in which was the main spring. Mike soon reported a fish in that pool and was laughed at. The next day he referred to it again. Finally the Captain, who was going fishing, stepped over to the pool and dropped in his fly, which was promptly taken, and he pulled out a trout ten and a half inches long. Beyond a ridge to the west and about a mile distant was Soda Creek, a small stream in which trout were wonderfully numerous. Some of us fished there daily and caught great numbers, though most of them were small.

Sunday, September 2—A dreary cold day, with steady rain and snow intermixed at times in the afternoon. We did not move camp. The bear oil was tired out and served to fill sundry empty kegs and bottles. A single large trout and two or three small ones were caught. The fish had

evidently left the upper waters except an occasional tardy one.

Monday—Made a long drive on a raw windy day, and camped on Rock Creek—the stream of the beautiful trout. I went down half a mile from the road into an open cañon where the creek is studded with large rocks, and caught a dozen or two of a larger size than are found in the open park.

Tuesday—The time was up for my return to the springs and at daylight I saddled and started, getting through comfortably before sundown. The party did a little more deer hunting on Gore range, killing one or two, took in in plenty of grouse along the road and reached the springs a couple of days later. Thence they pushed on to Denver, making their entire excursion about five weeks. Weather was splendid except our last Sunday out and the occasional showers and storms mentioned.

This imperfectly told narrative may be considered about the average result of a *summer* hunt by amateurs in the Rocky Mountains. Later in the season anyone can kill game in quantity. This trip was planned expressly to hunt bear, and that was spoiled by an unusual season. The other sport was merely incidental. Heavy transportation or wagons of any kind hamper the movements of a hunting party and confine them to the traveled roads and neighborhood of settlements where game is comparatively scarce and wild. W. N. B.

Fish Culture.

A TENNESSEE FISH COMMISSIONER IN MICHIGAN.—Col. Geo. F. Ackers, of Nashville, Tenn., one of the State Fish Commissioners, has been grayling fishing in Michigan. What he found and how he liked it is told in the following letter to a friend. By the way, Michigan and Wisconsin seem to be especially favored this year with the visits of southern and south-western sportsmen, Col. Ackers has gone to the Nepigon for trout:—

I have caught the gamest of all game fish, the "Michigan Grayling;" it is truly a daisy, pretty as a girl of sixteen, but harder to catch, and as superior to the speckled trout as the trout is to the bass. Royal indeed, pure as the water it lives in, quick as thought in action, game to the last, the pride of the angler, and a sweet morsel to the hungry man when the offices of the cook are done and it is placed before you broiling hot.

After you left I made two attempts to reach the upper dam or falls of the "Omewee Saba" or Pigeon river. I stopped at the Lakeview House, on Mullet lake, with a party of friends, secured a two-horse wagon; but unfortunately a Michigan bear was met in the road and frightened the horses. The bear went one way and the horses went the other, smashed the wagon and broke the hip of one of the horses. I determined not to give it up, so I went and returned. Captain Smith Boches of the Lakeview House, had a new wagon and team, gave us a good guide (an Indian) named Enos Kissigoee, and with myself, Col. C. F. Simons, of Lexington, Ky., and Mr. Ricker, who sketches for a weekly pictorial paper, went through the dense forests, reaching the Pigeon river at noon, and soon we had our rods in full rig, with hooks sent me by Dr. J. C. Parker, one of your citizens, and made L. L. Hill, of your city. I cast my line in the swift-whirling, dashing water, when one of the beauties took the hook and fly; then the struggle began. He made my little number one Kentucky reel sing like a top and my line whiz through the water like the buzz of a bullet through the air, until his wild, fiery nature was tamed by exhaustion only. He weighed one and one-fourth pounds. I have caught forty-four in three hours fishing and I have caught ten within three-fourths of an hour, the largest being one and a half pounds, and the smallest three quarters. Having caught enough I bottled two in alcohol, which I will show you on my return to Grand Rapids.

WISCONSIN—*Madison, Aug.* 15—*Editor Forest and Stream:*—The first reports circulated in regard to the meeting of the Wisconsin Fish Commissioners were not correct. President Welch was not requested to resign, but has had his resignation in the hands of the Governor for several weeks past. Justice to Mr. Welch demands this explanation. Mr. Welsher, superintendent, has not been fully exonerated. A committee was appointed to investigate the charges brought against him, and will make their report the last of this month in Milwaukee. Mr. Welch informs us that the majority of the Commission request him to withdraw his resignation, as they agreed with him in his work. We are told the worst has not yet been told of this delectable affair, which is causing serious damage to the fish interests of the State.

ROVER.

WHY THE FISH DIE.—There is nothing necessarily mysterous in the alleged extraordinary fish stories recently published concerning fish in Conesus Lake, Livingston Co. this State. The bullheads came to the shore by hundreds, gasping and apparently dying. After lying in a stupid condition in the shallow water, and partly on the sand, sometimes for a day, they seemed to recover, and work their way back into the Lake. The perch come to the shore and act in the same manner. None of them recover, however, and the shores are strewn with dead perch; some of them very large size. This is evidently caused by the inrush of mineral waters from newly-opened springs at the bottom of the Lake. The fish affected by this water in the way mentioned leave it, and in the pure lake water recover. If it be objected that the perch do not recover, it is sufficient answer to suggest that the mineral waters are too much for them.

—Mr. CHARLES IMBRIE, of the firm of Abbey & Imbrie, arrived from Europe, last Saturday, on the steamer *China*.

—Miss Sarah J. McBride, whose advertisement of flies appears elsewhere, has removed from Mumford to Caledonia, N. Y.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.

Trout, *Salmo fontinalis.*	Muskalonge, *Esox nobilior.*
Salmon, *Salmo Salar.*	Pike or Pickerel, *Esox lucius.*
Salmon Trout, *Salmo confinis.*	Yellow Perch, *Perca flavescens.*
Land-locked Salmon, *Salmo glaciei.*	Grayling, *Thymallus tricolor.*

Black Bass, *Micropterus salmoides*; *M. nigricans.*

Sea Bass, *Centropristis atrarius.*	Bluefish, *Pomatomus saltrix.*
Sheepshead, *Archosargus probatocephalus.*	Spanish Mackerel, *Cybium maculatum.*
Striped Bass, *Roccus lineatus.*	Cero, *Cybium regale.*
White Perch, *Morone americanus.*	Bonito, *Sarda pelamys.*
Weakfish, *Cynoscion regalis.*	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES FOR AUGUST AND SEPTEMBER.

GRAY COFLIN, NO. 10 AND 11.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's herl; wings and setæ, hyaline.

BROWN COFLIN, NO. 10 AND 11.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's herl; wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wings.

The white moth for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season.

At this season use the small flies for day fishing and the large flies for evening and night.

NEW HAMPSHIRE—*Charlestown, August* 16th.—Black bass fishing in the Connecticut River is reported excellent. The congregational clergyman went by the hotel with a handsome string yesterday, and I hear of good success from other parties. S. W.

MASSACHUSETTS—*Westport Harbor, August*, 16.—Mr. Wood came here on the 15th of July, and fished for bass, (striped) at the Point Rock. First night caught four—weight, 11, 13, 16, 18, pounds. Next evening caught one, 15 pounds, and lost one. Next evening caught three, 16, 45, 53 pounds. Next evening, one 18 pounds, and lost one. Next evening lost one. Next, one 20, one 8 pounds; he then left for home. Have full house now.

J. M. SOWLE.

THE FISHING FLEET.—The number of fishing arrivals reported at this port for the first seven months of 1879, was 1351, or over six per day, exclusive of the smaller fishing craft making short trips and returning to port every day or two. From January 1st to August 1st, 276 arrivals from the Grand and Western Banks, 687 from Georges, 182 from Shore codfishing trips, 162 from Southern and Eastern mackereling trips, 35 from New Foundland and the Bay of Fundy herring voyages, 7 from squiding trips, and 2 from the Bay of St. Lawrence with mackerel. In addition to these were 16 arrivals of Gloucester Bankers at Boston with halibut.

The receipts of fish at this port the past seven months, although not covering all the business of the fleet, have been very liberal. The Bank fleet sell a small portion of their codfish catch at New Foundland and in the provinces, and the greater part of the early mackerel catch is sold fresh at New York and Boston. Aside from the catch of herring and mackerel, and the fish caught by the traps and small boats—no inconsiderable quantity—the Banks, Georges and Inshore codfish fleets landed at Gloucester an average of 156,081½ lbs. of fish daily, Sundays included.

The fish receipts at Gloucetser from January 1st to August 1st were approximately as follows: Herring, about 9,525 bbls.; Bank codfish, 3,152,000 lbs.; Georges, do., 16,937,000 lbs.; Shore do., 3,596,000 lbs.; Bank Halibut, 7,732,400 lbs.; Georges do., 682,100 lbs.; Shore mackerel, 13,535 bbls.; Bay St. Lawrence do., 545 bbls.

Considerable quantities of hake, pollock and other fish from Maine ports have been marketed here in addition to the catch of the fleet.—*Cape Ann Advertiser, August* 15.

CONNECTICUT—*Block Island.*—The bass fishing at Block Island, has been excellent recently. The score at the stand of Mr. Henry Steers for week before last shows 8 fish weighing each between 24 and 55 lbs. Mr. James R. Steers has the credit of a 58-pounder.

NEW YORK—*Rochester, August* 15th.—On the morning of August 3d last, E. J. Wardwell and myself, E. Jay Sugru, of Rochester, N. Y., while fishing in Wilson's Ponds, three miles from foot of Moosehead Lake, Maine, took eight speckled trout of the following weights: 4 lbs., 6 oz.; 3 lbs., 6 oz.; 3 lbs., 8 oz.; 2 lbs., 12 oz.; 3 lbs., 6 oz.; 2 lbs., 13 oz.; 3 lbs., 4 oz.; 2 lbs. 12 oz.; total weight 26 lbs., 3 oz. Not a small fish taken in this catch, and said to be the largest catch ever taken in three hours time. AMOS H. Walker, proprietor of the Eveleth House, Greenville, foot Moosehead Lake, Maine, will furnish all the necessary information in regard to the above named ponds. SUGRU AND WARDWELL.

NEW YORK—*Henderson.*—If you want good black bass fishing, go to Henderson and fish Stony Island and the Galloo Islands. Had splendid fishing; largest fish, 4 lbs. 20 oz.; board, $5 per week. Excellent table. H.

NEW JERSEY—*Newark, August* 18.—Fine strings of perch are caught from the Hackensack bridges. The *Call* notes a revival of trade simultaneous with the coming of good fishing. Sussex papers report four pound bass in Smartswood Lake.

Forked River, August 16.—We are having fine sport with the weak and king fish; an average of 100 per boat being no unusual catch. Had it not been for the net fishing in our bay this summer we would have had fine sheepshead fishing, as nearly a ton weight of large ones have been caught in the nets in a few hauls. It is to be hoped that some action will be taken this winter in the Legislature to prevent the drawing of seines; otherwise we will not in a few years have any fishing.

The Riverside House has been very full all summer with gentlemen and their families who are fond of the sports to be found in our bays, and if we cannot protect the fishing all will suffer the consequences more or less. A.

PENNSYLVANIA—*Pottsville, August* 19.—One day last week a trout was caught measuring eighteen inches and weighing, when dressed, three pounds. This fish had made his home in one of the "breaches" which was filled with water in the vicinity of New Castle, near here; and in driving a gangway beneath this hole to prevent the water from breaking through into the gangway and drowning the coal mine beneath, as the water was being pumped out, in that way discovered the fish. Many other kinds of fish abound in it, but it is considered too risky to go to the bottom after them. Many most excellent "catches" have been made this summer, both in still and running waters, and your correspondent is numbered with those of the most fortunate; but the above mentioned is the boss fish of the season. DON PEDRO.

MINNESOTA—*Lake City, August* 11.—Black bass fishing in Lake Pepin was never better than at present. Four rods took 96 three days ago. Many campers on the Lake. Frontenac is open and in its glory. Hotels on the Lake all in fine condition, and rates generally reduced, from Frontenac all round. No heated term sufficient to disturb the "Lake Dwellers." Fun and fishing the order. Next week fun and shooting will be thrown in as an extra.

DR.

SUMMARY OF THE GODBOUT CRUISE.

OTTAWA, *August* 9.

My Dear Hallock:—

Although we left the Godbout on the 11th ult. we did not arrive home before the end of the month, having been cruising around until the dog days were over, as you know any one coming from a region like the Godbout is not quite disposed or prepared to meet such extreme heat as Ottawa can generally boast of about the end of July.

I now send you a statement of the total catch of salmon on the Godbout this season, which is very poor indeed, compared with other seasons, although individually I caught quite enough for good sport. I think we left a week or so too soon, as you will note. Judge Taschereau made good fishing after we left. The water got down and the upper pool was in good order, which gave him a chance.

JOHN MANUEL.

* Left. + Arrived.

Where columns are blank thus (—) parties were not fishing.

Total salmon caught 165, average 14 88-165 pounds.

Seven grilse caught by Judge Taschereau after the above party left the river six days to July 19; forty salmon, average 11 6-40—446.

Five grilse caught by N. A. Comeau at sundry times during season. Eighteen salmon, average 12 7-18 pounds—223. One grilse.

QUEER FISH.—The following correspondence comes to us under cover from Commissioner Webber of New Hampshire:

CHARLESTON, N. H. *August* 8th.

MR. EDITOR: The enclosed letter has been referred to Prof. Baird, who returns it with a request that it be sent to you for publication in FOREST AND STREAM, to see if anybody can throw any light on the matter. Prof. Baird thinks the fish referred to, may be some yet undescribed member of the herring family, and possibly Prof. Jordan may be able to place it. S. WEBBER.

ASTORIA, OREGON, *July* 19.

MR. WEBBER:—Dear Sir: I write to get your assistance in identifying a couple of fishes that are thought to be young shad, strayed from the Sacramento. They are eleven inches long, two and three-fourths deep, and about seven-eighths thick, and in shape, number, shape and position of fins, and shape of tail, are exactly like the picture in Webster's Unabridged Dictionary. The color is a uniform silver, except that on each side, about half an inch from backbone, a row of dark spots, not very distinct, numbering six to eight, and of the size of a large shot, extends from head to tail. The scales are about the size, and resemble those of a herring, while a few along the belly are much larger, being about one-third inch diameter, and more numerous toward the head. Another peculiarity is that the belly, which is quite sharp, is furnished with a keen sickle edge, extending from head to tail. These fishes have been cut open, and are found to be destitute of spawn. One other larger fish, about fifteen inches, has been caught. All three were taken by salmon nets, ten miles from salt water. If from the foregoing description, you can tell me what they are, I wish you would do so, and oblige C. J. SMITH.

—The expert sea bass fisherman, Mr. John W. Cox, wine importer of Pearl street, who is spending a short time at General O. M. Jardines Hotel, at Mystic Island, on Long Island Sound, off the shore of Connecticut, informs us

that he recently landed two fine blackfish weighing fourteen and fifteen pounds. The average weight as they run, is from four to five pounds each. This fine fishing ground may be reached by the Stonington boats to Stonington, or the New Haven cars to Noank.

Natural History.

NOTES ON SKUNKS.

FORT RILEY, Kansas, June 16, 1879.

Editor Forest and Stream:—

While reading the interesting article, "Some New Facts on Skunks," signed "Old Judge," in the last number of FOREST AND STREAM, some reminiscences were brought to mind which may be worth recording.

In the course of this article occurs the remark: "It is a known fact that the skunk when lifted by the tail cannot throw his cologne." This well known fact has been tested sometimes at the peril of the tail-holder. In my boyhood, like most youths in the country, I set traps for rabbits. One morning three of us were visiting our traps: one of my comrades found his trap sprung, and a cautious peep revealed a skunk. The trap was carefully lifted and carried home, when the old gentleman came out to help us. He was slow of speech and stammered out, "I've heard sa-sa-say, that you must hold a skunk up by the ta-ta-tail."

We went to a vacant lot, and while the son raised the lid, the old man seized the skunk by the tail and held him up triumphantly; but his triumph was of the shortest possible duration. The skunk drew himself up sufficiently to take an observation, and then covered the old man from head to foot with the genuine undiluted article. The skunk was easily dropped, and as quickly despatched by the three boys, who were as expert at throwing stones by hand as David of old was with the sling.

In the summer of 1867, at Fort Lyon, Colorado, it was reported to me that a skunk was in an outbuilding, and as I wanted to capture him to examine the scent glands, I resolved on strategy. Tying a sponge on the end of a long stick, and saturating it with chloroform, it was cautiously brought to his nose, but he kept turning away, and not until he took refuge in a hole in the wall could I circumvent him. By saturating the surrounding air, he finally succumbed. To guard against the possibility of a salute, I was rather reckless as to the amount of chloroform given, while removing the two glands, which are on either side of the rectum, like hollow rubber balls: each holding from four to six teaspoonfuls, and each communicating with the bowel by a single duct about the size of a crow quill. The openings of the ducts are just within the sphincter ani. By raising the powerful tail, the orifices of the ducts are exposed, and the contents are expelled by muscular action of the glands.

When the operation was finished the skunk gave no signs of life. My prudence had protected me at his expense. It required two hours hard work to restore him, which was finally done by the galvanic battery.

He refused food for five days, although various tempting dishes were set before him. Had I understood his tastes as well then as I do now, I might have hastened his convalescence by sulphuretted hydrogen. A lucky thought came to me at the end of five days, when it occurred to me, that as he was a loud smelling beast a bad egg might strike his fancy. Talk of cold water to a man wandering in a barren desert, or peaches and cream to a party in pursuit of the north pole; the way that skunk devoured that egg will never be forgotton. All the bad eggs about the post were hunted up to sustain the beast during his convalescence; and not until the supply was exhausted did he consent to eat good eggs, meat, milk and other food.

While urging a piece of meat upon his attention one day, he resented it and snapped at my hand, nipping the tip of my finger, but not drawing blood.

I cannot believe that the bite of a skunk, which is not rabid, will cause rabbies in the person bitten.

REMSEN.

HORSE-HAIR SNAKES.—*Lock Haven, Pa., August* 9.—*Editor Forest and Stream*:—N. A. T. of Houston, Texas, is right, ye Editor and philosophers to the contrary notwithstanding. In my boyhood while attending a country school I have had my little pond close by a brook full of small snakes grown from horse-hairs. My recollection is that in spring water a hair will have to be in water about two days before it shows life, and animation ceases in about the same time. N. A. T. need not be alarmed about the reptile race being increased in this way. J. B. L.

How dear to his heart are the snakes of his childhood, when fond recollection presents them to view! We will not split hairs over this question.

The Kennel.

THE USE OF SPANIELS.

Now that the spaniel is beginning to assert in this country the position he has for so long held in his own, and that sportsmen appear to be awakening to the fact that his assistance is as valuable to them in the brushy coverts of the North-eastern States and British provinces as is that of the pointer and the setter on the prairies of the West or the stubbles of the South, a few words from one who has had a life long experience of the breed might possibly be acceptable to some, at any rate, of your readers.

The spaniel's special business, as before implied, is to beat coverts: his duty is pre-eminently to flush, not to point game. He must range always within thirty yards of the gun, unless in the case of a very highly broken dog, when more liberty may occasionally be allowed. He must be fast and fearless of facing the stiffest underbrush; he must be taught to down charge instantly at the sound of a gun, at a signal from his master, or on the rise of game; and lastly, should retrieve tenderly either by land or water.

In the face of the confusion that exists in England as to pure strains of spaniels otherwise than Irish water and the comparatively modern "Clumber," it would be absurd for mere fashion or fancy to be allowed to interfere in the creation of a good standard breed of working field spaniels. Unhampered by the prejudices of the past and the prestige of particular breeds—for to strain after such phantoms in the matter of spaniels is absurd—the sound common sense of the American sporting world may be trusted to select from the homogeneous but excellent matter on both sides of the Atlantic, what it chooses to designate as a beau ideal field spaniel.

Ballock's famous "Bob" that early in the "seventies" carried every thing before him, though considered at the time the king of cockers, was infinitely better suited to the show bench than he would have been to facing the stiff brush of Maine or New Brunswick cock covers.

There is no excuse with spaniels for the perpetual clashing of the show bench and the field. In this, more than in any other breed of dogs, should success in one depend on capacity for the other.

From one to six spaniels may be used, according to the number of guns and the nature of the ground—some strains as everybody knows are mute—others give tongue. Color is important. I should at once reject for my own use a dog that could not be easily seen, giving the preference to liver and white or black and white. In my opinion, the most useful all round dog is produced by a cross between the cocker and small English water spaniel, or between the cocker and clumber. There remains one immeasurable advantage that spaniels have over setters for hunting ruffed grouse, in that while the birds will often run great distances and refuse to rise before the nose of the well trained setter, they will scarcely be able to indulge in such freaks when surrounded by a busy and bustling team of spaniels.

It is scarcely necessary, I presume, to add that the offense of chasing rabbits is the least pardonable and the worst that a spaniel can be guilty of, and must at all hazards be at once stamped out. RINGWOOD.

LONDON, (ONTARIO) DOG SHOW.—The Second International Bench Show of Dogs will be held at London, Ontario, on September 30th, and October 1st, 2d, and 3d. Entries will close on September 15th. The rules and regulations are similar to those governing other shows. The show will be held during the same time and on the same grounds as the fair of the Great Western Fair Association. The Marquis of Lorne and the Princess Louise are expected to be present. The Great Western, Grand Trunk, Canada Southern, Erie, and other railways, will carry dogs free if accompanied by a care-taker. The classification omits champion and imported classes, but otherwise is about the same as at previous shows. The premiums in the English, Irish, and Gordon setter and pointer classes, are $15 for first and $5 for second, with $5 each for dog and bitch puppies. Premium lists containing all particulars can be obtained by addressing the Secretary, W. C. L. Gill, London, Ontario, Canada. The officers of the association under whose auspices the show is held are as follows: President, J. S. Niven, Esq., M. D.; 1st Vice-President, W. R. Meredith, Esq., M. P. P.; 2nd Vice-President, L. H. Smith, Esq., (Strathroy); Committee, T. H. Smallman, Esq., W. Y. Brunton, Esq., J. Johnson, Esq., (G. W. R.), W. Hudson, Esq., W. A. Elliott, Esq., D. Skirvinc, Esq., R. Gibson, Esq., Herbert Marsh, Esq., Treasurer, Geo. Macbeth, Esq., Hon. Secretary, W. C. L. Gill, Esq.

ST. LOUIS DOG SHOW.

We print herewith the Rules and Regulations and also the Premium List of the First Bench Show of Dogs to be held by the St. Louis Kennel Club on October 7, 8, 9 and 10. Mr. Charles Lincoln is Superintendent:—

RULES AND REGULATIONS.

No dog belonging to the St. Louis Kennel Club, or to any member thereof, will be entered for competition, but the Club's dogs will be on exhibition.

This show will be held under the rules of the National American Kennel Club, which will be found in the printed copies of the Premium List.

I. All imported dogs and their progeny on both sides (but not the progeny of the latter) shall be entered in the Imported Classes and be debarred from entering in the Native Classes; but no native dog shall be debarred from entering in the Imported Classes.

II. No dog shall be penalized for having a docked tail.

III. Puppies may compete in Grown Classes; but if so, they will be judged by the standard for grown dogs.

IV. An entry fee of two dollars will be charged for each separate entry of one or more dogs or puppies, and this entry fee must in all cases accompany the entry.

Entries close *positively* September 20, and no dog will be received to compete for premiums after 10 o'clock A. M., of the 7th of October. Dogs should be at the Exhibition Building in the Fair Grounds on Monday, October 6th, before 6 o'clock P. M.

V. Exhibitors are requested to affix prices to their dogs. If the dog is for sale, state the price at which the owner will sell. If not for sale, say so.

VI. All entries must be made on blanks furnished by the Club, which can be had from the Superintendent at his office, No. 604 North Fourth street, St. Louis.

VII. The Club will use due diligence for the care and safety of all dogs exhibited (watchmen being always on duty), but it must be distinctly understood the Club will not be responsible for loss of or damage to any dog exhibited.

VIII. The decision of the Judges will be final, unless misrepresentation or collusion can be shown; in which event complaint must be made to the Board of Appeals of the National American Kennel Club. See Constitution and By-Laws, Section 12.

IX. Judges will be instructed to withhold the prizes offered in any classes where there is no competition, unless the animals exhibited possess suitable merit, in which case their discretion shall govern the prizes to be awarded—either first or second.

X. Exhibitors will be permitted to take their dogs home every day after the show is closed upon leaving a deposit of $5 with the Superintendent and surrendering their entry ticket—to be returned on reproducing the dogs before 9 o'clock next day. If prize winners should be taken out and not returned, the prizes will be forfeited.

Exhibitors need not accompany their dogs. They can be sent by express, directed St. Louis Kennel Club, care of FAIR ASSOCIATION, St. Louis—and the Club will attend to shipping them back to their owners.

The Show will be open daily from 9 A. M. to 6 P. M. The dog will thus be on exhibition by *daylight* only, which exhibitors can appreciate.

The age of puppies must be computed from date of birth up to the 7th of October, 1879.

No dog will be received unless supplied with suitable chain and collar.

There will be awarded in each class only one V. H. C., one H. C. and one C., if dogs possess suitable merit.

LIST OF PREMIUMS.

POINTERS.

CHAMPION POINTERS (over 55 lbs.)—For the best dog, $30. For the best bitch, $30.

CHAMPION POINTERS (under 55 lbs.)—For the best dog, $30. For the best bitch, $30.

OPEN CLASSES.

POINTERS (over 55 lbs.)—For the best dog, $30. For the second best dog, $15. For the best bitch, $30. For the second best bitch, $15.

POINTERS (under 55 lbs.)—For the best dog, $30. For the second best dog, $15. For the best bitch, $30. For the second best bitch, $15.

POINTER PUPPIES (under 12 months).—For the best dog, $10. For the best bitch, $10.

SPECIALS.—For the best Pointer Dog, a fine Parker Bros.' breech-loading double shot-gun. Presented and manufactured by Messrs. Parker Bros., Meriden, Conn. Value, $200.

For the best Pointer Bitch, a fine Remington beech-loading double shot-gun. Presented by Simmons Hardware Co., St. Louis, Mo. Value, $100.

For the best brace of Pointers, regardless of sex or weight, a collection of thirty heliotypé engravings, in portfolio, of Sir Edward Landseer's paintings. Value, $35.

ENGLISH SETTERS.

CHAMPION ENGLISH SETTERS.—For the best dog, $30. For the best bitch, $30.

OPEN CLASSES.

IMPORTED ENGLISH SETTERS OR THEIR PROGENY OF THE FIRST GENERATION.—For the best dog, $30. For the second best dog, $15. For the best bitch, $30. For the second best bitch, $15.

NATIVE ENGLISH SETTERS.—For the best dog, $30. For the second best dog, $15. For the best bitch, $30. For the second best bitch, $15.

PUPPIES (under 12 months.)—For the best dog, $10. For the best bitch, $10.

SPECIALS.—For the best English Setter Dog, a fine Parker Bros.' breech-loading double shot-gun. Value, $200.

For best English Setter Bitch, a fine Fox's patent breech-loading double shot-gun. Presented by E. C. Meacham & Co., St. Louis, Mo. Value, $100.

For the best brace of English Setters, regardless of sex, a gun case. Presented by Wm. Read & Sons, Boston, Mass. Value, $25.

For the best native English Setter Dog or Bitch, a beautiful solid silver flask. Presented and manufactured by F. A. Durgin, silversmith, No. 305 N. Seventh Street, St. Louis, Mo. Value, $75.

IRISH SETTERS.

CHAMPION IRISH SETTERS.—For the best dog, $30. For the best bitch, $30.

OPEN CLASSES.

IMPORTED IRISH SETTERS, OR THEIR PROGENY OF THE FIRST GENERATION.—For the best dog, $30. For the second best dog, $15. For the best bitch, $30. For the second best bitch, $15.

NATIVE IRISH SETTERS.—For the best dog, $30. For the second best dog, $15. For the best bitch, $30. For the second best bitch, $15. For the best dog puppy, $10. For the best bitch puppy, $10.

SPECIALS.—For the first Irish Setter Dog, a fine W. and C. Scott & Sons' breech-loading double shot-gun. Value, $150.

For the best Irish Setter Bitch, a fine Fox's patent breech-loading double shot-gun. Presented and manufactured by the American Arms Company, Boston. Value, $100.

For the best brace of Irish Setters, regardless of sex, a shooting suit. Presented by Wm H. Holabird, Valparaiso, Ind. Value, $35.

For the best Native Irish Setter Dog or Bitch, a bronze pheasant with young. Presented by Mermod, Jaccard & Co., St. Louis. Value, $35.

GORDON SETTERS.

CHAMPION GORDON SETTERS.—For the best dog, $30. For the best bitch, $30.

OPEN CLASSES.

GORDON SETTERS (either Native or Imported.)—For the best dog, $30. For the second best dog, $15. For the best bitch, $30. For the second best bitch, $15. For the best dog puppy, $10. For the best bitch puppy, $10.

SPECIALS.—For the best Gordon Setter Dog, a fine Nichols' breech-loading double shot-gun. Presented and manufactured by John A. Nichols, Syracuse, N. Y. Value, $100.

For the best Gordon Setter Bitch, a fine Remington Creedmoor Rifle. Presented by the Remington Arms Co., through their agents, Messrs. Brown, Hilger & Co., St. Louis, Mo. Value, $100.

For the best brace of Gordon Setters, regardless of sex, twenty-five pounds of Orange Lightning Powder. Presented and manufactured by the Laflin Powder Co. Value, $25.

For the best native Gordon Setter, Dog or Bitch, a massive silver chariot (drawn by boy and girl), for fruits or ices. Presented by L. Bauman & Co., St. Louis, Mo. Value, $75.

SPORTING DOGS.

CHESAPEAKE BAY DOGS.—For the best dog or bitch, $10. For the second best dog or bitch, $5.

IRISH WATER SPANIELS.—For the best dog or bitch, $10. For the second best dog or bitch, $5.

COCKER SPANIELS.—For the best dog or bitch, $10. For the second best dog or bitch, $5.

SPECIAL.—For the best brace of Cocker Spaniels, regardless of sex, a Parker Bros.' breech-loading double shot-gun. Value, $50.

SPANIELS OTHER THAN IRISH OR COCKERS.—For the best dog or bitch, $10. For the second best dog or bitch, $5.

FOX HOUNDS.—For the best dog or bitch, $10. For the second best dog or bitch, $5.

BEAGLES.—For the best dog, $10. For the second best dog, $5. For the best bitch, $10. For the second best bitch, $5.

SPECIALS.—For the best brace of Beagles, regardless of sex, a fine Ballard Rifle. Presented by Messrs. Schoverling, Daly & Gales, New York. Value, $100.

GREYHOUNDS.—For the best dog or bitch, $10. For the second best dog or bitch, $5.

SCOTCH DEERHOUNDS.—For the best dog or bitch, $10. For the second best dog or bitch, $5.

FOX TERRIERS.—For the best dog or bitch, $10. For the second best dog or bitch, $5.

NON-SPORTING DOGS.

SHEPHERD DOGS OR COLLIES.—For the best dog or bitch, $15. For the second best dog or bitch, $5.

NEWFOUNDLANDS.—For the best dog or bitch, $10.

BULL-DOGS.—For the best dog or bitch, $10.

BULL TERRIERS.—For the best dog or bitch, $10.

BLACK AND TAN TERRIERS.—For the best dog or bitch, $10.

ROUGH HAIRED TERRIERS.—For the best dog or bitch, $10.

YORKSHIRE TERRIERS.—For the best dog or bitch, $10.

PUGS.—For the best dog or bitch, $10.

ITALIAN GREYHOUNDS.—For the best dog or bitch, $10.

KING CHARLES, JAPANESE OR BLENHEIM SPANIELS.—For the best dog or bitch, $10.

NOTE.—Separate entries must be made for all classes marked "Special," and all dogs must previously have been entered in

the regular classes, to enable them to compete in the special classes.

Railroad Arrangements.—Nearly all the railroad companies will carry dogs free to and from the Show when accompanied by their owners.

The express companies will on *prepayment* of their usual rates to the Show, return the dogs *free*.

Editor Forest and Stream:—

ST. LOUIS, August 16.

I am glad to be able to inform you that Mr. Campbell has consented to exhibit his famous field trial setters, viz.: Joe, jr., Buck, jr., Floss, Fannie, Tom III. and Kate. They will, no doubt, cause considerable attraction to sportsmen, as this is the first time they have ever been exhibited.

A great many applications are already being received, that give assurance of us having a first-class show. The new building is almost completed, and is a very handsome one, probably one of the finest on the grounds. The space for the number of dogs will necessarily be limited. Early application should, therefore, be made.

Arrangements have been completed to take care of all dogs that may be sent by express, for any length of time before the show opens.

I send you a package of prize lists, which please hand to any who may wish for them.

CHAS. LINCOLN, Supt.

DOG TALK FROM VIRGINIA.

ASHLAND, VA., *August* 4.

Editor Forest and Stream:—

Searching for fresh air I brought my family, dogs included, to this pleasant village to spend the summer months, and delighted are we at the change. Four little boys roll on the green grass under the shade of the oaks; four faithful dogs participate in their merry gambols, or watch them with loving dignity; and to complete the rural appearance of our country home we have added a gallant black-breasted red game cock and half a dozen hens and a pig. Oh! that pig! The boys have fed him on peaches and pears and scratched his back until he feeds with the dogs and the chickens, and it would make you laugh to see him pushing a dog with his nose away from his pan, until poor doggie in self-defence takes him by the ear, only to be worried anew the next moment. I leave for town at 7:30 A.M.; I return at 5 P.M. The real pleasure of country life lies in the early morning and evening. The joyous song of the lark and the clear ringing note of the partridge greet my ears every morning, and the yard and garden are tuneful with the mocking-bird, the sparrow, the blue-bird, the cat-bird, the robin, and the thrush—truly "God made the country and man the town."

I brought up four dogs—two setters, a pointer, and old "Jip," my faithful terrier, a cross between Skye and Dandy Dinmont, now twelve years old, but as fresh and sprightly as a cricket. Old Henry, my "old reliable," is not a blue blood, but although cock-eared, sharp-nosed, pig-eyed, and under size, he has won his way, etc., spite all appearance, to the tenderest spot in my heart by five years of faithful honest service; service that has brought many a bird to bag, rendered without grudging for one, two, three, four, five days without a sign of flagging or loss of energy, and has proved him in nose and bottom equal to any dog of any strain anywhere. He is orange and white with a diamond between his eyes, in my judgment the best color of all—and is a Virginia native.

Next is merry dancing little "Eva," red and white, a cross between a noble black tan, half Irish, half Gordon, out of a bitch of pure English blood, traced back to an importation made by Jack Heth, a noted lover of fine dogs, as far back as 1846. I watched the development of "Eva" with great interest. She has the nose of the Gordon, the speed of the Irish, and intelligence and staying quality of the English setter. I am breeding back to English from her. Just two years old, she was due to whelp August 12th, by T. H. Taylor's Crack (Carlowitz-True), and if I have good luck I expect to raise a rattler from this cross.

Next is "Tom," my Sensation-Belle, lemon and white pointer, given me in April by friend Colburn. He is a very promising and ardent dog, with a fine nose and good frame. I think Henry and Eva have taught him a pace that would astonish Sensation, and even now, in August, he has more hard muscle and eats more corn-cake than ever before. I may be wrong, but I think a serious defect in the way a majority of northern dogs are broken is in their lack of speed and failure to range. A close broken pup will never range, but a ranger can be toned down. We hunt a great deal on horseback, and this doubtless adds to speed and range, and these are most important considering the extent of our fields. Still, not one of a hundred of our dogs are half broken, and I ought not to criticise others so superior in this regard.

The delicious sense of freedom after such long confinement in town has made my dogs rampant for the fields, and they go hunting by themselves every day. I will be compelled to chain them up, for they are not only hunting off all their flesh but will be thoroughly unruly when I take them in hand this fall. For several evenings we have had excellent flights of bull bats and I enjoyed shooting them. They fly very swiftly and are great darters, so that they are by no means easy to hit, and they are birds of fine flavor and greatly enjoyed on the table.

I spent one day in the swamps of the Chickahominy hunting for woodcock. Although the day was rainy, it was quite sultry. The dogs worked well, but in vain, and finally I returned with an empty bag and tired dogs, thoroughly wet to the skin, and without a feather.

We have a phenomenon in this town, I hesitate to write about, but the facts are avouched by so many respectable men, that I will. A yonng man named Cross goes hunting without a gun; his sole and only weapons are smooth round stones which he carries in his pockets. Throwing stones, he kills not only hares, but partridges. Three respectable and truth telling men assured me yesterday that they went out one day with him, they taking their guns; that he killed that day, using nothing but stones thrown from his hand, six hares running and three partridges flying. Last fall he attended our State fair, where a showman exhibited rag babies arranged on steps, and charged five cents for two throws with a ball, at say, ten paces. If you struck a baby he gave you a cigar and charged nothing. You have doubtless seen the game. Cross went in, threw, and struck and struck and threw, knocking over a baby every pop, until he broke up the show. It is evident that babies are his *forte*, and my informants say it was not a good day for babies. If this story be true, David was nothing compared with Cross.

I notice a great deal of talk about the place for the field trials of the National Association this fall. If I may be allowed to suggest a spot, I will name "Milford Depot,"* Caroline County, Virginia. It is within three hours of Washington, and two of Richmond; within easy reach of New York, Philadelphia, and Baltimore, and with magnificent flats in every direction. There are more birds in more good places within five miles of that spot, than in any other I know. The tavern is large enough to accommodate the judges, owners, and breakers, and small enough to keep off the tag rag and bob-tail, while the host is a gentleman and sportsman, and the neighboring farmers would furnish every facility. Excursion trains from Washington would bring down and take back spectators, while the village of Bowling Green, only two miles distant, would accommodate more than would come. Numbers of northern sportsmen know this locality, and I am surprised that no one has suggested it. If the idea pleases any one interested in these trials and further information is desired, I will gladly give it, if applied to through your office. I know every one about there, and will lend a helping hand to perfect arrangements.

But I have already written too long a letter. Not the least of my enjoyments in the country is to read FOREST AND STREAM. Mr. Hallock's Godbout letters fairly made me groan with envy of his enjoyment. "GOSHAWK."

* The managing editor of FOREST AND STREAM is able to endorse, from personal knowledge, what our correspondent claims for this locality.

—Mr. Geo. E. Browne, of Dedham, Mass., claims the name Sheila for his black pointer pup, out of his bitch Prudence (Warberton's Dandy—Crotchett's Moll), by E. C. Alden's Pete, Jr. (Strong's Pete, Woodbridge's Nell).

RED IRISH SETTERS FOR SALE.—Mr. E. J. Robbins, of Westfield, Conn., advertises in another column a pair of fine red Irish setter puppies, by champion Elcho, out of Bridget Plunket, she by Plunket out of imported Stella.

—C. A. Benton's Scotch deer hound Duke, out of Dr. C. C. Benton's imported Kate, by Capt. Irvine's Leo, was sent to Dr. Benton at Ogdensburg for the season. He is a fine specimen.

—Mr. Will Cravens, of Madison, Ind., has purchased from Ed. E. Powell, of same place, his lemon and white setter dog Glendale, by St. Elmo, out of Tip.

DOGS, HOGS, AND SCHOOLS.—A Missouri farmer, who has been spending his spare time in "figuring," gives the following statistical deductions: In thirty-two counties 10,603 sheep have been killed by dogs. He estimates the number of dogs in thirty-two counties to be 362,000; that a hog will thrive on the food necessary to support an able bodied dog, and at the end of a year weigh two hundred pounds; therefore, if the food for these 363,000 dogs went to the hogs, it would make 92,000,000 pounds of pork, worth at least six cents a pound, or $4,550,000—nearly twice the value of all the school houses in the State, and more than twice the amount used by the State for school purposes.

NEW YORK YACHT CLUB.

ANNUAL CRUISE AUGUST 6 TO AUGUST 15.

The fleet of the New York Yacht Club assembled in Glen Cove August 6, in obedience to orders issued by the Fleet Captain, G. L. Haight, at the request of Vice-Com. Thomas, schooner *Rambler*. That without any special inducements a fleet so numerous should have answered the call of the Vice-Commodore is a sign of the times which all persons having the best interests of yachting in America at heart will view with pleasure. Not many years ago it used to be a common thing to see the flower of the squadron turn out for a match, and engage in a drift out to the lightship and back, while only a meagre muster was made for cruising. That affairs have now decidedly changed we regard as evidence that the crew of sailors among our amateur tars is rapidly growing in numbers, and even as a class it may be said of American yachtsmen that they have much advanced of late, have learned to appreciate seamanship, and show a laudable love of a sailor's life. They have, in short, discovered through experience that there is something else to be got out of the grand sport of yachting than simply racing and the potting of mugs. Moreover, the "hard times" have done much to squeeze out from the club lists a large fraction which brought them nominally a crowd, which was sailed about in huge craft simply for ostentation's sake, in rivalry of the vulgar display characteristic of the inflation times. Much of this dross has dropped into the obscurity from where it sprang, and the sailor element in our clubs is now more than ever dominent. Of this the big fleet which collected recently in Glen Cove stands witness.

Aug. 7. When Fleet Captain Haight fired the preparatory gun at 5 A. M., and the signal was made from the flagship *Rambler* to get under way for New London, the first harbor to be made, the following yachts answered the signal:—Schooners: *Rambler*, 294 tons, Vice Commodore W. H. Thomas in command; *Dauntless*, 268, Rear Commodore J. R. Waller; *Intrepid*, 270, Lloyd Phœnix; *Dreadnaught*, 264, C. J. Osborn; *Madeleine*, 151, J. S. Dickerson; *Tidal Wave*, 202, Daniel Cook; *Resolute*, 206, Mr. Gurney; *Wanderer*, 198, James Stillman; *Estelle*, 103, J. D. Smith; *Nettie*, 116, F. P. Osborn; *Clio*, 68, J. R. Platt; *Magic*, 121, F. M. Weld, Jr.; *Peerless*, 68, J. R. Maxwell; and *Frolic*, 50, J. G. Cassatt. Sloops: *Niantic*, 65, R. H. Huntley; *Vision*, 64, J. J. Alexandre; *Vixen*, 38, F. C. Lawrence; *Regina*, 42, W. W. W. Stewart; *Active*, 41, Herman Oelrichs; *North Star*, 38, ——; *Psyche*, 33, E. M. Brown; *Volante*, 24, Mess. Hitchcock; and *Alert*, 19, Henry Vail. The *Gracie*, 70, Mr. C. Flint, though not belonging to the club, got under way with the rest. The movements of the fleet are best described by our special correspondent, an eye-witness to the whole cruise:—

NEWPORT, Aug. 12, 1879.

Editor Forest and Stream:—

At daybreak Wednesday morning last (August 7th) there was scarcely a breath of air to ruffle the glassy surface of Glen Cove. Four and twenty graceful craft swung at anchor there, awaiting the gun from the Commodore's boat, which was to rouse them into electric life, and start them on the long run for New London. The signal came at 5:30, and in an instant jibs were run up, anchors broken, and the boats, gathering headway slowly slid through the water. The sloops *Vixen*, *Regina* and *Active* were anchored close to one another, and the two latter effected a fine start. The *Vixen*, however, before she had gathered way was fouled by the schooner *Nettie*, and to prevent further damage was compelled to drop anchor again. A large hole was torn in her jib. This accident cost her much, for by it her old enemy, *Regina* gained a clear lead of a couple of miles. *Intrepid*, *Dauntless*, *Estelle*, *Peerless* and *Clio* secured an excellent start, and were well to the front at the end of the first half hour, *Intrepid* leading the fleet. By 9 o'clock *Intrepid* led the entire fleet, with the exception of *Regina* and *Niantic*, by a clear three miles. It was now blowing very fresh, and the smaller boats brought down their clubtopsails. *Intrepid* continued to increase her lead, and was doing very finely indeed, with every prospect of leading the squadron into New London, when the breeze moderated very much, and the small boats came to the front. By this time the gallant little *Vixen* had made good much of her loss, had passed most of the larger boats, had left *Active* far astern, and was close on the heels of *Regina*. Towards noon the breeze began to give out, and by 3 o'clock it was almost a calm. The positions of the boats then were somewhat as follows: On the north shore were *Clio*, *Madeline*, *Vision* and *Dauntless*. In the middle of the Sound *Intrepid*, *Rambler*, *Estelle*, *Resolute*, *Magic*, and most of the other schooners just holding their own against the strong head tide. On the south shore a lively struggle for the lead was going on between *Vixen* and *Regina*, *Active* being about a mile astern. At about 3 o'clock, just off Oldfield light, *Vixen* passed to the front, and *Regina* stood out into the Sound only to return to her old tactics which had already served her so well, and hug the south shore again. Here ensued a calm of three hours. The positions of the schooners remained practically unchanged. *Vision*, *Madeline* and *Peerless* put into New Haven Harbor for the night, as the weather was hazy and somewhat threatening. The three plucky little sloops way over on the south shore, however, held sturdily to their course. A light breeze from the S. E. sprang up, and the boats ran merrily along, making a long leg and a short one. When darkness fell the *Vixen* was leading the fleet by about two miles. Then came *Regina* and *Active*, *Clio*, *Estelle* and *Magic*. The night was cold and foggy. When daylight broke it began to blow very briskly from the east, and down came the clubtopsails again. *Vixen* still led; a mile astern of her was *Regina*, while a couple of miles astern and to leeward was *Active*. In the distance appeared the schooners. It rained in torrents. Fresher and fresher blew the wind, and the men tending the jib sheets on the sloops stood to their knees in water. At precisely 6:32 A. M. *Vixen* rounded to off the Pequot House, and fired her gun. *Regina* came along only nine minutes later, and the *Active* came bowling in at 7 o'clock, twenty-seven minutes later. In half an hour the schooners began to arrive. *Estelle* led them in, closely followed by *Clio*, *Dauntless*, *Magic* and *Intrepid*. These four boats made a beautiful spectacle as they came up the harbor, so close together that it was difficult to decide which was leading.

The following are the names and times of the leading boats:—

	H. M.		H. M.
Vixen	6 33	Rambler	7 20
Regina	6 42	Niantic	7 37
Active	7 00	Dreadnaught	7 42
Estelle	7 07	Tidal Wave	8 13
Clio,		Resolute	8 39
Dauntless,	7 10	Wanderer	9 49
Magic,		Nettie	11 0
Intrepid	7 12		

The others came straggling in later in the day. The *Ambassadress*, *Phantom*, *Fleetwing* and *Clytie* joined the fleet here. The yachts gave their men a sorely needed rest Thursday, and Friday morning, at 10:30, they started for Shelter Island. A more magnificent start than was then made has probably never been seen. Hundreds of people from New London and the neighborhood were on the banks of the river to witness it. *Wanderer*, *Clio*, *Magic* and *Estelle* were among the first of the schooners off. Close to the wharf were anchored *Regina*, *Active* and *Vixen*. These swung around at about same time and darted past the landing, stem and stem, each of them a perfect cloud of canvass. The wind was westerly and quite fresh. *Active* quickly took the lead, passing *Regina* to windward; *Vixen* soon was after, keeping under *Regina's* lee bow. The race then was between the *Active* and herself. It was close and exciting, both boats keeping well up to windward, and neither of them for a long time able to gain any advantage over the other till the *Active* slowly gained on her rival, and beat her to the Planegut spindle by about a hundred yards. The first schooner in was *Estelle*, closely followed by *Clio*, *Fleetwing* and *Madeline*.

The fleet left Shelter Island for Newport at 9 o'clock. The breeze was free and very light at first. The *Clio* being to windward soon had a long lead. She was followed by *Active* and *Vixen*. The *Regina*, *Christine*, *Intrepid*, *Estelle* and *Dauntless* next. The breeze freshened, and the *Regina*, being well to windward, soon ran by *Vixen*, *Christine* and others, and at the end of a couple of hours had worked into the position of second place. The *Intrepid* came bowling along under a cloud of canvas, and carrying the largest balloon jib in the fleet. All the boats had everything boomed out, and the wind being free and not too heavy, cracked on every stitch of canvas they possessed. Most of the yachts kept well up to windward, but the *Vixen*, to avoid the flood tide in the race, and hoping to catch a southerly breeze, laid her course at once for Newport. This probably cost her the race. At noon the leading boat, far down the Connecticut shore, was the *Active*. A mile astern of her was *Regina*, and another mile astern the *Clio* and *Tidal Wave*, having a hard fight for third place. Miles away to the south was *Vixen*, leading the rest of the fleet by a couple of miles. In her wake were *Nettie*, *Kate*, *Clytie*, *Intrepid*, *Madeline*, and others. At 3 o'clock *Clio* had been passed by *Tidal Wave*, who began to creep up on the *Regina*. The yachts held these positions till the end of the run. *Active* came in a leader by half an hour of her rivals. *Regina* carried away a topmast off the mouth of the outer harbor, yet managed to come in second: *Tidal Wave* was third; *Vixen* fourth; *Clio* fifth; *Nettie* sixth; *Kate* seventh; *Madeline* eighth. It was dark when others came in.

The times taken are as follows:

	H. M.		H. M. S.
Active	6 18	Vision	7 58
Tidal Wave	7 4	Intrepid	8 00
Regina	7 7	Niantic	8 05
Vixen	7 16	Psyche	8 08
Clio	7 30	Rambler	8 10
Clytie	7 40	Dreadnaught	8 13
Kate	7 47	Dauntless	8 13 20
Estelle	7 48	Volante	8 33
Phantom	7 51	Fleetwing	not timed.
Magic	7 55	Nettie	not timed.
Madeline	7 57		

The run over was a remarkably pleasant one. *Madeline* when she was coming to anchor fouled the little *Vixen*, tearing away and grinding up her yawl, and ripping her mainsail. The crash brought many boats from neighboring yachts to the scene of action, as it was so loud as to lead the hearers to suppose that the accident was a serious one. A magnificent fleet of yachts was now anchored at Newport, in the inner harbor. There were over thirty, all told, and their lights at night made the scene a brilliant one. The squadron was joined by several more yachts, the fleet in harbor being: *Rambler*, *Resolute*, *Clio*, *Clytie*, *Dauntless*, *Dreadnaught*, *Comert*, *Estelle*, *Fleetwing*, *Intrepid*, *Madeline*, *Magic*, *Nettie*, *Peerless*, *Tidal Wave*, *Wanderer*, *Vixen*, *Regina*, *Volante*, *Vision*, *Active*, *Niantic*, *Hope*, *Recreation*. and S. S. *Ideal*.

DUXBURY YACHT CLUB.—The union regatta of this club was sailed off Duxbury, Saturday, August 16th. The day was overcast, light breeze from southwest, which freshened, so that during the latter part of the race light canvas was taken in. Time of *Mercury* not taken, as she failed to cross the finish owing to her draft. A ball took place the previous evening which was very successful, and a dinner was served after the race at the Standish House. In the following summary, K denotes keel, and C. B. center-board:—

FIRST CLASS.

Yacht.	Owner.	Length. FT. IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Siren, c. b.	L. N. Keith	38 00	1 26 41	1 03 31
Lilly, c. b	Sanborn	27 02	1 51 15	1 18 24
Triton, k	H. McKay	30 02	1 43 41	1 43 41
Mercury, k	Com. Holmes	31 01	Not taken.	

The *Mercury* was unable to complete the race on account of her great draught of water compelling her to keep in the channel.

SECOND CLASS.

Yacht.	Owner.	Length. FT. IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Thisbe, c. b	T. Litchfield	20 08	1 46 09	1 04 59
Manic, c. b	F. Barlow	26 06	1 40 50	1 07 17
Allie, c. b	Wattles	21 06	1 47 16	1 07 19
Sea Bird, c. b	Loveland	22 00	1 50 59	1 11 18
H. C. Wharf, k	Wharf	21 08	1 53 16	1 13 35
Fanny, k	C. A. Perkins	23 03	1 56 43	1 19 04

THIRD CLASS.

Yacht.	Owner.	Length. FT. IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Peerless	Gifford	18 09	1 53 09	1 08 47
Pansy	Pollo	19 07	1 52 24	1 09 28
Dream	C. Barnard	18 03	1 57 29	1 12 18
Pearl	Chase	17 01	1 59 19	1 12 40
Sea Foam	Southworth	18 06	2 01 31	1 18 42
Unique	Reed	16 08	2 08 08	1 19 47
Undine	Lowe	18 00	Time not taken.	

In the sprit-sail, fourth class, *Annie M.*, P. H. Winsor, won first prize; *Little Charlie*, Mr. Ransom, second, and *Wanderer*, J. D. James, third; beating *Sadie C. Montana* and *Dexter*.

QUINCY YACHT CLUB.—Quincy Y. C. regatta May 9. *Psyche* has been given second place, instead of *Flyaway*, the latter being found too large for the class. *Psyche*, therefore, takes second prize. The third championship regatta of this club was sailed Saturday, Aug. 9, off Quincy Great Hill. *Muriel* and *Dandelion* had already won the season championship in first and third classes, while in second class *Elf* and *Wildfire* had each won a race. In the second championship match *Elf* and *Thistle* sailed a dead heat on time, and second prize for that race was decided by race of Aug. 9. Judges: Messrs. J. T. Penniman, P. B. Turner, Samuel Bass. Summary:—

FIRST CLASS.

Yacht.	Owner.	Length. Ft. In.	Corrected Time. H. M. S.
Muriel	C. G. Weld	22 6	1 24 41
Allie	A. S. Wattles	22 8	1 43 51
Secret	J. Binney	23 3	0 00 00

SECOND CLASS.

Thistle	W. H. Litchfield	21 10	1 31 42
Elf	W. P. Barker	20 4	1 38 32

THIRD CLASS.

Rocket	B. F. Bass	16 7	1 11 13
Nattie	W. H. Nicholson	16 8	1 15 44
Dandelion	J. Q. Adams	17 5	1 16 28
Imp	G. C. Adams	16 10	1 16 50
Elmer	P. Chubbuck	17 5	1 16 59
Undine	A. L. Neal	17 3	1 17 08
Louisa	L. H. Parrott	17 0	0 00 00

Muriel, *Thistle*, and *Rocket* take first prizes, *Allie*, *Elf*, and *Nattie* second prizes. *Thistle* also receives second prize for previous race, decided by this one. Championship of the season goes to *Muriel* and *Dandelion*. In second class there must be a "sail off" between *Wildfire*, *Elf*, and *Thistle*.

FANCY VS. WATER WITCH.—The yachts *Fancy*, Commodore P. Grant, and *Water Witch*, Mr. H. Hutchings, sailed a match off Nahant Aug. 14. Course from steamboat wharf to buoy off Winthrop's Point and return; sail twice over; sixteen miles. *Fancy* took the lead and kept it in spite of having some trouble with her fore stay. After rounding Winthrop Head she parted her patent gaff arrangement, and had to give up, the *Witch* taking the stakes of $100. Judges: Commodore W. L. Jeffries, B. Y. C., and Mr. William Morris. Referee: Commodore Frank E. Peabody, D. Y. C.

QUINCY POINT SCRUB RACE.—An impromptu race was sailed August 11th off Quincy Point, for three prizes presented by Mr. E. W. Baxter. Judges: Messrs. L. M. Hersey and H. M. Federhen. No time allowance. Summary:—

Yacht.	Owner.	Actual Time. H. M. S.
Dolly Varden	A. P. Cleverly	4 26 32
Elfin	W. F. Maybury	4 28 05
Dolphin	Ed. Packard	4 28 28
Undine	Harvey French	4 34 09
Rescue	W. N. Ford	4 34 25
Louisa	Luther Parrott	4 37 00

SALEM YACHT CLUB.—The second race of this club was sailed off Lowell Island Aug. 11th. Wind moderate from S. E. Courses, 10, 7, and 5 miles for the three classes. Judges: Messrs. Richardson and Nevins.

FIRST CLASS.

Name.	Owner.	Length. Ft. In.	Actual Time. H. M. S.	Correct Time. H. M. S.
Mignon	Wallis & Dodge	25 4	2 13 31	1 41 49
Coming	Rock Brothers	26 2	2 56 00	2 25 10
Catamaran, G.	Mansfield	00 0	2 47 00	0 00 00

SECOND CLASS.

Dash	Huntington & Brown	19 9	1 28 30	1 01 21
Coquette, F. A.	Brown	19 5	1 27 40	1 00 10
Thistle	Snow Bich	19 6	1 27 09	0 59 35
Thorn	John Newcomb	19 6	1 30 29	1 02 55
O. M. A	Anton Liebsch	22 0	1 50 00	1 25 03
Aurora	Joshua Brown	21 0	1 35 40	1 09 47

THIRD CLASS.

Tulip	W. T. Servey	15 5	1 06 00	0 43 47
Amy	C. B. Knowlton	12 2	Not taken.	

Mignon, *Thistle*, and *Tulip* take first prizes, and second prizes go to *Corning* and *Coquette*.

NEWPORT YACHT CLUB.—The second regatta of the Newport Y. C. was sailed Aug. 14th. The strong S. W. wind frightened away most of the entries, and only three yachts mustered spunk enough to risk a capsize. Course from Long Wharf to Bishop's Buoy, thence to stakeboat off South Dumplings, thence around buoy off Torpedo Station, and back to start; distance 8 miles. Prize given by ex-Commodore Pratt. Double reefs were in order, and all three managed to keep right side up, though crews were about drowned out. *Sunshine*, Chas. Cobb, of Boston, took and kept the lead, winning in 4h. 4m. 14s., beating *Avis*, Professor H. S. Eustis, Cambridge, and *Baby*, H. K. Norman, of Boston.

SAILING ON THE DELAWARE.—In the regatta held by Captain Wright off Cooper's Point, N. J., August 4th, the starters were: *Shuck*, *Norcross*, *Feeney*, *Viola*, *Holland*, and *Cohill*. Course around buoy off House of Correction and home. Wind squally and variable. First prize won by *Shuck*, second by *Norcross*, and third by *Feeney*. The *Cohill* is out with a challenge to sail the *Holland* for the Mayberry challange flag and a purse of $50 to $100. If not accepted, will sail any yacht of the Cooper's Point Y. C. except the *Norcross*.

THE LATE NEENAH REGATTA.—*Neenah, Wis., August 13.—Editor Forest and Stream*:—In your issue of Aug. 7 I notice a communication from my friend, J. M. Dickinson, captain of the yacht *Niobe*, wherein, in reply to some correspondent unknown to us, he says: "The judges held a meeting and declared the race off, &c. Believing we had won the race fairly we declined to enter the next day." Without desiring to detract one *iota* from the fame of the *Niobe* or the good name of her gallant captain, still as one of the judges I feel it a duty, in fairness to all parties, to briefly state the facts. The course is a twelve mile one. The rules of the club make the necessary time for a race as *twice* around inside of three hours. According to Captain Dickinson's own statement, as published in an Oshkosh paper, his *Niobe* was 3h. 8m. in making *once* around. The judges, as a matter of course, declared the race off, and required it sailed on the next day. If this is not a fair statement of the case then we do not know how to make one

J. N. STONE, one of the Jugdes.

MITCHELL BOAT CLUB OF MILWAUKEE.—The new club house has been finished, and is a handsome two-story structure of Gothic style. A new boat from Charles Plass, of Detroit, has been added to the stock. She is 50 feet long, 52 inches wide, and has both fast and sliding seats and Ostrom rowlocks. Mr. J. K. Ilsley, of the Milwaukee B. C., has a new paper single for practice work. It is contemplated to add several new boats to the Mitchell B. C.

PENSACOLA (FLA.) REGATTA.—The annual regatta of Pensacola, Fla., was sailed Thursday, July 17. Judges: Gen. S. A. Moreno and Capt. John B. Guttman: course, triangular; distance, 15 miles; prize, $25. Wind strong from S. W. Summary:—

Yacht.	Owner.	Length. ft. in.	Time Allowance. H. M. S.	Corrected Time. H. M. S.
Wallace	Dixon Reed	28 7	0 00 00	2 32 25
Rover	U. S. N.	23 3	0 40 00	2 37 13
Blanche R.	S. R. Mallory	21 10	8 26 00	2 38 56
Belle	W. Handlou	23 01	6 53 00	2 39 47

The race for pilot boats was sailed the following day. Prizes, $50 add $25; course, 15 miles. Ten boats started. Won by the *Little Frank*, though a claim of foul was made on the strength of her main boom striking one of the marks in rounding. The question has been referred to the secretary of the Southern Y. C.

ROYAL NOVA SCOTIA Y. S.—Mr. F. C. Sumichrast, the honorable secretary of the club, has been elected an honorary member of the Eastern Y. C. of Boston, a compliment well deserved, in consideration of services done in behalf of the best interests of yachting.

THE BARRIE REGATTA.—In the professional single-scull race at Barrie, Ont., August 10th, Hanlan and Riley crossed the line together in 27m. 2s. The other contestants were Elliott, Toronto; Frank Gaudaur, Toronto; John A. Kennedy, Portland, Me.; Geo. Hosmer, Boston; F. A. Plaisted, Brooklyn, N. Y.; Wm. McKeen, Toronto; Bob Berry (colored), Toronto, and J. Hanlan and P. Patullo, Toronto.

ST. ANNE'S (CAN.) YACHT CLUB.—The annual regatta was sailed August 2 over a course of fifteen miles for the Clarendon cup. Wind fresh from southeast. *Sappho*, D. Heath, won, beating *Eolus*, Mr. Browne, *Bella Florence*, Mr. Hodson, and *Petrel*, I. Greene. Latter came in third, but was disqualified for polling. A race for open boats finished the day's sailing.

RACING AT KINGSTON (ONT.)—A race was sailed in Kingston Harbor July 28 for the harbor championship. Won by *Zeitella*, beating *Laura*, *Emma*, *Charm* and *Crossbones* in the order named.

YACHTS' PHOTOS.—Mr. Jay V. Olds, of Bridgeport, Conn., has been made agent for the sale of photographs and yachting literature of several English houses. He proposes also to keep a full line of American photos, &c., so that parties desiring to decorate club houses or cabins can procure from one headquarters all they need in this line at lowest prices. His list of photographs includes nearly every yacht of repute abroad or at home.

TO AMERICAN YACHTSMEN.—For complete records of all yacht races in England, as well as for a great variety of other matter of interest, such as cruises and yachting tales, read "Hunt's Yachting Magazine," established 1853. Can be had of booksellers generally or direct from Hunt & Co., 119 Church street, Edgware road, London, E. C., England. Published monthly, one shilling sterling per number.—*Adv.*

Sept. 25-25-27—Detroit.—Daft's English eleven vs. Detroit.

THE INTERNATIONAL CRICKET MATCH.

CANADA VS. UNITED STATES.

In our next number will be found a full account and score of this international game, and until then our readers must be content with a glance at the following summary of United States-Canada matches that have been already played:—

1853—Won by United States, at Harlem, N. Y., by 34 runs.
1854—Lost by United States, at Toronto, by ten wickets.
1855—No match.
1856—Won by United States, at Hoboken, by nine wickets.
1857—Lost by United States, at Toronto, by four wickets.
1858—Won by United States, at Hoboken, by four wickets.
1859—Won by United States, at Toronto, by four wickets.
1860—Won by United States, at Hoboken, by five wickets.

It will be seen that the last took place in 1860, and no doubt they would have been continued annually had not the "late unpleasantness" on this side of the line put a stop to all thoughts of the game. We sincerely trust that it may continue to be a yearly event. No other match can create as healthy an interest, and it *is* interest that increases the popularity of "the noble game of cricket." At the beginning of the season we spoke of the usefulness of this match, and it may now interest our readers to learn the source from which it sprung.

The first step toward international cricket was made by the St. Georges Club, of New York, to whom all honor is due. Early in 1840 an obscure, undefined challenge to that club was given in the name of Toronto and said to have been delivered by a gentleman of that place. The St. Georges complied with alacrity, but upon reaching Toronto found that they were not expected—and it was all a mistake. In consideration, however, of their having gone so great a distance as 500 miles a friendly game was gotten up and played. The Toronto club was expected to play a return match in 1841, and the hope was repeated in 1842; but sufficient circumstances precluded them from so doing during those two years. Howev er

on September 13, 14, 15 and 16, 1843, a match was played in New York between eleven *bona-fide* members of the Toronto Club vs. eleven *bona-fide* members of the St. Georges, the visitors being victorious. At this time it was agreed that the St. Georges should go to Toronto and play the return match during the ensuing summer. Consequently in 1844 the St. Georges, whose ranks had been sadly thinned by deaths and resignations, incorporated three members of the Philadelphia Union Club in their eleven and turned up with them at Toronto on July 24. An altercation ensued, the Canadians refusing to play the mixed team. The St. Georges, after waiting for several days, were obliged to return home, the match being off.

This difficulty between the two leading clubs of the time led to the publication of two challenges in August of the same year, the St. Georges expressing themselves willing to play "any eleven players in Canada for any sum from $100 to $1,000, the match to take place in New York," and the Toronto Club was also willing to sacrifice their feelings by meeting "in a friendly trial of skill" any blasted "eleven residents of the United States of America" at Toronto who should desire to accept bets to the extent of 200 guineas on the result.

After a vast amount of beer and ink had been consumed the Toronto Club on September 9 accepted the St. Georges' challenge, naming $1,000 as amount of the stakes, and according to agreement All-Canada put in an appearance on the St. Georges' ground on September 24, 1844.

The match was close and interesting, and from the score, which we reproduce, it will be seen that Canada won by 33 runs :—

Nothing daunted by this defeat the St. Georges challenged and played All-Canada, this time at Montreal on July 30–31, 1845, and again Canada was victorious by 61 runs. The return match was played in New York in August of the same year, when the Canadians for a third time were successful, this time by three wickets. The St. Georges now called upon the Philadelphia-Union for aid, and these clubs in August, 1846, issued a joint challenge to All-Canada. It was promptly accepted and the match commenced at New York on the 27th of the same month. Two innings only were played—Canada, 28; United teams, 57—when unfortunately a dispute arose (an infringement of law XIX.) and the game was left unfinished.

From these games and others of a like character the United States-Canada match sprung up, which in the future, unless it is played by the best cricketers, irrespective of position and pocket, should be distinguished by some other name.

UNITED STATES vs. CANADA.—A telegram, dated Ottawa, Aug. 14th, informs us the game so far as played last Tuesday resulted as follows :—Canadians : first inning, 85 ; second inning, stumps drawn at 6 o'clock with 78 for 9 wickets. Americans : first inning, 108. Before this reaches our readers the telegraph will have announced the victory of the Americans boys.

—The Syracuse cricketers cabled Daft on the 11th inst., offering him $1,000 if he would visit their city and play a two days' match vs. 22 of Central New York.

CANADIAN CRICKET—*August* 8th.—Bayfield vs. Seaforth, at Seaforth. The former won, scoring 154 in one innings to the latter's 98 in two.—August 8th, Barrie vs. Collingwood, at Barrie. Barrie 141 first inning, Collingwood 46—one day's match.—August 9th, Owen Sound vs. Meaford, at Owen Sound. The former won by 70 runs.—August 9th, St. Mary's vs. Stratford, at St. Mary's. Former won by an inning and 21 runs. Adams, for the winner, hit 73.—August 9th, Newmarket vs. Aurora, at Newmarket. Visitors defeated by five wickets.

ARCHERY.

NATIONAL ARCHERY ASSOCIATION TOURNAMENT.—Not having space this week to publish the full report of the Chicago tournament with our criticisms, we have thought best to defer the whole until next week, only taking occasion now to congratulate the association upon the success of its first meeting.

EUREKA ARCHERY CLUB.—The following named officers were elected at the regular meeting of the Eureka Archery Club, Sacramento, Cal., held Friday, the 1st inst. : Captain, Thomas Fish ; First Lieutenant, R. J. Dolan ; Second Lieutenant, F. Chaine ; Secretary, N. B. Berry. A committee of three was appointed to confer with other clubs in regard to a State tournament during fair week.

AMERICAN BOWS.—It is three years since the public first began to show any interest in archery, and though little practiced at first, it now has almost, if not quite, taken the place of croquet. Then all the implements of archery were imported ; the demand increased so rapidly, however, that a number of American manufacturers started immediately the making of archery goods, and now the best in the market are made in this country.

Lancewood is the principal material used in bow making, and is indigenous to this country, whence it is shipped in sailing vessels abroad ; in consequence of the long voyages and exposure to dampness, the wood loses its fine color and becomes otherwise injured. No matter how well seasoned on the other side, it will shrink when it returns to our dry climate, and this accounts for the fact of the imported bows often breaking. Among the first to take advantage of this new branch of industry, was the firm of Conroy, Bissett & Mallesyn, the well-known fishing-tackle house in New York, and we now note an increased demand throughout the country for bows of their manufacture. At first it was difficult to get sufficient skilled labor, and they had great trouble to get rid of the uneven bend in their bows, a fault which foreign bows still have in a greater or less degree ; but now they are perfect, which no doubt accounts for the small percentage of breakage. The dealers find it to their advantage to order their goods at home. American fly-rods are now being sent to England, and before long they will be ordering American bows. Not only are bows made here, but all the tackle necessary, such as arrows, targets, quivers, etc., etc., and of a very fine quality and much lower price.

ARCHER.

THE EASTERN ARCHERY ASSOCIATION.

Editor Forest and Stream :

It having been expressed to me by an archery club located in the vicinity of New York, that they would have been glad to join us in the organization of an Eastern Archery Association if they had understood that an Eastern rather than a New England Association was proposed. I desire to say for the information of any archery clubs in the Middle States, so disposed that it was the earlier intention of those who proposed the organization to have a New England Association, but on receipt of a communication from a club in your State, and having no desire to be exclusive, it was thought best to have an Eastern Association which would be composed of clubs in this part of the country, the members of which could not spare the time, or care to be at the expense of attending the meetings of the National Association, which probably will always be held in the West.

The result of the meeting and the expressions from the various clubs represented were in excess of the anticipation, and very gratifying to the originators, and from the indications it is expected that a very interesting meeting will be held in this city the last week in September when the Association is to hold its first annual prize competition.

The programme cannot definitely be stated as yet, but is to include competition for Champion and Lady Champion Medals at the double American and Columbia rounds. Team shoot (for four) at the American and Columbia rounds and several handicap matches. It is the intention of the committee to so arrange the prizes, that those who are not the best shots will have an equal share of them as an inducement for all to join in the competition. It cannot be expected that many, if any, large scores will be made as this is the first season at archery for nearly all the members of the various clubs in this part of the country.

The club of which I am a member, the Pequossett Archers, represent, I think the condition of most of the clubs in the East. No member of the club had practiced archery previously to the organization of the club about the first of last May, nor have we since had the privilege of taking lessons from anyone. We have tried to follow the teachings of Maurice and Will H. Thompson, and others, with, we think, a fair measure of success. It is our desire though to meet other archers on the field, as we know there are many things which we can learn only in that way.

Several parties have already offered special prizes for the first annual prize competition and further offers will be gladly received by the committee. Any archery club desiring to join the Association and competing for the prizes should make application to John Worcester, Esq., Corresponding Secretary, Waltham, Mass. The membership fee is five dollars and our rules permit the admission of a club to membership at any time.

Our thanks are due to the National Archery Association for the lesson they have given to us.

A. S. BROWNELL,
President Eastern Archery Association.

W. Holberton, Esq., who is a member of the Executive Committee of above Association, urges over his own signature all lovers of archery to join, and also to attend the meeting in September, no matter how small a score they make—ladies as well as gentlemen.

WEBB AND BOYTON.—Capt. Mathew Webb, the English swimmer, renowned for his exploit of swimming across the English channel, lately arrived in America, and on the 14th inst. swam from Sandy Hook to Coney Island, a distance of ten miles as the crow flies, but owing to winds, tides and currents, requiring a swim of about seventeen miles. His speed was about 2¾ miles per hour. The sea was very rough, and the surf the wildest known at Coney Island for a long time. Capt. Webb is 31 years of age, 5 feet 8 inches in height, and weighs 195 pounds. He has great muscular strength, and a noticeable breadth of chest. In swimming, he pushes his arms out to their full length before him, and then carries them around and back with a full sweeping stroke. His legs are held high in the water, so that his heels are often visible.

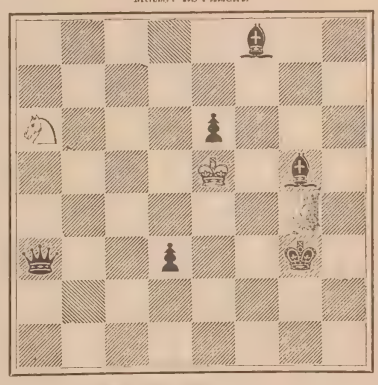
A match between Webb and Boyton, will take place at Newport, to-morrow, off Beach No. 1. The men will swim between two buoys, one-half mile apart. Webb is to swim twenty miles while Boyton paddles twenty-five miles. They enter the water at 3 o'clock A. M., and finish about six o'clock in the evening. Webb will wear swimming tights ; Boyton will wear his life-saving suit.

MILWAUKEE SWIMMING SCHOOL.—Since the 12th of July the following named pupils of the Rohr Swimming School finished the courses by swimming longer than the prescribed length of time, 30 minutes ; Maria Vette, 63 min. ; Geo. Moebus, 35 ; Martha Biersach, 63 ; Otto Heyer, 40 ; Joseph Rice, 36 ; Albert Schneider, 41 ; Elise Vette, 71 min.

The steam yachts plying between the downtown bridges and the Milwaukee River dam are carrying full loads during the warm spell. The trip of two miles and back is made in 30 min. per boat. The merely nominal fare, five cents, enables every one who desires to enjoy a bath free of charge.

An estimate of 1,300 is placed upon the number who patronized the free baths during the week ending July 19th.

Two days of the week are set apart for the feminity.



—THE Astley belt competition, which is distinct from the O'Leary walk, will be held in the Madison Square Garden, the last week in September. The contestants expected, are Weston, Blower Brown, Hazael, Rowell, Panchot, Ennis, Krohne, and Norman Taylor.

—Ferdermeyer, the Frenchman, who recently a fugitive around at the Manhattan shows, having suffered many woes on land and sea while wheeling a barrow from San Francisco to New York, completed last Saturday night an unsuccessful attempt to trundle his vehicle 450 miles in six days at the American Institute Building, this city. The limping tramp had scored 407 miles, when the gas was turned out and audience, management, and pedestrian were unceremoniously plunged at once into darkness and sombre reflections upon the illusory character of all pedestrian matches in general, and wheelbarrow trundlings in particular.

The Game of Chess.

Problem No. 60.

Motto : Be Patient.

White to play and give mate in two moves.

1 R-R7 1 R-B-3. 2—B takes R 2—any 3—mates.

CORRECTION.—The Black R on Black's Q B4 in problem No. 59 should be a White Rook on whites Q B5.

CURSORY JOTTINGS.

The *American Chess Journal* is to be published hereafter at Chicago, Ill., by Mr. E. Barbe, a clever problemists player and a chess enthusiast. We shall notice the first number that apears under the new management somewhat at length.

The Canadian Chess Assocociation is to hold its eighth annual meeting September 23, 1879, in committee room No. 8, House of Commons, Ottawa. This tourney is open to all residents of the Dominion, in payment of an entrance fee of $1. The prizes are five in number : $30, $20, $15, $10, and $5, or in that proportion according to the actual amount at the disposal of the association. Rev. T. D. Phillips, M. A., Ottawa, the secretary and treasurer of the association will no doubt gladly furnish additional information.

NORTH-WESTERN SURVEYS.—We have received from the author the Annual Report upon Explorations and Surveys in the Department of the Missouri, by E. H. Ruffner, First Lieutenant of Engineers, U. S. A. The included Report of Lieut. C. A. H. McCauley of the San Juan Reconnoissance is extremely interesting and valuable. This embraces a record of some 2,000 miles of exploration in South-west Colorado and New Mexico. The subjects discussed are the general character of the country traversed, seasons, climate, etc., agricultural and pastoral pursuits, lines of communication, population, mines and mineral wealth, the botony and entomology. We need not say that the information here collected is of an invaluable nature.

Philadelphia anglers and gunners fit out at the establishment of the veteran, John Krider, whose forty years of experience in the field have made him an authority on all matters pertaining to his line. Mr. Krider has just published a book entitled "Forty Years Notes of a Field Ornithologist," of which a notice will appear hereafter among our book reviews.

—According to the Worcester *Gazette* a Mr. Parker of Coldbrook, Mass. has succeeded in taming a partridge which he caught with a snare. He keeps it about the house, the bird comes at his call, lights on his shoulder and feeds from his hand.

FOREST AND STREAM ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

—*Pomeroy's Democrat*, published at La Crosse, Wisconsin, claims to be the leading Greenback party organ of the United States, circulating in every State and territory. It is sent to subscribers at $1 per year.

—THE September number of the *Poultry Monthly* contains an unusual amount and variety of valuable matter for poultry and pet stock raisers. The *Monthly* is achieving a well-merited success.

THE REV. DR. EDWARD EGGLESTON, of Brooklyn, is in the Adirondacks, getting all the benefit possible from what he is pleased to term the "great family remedy"—a trip to the woods.

—It is proposed by a number of Georgia gentlemen to erect a monument to the brave Sergeant Jasper, who fell in the attack on Savannah October 9, 1779. The more monuments we have in America to commemorate the loyal deeds of loyal men, the greater will be the incitement of bronze and marble to emulation of heroic daring. We bespeak for the Jasper Monumental Association the success it deserves. The corresponding secretary is Mr. D. J. Foley, Savannah, Georgia.

"CAMP GUMPTION."—If Eve did not enjoy the Garden of Eden a great deal more than her lord and master did, she was no fair prototype of her sex. A woman, bless her, will see more beauty in a wayside weed than the man who walks with her would discover in a whole conservatory of exotics. So we have always found that in the woods the girls had a thousand ways of finding pleasure where their masculine escorts would only yawn and look bored. When the better halves of creation do go off alone by themselves, no matter in what part of the world it may be, they always manage to find more of the Garden of Eden than ever was discovered by the Orientalists and Eastern explorers. Just now we note that a party of some half dozen young New England girls have pitched their tents on the shores of a New Hampshire lake, where they have established a community something like the fabled island of the Amazons. They are fitted out with tents, horses and carriages, boats and all camping paraphernalia; while a man servant does the heavy work. The time is spent in fishing, rowing, driving, etc., with singing, reading, recitations and games. The camp is very fittingly termed "Camp Gumption," and each member of the band calls herself "a gump." May their tribe increase!

—See advertisement of a new glass-ball trap in another column.

CALL OFF THE HOUNDS!

IF there was ever a proceeding mean and disgraceful, it is the hunting of the Rev. W. H. H. Murray. The persecution of brothers Beecher and Talmadge cannot hold a candle to it for littleness—for that parsimony of charity, brotherly kindness, and good will to man, which one's natural instinct ought to prompt toward a person in distress. What is the crime? Where the blame?

Is it sinful for a clergyman to be a sportsman? Is it a crime for a clergyman to love the horse? or to invest money in a journal intended to inculcate good morals and good taste? or to put hard earnings into a commercial enterprise? Is it sinful, so long as these pursuits and interests make not diversion from the main object and devotion of his ministerial work? If not, and if a jury of laymen, who chuckle when purity is ever so slightly smirched, are to sit upon the case of the hunted Murray, then two hundred other clergymen, who are subscribers of FOREST AND STREAM, stand ready to forefend the outrageous shafts which cloud the air; and behind them stand ten thousand more of our subscribers, in solid phalanx, to back them. If we have any cognizance of the personal character of a constituency with whom we are in daily and constant communication, we do not err in what we say, and our pledge will be assured by a voice unanimous.

And now, since the types and telegraph have been busy for a month from Maine to San Francisco in the effort to malign and traduce—finding nothing but pecuniary misfortune to base their calumny upon, let us ask if it be not the quintessence of jealousy which prompted the persecution? Would not those pious Pharisees, who sneer and gibe, be themselves proud of Mr. Murray's well-earned reputation as preacher and author; and rejoice in the accumulation of worldly goods which he was supposed, till now, to be possessed of? If they do not own fine stock farms, would they not be glad to do so? Would they not be content with investments which pay good dividends?

There are religious sects who teach that the glorification of the Creator consists in mortifying the flesh, subduing all the natural instincts which that Creator has implanted, and in living on charity; but we do not believe that the universal sentiment requires that a clergyman shall be a pauper, or if left a legacy, shall bestow it all upon church work and charity. The worst feature of this whole business is that a hundred editors, who never saw Mr. Murray, are so ready to rejoice over his pecuniary failure, and to attribute it to his dabbling in worldly matters. We do not know what the exact condition of Mr. Murray's financial affairs may be at present, but we have every reason to suspect that his embarrassment has been caused solely by his newspaper venture. We know by long experience what a hill of difficulty a publisher has to climb to attain success, and what an absorber of available funds a journal newly started is. Statistics show that forty-nine of every fifty ventures fail, and we are aware of the struggle and self-sacrifice which Mr. Murray has made to establish the *Golden Rule*. Most beautiful is that title, and most noble its inception. We believe that it was the preacher's own good heart which prompted him to adopt it for his paper, and that in his walks with his fellow men he endeavored to follow that golden rule, and "do unto others as he would be done by." But alas! for human charity! Those whom he would serve have turned on him, and flung his precepts in his face! All good sportsmen who have the kinship of the fraternity at heart, should rise up to defend his good name and fame. The time will soon come when those who have maligned him will hide their heads for shame.

PREPARATORY NAVAL AND COMMERCIAL SCHOOL.—School Ships and Training Schools are good institutions, and we are glad that we are about to have more of them. Quite recently an academy of this sort was opened at Annapolis under Capt. Wilkinson, formerly of the U. S. Navy, and a most competent disciplinarian and instructor, with a corps of skilled assistants. Many worthy young men go to sea without that preparation which a few months of judicious study would afford, and their ignorance therefore closes to them the avenues of promotion, and keeps them always before the mast. This new school at Annapolis proposes to instruct youths so thoroughly that they will need the experience of only one or two voyages to fit them to take command of a ship. No doubt many marine disasters are due to incompetency. Few merchant captains are able to rate their chronometers, ascertain variations of the compass, or to solve other equally important problems on which the safety of a ship may depend. We take great pleasure in recommending to this academy any of our acquaintances who may have sons intended for the merchant service. The session will commence Sept. 25th.

The fireworks at Brighton Beach last Tuesday evening far surpassed in novel combination of colors, ingenuity of device and perfection of movement any pyrotechnic display hitherto given in America. The attractions at Coney Island the coming month promise to be more numerous and varied than ever.

FAT MEN'S ACCLAMATION—The Fat Men held their fourteenth annual convention and clam-bake at Gregory's Point, Conn., last Thursday. The Fat Men, like the old woman of the nursery rhyme, live only upon victuals and drink. The victuals on the present occasion consisted of three barrels of sweet potatoes, seventy-five bushels of clams, 1,500 pounds of fish, 4,000 ears of corn, 14,000 pounds of lobsters and 1,000 chickens. There were 300 Fat Men and an unnumbered multitude of lean and hungry inhabitants who had come from far and near to snuff the savory odor of the clams, and perchance pick up here and there a discarded corn-cob. Some conception of the magnitude of the Fat Men's annual feasts may be gathered from the fact that the grass covered mound, formed by the clam-shells and refuse of the original clam-bake, fourteen years ago, was recently excavated by a Connecticut archæologist, under the impression that it was a newly discovered Indian mound.

Huge in the individual waist-measurements of its component members and stupendous in the enormous aggregation of its colossal congregated physical vastness, the Fat Men's Association possesses a correllative expansiveness of magnanimity and a voluminousness of chivalric generosity which is all-embracing in its convocation of beatific immensity. Its constitution recognizes no distinctions of race, creed, political belief, nor previous condition of attenuated emaciation. In deliberating upon the weighty claims of a candidate for admission into its Cyclopean fold, the Fat Men's Association regards only the size of pants worn by the applicant, and the number of square yards of canvas he must lower when exhorted to pull down his vest. The question is simply and solely one of avoirdupois, just as it was in Holland in the good old days of the sorcerer's scales. In those times the man or woman accused of being in league with the Devil was promptly plumped into the scales. If the beam did not tip at a certain fixed number of pounds, the evidence was conclusive; the convicted wretch was packed off to be roasted. So are the F. M. A. candidates weighed in the balance; happy fat men if they be not found wanting! It were needless to say that no fictitious obesity avails here. No emulous frog who has blown himself up with voluminous tailoric devices passes here for the ox he is not. No scaly deceptions carry any weight. Levity meets its own deserved chagrin.

If any of our readers are disposed to make light of the Fat Men's Association, let them reflect upon the gravity of the members as here set forth. (The compositor will refrain from adding extra ciphers.) The newly elected President, Mr. Willard Perkins, of Waterbury, Conn., weighs, or did weigh before the dinner, 396 pounds. We may safely count on his having brought the figure up to 400 during the feast. The retiring President, Mr. C. W. Bradley, tipped the beam at 312 pounds. The following gentlemen, with the appended weights, were made vice-presidents:—H. D. Busch, of Hoboken, 411; Patrick Murphy, of Saugatuck, Conn., 278; J. E. Wheeler, of Saugatuck, Conn., 275; W. B. Sharp, of Danbury, Conn., 213; Andrew Hull, of Danbury Conn., 220; Theodore M. Amsdell, of Albany, 220; William Werner, of New York, 220; A. Wallace, of Bridgeport, Conn., 220; William H. Risley, of Berlin, Conn., 225; James Hillender of New York, 255, and J. A. Kerr, of New York, 227. Among the other colossi were James Covert, who tips the beam at 300; Charles S. Warren, who is eighteen years old, and brings it down to 279; A. King, at 320, R. S. Roy, at 297, D. McCormack at 308 and James Norton at 353.

THE PHILOSOPHY OF FIELD SPORTS.

A FRIEND of mine having a Chinese servant whose pronunciation of "r", when asking a guest if he would have some rice pudding, was not remarkably appetizing, undertook to teach him to pronounce "r" correctly.

"Now, sir," said my friend, "say *ahrrr*."

Sin (slowly and distinctly)—"*ahrrrrr*."

"Now, say *rrrrice*," said his teacher.

Sin (slowly and distinctly)—"*llice*."

Teacher—"No, no; say *rrrrrr*."

Sin (slowly and distinctly) *rrrrrrr*."

Teacher—"Now, say *rrrrrabbit*."

Sin (slowly and distinctly) "*llllabbit*."

The difference between the abstract and the concrete is as puzzling to many of us as it was to Sin. However well we may know a thing theoretically, our knowledge often vanishes when we attempt to use it in facing reality. And nowhere is this more the case than in the science of hunting. Take the best judge of distance that ever shot at Creedmoor, place him in the field, show him a stump or stone 200 yards away, and he will say, "It's about 200 yards." But put a deer there and let him kill it, and he will be very apt to say "400 yards", and will firmly believe it. So long as there is nothing to look at but distance in the abstract, he will say "*ahrrr*" as correctly as the Chinaman did; but make it concrete by putting the deer there, and he will pronounce it "*llabbit*" almost every time. This difficulty renders almost worthless all that part of our information about the distance game can be killed, or rather shot at to advantage, with either rifle or gun, and throws a miserable uncertainty upon most all other points that can be determined only by field experience.

This difficulty is also increased by certain forms of expression, which have become as stereotyped as "true sportsman", "speckled beauties", etc. For instance, its always and eternally that "old buck" or "big buck" that a writer kills (with his quill), until in the interest of philosophy one is almost tempted to offer a reward for any reliable information about the killing of a small doe or a fawn. So, too, that same old buck is nearly always at the regulation distance of 200 yards or 400 yards, and 200 yards is the lowest distance at which it is respectable to shoot him at all. In the country, where I used to hunt squirrels when a boy, a shot-gun that didn't "kill 100 yards" was as worthless as a school-teacher who didn't "lick". "Knock him down in his tracks!" "Put a ball through his heart!" and a dozen kinds of similar lingo, form part of the mental furniture of many very good hunters, until one would suppose that to get a ball into a deer's heart was a matter of course for a good shot, and that a deer was as easily knocked down in its tracks as a cabbage head.

We have received from the past an heirloom of old ideas, to which many still cling, and many of which are partly true in a limited sense, but wrong in being applied to all cases, such as, that bullets should be made of the softest lead: bullets injure a shot-gun; any fool can kill a deer in "running time", and others too numerous to mention.

As in every other science, there are those who love to throw a vail of mystery around the simplest matters. From many a good hunter, especially if of the real old variety, one can get little information about hunting or shooting except expressive shrugs and a bulging sapience of face thay say, as plainly as words, "You poor goose, don't ask me. Ask Him who made me so wonderful."

So, too, we often see the same tendency to explain the natural by the supernatural. Thus, a style of rifle shooting, containing not a principle that had not been known and followed for years; novel only in the shortness of the distance, the character and position of the mark and in the number of shots fired; so simple that in a few months it had dozens of successful imitators, and so worthless practically that nearly all those imitators have abandoned it only last year—in the age of the telephone, phonograph and other vast triumphs of mind over matter; in an age when we look back with contempt upon the sporting knowledge of our fathers—was explained by many men of tolerably good sense as witchcraft, jugglery, illusion, sleight-of-hand, etc.; while some who laughed at these, and also scouted as absurd the only real explanation that could be given of it, planted themselves upon the highly philosophical rock of "intuitive" and "instinctive aim."

A bar of nettles to the hand of progress is the supersensitiveness of nearly every one whose opinions, wares, skill, fame or methods any one attempts, however sincerely or fairly, to touch with anything but the quill of praise. Such a person is apt to be set down for a "caviller", a "detractor", a "tool of a rival" or a fool, and is quite likely to be answered with the knock-down argument of "put up or shut up;" while one who makes any advance beyond his fellows is apt to be immediately invited to "put up" or resign all pretensions.

Here, too, nearly every improvement has to drag the leaden anchor of old-fogyism through the thick mud of prejudice. An improvement, if slightly defective (and often if not at all defective), instead of being encouraged and cheered on to perfection, is very apt to be blocked, hampered and bogged at every step by the strenuous efforts of those most anxious for improvement. Almost everything we have that is of much value has had to fight its way into favor. We laugh at the English for their stupidity in adhering to the muzzle-loading match rifle instead of bending their energies to the perfection of the breech-loader, as they should do; yet we cling with equally stupid fondness to our clumsy, lumbering, low-trajectoried, single-barreled sporting rifles, while the English for years have been far ahead of us in that line. When the next great improvement in fire-arms comes up we shall nearly all pitch into it and quite forget the ponderous arguments the past has hurled at breech-loaders, repeaters, and nearly every other improvement of any great value.

We see, too, that same strange tendency in men, often sensible and intelligent, to overlook the most obvious facts. Men will argue against Express rifles as if it was absolutely necessary to cast the ball with a hole in it, and as if expansion of the bullet was the only virtue in the rifle. Hundreds of pretty fair shots are sure that the lateral motion of the gun in following crossing game will carry the shot sidewise so as to meet it, although it would seem that no one can help seeing that the motion of the gun muzzle is not 1-20th the speed the game it is following. This often degenerates into a stupidity that is absolutely unaccountable; at least upon any known principles of the human mind in a state of sanity. Thus many old hunters will insist that the hammer on the cap is the safest way to carry a gun, and others that if at half-cock it will pass the scar and strike the cap if anything pulls it back and lets it slip, although an instant's experiment will settle the question, even if every day's observation and the knowledge of a lock were insufficient. And if these are to be hooted at, what shall we say of those who made the old Henry rifle without any half-cock at all? And what shall we say of those who pester editors of sporting papers with questions that a moment's experiment or thought would settle for themselves, such as the proper load to kill a chippy at ten paces, or why gun barrels are not made of glass so that we can see whether they are loaded or not? Or of those who take a paper for years and ask questions which are answered in every number year in and year out? And I may add, what shall we say of the editors who keep on answering them? I hope "they have ther reward," but doubt it most mightily.

Such cases of error as ignorance, envy, interest, and a dozen or more others, it is useless to discuss. The ones above mentioned comprise nearly all causes for which there is any hope of reformation; few indeed are they who will take the pains to avoid even these; and fewer still are they who can succeed in doing so if they do try. But it does no harm and may do some good to point them out. Except in pure natural history, where experiment is often impossible, there is no such field of uncertainty as there is in such sciences as medicine. It is often impossible to say whether a certain remedy cures patients; whether it is simply inert and they recover without it, or whether it is injurious and they get well in spite of it; until years of observation and experiment, and a careful examination of very many cases have eliminated all chance and sifted out all other causes beyond the medicine. But in our science there is rarely any trouble of this kind. The most vexed questions—recoil, muzzle-loader vs. breech-loader, one eye vs. two eyes, etc.—can all be submitted to rigorous inductive or experimental tests that shall exclude all chance of mistake. The main trouble is that such investigations do not usually pay, and are usually stopped short of the point necessary for certainty. Too often they are made only to prove an opinion, and of course all such are generally good for little else.

Beyond all this lies a field for much honest difference of opinion; and here, without fear of the absurd charge of egotism which is often made when a writer alludes to himself, I shall mention a singular instance, because it shows the greatest of extremes in ideas. Mr. Cleveland's idea of a "sporting rifle" is a single-barrel, single-loading, No. 40 cal. 20-inch barrel, 40 grains of power, of about five or six pounds weight; while my idea of a "sporting rifle" is precisely the reverse. Though much Mr. Cleveland's inferior in experience, skill and knowledge of different rifles, I think I am not his inferior in the desire to ascertain exact truth, and in the patience and deliberation necessary to get somewhere near it. So that when I paid for my *beau ideal* of a sporting rifle five times the amount that this cost I did not do it hastily or unadvisedly, for I had tried carefully and without prejudice all our leading American rifles, commencing years ago with Mr. C.'s very *beau ideal*, and was quite as anxious for a cheap rifle as Mr. C. is for one that can be put in a valise. A still more singular feature is that we are both bent mainly upon one point, viz., to get clear of as much labor as possible in hunting. For me, broken down in health and several times badly injured by overwork in hunting, this was the main point, to get a rifle that would save work; and it come to a point where I must have one or stop hunting dear entirely. Mr. C. thinks he saves work when he carries only six pounds of iron. I, much his inferior probably in physical strength, have chuckled for nearly a year over my success in attaining the same point by packing over the hills nearly twelve pounds of iron in the shape of a double 65 cal. Express. The only point upon which we differ is the time of taking it easy. He likes his ease before getting a shot, while I prefer to rest after getting a shot, instead of half the time spending the rest of the day in hunting up wounded game. And I presume we are both satisfied with our success in attaining our respective points. At least I am.

This ground for honest difference is quite extensive, though, as in the instance last given, the difference will often, if analyzed, be found to be rather different applications of nearly the same identical opinions. For this reason, as well as from the natural difficultics surrounding many branches of the subject, we should all be very cautious not to bristle too quickly when our opinions are opposed, and not dash too quickly with uplifted quill to puncture what to us seem empty bubbles from the opponent's mouth. And, above all, we should go slowly in forming our opinions about anything connected with the subject, more slowly in confirming them, still more slowly in writing about them, and even more so in rushing into print with them.

T. S. VAN DYKE.

[Commenting upon a reference to himself in Mr. Van Dyke's first paper, Mr. Cleveland sends us the subjoined note, which we are confident none will welcome more than will Mr. Van Dyke.—[ED. F. AND S.]

EDITOR FOREST AND STREAM:—On running over several numbers of your paper, my attention was arrested by an allusion to myself, which contains such an obvious misrepresentation, or misunderstanding of my words that I must ask room to set myself right. I sent you more than a year ago a very interesting letter from Mr. W. T. Horneday, giving an account of the killing of a tiger with two shots from a 40 cal. rifle. The only deduction I drew from the story was—"The evidence it affords of the importance of a flat hundred yards of the bullet's flight. If Horneday's bullet had gone a single inch too high he never would have written that letter," etc. I said not a word in advocacy of the use of so light a bullet for such game, and the admiration I expressed for the nerve of a man who could be cool enough to achieve such a feat is in itself evidence of my appreciation of the tremendous risk involved. Now, I find the following in an editoral in your paper of the 15th inst.: "Thus, when an eminent rifle authority told us of a tiger being killed with a 40 cal. rifle and 40 grains of powder, the ball hitting the tiger in the eye, he proved nothing at all but the good fortune of the shooter. Fifty such instances would not even tend to prove what he was trying to prove—the efficiency of such a ball and charge for such game—until he can first give us a recipe for making tigers strike an attitude, at a short distance, too, from the hunter." I made no effort to prove any such thing as you assert, and agree entirely with you that the instance cited affords no evidence in its favor.

Chicago, May 30. H. W. S. CLEVELAND.

GAME PROTECTION.

SPORTSMEN'S ASSOCIATION OF WESTERN PENNSYLVANIA.—This association has just completed its new rooms, No. 75 Fifth avenue, Erie, Penn. The building has been leased for a term of ten years, and $10,000 were expended in fitting up the quarters. There is a reading, card and billiard room. The museum, in which the meetings of the association will be held, is a large hall on the upper floor containing some 2,000 specimens of natural history, most of them being the contributions of members. From the date of its organization in 1876 the association has increased in membership, until now 260 names are upon its rolls, among which are many of great influence. The work accomplished has been of a most valuable nature. The officers are:—President, Robert Dalzell; Vice-Presidents, Col. B. F. Ruff, D. C. Phillips, F. H. Kennedy; Treasurer, W. C. Macrum; Secretary, John F. Wilcox; Assistant Secretary, Howard Eaton; Naturalist, H. S. A. Stewart. Board of Directors, John C. Brown, Howard Hartley, Dr. W. F. Fundenberg, E. A. Myers, and J. V. Long. Executive Committee, John Caldwell, Jr.; C. A. Carpenter, N. M. McDowell, Edward Gregg, B. Bakewell, Jr.; Charles Hays and J. H. Bughman.

DISSATISFIED CONNECTICUT SPORTSMEN—*Editor Forest and Stream*:—The article in your last issue (31st July) entitled "A Connecticut Quandary," it seems to me is rather doubtful recommendation for laws which "are in very good shape, in fact as nearly perfect as we can at present hope to make them." It strikes me very forcibly that a law which is a dead letter is rather worse than useless, for it teaches people to break laws. What a farce; the legal season opening Oct. 1st and New Haven restaurants buying and selling them (woodcock) in the middle of June. Now our present law was, I believe, passed in the interest of a few sportsmen who shoot nearer the sound than we poor chaps up here in the hills—men who want to take, say, a week's vacation in the fall for shooting and who want to bag all the birds possible in that time, and, of course, October in that locality is the best month. With us the last of September is better usually, and the present law is very unpopular in Litchfield County at least, and I know it is with many sportsmen in other parts of the State. The trouble seems to me just here, our sportsmen work too much on the plan of "every man for himself." If a law is passed that suits a man, or nearly so, he will observe it—if it don't he will not—thinking somewhat in this way: "I can't get the laws changed as I would wish, so the easiest thing for me to do is to go to some quiet spot where they won't prosecute me, and just take my little hunt and keep still about it." I have long been in favor of a uniform season throughout New England, beginning Sept. 1st and closing Jan. 1st, and I believe that the quickest way to get it there is to enforce the laws as they stand rigidly in every town. Our club have so far enforced the law in our town but they are getting rather discouraged, for we continually hear of its being violated all over the State elsewhere, and they are beginning to ask what is the use of keeping birds till October to have them go to swell the bag of some chap down along the sound Oct. 1st?

If our city sportsmen and game clubs will see to it that birds are not sold in the markets out of season, one great inducement to poachers will be gone, and if by any possibility the present law could be enforced for one season throughout the State, I feel certain that one more to the liking of the majority of sportsmen would take its place, and which would in reality afford more protection to birds than at present.

I should be sorry to see the old law opening the season July 4th again in force, but I believe even that was better than the present, which seems to be just about as good as no law at all. W. H. WILLIAMS.

Lakeville, Conn., Aug. 4.

WHY ARE THEY NOT PROSECUTED?—*New Haven, Conn., August* 12.—*Editor Forest and Stream*:—You ask me in your article if I could tell who killed the woodcock?[2] There are several men who make a business of shooting them and sending their birds to New York markets. But they are not members of the New Haven Gun Club.

D. C. SANFORD.

LEWISTON, *August* 11, 1879.

Editor Forest and Stream:—

Through your columns I would like to call the attention of Maine sportsmen to the necessity of a State organization, and the manifold benefit such an association can derive. For several years a majority of our sportsmen have seen the need of unity, and have required the influence such an association could wield. The subject has been broached on one or two occasions—occasions inopportune however; but now, as our State shoot comes off early in September, plans should be perfected, and arrangements

made for organizing at this time, as a large delegation, embracing all our leading sportsmen will probably be in attendance. It is recommended a correspondence by our State club be immediately opened with E. G. Heath, Sec'y Androscoggin Sporting Club, Lewiston, who, I'm informed is ready to cooperate on behalf of said club. There are several questions that can only be equably considered by such an organization, now being discussed here, viz: Substituting glass balls for birds after this year; handicapping guns; procuring legislation on a number of topics that will be brought before such an organization, etc., etc. We also need game commissioners, similar to our fish commissioners, whose efficient works are patent to every who has felt any interest in their labor. Commissioners whose duty it shall be to look after the re-stocking of our forests with game birds, but more particularly for the present, to protect such as we already have, by a strict enforcement of our game laws, which are transgressed repeatedly, though out-wardens prove however vigilant.

In Lewiston we have a State warden who annually devotes one or two weeks of his time to looking after these transgressors, (State wardens receive no pay) but they evade him generally in the following manner: Several draw lots to see which one shall remain at home, and watch the warden, while the others ravage the wood for wood-cock. Should the warden by any means learn that parties are in such a section shooting woodcock, and attempt to catch them with birds, or in the act, or even, in fact, leave his store, the party watching is to take a team and notify them at once. Thus protected, parties hunt woodcock throughout August, and when the law-abiding sportsmen takes his turn the first of September, the game is minus, having been killed off by August transgressors. Yes! we need game commissioners whose duty it shall be *to devote their whole time* to following up these chaps, and make poaching too hot for their indulgence.

Yours, believing the observance and enforcement of our laws mutually beneficial. LEWISTON.

The Rifle.

NEW YORK CITY SCHUTZEN CORPS.—The sixth annual fall shooting and seaside summer-night festival of the New York City Schützen Corps, Captain John F. Gerdes, will be held at West Brighton Beach Hotel, Coney Island, Thursday, August 28th. If the weather is unfavorable, the festival will be postponed until August 29th.

EXPRESS RIFLES.—AN OPINION FROM INDIA.—*Gorucpore, India, June 28.—Editor Forest and Stream:*—I have seen many controversies both in your paper and also many Indian and English papers as to the efficacy of the Express rifle as a sporting rifle. I beg to say a few words as to my experience both with an Express and a spherical ball rifle. I have for the last twenty years been in the habit of using spherical ball rifles and guns, and I always found that I could knock down game, from the largest to the smallest, generally with the first shot, if properly placed behind the shoulder. Large game require rather more gunpowder than smaller to drive the ball through them, but I generally use about three drachms of Hall & Son's F F F powder (it is most awfully bad and dirty, as being the only powder that can be got with convenience so far away), for convenience in loading cartridges, to be used with both rifle and smooth bore. When the Enfield rifle was first brought into notice after the mutiny in this country, and every one was in praise of it, I managed to pick up one which was an old campaigner, that had been through the whole of the mutiny. I tried deer shooting with it, but I miserably failed in my attempts. I used the regular Enfield bullet, and I fancied that it was owing to the ball being too small, for I could not "kill dead" with it, and had a great deal of trouble—for I generally shoot at night—in tracking the game in the morning, when, to my disgust, I used to find very often the deer or pig half eaten up by jackalls. So the old rifle was thrown aside for some years as useless, and I contended myself with my 14 bore muzzle-loading shotgun, with which I killed a vast quanity of game, for I found that it did more execution. After a time I got made to order a 12 bore rifle breachloader, with the Enfield twist and polly-groved, so that I could use round and conical bullets with it and the common No. 12 paper cartridges, for I gave my 14 bore away, and went with the fashion and purchased a No. 12 bore breechloading shot-gun, so that one cartridge should fit both. On using the conical bullet with the above rifle I found it the most miserable bullet ever invented for sporting purposes, for I could not bring down deer or pigs with it dead, but had invariably to hunt for them in the morning, if I managed to hit, for the bullet was just as apt to go too high as not. So I tried the round ball. After altering the front sight I found that I could shoot pretty correctly up to 100 yards with it, and from 50 to 75 yards it was dead shooting, and I was contented. It then struck me to try my Enfield, and after making a breechloader of it I found that I could kill crows and kites with it, just as was done with the old Kentucky rifles, and it was a splendid weapon for deer shooting, for I now managed to kill dead with it, which I had failed to do before. Hearing of the great killing powers and correct shooting of the Express rifle, I thought of getting one of the largest bore that was made, and on casting about to find out who was a good maker of Express rifles I came across the book by Forsyth, "The Sporting Rifle and Its Projectile," which I at once read with great relish, and I at once made up my mind to get a rifle on his spherical system; but on speaking to some of my friends on the subject they advised me not to have anything to do with a spherical ball rifle, as it was too old fashioned, and that the Express rifle did its work much better; but on being shown an Express rifle, and seeing the bullet, I had my doubts as to its killing dead powers. I, therefore, borrowed an Express to try what it would do. I took it home, and shot at a number of pigs, &c., when I found that the bullet always went over the game. I then had a new front sight made about one-eighth of an inch higher than the old fly. I then found that it shot quite truly, and hit everything I aimed at fairly behind the shoulder, but I found that it seldom killed dead. Deer would go off with the bullet and pigs would take no notice of it. It was a complete failure, as I expected. The rifle was one made by Turner, 500 bore, a tiger rifle. The powder used was Curtis & Harvey's No. 6, 4½ drachms. I, therefore, returned the rifle, perfectly disgusted with it, and do not intend to have anything more to do with new fashioned rifles. I have been thinking of getting a No. 13 single barrel Forsyth, for if you come to consider, it is nothing more than an Express for spherical bullets. It shoots just as far as an ordinary Express rifle at point black ranges, and a round ball does its work much better. The Express rifle is a very pretty plaything, and that is all the praise I can give it. On reading over the *Asian* (the new sporting paper just come out) I find that sportsmen even fail to kill tigers with one shot with their far-famed pet Express rifles unless they hit them in the eye or else in some such unlikely place, by a fluke, but generally murder them inch by inch after half a dozen shots. If you call that sport I do not. If any of your American gunmakers would take the risk, and forge some of the Forsyth Spherical Express rifles at a decent price, I guarantee that when the hunters and sportsmen have found out its powers they will, one and all, take to it. The ball can be made as small as the shooter likes, from the size of a pea to ten or eight to the pound, and they will all give satisfaction with a point blank range of 250 yards, without any elevation whaever to the gun; but if the gunmakers put more twist than the rules laid down, they will spoil the rifle as a hunting weapon. Try and agitate the matter for the good of America, and as she has the best marksmen in the world I do not see why they should not have the best hunting rifle as well, and wipe old England's eye for her.—SHIKAREE.

N. R. A. RULES.—The following shows the exact changes which were made in the rules of the N. R. A., at the last meeting of the directors. They relate principally to military rifle, and are attempts on the part of the board to curry favor with the Regular Army officers. General Upton, who is an excellent authority on tactics, but not particularly quoted on marksmanship, had written a letter giving it as his opinion that muzzle-rests should be allowed to soldiers on the range. Taking this as a cue, the following is now the reading of the Rules on the points mentioned:—

Rifles.—Military rifles, weight (without bayonet) not to exceed 9 lbs. 4 oz.; stock sufficiently strong for military purposes, and such as to admit the use of a sling; minimum pull of trigger, six pounds; sight to be of *bona-fide* military pattern, to be attached to the barrel, the front sight to be immovable, the rear sight may be used as a wind-guage by the sliding bar or the leaf being used laterally, either by sliding or by a screw, or by any similar device sufficiently substantial for military purposes. Sights may be colored in any manner. No hair or set triggers will be allowed. No fixed or artificial rests will be allowed, except when expressly permitted by the terms of a match.

Shooting.—1. Competitors must be present at the firing points punctually at the time stated on their tickets, or forfeit their right to shoot. 2. After a competitor has joined a squad, he shall not quit it until he has completed firing, or retired. 3. No two competitors shall shoot in any match with the same rifle (except in matches entered for on the ground and at bull's-eye targets), nor shall a competitor change his rifle during a competition, unless his first rifle has become unavailable through an accident, which must be verified by the officer in charge of his firing point.

Position.—In all matches restricted to military rifles at 400 yards, the position shall be kneeling; at distances over 400 yards, any position may be taken, unless otherwise prescribed by the terms of the match; competitors using military rifles at a distance over 800 yards, may be permitted to use any *bona-fide* extemporized muzzle rest, such as a knapsack, rolled blanket, or overcoat, including any previously prepared device, when permitted by the terms of a match. Rounds—7 in all matches, except when otherwise stated.

No match will be commenced without, at least, ten competitors. Competitors retiring from a match forfeit all claims therein.

N. Y. STATE RIFLES.—The General Inspector of rifle practice authorizes the following alterations in the sights of the Remington rifle in use by the National Guard of the State.

They must in all cases be made by a competent gunsmith to be selected by the regimental or (in the case of separate companies) of the division inspector of rifle practice, and must conform to the guages sent to the various inspectors. No alterations should be allowed in the foresight of any rifle except those assigned to skilled shots, who will be careful to preserve them from injury.

I. The foresight may be narrowed so as to conform to the guage, care being taken not to reduce the height.

II. The nick or V in the rear sight may be cut deeper (if deemed necessary) so as to conform to the foresight.

III. The rear sight may be converted into a wind guage either by arranging the leaf to move laterally by a screw or by arranging the bar to slide sidewise as in the new sight of the Springfield rifle.

IV. In converting the steps of the rear sight into an incline plane, they may be roughened so as to prevent the sight from slipping down.

NEW YORK—*Rochester, Aug. 7.*—Nine teams entered for the Seventh Division Prize on the range here to-day. Light, wind, and atmosphere were in the marskmen's favor, but the shooting was poor. The conditions were: 200 and 500 yards, military rifles, State model, any ammunition, five rounds per man each range, teams to consist of five men each. There was really but two teams in the match. The Binghampton team, at the mid range, steadily increased their lead—7 at 200 yards—until at the close 17 more was added, and they won the match with 24 points to spare. Co. H of the 54th Regt., Rochester, was second with 168 points:—

BINGHAMPTON.

	200 yards.	500 yards.	Total.
J. Larned	21	23	44
C. Van Orden	23	19	42
D. Hogen	18	21	39
M. D. Hinds	19	16	35
O. A. Morris	16	16	32—192

Utica, N. Y., August 13.—In the rifle match to-day, the Ogdensburg team made a score of 1186, and Utica 1137. Ives, of Ogdensburg made fifteen bull's-eyes at 500 yards.

—There is some talk of a big long-range tournament to follow the fall meeting at Creedmoor.

VERMONT—*West Milton.*—There will be a grand rifle tournament at Willow Bay House range, West Milton, Vt., Wednesday and Thursday, Sept. 3d and 4th, 1879, under the auspices of the Burlington Rifle Club. The following prizes will be contested for: First day, match No. 1, $75 in four prizes, 200 yards, position standing; match No. 2, in four prizes, $50, 1,000 yards, position any, without artificial rest. Second day: purse $100, open to teams of eight from any club in the United States, distance 800, 900, and 1,000 yards, fifteen shots at each range, position any, without artificial rest. Rules of the National Rifle Association to govern the match. The celebrated long-range riflemen from Walnut Hill are expected to contest for the prizes.

Hopkinton, Aug. 16.—The rifle club had a match at their range to-day, the sun was slightly clouded and there was but little wind. Some excellent scores were made, Mr. P. W. Smith leading the list with a complete score of 75. The conditions were fifteen rounds at 500 yards:—

P. W. Smith	75	C. A. Frost	69
J. Stewart	73	J. Wadsworth	53
O. C. White	69	Oliver H. Smith	52
B. W. Claflin	66		

MASSACHUSETTS—*Boston, Aug. 13.*—Walnut Hill Range. Summary:—

	800 yards.	900 yards.	1,000 yards.	Total.
W. H. Jackson	75	67	75	217
J. S. Sumner	73	73	70	215

W. M. Ward	66	71	64	201
W. Howard	71	64	62	197
J. Nichols	60	56	57	173

Aug. 16.—To-day proved an inauspicious one. A continual rain prevailed, and the light was the poorest encountered during the season. However, Mr. Guerrier headed all comers with a splendid 33, out of a possible 35, beating the score of Mr. John, who won the *Spirit of the Time's* badge at Creedmoor on 32, which was considered a fine achievement. The following summary indicates the best in the Silver-ware Match, off-hand, 200 yards, seven rounds:—

W. E. Guerrier	4 5 4 5 5 5 5—33	R. Page	4 4 4 4 4 5 5—60
E. Whittier	4 5 5 4 5 4 5—32	A. B. Archer	4 5 4 4 4 5 4—30

Boston, August 12.—To-day the friendly rifle match, postponed from last week, between teams of eight men from Company D (Roxbury City Guard), First Regiment M. V. M., and Company L, First Artillery, U. S. A., was decided at Fort Independence, Boston Harbor. The match was arranged a few weeks since, and has excited considerable interest in this vicinity as, in a measure, affording a means for testing the comparative merits of the "regulars" and our citizen soldiery in the use of the soldier's weapon. The conditions of the match were five rounds at each distance, off-hand firing at 200 and 300 yards, prone position allowed at the 400 yard range; any military rifle; for the rest Creedmoor rules to govern. The summary:—

ROXBURY CITY GUARD TEAM.

Boston, Aug. 16.—The regular monthly prize shoot at Mammoth Rifle Gallery is progressing finely. The following is the standing of the several competitors to date:—

E. Whittier	5	5	5	5	5	5	4	5—39
U. A. Pollard	5	5	5	4	4	5	5	5—38
H. A. Pickering	5	5	5	4	5	4	5	5—38
Wm. H. Harrison	4	5	5	5	5	5	4	5—38
George Estes	4	4	4	5	5	5	5	5—37
M. O. Johnson	5	5	4	4	4	5	5	5—37
Geo. M. Smith	5	5	5	5	4	5	4	4—37
A. S. Lord	5	4	4	4	4	5	5	5—36
F. M. Cady	5	5	4	4	4	4	5	5—36
S. S. Bumstead	4	4	4	4	5	4	5	5—35
Geo. W. Morse	5	4	4	4	4	4	5	5—35
H. A. Hopkinson	4	4	5	4	4	4	5	5—35
Chas. Tupper	5	4	4	5	4	4	4	5—35
O. W. Clapp	4	4	4	4	5	5	5	4—35

—Last Saturday the workmen of the Armory, at Springfield, presented the Armory Rifle Club with a beautiful silver cup as a slight token of their appreciation of the honors the boys have been winning for the Armory. It is gold-lined, adorned with a prairie hunting-scene, and forms a very pleasing ornament to the club-room. Mr. P. H. M. Brooks, made the presentation speech in behalf of the workmen, and Captain Hale responded for the team.

Medford, August 13.—The Medford Rifle Association held its regular meeting at Bellevue range this afternoon before many spectators. The weather conditions were favorable, excepting a strong wind. There were 54 entries in the Sharps Rifle match. 200 yards; rounds, ten; off-hand open to all:—

R. Sawyer	5	4	4	4	4	4	5	5	5	5—45
H. H. D. Cushing	5	4	4	5	4	5	4	5	4	5—45
F. Hollis	4	4	5	4	4	4	5	5	5	4—44
H. S. Harris	4	4	5	5	4	4	5	4	4	4—44
N. P. Ames	4	4	4	4	5	4	5	5	4	4—43
E. Bennett	4	4	4	4	4	4	5	4	4	4—41
A. J. Greene	5	4	4	3	5	4	4	4	5	3—41
D. N. Howard	3	4	4	4	5	4	5	5	4	3—41
F. E. Garden	4	4	3	4	3	4	5	4	4	5—40

Medford, Aug. 15.—The Raymond Sportsman's Club held their regular meeting at Bellevue range, Medford, to-day, which was largely attended by the devotees of glass balls and the rifle. The spectators were very numerous. The day was very warm and the light too bright for good results. Mr. D. Kirkwood, the well-known gun maker and capital shot, made the elegant score of 48 out of the possible 50, which places him at once in the front of the possible 50, which places him at once in the front rank of our best off-hand shots. His two re-entries were

also a fine showing, 45 each. The following is the result :—

D. Kirkwood	5	5	5	5	4	5	5	5	5	4	48
E. Sears	5	5	3	5	4	5	5	4	3	4	43
J. S. Bennett	4	4	4	4	4	4	4	4	4	4	40
(Re-entry)	4	5	4	4	4	4	4	4	3	3	39
H. Max	5	3	5	4	3	5	4	3	4	2	38
J. F. Cross	5	5	4	4	4	3	2	3	3	3	36

In the glass-ball trial splendid results were obtained. Mr. Johnson carried off the honors of the day with a capital 29 out of the 30. The conditions were 10 shots each from single, double, and rotary traps :—

	Single.	Double.	Rotary.	Total.
L. E. Johnson	10	9	10	29
G. B. Blanchard	10	10	8	28
T. H. Raymond	8	10	7	25
J. R. Teele	9	9	5	23
C. Dearborn	9	7	6	22
T. M. B. Morris	4	5	6	15

CONNECTICUT—*Collinsville, August* 13.—Canton Rod and Gun Club, Riverside range, practice meeting at 200 yards off-hand :—

	Mass.	Cred.		Mass.	Cred.
Moore	99	43	Lewis	87	49
Laubeustein	99	40			

—At the Eagle, on which only members in good standing are allowed to shoot, Captain Yuengling knocked down with his first shot the middle crown, entitling him to the first prize. The distribution of prizes took place in the evening of the 8d or last day. The following is the result—Ring Target, possible 75 :—

Wm. Klein, Rob. Faber and Wm. Hohn, each..... 68
E. Holtzman, L. Vogel, D. Miller, Wm. Hayes, Newark ; W. H. Johnson, each..... 67
John Raschen, Hoboken ; C. G. Zettler and Geo. Doehle, each.. 66
O. E. Pillard, New Britain, and C. Mattmann, each..... 65
R. Spitz and J. R. Grohmann, each..... 64
Geo. Quittmeyer, Bridgeport; F. Fabarius and Hy. Kuechel, Brooklyn, each..... 63

Man target ; possible sixty lines :—

M. B. Engel..... 58
H. Oehl..... 56
R. Faber and Thos. Broadway, each..... 55
John Raschen, Hoboken ; O. E. Pillard, New Britain ; A. Delahaunty, Pittston, and W. W. Johnson, Newark, each..... 54
F. Fabarius..... 53
L. Vogel, Phil. Klein, L. Doeler, and D. Miller each..... 52
E. Holtzmann, Captain A. Ermisch and F. Landolt, each..... 51
Captain Kingsman, Bridgeport, and G. Joiner, New York, each 50

The whole affair was a splendid success, but the corps are not satisfied and have already made preparations for another one to be held in a few weeks in some rural district, on which occasion a most beautiful meerschaum pipe presented by the FOREST AND STREAM AND ROD AND GUN will be shot for.

NEW JERSEY.—*Brinton, Aug, 12th.*—Ballard match ; fifth competition ; 14 entries, the following being the best score :—

E. M. Squier..5 4 5 5 4 4 5 4 5 5—46 | J. M. Dart....5 5 4 5 5 5 4 4 4—44
E. E. Lewis...5 4 5 4 5 5 4 4 5 4—45 | C. Hance.....4 4 4 4 3 4 3 5 4—39

August 16th. Sharp's match for military rifles ; twelfth competition ; rifle won by Dr. M. M. Maltby, Dr. J. M. Dart leading all competitors, but having previously won a rifle, scored one competion for final prize ; 22 entries, the following being the highest scores :—

Dr. J. M. Dart	5	5	4	4	4	4	5	4	4	4—43
Dr. M. M. Maltby	5	5	4	5	5	5	4	3	3	4—43
C. A. Houston	4	4	5	4	4	4	4	4	3	4—40
P. Allen	5	4	4	4	4	3	3	4	4	5—40
D. F. Davids	3	3	4	4	4	4	5	4	5	4—40
F. J. Donaldson	5	4	4	5	4	3	3	3	4	4—39
J. R. Donman	4	4	3	5	4	4	3	3	4	4—38
W. A Robinson	3	3	3	5	3	3	5	4	4	4—37

PENNSYLVANIA.—The Nay-Aug Rifle Association of Scranton, Pa., announce the following list of prizes : 1. Match for State Championship, open only to N. G., Penn., 200 and 500 yards, State arm, seven rounds. three competitions, for a gold, silver, and bronze medal, Aug. 14th. Sept. 18th, and Oct. 16th ; 2. Match teams of twelve from any company N. G., Penn., 200 and 500 yards, seven rounds, Thursday, Sept. 25th. 3. All-comers Match, any rifle, 500 yards, ten rounds; prize, Sharps military rifle, officer's model, Thursday, Sept. 4th. Long range and sporting rifles will be handicapped five points ; special military rifles, three points ; winners of first prizes in any monthly competition, two points. 4. Season Badge, the Nay-Aug Rifle Association Season Badge (gold), to be shot for weekly (Fridays), by the members of the association only, and to be awarded finally to the member winning it the greatest number of times during the season, and shot for under the rules of the National Rifle Association, on the following conditions : distances, 200 and 500 yards ; five rounds at each ; all rifles other than military to be handicapped five points ; no coaching allowed, and no two men to use the same piece ; match open at 3 P.M., and close at sunset.

VIRGINIA — *Rawley Spri ngs.* — The remarkable fine shooting done by the lady visitors at this place within the past ten days. induces me to send you a brief account of a match held on the 29th ult. A very pretty one hundred yards range is used, shooting from the handsome pavilion, which has been erected over the main fountain, into the side of the mountain. One month ago only a few of the ladies could be induced to shoot, but they have gradually taken it up, until the two clubs now number about thirty-five, and I am quite sure rival in their enthusiasm the members of Empire or New York rifle clubs. Meeting, as they do, every day in these friendly competitions, has created a proper spirit of rivalry and made rifle shooting decidedly the most popular amusement. The handsome gold badge of Schützen König of this State is worn by the lady making the best score each day, so that it is an easy matter to distinguish the champion from the other contestants. Conditions of match, distance, 100 yards : rifle, Ballard, 22 calibre ; number of shots, five ; target, Mass, reduced to 100 yards ; bull counting 12 and 11 :—

WASHINGTON, D. C.—The Columbia Rifle Association arranged with the Weather Bureau for a good, gray day last Saturday, for their fourth weekly shoot for the Harkness gold medal, but through some oversight too much wind was turned on, and as a consequence considerable judgment was required by the three contestants in tackling the unsteady one o'clock wind that prevailed, with more or less force, throughout the afternoon. Illness and out-of-townness kept all away but Col. Burnside, Mr. Laird, and the Sandy Springs' champion, Dr. Scott. The latter's ready acquaintance with the wind helped him to a very good 73, which was the distinguishing feature at 800 yards. The Colonel, after a few passing "centres," got on for a good terminal string of half a dozen "white owls," winding up with 71 to his credit. Laird's 70 was hard worked for against a treacherous marsh wind. At 900 yards, after uninterrupted bulls had been signalled for four or five rounds, the untimely clinging of the midswamp streamer to its pole deceived all three men into making wide ten o'clock "mags," followed by a "centre" for each. The firing was then stopped until a boy could release the caught pennant, when it streamed out bravely and gave the correct "tip" for an almost unbroken sequence of white signals to the end. The Colonel and the Doctor at this stage had nearly identical scores, shot for shot, each tallying 71. On opening at 1,000 yards it became evident that Col. Burnside meant business. Shot after shot tickled the bull's iris, and it was very comforting to see, across the wide marsh, the broad white disc lazily climbing up, pausing almost in the geometrical center of the target, and bobbing back into shelter after every bang of the small bore. A dull, cloudy light, and a lull in the breeze before sun-down gave cheerful promise of a good score, if not a clean one, at this long range, but an unlucky change in the light, due to a feeble sunburst, on the fourteenth round spoiled the chance, and although winding up with a carton bull, Col. Burnside retired with only 74 scored for him, and a total of 216. Laird came next with 69, tying with the doctor on the aggregate of 209. The detailed scores are as follows :—

COL. BURNSIDE.

800	5	5	4	4	5	4	5	5	4	5	5	5	5	5	5—71	216
900	5	5	5	5	5	5	3	4	5	5	5	5	5	5	5—74

PERSONAL.—Captain W. H. Jackson, of Boston, re turned from Canada on the evening before making the big score noted in our rifle columns. He reports a splendid time in the Canadas, with plenty of big trout landed beside the streams he visited.

DITTMAR POWDER.—All orders for Dittmar Powder advertised in our columns should be addressed to the Dittmar Powder Manufacturing Company, 24 Park Place, New York City. The works are located at three different points in various States, and communications to the factories unattended to, will receive a prompt response when addressed as above. [*Adv.* CARL DITTMAR.

—The northeast Georgia Fair and Stock Association, of which W. P. Dearing, Athens, Ga., is Superintendent, will hold its exhibition at Athens, beginning Oct 7.

—J. Palmer, O'Neil & Co. of Pittsburg, Pa., publish an illustrated catalogue of sportsmen's goods.

Game Bag and Gun.

FIRST ENGLISH SNIPE.—Mr. M. Englert, provision dealer, 35 Delancey street, city, while giving his dogs a run on Monday last at Springfield, L. I., struck an English snipe, which is rather early for the season. We acknowledge receipt of the bird, with thanks for the juicy compliment.

INDIAN CAMP AXES.—An ax and a box of matches are perhaps the two most indispensable articles to a woodsman, and should be the requisites of every sportsman who goes into camp. Next to the possession of the ax, is the knowledge of using it properly and, of course, carefully. Accidents from carelessness in handling axes are perhaps even more frequent than those from handling guns. We need not explain how they result ; but any one will readily perceive that a sharp tool carried haphazard through tangled brush, or left knocking around the camp woodpile, or tossed into a boat or wagon, is not a thing to contemplate with serenity or comfort. Most woodsmen use a leathern case or sheath to protect the blade, when the ax is not in actual use. The Indian Camp Axes, to which our title refers, are not only good tools, but they are supplied with capital protection, and are very handy to have around. They are manufactured by A. S. Crosby & Co., of Waterville, Maine, whose advertisement will be found in our columns.

—We need not go back to the time of Deerslayer for hair breadth escapes from catamounts and other varmints. A man who was walking through a growth of underbrush in Berks County, P., the other day, was attacked by a wild cat which sprung from a boulder, striking him upon the shoulder. Shaken off, it made a second attack, when the man succeeded in shooting it. It was a female and weighed sixteen pounds.

MORE MIGRATORY QUAIL.—The Monroe County Sportsmen's Association, of Rochestor, N. Y. are to import one hundred dollars worth of migratory quail, to be liberated in Monroe County.

MIGRATORY QUAIL—*Lakeville, Conn., August* 4.—Our migratory quail returned in considerable numbers and have been breeding here. The prospects for ruffed grouse shooting are fair unless the wood tick kills them off again as last year; and woodcock seem to be quite plenty, but whether they will be Oct. 1st or not remains to be seen. None have been killed in our town, at least, so far. I had the misfortune to loose my setter dog Duke last week by being run over by the cars. W. H. W.

SENECA GUN CLUB—*Seneca Falls, N. Y., Aug.* 14.—At the annual meeting of the Seneca Gun Club held Aug. 6th, Mr. Horace Silsby was re-elected President by acclamation, whereupon Mr. Silsby arose, and after thanking the club for this and past honors, begged to decline the position, thinking it more advantageous for the club to elect a president whose business did not require such prolonged absence from town. The following officers were then unanimously elected : Jas. F. Laurence, President ; Wm. Parrish, Vice-President ; Milton Hoag, Treasurer ; C. H. Williams, Secretary ; Executive Committee : Horace Silsby, Henry Stowell, B. P. Lathrop, E. V. Burton, and J. B. Conrad. The club offers a reward for each and every conviction of offenders against the game laws.

NEW HAMPSHIRE—*Hampton Marshes, August* 14.—Bay birds are migrating south in large flocks. Winter yellow legs, black-breasted plover, jack curlews, brownies, etc., are being bagged in considerable quantities. Recently 500 birds left here for Boston markets. W. W. J.

Hampton, August 18th.—Flight birds are coming in quantities owing to stiff easterly winds and storms. Large bags are being made. The following was composed while resting neath a bay rack :

"What more lovely sport can be
Than stooling for birds from out of the sea,
And knocking them, too, with a premium gun,
Made by W. & C. Scott & Son?"

W. W. JOHNSON.

CONNECTICUT—*Pomfret Centre, Aug. 18th.*—The prospect for quail is promising, but ruffed grouse and woodcock are nearly exterminated. E. A.

NEW YORK—*Eldred, Sullivan County, Aug.* 18th.—Woodcock have all left since the heavy rains, but I hear they are plenty about six miles north, at the headquarters of the streams.

Tarrytown, August 4th, 1879.—I went out on the morning of the first ; the woodcock were massed in the very wet swamps and I put up ten birds in one place, with very bad luck in the matter of killing them, partly in conse-

quence of the close cover and partly my very bad shooting. I was accompanied by Oscar Purdy of Tarrytown with his dog, and I had Mr. Raymond's bitch, Sukie, who behaved splendidly. The swamps were full of sportsmen, but although there was a constant fusilade few birds came to bag.

I desire to acknowledge politeness from a stranger. I had as I supposed knocked over a bird and had sent Sukie into cover to find dead, when the bird got up and flew into the face of a gentleman breakfasting under a chestnut tree. He knocked the cock over handsomely and then called to me to send the dog who found him in the retrieve. Sukie did the work well and the bird went to the stranger's bag. He was frank and polite and I raised no question of property: but there is a nice point in it. R. S.

OHIO—*Youngstown, August* 13.—Woodcock shooting is about over here for the present, as the birds have deserted their former favorite grounds for the more secure quarters to be found amidst the tall corn of the rich bottom lands; there to fatten, feast and feather. The Mahonings and the Ohios are the only clubs of this city that were courageous enough to undertake a trip to the unknown wilds bordering on Chautauqua Lake. BUCKEYE BOY.

NEVADA—*Reno, August* 15.—Game in this region is abundant. Meadow shooting for snipe opened on the 1st of this month, and some fair bags have been made. We are looking forward to the fall flight of ducks and geese, which always affords lots of fun. The shooting lasts all the winter, and the guns are always to be heard on the Truckee meadow. Brant, swan, curlew, doves, sage hens, quail, jack rabbits, cottontails, mountain grouse, deer, etc., make up a rarely excelled variety of game. And with all this the fishing is superb. HACH.

THE FLORIDA MOSQUITO.—*Titusville, Brevard Co., Fla., August* 2d.—The mosquitoes are so bad in Florida that even the stoical Indian cannot stand them. Civilization interposes a mosquito or muslin sand-fly bar to stay their attacks, but then untutored Indians have not reached such heights of material progress as to be provided with such appliances. Their resort is smoke from smouldering wood, which is called a "smudge." Sitting around this "smudge" in the daytime they manage to keep away the pest, almost asphixiated at the same time themselves. For the night they erect a scaffold supported on four posts a few feet from the ground. On this they spread their blankets and build an immense "smudge" beneath. The black volumes of smoke roll up and envelope them in plutonic shades in which no mosquito can live. Outside of the smoke the hum of the innumerable millions sounds like a mighty wind sweeping through a field of tall wheat or rye. The poor dogs run howling about and rush at last to the water and lie down up to their noses. Oftentimes the mosquitoes fall into the fire in such numbers as to extinguish it. I have seen the so-called blind mosquitoes washed up on the shore in layers four inches deep. They rise up before you like a wall, in the marshes. Let a hunter be but lost or disabled without a musquito bar and no way of making a fire in the marshes or the woods during a night and his fate would be sealed. If not dead, he would be a raving maniac by morning. They are worst during the fall of the moon and during rainy weather. There are half a dozen kinds of the insect in Florida; one variety that I have seen, the "gallinipper," measures three-fourths of an inch. On my expeditions when locating railroad lines, upon moving our camp to a new location, we always burn over all the surrounding country for several miles. In this way we manage to destroy most of them, and new-comers find no congenial cover. I wonder if mosquito netting was discovered at the time the old Spaniards occupied this country? The settlers sit at table with a brazier of smoking brands at either end and one under the table, and thus partake of their meals. Old rags or leather is substituted for wood while the supply lasts, the smoke being more pungent. Out in the hen-coop the poor fowl are stamping all night in the vain endeavor to keep the mosquitoes from their legs and feet. When I take an observation through the transit they settle on my face and hands in clouds, and my note-book is spattered throughout with blood. AL. I. GATOR.

Our correspondent should domesticate these creatures and teach them to bore post holes with their bills. Properly harnessed, a Florida mosquito might be made a most efficient instrument in railroad and canal construction.

LOADING A PARKER GUN.—*Editor Forest and Stream*:—In a late issue you publish a tabular statement of trials at a target with a Scott gun. I use a Parker gun, than which I believe there is no better gun made. Everyone seems to have the right through your columns to advertise his choice, and I claim the same privilege. The writer's statement for his and many other guns as to the best load is undoubtedly correct; and while a 10-bore may be proven by United States Army officers, as a general rule to burn clean just four drachms of powder, there are exceptions which burn somewhere between four and five drachms of powder. The difference may be trifling in amount, but there is a decided difference in the pattern and penetration. If, therefore, your gun shoots better with four and a half drachms, it shows that the chamber burns over four drachms; and, even if a little is not well consumed, use four and a half drachms instead of four.

Different sized wads are required for metal and paper shells of course, but I find two different styles of loading metal shells. No. 10 A as follows: four and a half drachms powder, two common Eley wads, No. 9, one and a quarter oz. shot and one pink edge wad, No. 8; again five drachms powder; one No. 8 pink edge wad; one and a quarter ounces shot, and one No. 8 pink edge wad. You will find with No. 4 or 6 shot about the same proportionate pattern and penetration, and difficult in either case to be improved with any other load. I prefer the first as always sure. When the ducks get plenty, I will report the result of these loads; at present I can only judge from the target. If some one asks you the cost of such a load at retail prices of ammunition, it will be about four cents. It pays to shoot enough powder and shot to *kill*. Thirty-eight birds bagged out of thirty shots is far more satisfaotory than twelve out of thirty, as well as more profitable as an investment. R. W. H.

Oconto, Wis., August 2.

LONG DISTANCE TARGETS.—*Boston, August 12th*, 1879. Why cannot "Forest Aisle" give us some long distance targets, say 75 and 100 yards at a 30 inch ring? I think we would all be obliged to him. I have never seen any long distance targets in the "Forest," and think they would be very interesting to all gunners who like to "reach out" for their game. Let us have some long distance fellows, just for a change. PLUVIER.

There is no person more competent to treat these subjects than "Forest Aisle," who has been long qualified by British official service, and is even now one of the foremost of the *London Field's* correspondents.—*Ed. F. and S.*

AN ERROR IN GUAGE.—MISSISSIPPI—*Jackson, August 12th.—Mr. Editor*:—In issue of FOREST AND STREAM August 7th, "Forest Aisle" says, one of his "companions was armed with a gun 9¼ lb. 16 guage, etc.," and "used 4½ drs. powder and 1¼ oz. shot;" if FOREST AND STREAM did not make a mistake in proof-reading, please ask "Forest Aisle" the length of a 16 bore shell to take above amount of powder and shot as well as wads. Would also like to know weight of the man who fired 12 drs. out of the 7 bore, provided "Forest Aisle" knows what became of the 12 drs. man.

GEO. C. EYIRCH.

The error was on the part of the printer; it should have been 10 guage. With regard to the 12 drs. of powder, our correspondent must remember that the gun weighed 17 pounds; and although we should not have cared to have stood behind it, as John Phenix remarked in his celebrated reply to the pistol challenge of Capt. Travis, in offering to repeat the latter's feat of shooting an apple off a man's head, although a man in San Diego could not be found to hold the apple, perhaps one in St. Louis (or Canada) could.—ED.]

Indianapolis, August 12th.—Mr. Editor:—Dear Sir: In the last issue, August 7th, of your paper, one of your contributors—"Forest Aisle," speaks of Stonehenge's new method of loading shells whereby the pattern and penetration is marvelously increased. I have been a somewhat careful reader of your paper and have failed to see anything upon this subject. If there is anything in it, what is it? I am anxious to learn all that I can touching the efficiency of the breech-loading shot gun. H. G. C.

THE ECHOES OF A BUGLE.

HUNTINGDON, Tenn., *July* 15.

Editor Forest and Stream:—

Some weeks ago I propounded an interrogatory through the FOREST AND STREAM on the subject of a "harp horn," or tongued horn, stating that I had seen such in the possession of a hunter while on a camp hunt last fall. Since the question appeared in your columns I have been forcibly impressed with the extensive and attentive reading that must be devoted to the FOREST AND STREAM, and if I have not elicited the desired information, I have at least been interested in the numerous responses that have been forwarded to me. I am now prepared to set up a considerable tin shop of specimen tin horns that I have received, and am quite sure that I now have on hand the most extensive collection of manuscript on the subject of tin horns that can be found in America. But now, by way of being more specific, I would say that it was not the "fog horn" that I was inquiring after, nor was it any kind of a tin horn, but the old fashioned cow's horn, with the amendment of a vibrating tongue inserted in the neck and mouth-piece, pointed so as to go inside the mouth instead of pressing against the lips. Ordinarily such a horn would be considered inferior to the common blowing horn, but to those who cannot well blow the common horn it would be preferable. The one that I saw came from St. Louis, and gave out a piercing, shrill note, that could be heard for miles. But as I have seen no advertisement of such I suppose that the inventor made one and then died. For the information of the numerous manufacturers who seem to imagine a tin horn the very thing for a sportsman, I would say that I never knew a hunter to carry a tin horn; but from time immemorial the cow horn has been peculiarly his instrument for calling in his hounds; and so long has the noble breed of dogs been accustomed to its sound that intuitively they set up a gladsome howl when it is heard, and no doubt feel as did the poet when, with a slight change, he penned the following beautiful lines:

> Oh! huntsman, wind that horn again,
> For never did the listening air
> Upon the lambent bosom hear
> So soft, so wild, so sweet a strain.
> What though thy notes are sad and few,
> By every simple huntsman blown,
> Yet is the pulse to nature true,
> And melody in every tone.

I have not heard the above lines for more than twenty-five years, but think that I give them substantially correct. L. L. H.

Our correspondent who has had the novel experience related above might have saved himself from such an overwhelming avalanche of paper and tin had he been more explicit in his original inquiry. It is not strange that with all the information so gratuitously sent to him he has discovered nothing better than the old-fashioned cow's horn, for this instrument has a melody all its own, and is deservedly the one commonly adopted by followers of the hounds. It is usually formed by simply scraping and polishing a cow's horn, and sawing off the small end at a suitable distance; the key depends upon the length of the barrel and the size of the apperture. Almost any boy at the South knows how to make one; but there is a knack about it, as there is a knack about constructing violins. The virtuoso's collection of hunting horns is as interesting in its way as a collection of any other musical instruments; especially if your host has a fund of stories and romances connected with the initials cut upon this horn and that one, and if he is disposed to relate the stirring stories recalled by each.

Texan steer horns are generally the best for hunting bugles. A North Carolina Congressman of our acquaintance, who ran down to New York during one of the intermissions at Washington last winter, is very skillful in the construction of these instruments, and had among his errands here the purchase of a number of steer horns. We doubt if one man in a thousand met on Broadway would know where to direct a stranger for Texan steer horns. But our friend knew where to go. Down in a Front street cellar, dimly lighted by a flickering gas jet, were stacked up scores and hundreds and thousands of horns; short horns, long horns, straight horns, crooked horns, horns smooth, horns crumpled, brown, gray, white, and black horns; a spectacle ghastly enough to throw a timid body into convulsions for a week. The hunter after hunting horns was told to select half a dozen. He began by picking out a magnificent specimen, long, well tapered, symmetrical. This was, however, quickly discarded for a better one; then the second for a third, and embarrassed and bewildered by the wealth of Texas before him, he would have gone on selecting alternately and rejecting until this day had not desperation come to his rescue, when he took the first six at hand, regretfully cast one lingering look behind, and made his way out; and we presume that the hills of North Carolina have ere this resounded to the merry notes of those horns, urging on horse, hound and hunter to the chase. The instrument devised from the cow's horn is not always sweet toned. Properly prepared it becomes a means of most horrible discord, much affected in certain localities of the United States by night revellers and mob-serenaders; and it is a musical instrument high in favor with savages.

MAINE.—*Bath, Aug.* 6.—The third and last of the series of glass ball shoots of the Sagadahoc Fish and Game Protective Association, for the association badge; rotary trap; Bogardus rules; 18 yards rise:—

Rothwell..... 1	Clark..... 1
Morgan..... 1	

Not having pigeons enough, ties were shot off at glass balls; five balls each:—

Rothwell..... 0 0 1 1 1—3	Stumph..... 1 1 1 1 0—4
Morgan..... 0 1 1 0 1—3	Clark..... 0 1 1 1 0—3

HOWELL SHOOTING CLUB.—Following are the scores of bird and ball shooting matches, held under the auspices of the Howell, Michigan, Shooting Club, August 6th, 7th, and 8th. The first match was for the glass ball champion medal, between C. G. Jewett and Geo. Buzzard, the score resulting as follows:—

Jewett	25	24	25	24	—98	Buzzard	20	22	22	21—85

Match at 20 glass balls; 3 Bogardus traps:—

J. H. Beebe	17	C. J. Jewett	18
J. E. Long	17	H. Whipple	17
H. Mason	14	Henry Wilbur	20
E. F. Mulliken	13	R. F. Sprague	15
E. G. Angel	15	Jas. Glenn	20
B. F. Burgess	16	C. G. Harrington	16
J. H. Warren	12	M. T. Cole	12
G. A. Fox	11	Frank Wherry	16
A. Linmann	15	R. H. Rumsey	19
I. H. Murray	11		

Glen, of Detroit, and Wilber, of Howell, tied for first money, and on the shoot off the former won. Rumsey and Mulliken, of Howell, tied for second, which was finally won by the latter. Jewett, of Howell, took third; Beebe, of Flint, fourth, and Wherry, of Plymouth, fifth.

Third match; same conditions; 15 balls:—

I. H. Beebe	12	R. F. Sprague	13
J. H. Day	12	C. G. Harrington	11
E. F. Mulliken	13	Murray	14
Frank Wherry	15	H. A. Whipple	14
B. F. Burgess	14	R. H. Rumsey	15
James Glenn	11	M. T. Cole	w
C. G. Jewett	13	E. G. Angel	11
Fox	11	H. Mason	w
John Long	13	Ed. Carpenter	12

After a splendid contest for second between B. F. Burges, of Jackson, I. H. Murray, of Indiana, H. Whipple, South Lyon, and M. T. Cole, Detroit, Whipple was pronounced victor. Third was won by Long, of Detroit, and fourth by Carpenter, of Howell.

Fourth match; double rises:—

Frank Wherry	11	01	10	11	10	11	11	11	11	11	—17
I. H. Beebe	00	11	11	11	10	10	11	11	11	10	—16
H. Whipple	11	11	10	10	00	11	10	11	11	11	—15
E. F. Mulliken	11	10	11	11	11	11	11	11	11	01	—17
R. F. Sprague	10	10	10	10	10	10	10	10	10	10	—11
M. T. Cole	11	10	00	10	11	10	11	00	10	11	—12
Sames Glenn	11	00	00	01	11	10	00	10	10	11	—10
Henry Wilber	10	11	00	11	11	10	10	10	00	00	—10

First was won by Wherry.

Sweepstakes; 10 balls:—

C. G. Jewett	9	I. H. Murray	3
F. Wherry	10	R. F. Sprague	8
G. A. Fox	4	O. C. Kemp	5
R. H. Rumsey	9	L. W. Sprague	4
M. T. Cole	9	R. Robinson	4
James Glenn	8	M. Lewis	9
Geo. Buzzard	9	F. N. Wright	5
E. F. Mulliken	7	C. Ball	9
A. I. Wakely	6	A. Linmann	9
E. G. Angel	8	John Marshall	7
H. Whipple	6	W. Hawkinson	7
I. H. Beebe	6	L. Kenney	6

Sweepstakes at 5 birds; H and T plunge traps:—

L. H. Warren	0	L. W. Sprague	2
R. R. Robinson	3	E. H. Murray	4
F. N. Wright	3	S. McLean	4
W. T. Redcliff	4	A. J. Wakely	3
I. H. Beebe	3	M. T. Cole	2
James Glenn	4	E. G. Angel	3
C. K. Sprague	4	W. Hawkinson	3
H. Whipple	2	C. G. Jewett	5
H. M. Mason	4	C. A. Fox	4
R. H. Rumsey	5	A. Linmann	5
H. G. Harrington	4	L. J. Kenney	4
F. Wherry	2	John Marshall	4
S. A. McLean	3	E. F. Mulliken	5
O. C. Kemp	3		

After a spirited contest in each case, McLean, of Bay City, won first; Jas. Glenn, of Detroit, second; I. H. Beebe, of Flint, third; Wherry, of Plymouth, fourth.

Sweepstakes at 5 single balls:—

I. H. Murray	5	M. Lewis	3
L. W. Sprague	3	Ira Paine	5
R. F. Sprague	5	F. N. Wright	3
A. Linmann	3	C. G. Jewett	4
O. C. Kemp	3	C. Ball	5
S. McLean	3	M. T. Cole	3
I. H. Beebe	3	B. F. Burgess	3
C. A. Fox	3	E. H. Mulliken	3
J. H. Warren	3	E. F. Mulliken	3
S. A. McLean	4	W. Hawkinson	4
Ed. Carpenter	3	L. J. Kenney	3
H. Whipple	4	James Glenn	5
H. B. Blackman	2	E. G. Angel	2

Paine and Glenn divided first after other ties; Jewett won second; Carpenter and McLean divided third.

Sweepstakes at 15 single rises:—

E. G. Angel	0 1 1 0 1 0 1 1 1 1 0 0 1 1 0—9		
Chas. Ball	1 1 1 1 1 1 1 1 1 1 1 1 0 1 0—13		
A. J. Wakely	1 1 1 1 1 1 1 1 1 1 1 1 0 1 0—12		
Ira A. Paine	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—15		
E. Carpenter	1 1 1 1 1 1 1 1 1 1 1 1 0 1 0—13		
F. Wherry	1 1 1 1 1 1 1 1 1 1 0 1 1 1 1—13		
S. A. McLean	1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—14		
H. Whipple	0 1 1 1 1 0 1 1 1 1 1 1 1 1 1—13		
I. H. Beebee	1 1 0 1 1 1 0 0 1 1 1 1 1 0 1—11		
R. H. Rumsey	1 1 1 0 0 1 1 1 1 1 1 1 1 1 1—13		
M. T. Cole	1 1 1 1 1 1 1 1 1 1 1 0 1 0 1—12		
James Glenn	1 1 1 1 1 1 1 1 1 1 1 1 0 1 1—13		
C. G. Jewett	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—15		
I. H. Murray	1 1 1 1 0 1 1 1 1 1 0 1 1 1 0—12		
E. F. Mulliken	0 1 1 0 1 1 1 1 1 1 1 0 1 0 w.		
R. F. Sprague	1 0 1 0 1 1 1 1 1 1 0 0 w.		
A. Linmann	0 1 1 0 1 0 1 1 1 1 1 1 1 1 1—12		
L. W. Sprague	0 1 0 0 0 1 1 1 1 1 1 1 0 w.		
O. C. Kemp	1 1 1 0 1 1 1 1 1 1 1 1 0 1 1—13		
C. Wilcox	1 1 1 0 1 1 1 1 1 0 1 1 1 1 0—12		
B. F. Burgess	1 1 0 1 1 1 1 1 1 1 0 1 0 1 1—12		

Jewett, of Howell, and Ira A. Paine, of New York, divided. Second was won by Wherry, of Plymouth, divided. After three shoot-offs, C. Ball of Dansville, succeeded in capturing third. Fourth divided between Murray, of Indiana, and Rumsey, of Howell.

Sweepstakes; Card's rotary trap:—

Lockwood	1 0 1 0 0 1 1 0 1 1—6		
Linmen	1 1 1 1 1 1 1 1 1 1—10		
Wherry	1 1 1 1 1 1 1 1 0 2 1—9		
Jewett	1 1 1 1 1 1 1 1 1 1 0—9		
Rumsey	0 1 1 1 1 1 1 1 0 1—8		
Kemp	0 0 1 1 1 1 0 0w		
Fox	0 1 1 0 0 1 1 0w		
McLean	1 1 1 1 1 1 1 1 1 0—9		
Glenn	1 0 1 1 1 1 1 1 1 1—9		
Cole	1 1 1 1 1 1 1 1 0 1—9		
Whipple	1 1 1 1 1 1 1 1 1 1—10		
Carpenter	1 1 1 1 1 1 1 1 1 0—8		
Paine	1 1 1 1 1 1 1 1 1 0—8		
Beebe	0 1 0 1 1 1 1 0 1 1—7		
McLean	1 1 1 1 1 1 1 1 1 0—8		
Mulliken	1 1 1 1 1 1 1 1 1 1—10		
Burgess	1 1 1 1 1 1 1 1 1 1—10		
Hall	0 1 1 1 1 1 1 1 0—7		
Angel	0 1 1 1 0 1 1 0 0 1—5		

Mulliken won first; Jewett and Wherry finally divided second; Carpenter took third, and Bare and Beebe divided fourth.

Sweepstakes at birds; H and T plunge traps:—

S. A. McLean	2	M. T. Cole	
C. A. Fox	0	C. G. Jewett	4
James Glenn	2	H. Whipple	2
R. R. Robinson	2	J. H. Linmann	4
E. G. Angel	3	Ira Paine	5
S. McLean	5	I. H. Murray	3
I. H. Beebe	3	C. G. Kemp	1
E. F. Mulliken	4	Frank Wherry	4
R. H. Rumsey	4	C. E. Ball	3

Cole, of Detroit, won first; second divided between Jewett and Mulliken, of Howell; third won by Ball, of Dansville; and fourth won by McLean, of Bay City.

ST. PAUL TOURNAMENT.

St. Paul, Minn., August 5, 6, and 7, male revolving traps, screened; glass balls. First match; 18 yard rise:—

R. A. Becker	1 1 1 0 1 0 1 0 1 1 1 0 1 1 0—10

Lemon	1 1 1 1 1 1 0 1 1 0—8		
Kennard	0 1 0 0 0 1 1 0 1 0—4		
Cory	0 0 1 1 1 1 1 1 0 0—6		
Brown	1 1 1 1 1 1 1 1 1 1—10		
Nesbitt	1 1 0 0 1 1 0 0 1 1—6		
Nicolin	1 1 0 1 1 0 1 1 1 1—8		
Hobbitt	1 1 1 1 1 1 0 1 1 1—8		
J. G. Smith	1 1 0 1 1 1 1 0 1 1—8		
Scaley	1 1 1 1 1 1 1 0 1 1—9		
Powers	1 0 1 1 0 1 1 0 1 0—6		
Rodman	1 0 1 1 1 1 1 0 1 1—8		
Taber	1 1 0 1 0 0 1 1 1 1—7		
Schilling	0 0 0 1 1 0 0 0 0 0—2		
Pfister	0 1 1 1 1 1 1 1 1 1—9		
Zimmermann	1 1 1 1 1 1 1 0 1 0—8		
Wheeler	1 1 1 1 1 1 1 1 1 0—9		
Butler	1 1 1 1 1 1 1 1 1 1—10		
Stewart	1 1 0 0 0 0 0 1 0 1—4		
Richardson	0 1 1 1 0 1 0 1 0 1—6		
T. J. Rodman	1 1 1 1 1 0 1 1 1 1—9		

Butler, Brown and Baldwin divide first.

Ties on 9:—

Tainter	1 1 0 1 1—4	Mitchel	1 1 1 1 1—5
Hobbitt	1 1 1 1 1—5	Scaley	0 1 0 w
Pfister	1 0 w	Wheeler	0 1 1 1 1—4
Rodman	1 1 1 1 1—5		

Second tie:—

Mitchell	1 1 1 1 1—5	Hobbitt	1 1 1 1 1—5
Rodman	1 0 w		

Hobbitt won the second.

Ties on 8:—

Elliot	1 0 1 1 1—4	Rodman	1 0 1 1 1—4
Day	0 1 1 1 1—4	Lemon	1 0 0 1 1—3
Smith	1 0 1 1 1—4	Becker	1 0 0 1 1—3
Zimmermann	1 1 1 1 1—5		

Ties on 7:—

Skinner	1 1 0 1 1—4	Nicolin	1 0 0 1 w
Rodman	1 1 1 1 1—5	Taber	1 0 0 1 w
Lamprey	1 0 0 w		

In the sweepstakes, first prize won by Zimmermann, Hobbitt and Baldwin divided second, Nicolin third, and Cory and Becker divided fourth.

In last sweepstakes the first was won by Mead, second by Schilling, and the third by Baldwin.

Third Match: 18 yards rise:—

Hoblit	1111111111111111111—20		
Baldwin	1111111111111111110—19		
Vansiyke	1111111111111111110—19		
Nicolin	1111101111111101111—18		
Wheeler	1111111111111111101—18		
Dyer	1011111111001111111—17		
D. H. Day	1111111111111111100—17		
Lamprey	1110111111101101111—17		
West	1111111111101101111—17		
Zimmermann	0111111111111011111—17		
R. S. Pease	1110111011101111111—17		
W. H. Skinner	1000111011111111111—16		
A. L. Mitchell	1010111110110101110—16		
Wormwood	1111011001011011111—16		
J. C. Smith	1111111100701111110—16		
L. T. Kennedy	1100111111011111110—16		
Rogers	1111011110111111101—16		
R. A. Becker	1111111011011011101—15		
L. S. Tainter	0110011110111111111—15		
C. J. Butler	0111101101111101101—15		
W. H. Thurston	0011111111111101100—15		
Kellogg	1110001111001111111—14		
J. J. Lemon	1111011110011000111—14		
M. T. Kennedy	1101111010110111000—14		
Cory	1011101110011011101—13		
Doy	1111111001011101101—13		
M. E. Taber	1110311001100001111—13		
S. O. Seymour	0011001100110101101—11		

Baldwin and Vansiyke divided.

Ties on 18—21 yards rise:—

Nicolin	11111—5	Wheeler	11111—5

After one more tie these gentlemen divided.

Ties on 17:—

Dyer	11111—5	West	10111—4
Day	01101—3	Zimmermann	11111—5
Lamprey	00111—3	Pease	10111—4

Second tie:—

Dyer	11011—4	Zimmermann	11011—4

Dyer and Zimmermann divided.

Tie on sixteen:—

Skinner	01011—3	Smith	11111—5
Mitchell	10011—3	Kennedy	10111—4
Wormwood	10111—4	Rogers	11111—5

Second tie:—

Smith	01101—3	Rogers	11010—3

Smith and T. N. Rogers divided.

In the sweepstakes which followed, prizes were won by Dyer, Rodman, Nicolin, Pease, Hoblitt and West.

Fourth match: 18 yards rise:—

T. J. Rodman	111111111111111—15
Butler	101111111111111—14
Bean	111111011111111—14
Hoblitt	110111111111111—14
Smith	001111111111111—13
Nicolin	111110111011111—13
Zimmermann	111110111011111—13
Brown	111011111111110—13
A. B. Rodman	111111111101101—13
Vansiyke	101111111111011—13
Baldwin	110111111111011—13
West	111011101111111—13

Wormwood	101110101010100—6
White	100011100000010—5
VanDyke	110000000000000—2

Ties on 14—21 yards:—

Butler	11011—4	Bean	10101—3
Hoblit	11111—5		

Ties on 13—21 yards:—

Smith	1110w—4	Nicolin	11111—5
Zimmermann	11111—5	Brown	0w
Rodman, A. B	110w	VanSlyke	11111—5
Baldwin	110w	West	0w
Lamprey	11111—5	Skinner	11110 4

Second tie:—

Nicolin	11111—5	Zimmermann	110w
Vansiyke	00w	Lamprey	

Ties on 12—21 yards:—

Day	11001—3	Becher	11101—4
Wheeler	11001 3		

Pease, Dow and Roseboom divided fifth.

In sweepstakes, prizes were won by Hoblit, Baldwin, Tainter, Zimmermann, Skinner, Wheeler, Taber, Mitchell, Lamprey and Butler.

Fifth match; 18 yards rise:—

J. G. Smith	110111111001011111001—13
Nicolin	011111111111111111111—19
Caleb Trunx	010111001111G1111010I—13
Tainter	111111011111111111101—18
Wheeler	110011111111101011111—18
Fuber	111111111111111111111—19
J. B. Rodman	100111111111111111111—19
F. J. Rodman	111111111111111101111—19
Mitchell	110101111011111111010—16
Lamprey	011111111111010101011—13
Elliott	001110011011111111111—13
Bean	111011101011111011101—15
White	010000011001111101100—10
Day, Jr	111111011011001111111—17

Cundy	011111111111111111111—17
Seymour	111011001001010111010—12
Hoblet	111111111111101101111—17
Vansiyke	110111111111111101111—18
Anderson	100001011011011011011—11
Rogers	111111101111111111111—19
Baldwin	111111011111111111111—19
Pease	111111111111111111111—20
Pfister	111111111111111101101—18
Becker	110101011111011011111—15

First prize won by Pease, of Minneapolis.

Ties on nineteen:—

Faber	1 1 1 1 0—4	J N Rogers	1 0 1 0 —w
F J Rodman	1 1 0 1 1—4	Baldwin	1 1 0 1 1—4
Lemon	1 1 1 0 1—4		

The second tie was won by Faber scoring 5, Rodman 4, and Baldwin and Lemon 3 each.

The third prize was divided between Tainter, Zimmermann and Van Slyke. The fourth prize was divided between Day, Jr., Cundy and Hoblet. The fifth prize was decided by shoot off, Mitchell scoring 5, and Nicaulin 4.

Sixth match; 21 yards rise:—

Zimmermann	111111111001011111011—16
Nicaulin	111110111111111111110—18
Baldwin	111111111111011111111—19
J G Smith	001111110101111011111—15
Hoblet	110111111111111111111—19
A B Rodman	111100111071011111111—16
Cundy	011011111101011111111—15
Tainter	111111011011111111111—17
F J. Rodman	101011111111111111111—18
Pease	111100011111111011011—15
J B Rodman	011110111011001110—14
Elliott	111111101101011011110—15
Mitchell	110111111111111111111—19
Lamprey	011111111111011011111—18
Becker	111101011111111011111—17
Fuber	111011111111111111111—19
Pfister	111111111111111101111—18
B Brown	101101111111111111101—17
Wheeler	111101101111111011111—17
Van Slyke	111111111111111011110—17
Lemon	001011111011010001011—11

Ties on nineteen won by Hoblet, scoring 5 against Baldwin's 4. Second divided between Nicaulin, F. J. Rodman, and Faber, all scoring ties on the tie shoot. Third prizes was won on second tie by Van Slyke, scoring 5 against Becker's 3. The fourth prize, was won by Mitchell on first tie, scoring 5. Fifth prize was divided between Pease, Cundy, Elliot and Smith.

Sweepstakes; 10 balls; 18 yards:—

First prize on tie of ten balls was won by Baldwin scoring 5, and Skinner 3. Second prize on tie of 9 balls was won by Wheeler, of Minneapolis, by scoring 5. Third prize on a tie of 8 balls was won on second tie by Elliott, of Minneapolis, over Mitchell and Lemon, by scoring 5. Fouth prize on a tie of 7 balls was won by Engles on second tie over Brown by a score of 4 balls.

Second sweepstakes: same conditions:—

The first prize was shot off on tie of ten in three times, and won by Baldwin, scoring 5. Second prizes on tie of 9 balls, was won by Hoblet, scoring 4. Third prize on a tie of eight balls, won by Elbott over Wheeler and Lamprey, in scoring 6. Fourth prize on tie of seven balls was divided between Keator, Cundy and Pease.

Team shooting; 21 yards rise:—

St. Paul Gun Club:—

Vansiyke	111111001100010101012—12
Day, Jr	101101110011111111101—15
Baldwin	111111111111111111111—20
Total	47

Minneapolis Gun Club:—

Wheeler	011111111111011111118
Elliott	010111111111010110131—15
Pease	111111111111111111110—18
Total	51

St. Paul Rod and Gun Club:—

Lamprey	111011111000011101101 13
Mitchell	001111101111011111—15
Zimmerman	111101111001111111016
Total	45

Baldwin won the hunting suit, valued at $15, offered by Burkhard for the best average in the three days' tournament.

Zimmerman won the Lancewood fishing rod, second prize, on average offered by Kennedy Bros.

Baldwin and Faber won each two sacks of shot for best average during shoots 5 and 6.

TENNESSEE, *Laitenbergers' Garden Nashville, Aug.* 8th.—The glass ball scores, shot as above, are unavoidably deferred till our next issue.

—Sir John D. Astley, whose name has become familiar to Americans within the last twelve months as the promoter of the long distance walking matches, has an excellent record as a pigeon shot. In a match, August 5, with Mr. C. J. Alexander, at Preston, 50 birds each, 22 yards rise, the score was, Astley, 33; Alexander, 38.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We cannot attempt to give specific directions where to go for game or fish. Correspondents must keep themselves posted by consulting our news columns.*

☞ *We make no charge for answering inquiries in this column.*

W. S. W. Haverhill, Mass.—Have sent you a Bogardus score book by mail.

H. N. C.—Get Nelison's Boat Building for Amateurs. Price, $1.25. Can obtain it for you.

Querist, Montreal.—The New York State Fair will be held at Utica, September 8th to 12th inclusive.

S. B. T.—For small tent apply to S. H. Hemenway, over Wall st. Ferry House, South st., New York.

GEO. S. B., Jersey City Heights.—Have referred your horse questions to *Spirit of the Times*, which see.

W. J. S., Princeton.—Please inform me whether the Scotch deer hound hunts by sight or scent? Ans. By sight.

MEMOIR.—*Oology* is the name for the study and collection of birds nests. Use glass stoppers, which require no wax or cement.

J. V. J., Warren, O.—The open season for deer in Michigan, Upper Peninsula August 1 to November 15; Lower Peninsula, September 15 to December 15.

E. P. W.—You can make a patented article without paying royalty if for exporiment only. But if for use, so as to derive the benefits of the patent or for sale, you must pay royalty.

J. T. D., Cambridge.—Please inform me if a near-sighted person can become a good archer? Ans. Yes, if he puts on glasses so that he can see the target. Many near-sighted men have acquired skill as shot gun experts.

S. S., New York.—My setter has a very large wind-gall on his fore leg: can you tell me what to do to remove the same without danger to the dog? Ans. Persistent hand-rubbing may remove it, but it is liable to return.

C. A. P.—Canoe clubs in New York waters are the New York Canoe Club, club house at the Staten Island Cricket Grounds; also Jersey City Canoe Club, with headquarters at Commodore's office, Chas. E. Chase, 287 Broadway.

R. D., Rochester.—Can you advise me of any good place in Northern Michigan, where during the latter part of September, I can find good fishing and shooting? Ans. Have sent you a pamphlet of the Grand Rapids and Indiana Railroad.

F. M. C.—Guardboard strakes are put on the skip jack first, then top streakes, and last, fill in between the two. You can obtain copper nails from any hardware store. Common or galvanized five penny nails will do just as well. Where you want to clinch use wrought iron nails.

POLARIS.—Length of schooner *Frolic* on water line ft. approx. Has raking or clipper stem. Least freeboard 2½ load line to deck. Above this is about 15 in. bulwark. Lead should be kept within two-thirds the length of the keel amidships if possible. Make keel thick enough for that purpose.

T. F. A., Philadelphia.—Kindly inform me where I can find a breeder of Persian and English greyhounds in this country and the probable cost of a young dog? Ans. No one this side of the Rocky Mountains makes a specialty of breeding them, but by advertising you can probably hear of one for sale.

F. H. W., Elmira, N. Y.—The worms are what are known as round worms. Give areca nut. You can get it from Conroy, Bissett & Mallison, No. 65 Fulton St.; price 50 cents per box. Bells are sometimes used on setters in shooting in very thick cover. See advertisements. Your subscription expires March 1, 1880.

T. H. D., New York.—Your bitch has chorea, a frequent sequel to distemper. You can do little beyond giving the dog country air and attending carefully to her diet. The following tonic might be beneficial; sulphate of zinc, three grains; extract of gentian, three grains; mix and form a pill to be given three times a day.

JUVENIS, Lennoxville, P. Q.—1. 2¼ grs. in one drachm of powder. 2. Coarse powder gives better penetration and less recoil than fine powder. 3. For directions how to load for game, see a dozen articles in last Volume of this paper. For your 12-gauge use 3¼ dr. powder, 1¼ oz. shot. For woodcock and snipe use No. 10 shot; for ducks No. 6.

J. D. G.—For hunting and fishing in Chesapeake build a schooner 30 to 35 ft. long, 26 to 30 ft. water line, 9½ to 11 ft. beam, and 5 to 6 ft. deep. Will draw without center board from 3 to 3 ft. 6 in. If you need lighter draft, give more beam and less depth. If cheaply built, will cost complete about $500 to $600. Sloop will be faster, but schooner handier.

W. B. R.—For canoe rigs see appendix of Canoeing in Canuckia. Paddles always double bladed. No stays used for the masts; stiff enough without. Whether convex or concave lines is open to debate. Some prefer hollow, others full or parabolic lines. A very flat parabola probably as good as any. Each modeler follows his own ideas. Lines are always spoken of as viewed from the outside of the boat.

SUBSCRIBER, Petersburgh, N. Y.—Which is the most intelligent and best calculated for a watch dog, the St. Bernard or Newfoundland? or is there some other breed that is better and where can they be obtained? Ans. Either would answer, so would the mastiff. For St. Bernards write to LeRoy Z. Collins, Lancaster, Mass., or Chas. H. Allen, 7 Beaver St., Albany, N. Y.

DAISY, Boston.—I have a Gordon setter bitch sixteen months old just recovering from quite a sever attack or distemper, which has left her with the pupils of the eye enlarged so much that none of the iris is visible and her sight seems somewhat effected. Is there any remedy? Ans. It is probable that your dog has amaurosis, for which little can be done, although a seton on the poll sometimes effects a cure.

PARLOR FISH CULTURIST.—To water-proof the bottom of your aquarium apply a cement made as follows: Linseed oil, 3 oz.; tar, 4 oz.; resin, 1 lb.; melt together over a gentle fire, If too much oil is used the cement will be too soft. This may be corrected by adding tar and resin, or by allowing it to simmer for a longer time. Apply warm, and do not use the aquarium for several days.

E. J. S., McVeytown, Pa.—I have just come into possession of a coach dog (not full blooded); can it be trained for hunting, tricks, etc.? About what age should the training begin? It is a bitch; how soon should she be altered? She is now about five weeks old. Ans. The dog could probably be taught tricks but would most likely be useless for hunting. Begin training at six months. If she is to be spayed it should be done at once.

W. C. W., Monroe, N. C.—1. The comparative advantages of pin and central fire guns are these: Pin shows at glance when gun is loaded. But it is clumsy. Mere question of hammer and plunger. Read "Gloan" on Breech-loader. Simple fact that pin-fires are superseded by central fires is sufficient demonstration of superiority of latter. 2. We do not trouble to reload paper shells. Brass shells may be reloaded twenty times. Then throw them away to prevent accidents.

F. H. B.—The sailing rule is indistinctly worded and can be taken to mean one thing as well as another. "Yachts must be commanded and sailed by the owner or owners of such yacht." The spirit of this rule we take to be that the owner must take general charge and hold the tiller or the wheel, but the words "sailed by" do not strictly convey that meaning, for a vessel may be "sailed by" her captain, without his taking physical hold of anything. Better have the rule amended to read "steered by."

SPORT, Pittsburg, Pa.—Who owned the setter dog Bismarck, his pedigree, etc.? How old was he when he died? When did his death occur and how? Ans. Bismarck was owned by Mr. David Brooks of Philadelphia. He was whelped on April 1, 1868, at Cedar Rapids, Iowa, and was sired by a red Irish setter dog brought to Iowa by an Englishman, out of a white Belton bitch imported by a gentleman of Cedar Rapids. He died in Philadelphia in November, 1875, being smothered to death in an express car.

BUFFALO, Buffalo.—What shall I do to cure my setter puppy, six months old, of weakness in his hindquarters; he has a good appetite and seems in good health. If he tries to turn around quickly his back-legs give way and he falls. Has been in that condition for two or three weeks, Ans. See that the dog's kennel is clean and perfectly dry at all times. Rub him around the loins twice a day with some simple liniment and give him a tablespoonful of cod liver oil night and morning.

A., Richmond Va.—There are three prizes to be thrown for *with dice*, and are classed as first, second and third prizes. The first goes to the best throw, the second to the next best and the third to the next best. A, B and C each throw 43; D, E and F, 38; L, M and N, 35. I hold that A, B and C are entitled to the three prizes. If the solution seems different to you be kind enough to state the reasons? Ans. You are right; A, B and C throw again to determine which of them shall have first, second and third prizes.

W. C. P., East Saginaw, Mich.—1. What would be the expense of a week's fishing among the Thousand Islands exclusive of railroad fare? 2. What would be the necessary tackle for such fishing? 3. Is not the fishing a few miles out better than it is in the Bay? 4. When is the best fishing? Ans. 1. About $4 per day, including guide, bait, hotel, etc. 2. Rods, reels, flies, spoons, lines, minnows, landing net. 3. The boatmen will tell you where to fish. 4. Previous to and after August.

EXTRAVAGANCE OF AMERICAN HOUSEKEEPERS.—Mr. Delmonico, talking about *entrées*, says that Americans ought to copy "the French method of utilizing small bits of raw meats and fowls, and of recooking all kinds of cold joints and pieces of cooked meat which remain, day by day, from every dinner in almost every family." The success of such dishes depends mainly on the sauce, which is best made from broth. The following is his recipe for a favorite sauce: "Take an ounce of ham or bacon, cut it up in small pieces, and fry in hot fat. Add an onion and carrot, cut up, thicken with flour, then add a pint or quart of broth, according to quantity desired, season with pepper and salt, and any spice or herb that is relished (better though without the spice), and let simmer for an hour, skim carefully, and strain. A wine-glass of any wine may be added, if liked." Cold roast or broiled beef or mutton may be cut into small squares, fried brown in butter, and then gently stewed in the sauce about described. Mr. Delmonico describes croquettes as the attractive French substitute for American hash, and tells how to make them: "Veal, mutton, lamb, sweet breads, almost any of the lighter meats, besides cold chicken and turkey, can be most deliciously turned into croquettes. Chop the meat very fine. Chop up an onion, fry it in an ounce of butter, add a tablespoonful of flour. Stir well, and then add the chopped meat and a little broth, salt, pepper, little nutmeg. Stir for two or three minutes, then add the yolks of two eggs, and turn the whole mixture into a dish to cool. When cold, mix well together again. Divide up into parts for the croquettes; roll into the desired shape in bread crumbs. Dip in beaten egg, then into bread crumbs again, and fry crisp, a bright golden color. Any of these croquettes may be served plain or with tomato sauce or garniture of vegetables.

OUT-DOOR GAMES.—Physical exercise can be, and often is, carried to excess; but every one should practice it within reasonable limits. A gentleman should not only know how to fence, to box, to ride, to shoot, to swim, and to play at billards, he must also know how to carry himself, and how to dance, if he would enjoy life to the uttermost. A good carriage is only attained by the help of a drill-master, and boxing must also be scientifically taught. A man should make himself able to defend himself from ruffins, and to defend woman from them also. What fencing and drilling are to a man, dancing and calisthenic exercise are to a young woman. Every lady should know how to dance, whether she intends to dance in society or not: the better the physical training, the more graceful and self-possessed she will be. Swimming, skating, archery, or games of lawn-tennis and croquet, riding and driving, all help to strengthen the muscles, and to take the young out into the open air, which makes these games desirable. The subject is one that too much cannot be said of by parents, teachers, and educational reformers. Such training should begin in childhood.

MANY people who boast of being "plain" and "blunt" are merely coarse and boorish. Such persons are constantly inflicting wounds, which neither time nor medicine can ever heal.

VICTOR!
GLASS BALL TRAP.
STOCK & MORRIS PATENT.

This Trap is destined to revolutionize glass-ball shooting. It weighs but four pounds, and can be set up anywhere, without previous preparation, in two minutes. It is so simple that it can never get out of order. It throws balls without breaking, at any desired velocity, in any direction, faster than twenty guns can continue to shoot them. To become a good shot it is now unnecessary to go to club grounds for practice, as anyone can find a good place for shooting within a few rods of his dwelling, and have an hour's daily practice without the slightest trouble or inconvenience. The Trap has been entirely remodeled and greatly improved, both as regards efficiency and finish.

No. 1 (Plain), $4. No. 2 (Nickel-Plated), $5. Will close out the balance of Old Model Traps at $3.

CHAS. FOLSOM, Sole Agent,
For Sale by Dealers Everywhere. **53 Chambers street, New York.**

PEORIA, *August 8th*, 1879.

Mr. Charles Folsom, Agent for the Stock & Morris Patent Glass Ball Trap, No. 53 Chambers street, N. Y.

SIR—You ask the opinion of the Peoria Shooting Club on the above trap, which is now used exclusively on our grounds. We give it decided preference over all. It delivers the balls with varying velocity, thus more closely imitating the natural flight of a bird, and in this point it has no competitor. We have yet to see its equal for any of the following qualities:—Simplicity of construction, rapidity and certainty of action, durability, lightness, and portability. It works perfectly and is so simple; it does not break down or get out of order at all. We recommend it in highest terms for the use of clubs, and also for amateurs for private practice. For those who would like frequent practice on their own premises, without the need of costly and tiresome preparation, it fully meets a long-felt want, as it weighs but four pounds, and can be set up ready for use anywhere in two minutes. It was to-day tested on our grounds for power and speed, when it threw fifty-nine (59) glass-balls an average distance of twenty-five yards from a single cup in sixty seconds, keeping two balls constantly in the air at the same time. The new model is a decided improvement upon the old. We wish you success in its introduction, and think its use will do quite as much to popularize glass ball shooting as anything that has yet been found.

Yours, &c.,
V. M. LINCOLN, Pres., Z. N. HOTCHKISS, E. B. McCLINTOCK, WM. MEYERS,
W. R. WILEY, FRED. KIMBLE, JOHN KELLY, GEO. W. BAKER, Sec

CURE BY ABSORPTION.

"SAPANULE."

THE GREAT EXTERNAL LOTION AND FLUID ABSORBENT. Nature's Remedy Applied by a Natural Method. Used in Sponge or Foot Bath it Immediately Relieves Pain and Soreness of Body and Limb from whatever cause. It also brings a refreshing coolness, and destroys offensive perspiration. It is the only Lotion offered to the public to be used through the Bath. "SAPANULE" is a sure and specific remedy for Rheumatism, Neuralgia, Lumbago, Headache, Burns, Scalds, Bruises, Sores, Piles, Boils, Chilblaines, Bunions, Corns, etc. Cures all Eruptive Disorders of the Skin, leaving it smooth and soft. Soreness or Inflamation of Feet from whatever cause, immediately relieved and permanently cured by using "SAPANULE" in Foot Baths. "SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY, 4 FOURTH AVE., COR. 22d ST., New York, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:

A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.

HENRY BERGH, President.

MESSRS SAMUEL GERRY & CO.:

For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.

MRS. W. H. KINSLEY, 153 West 22d St., New York.

FROM HON. JOHN BEATTIE.

SAMUEL GERRY & CO.

GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,

JOHN BEATTIE, Providence, R. I.

MESSRS SAMUEL GERRY & CO.:

GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I sufferred intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE." Truly yours,

N. ORMS, 59 West 22d St., New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS.

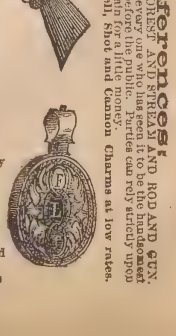
This Chain will be made from the very best quality of ROLLED GOLD PLATE, or what is known as Gold Filled, and will be warranted to wear equal to a Solid Gold Chain from four to six years. The retail price will be $8 each. Liberal discounts to Clubs or Societies ordering twelve or more at one time. Emblematic for Pigeon, Glass Ball or Target Shooting, consisting of Shot, Shells, Cartridges, and a Gun or Rifle for bar, will also be made of Solid Gold upon application, at the lowest market price.



PATENTED
APRIL 15, 1879.

References: CAPT. A. H. BOGARDUS—FOREST AND STREAM AND ROD AND GUN. This Chain is pronounced by every one who has seen it to be the handsomest thing in the line of Sportsmen's Jewelry ever offered. Orders can rely strictly upon uniform quality and a good chain for a little money. A large assortment of Shell, Shot and Cannon Charms at low rates.

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-working at Washington, Richmond, and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly Printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1.75. Orders for five copies and upward filled for $1.40 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.

Guns, Ammunition, Etc.

EDWINSON C. GREEN,

Winner of London "Field" Gun Trial OF 1879.

Distancing all his Competitors-Greener, Malcham (Scott's), Lesson (Webley), and the Whole Competition.

"In the second class for 16-bores Mr. Green distanced his competitors in all the three classes, beating Mr. Greener's 12-bore by 32-28 points—a most marvelous performance truly. In the third class for 20-bores, Mr. Green again beat the winning 12-bores."—Editorial London *Field*, May 10.

Feather Filled Glass Balls.

PATENTED AND INVENTED BY

IRA A. PAINE.

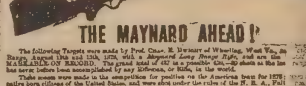
THE ONLY SUBSTITUTE EVER INVENTED FOR A LIVING BIRD.

Awarded the Medal of Progress and Grand Diploma at the American Institute Fair, 1878.

A sweeping reduction in price. Ask your gunmaker for the FEATHER FILLED AND TAKE NO OTHER. **SPECIAL NOTICE TO DEALERS.**—Owing to the great demand for the FEATHER FILLED BALL, we will from this date pay strict attention to our factory and the careful production of the ball only, and have appointed the well-known house of **HAGERTY BROS. & CO., 110 Platt Street, New York,** as our authorized agents, to whom all orders and communications may be addressed. ALSO MANUFACTURERS OF THE BEST PLAIN BALL IN THE MARKET.

Office of the Bohemian Glass Works, 214 Pearl Street, New York.

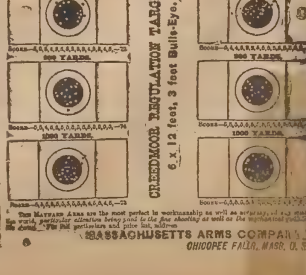
Attention, Sportsmen!



Kay's Improved and Perfected Ball for 1879.

[PATENTED OCTOBER 13, 1877.]

A SUBSTITUTE FOR GLASS.



HAVING succeeded in producing a Ball for professional and amateur use at the trap, we offer the same with the following recommendations, viz: In breakage, the equal and superior to any glass; Uniformity, being of an exact uniform thickness of 1-20th of an inch, is superior to any blown material; Durability, is not affected by their solubility; Residuum, can be used anywhere, and on finest lawns, leaving neither injurious or unsightly refuse. Packed in barrels by a device peculiar to us, we guarantee against breakage in shipment. For particulars see circulars. Price, $2 per 100. All orders addressed to dealers, or **A. B. KAY & CO.**, Newark, N. J., Manufacturers of Buck and Heavy Drop Shot, Cartridges for Long-Range, viz.: Deer, Duck, and Geese, $3 50 per 100; also, the Chip or Expansive Concentrator, $1 25 per 100. A box of 50 sent on receipt of 75 cents by mail.

Maynard Creedmoor Rifle

THE MAYNARD AHEAD!

The following Targets were made by Prof. Chas. E. Dwight of Wheeling, West Va., on Bisley, August 19th and 20th, 1878, with the *Improved Long Range Rifle*, and are the MAXIMUM RECORD (considering number of shots, distance and position) that has ever been made in the annual competition for positions on the American team for 1878; and were offered to the United States, and were shot under the rules of the N. R. A. Fall in rifle shooting at either distance. These scores were all witnessed and sworn to by Adjt. Gen. Sweeney, *Wheeling Register* Rifle Club, Wheeling, West Va.

The MAYNARD Arms are the most perfect in workmanship as well as accuracy, of any arms for rifle shooting, particular attention being paid to the fine shooting as well as the mechanical qualities of the arms. The full particulars and price list, address

THE CARVER TARGET BALL.

[CAVEAT FILED.]

GREENVILLE, Pa., May 26, 1879.

DEAR SIR:—We take pleasure in notifying all admirers of Target and Ball Shooting that we have introduced a COMPOSITION TARGET BALL for Trap Shooting that is perfect in every particular. It has been thoroughly tested by many of the leading Sportsmen, and pronounced by all as the only perfect and unobjectionable Target Ball in existence. This Ball is very uniform in weight and standard size, and when broken leaves no *debris*, but will EVAPORATE in five days and acts as a FERTILIZER. They can be used on Lawns, Gardens, Fields or Parks, thereby doing away with the danger and annoyance consequent in using Glass Balls. We are now prepared to fill orders. Drafts or P. O. Order must accompany all orders. Organized clubs are invited to send for Sample Box, (25 balls) and Circular free.

J. H. WAUGH, Inventor

Ammunition.

Laflin & Rand Powder Co.,

No. 26 Murray Street, N. Y.,
Sole Proprietors and Manufacturers of

ORANGE LIGHTNING POWDER.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers are specially recommended for breech-loading guns.

ORANGE DUCKING POWDER.

For water-fowl, strong and clean. No. 1 to 5, in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

ORANGE RIFLE POWDER.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. BOGARDUS, the "Champion Wing Shot of the World."

Blasting Powder and Electrical Blasting Apparatus.

Military Powder
of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood-cut, sent free on application to the above address.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING,"

FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridges, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 50 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,

88 WALL STREET, NEW YORK.

A GOOD PLAN

The most profitable way of dealing in stocks is by combining many orders and co-operating them as a whole, dividing profits *pro rata* among shareholders, according to the market, monthly. Each customer thus secures all the advantages of immense capital and experienced skill, and can use any amount, from $10 to $10,000, or more, with equal proportionate success. "New York Stock Reporter" and new circular mailed free. Full information for any one to opperate successfully. Lawrence & Co., 57 Exchange Place, N. Y.

MOLLER'S NORWEGIAN COD-LIVER OIL

Is perfectly pure. Pronounced the best by the highest medical authorities in the world. Given highest award at 12 World's Expositions, and at Paris, 1878. Sold by Druggists. **W. H. Schieffelin & Co., N.Y.**

PURE TIN-COATED AND BURNISHED

DROP AND BUCK SHOT.

American Standard--Eagle Brand.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM:— NEW YORK, Jan. 13, 1879.

HAVING been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

GLASS.

Patented December 3, 1878.

CURTAINS, SHADES, AND BLINDS

Dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Public Buildings, Churches, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of five styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of **$1.00.**

Agents Apply to **L. Lum Smith,** Patentee & M'f'r, 717 SANSOM ST., PHILADELPHIA, Pa. (Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald:*

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

The Largest, Spiciest, and only REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

by over 200 responsible advertisers in this month's issue of the *Agents' Herald*. Grand outfit, including circulars, terms, and a beautiful 10x14 engraving of the *Smithograph*, sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's *Agents' Herald*, all for 10 cents. Yearly Subscription, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste, AGENTS' PUBLISHING CO., Phila., Pa.

SEPTEMBER.

HUNTSMAN awake! for the light frost gleams
Through the rosy mist, in the dawning beams;
And the noisy coot and the answering rail
Are heard afar from the golden swale.

While the mallard quacks, in the fallen grain,
To his greedy mate, as she calls again,
And the dun grouse, proud as an Indian king,
Shakes the diamond dew from his mottled wing.

The sweet voiced quail, from the stubble glebe,
Replies to the laugh of the distant grebe;
And the gaudy wood-ducks' plaintive cry
Is the signal note for the teal to fly.

Then up and awake, for the coming breeze
Has kissed the lips of the trembling seas;
And arouse and away, with a hunter's zest,
Ere the morning sunbeams shame thy rest.

For list! 'tis the pheasant's rolling drum,
On the old beach log, by the murmuring rill,
Where the red trout leaps when the roses come,
And the spotted fawn lies scentless and still.

And staunch old Bess, on her kennel-chain,
Has snuffed the air with her dainty nose,
And whines for a range on the lowland plain,
Where the snipe lie close when the south wind blows.

The squirrel too, from her covert now,
With a bold, free leap, in the startled wood,
Has scared from their roost on the breaking bough,
A mighty flock of the pigeons brood.

And away they sweep to the azure dome
To join, in their long and restless flight,
The clamoring geese from their arctic home,
Or the swan in her robe of angel white.

And all the earth's glad, jubilant throng
Rejoice, for the task of the year is done;
And Heaven above reechoes the song
Of a labor passed and a triumph won.

Then huntsman wake! for the winter blast
Will whiten the bier of the autumn dead;
And the snows of thy life will come, at last,
When all of its brightest hours have fled.

R. W. H.

For Forest and Stream and Rod and Gun.

Wing Shooting in France.

THE game bird *par excellence* of France, and the one affording the most pleasure to the sportsmen, is the *perdrix grise*, or gray partridge. The opening day varies, but they may be shot on and after September 1st, which is generally made a holiday by sportsmen, albeit not a legal one.

These birds are large, swift of wing, and lie well to a dog—as well, if not better, than our common quail. They are found principally in wheat and buckwheat stubble, and when disturbed are apt to seek seclusion and safety among the vineyards, where, indeed, they are perfectly safe, since no one with less "cheek" than a book or lightning-rod agent would think of pursuing them, at the same time running the risk of destroying some worthy man's harvest.

The opening day of '78 was the 1st of September, and I found myself with a pleasant party among the first to take advantage of it. The evening of the 31st of August found us domiciled in a farmhouse in the south of France, and preparing for the next day, loading cartridges and cleaning guns being the principal occupations. Old Jacques Dufête, our host, himself an ardent sportsman, was relating to us his past experiences and promising us good sport on the next day, in the meanwhile raising our hopes to the highest pitch of expectation with his glowing accounts of the number of partridges. "Messieurs," said he, "those of you who are not ready at four o'clock to-morrow morning remain at home." The dread of such a misfortune was enough. Suffice it to say we were all on time.

Jacques, with his gun and dogs, greeted us as we sleepily tumbled down stairs in the early grey of the morning. Which were the most remarkable, the dogs or the gun, would have been difficult to say. The gun was a relic handed down in the family for ages, and as for the dogs, one unacquainted with the duration of a dog's life would have imagined them equally old. Many a time that day I longed for some of my own setters at home in America. Almost every bird was flushed, such a thing as pointing the birds being very rare. In consequence of this little disagreeable peculiarity of the dogs the shooting was very wild. Still, we managed between us to kill something like thirty birds. Had we had any good dogs this number would have been materially increased. There are in France but few sportsmen who seem to know what a really good dog is. Can it be that sport is not one of the inbred attributes of the Gallic race. Who ever heard of a dog show or field trial in France? And yet, although much has been said in opposition to these exhibitions, it cannot but be confessed that they have done wonders for the breeding of dogs both in England and America. At any rate, both these countries are so far superior to France in their breeding of hunting dogs as to be almost incomparable.

But to return to the subject. The first birds we found were flushed in an old buckwheat stubble situated on a side-hill between two pieces of woods, thick with undergrowth and covered with a reed-like weed that is very abundant in some parts of France. When the birds got up we were not near enough to do any execution, so after a few "*Sacrés chiens!*" which greeted the performance of the dogs, we marked them down in the woods and proceeded. But by this time thoroughly disgusted with the dogs, which from politeness alone we will call setters, "though to all appearances they had as much setter blood in them as Mark Twain's jumping frog," I determined to walk them up myself, feeling confident that in this way I would be more successful. While the others were following the dogs I set off in another direction, where I had marked a pair of birds. The event proved my wisdom, for I managed to bag this pair, while the rest of the party were in vain pursuit of the dogs, each one striving to keep as near them as possible, knowing by experience that that was the only way to get a shot. These birds seem to breed twice. I judge so from the fact that several times we put up coveys wherein were the old birds and grown young ones and, besides, several smaller birds scarcely able to fly, and too young to shoot. It seems a remarkable fact that the old pair should raise one brood, and that they should all have remained together while a second brood was raised. I should like to hear of a similar experience in this country.

There is a way of shooting these birds in France, indulged in to a great extent by so-called sportsmen. I mean *torch hunting* at night. A more pernicious and destructive practice it would be hard to find. The *modus operandi* is as follows: A covey having been discovered in a field, the farmer—for they are the ones most addicted to this kind of sport(?)—goes to work to build a small hiding-place out of limbs and twigs, covering it over with leaves and soil, so as to make it as inconspicuous as possible. Choosing a bright night, he repairs to the field, and concealing himself in his house awaits the arrival of the birds, which is indicated to him by the little chirping noise which they give when running together for the night. With his gun by his side he watches and waits, and he may even smoke his pipe without fear of frightening the partridges. When he has good reasons to suspect that the birds are around him he deliberately lights his torch, and by waving it to and fro attracts the attention of the birds, which approach him, seemingly fascinated by the glare of his torch. When they have approached near enough he shoots, and very frequently bags almost the entire covey. He never gets another shot. Once fired at in this way they forsake their former roosting-place, never to return.

This style of hunting, called "*La chasse au feu*," is the *bete noir* of all true lovers of sport in France, and much has been done to stop it. The fact that it is against the law only lends an additional zest to the amusement. However, it is certainly a most barbarous practice, and would long ago have exterminated the partridges were they not protected, at least to some extent, by the shortness of the open season. The farmers argue that they might just as well have the birds as anyone, and as they shoot to sell, they go about it in the manner best adapted to obtain the greatest number with the least expenditure of powder and shot. As these *perdrix grises* are worth from five to seven francs, or from $1.00 to $1.50 per pair, it is a great temptation to shoot them.

In the course of my hunting I have often come upon a piece of ground admirably situated for partridges, and have been surprised to find no birds. The mystery was, however, generally cleared up by the appearance of one of these little houses, and surprise gives way to indignation as you kick over the house (a thing all sportsmen would naturally do), and recognize the fact that the birds are gone the way of all game—either shot or driven away.

It was too early in the season for this kind of hunting when we were out, and consequently we found a considerable number of birds. Had we been a month later the place, no doubt, would have been entirely depleted.

I should much like to see this bird imported into America, and should watch its progress with great interest, having no doubt of the result. They would breed well and prove a great addition to the game birds of the United States.

New York, Aug. 15th.

For Forest and Stream and Rod and Gun

HALLOCK:

THE COUNTY SEAT OF KITTSON COUNTY, MINN.

Dear Mr. Editor:—Inclosed please find a map of the town that boasts your name. This drawing is a true representation in every respect and will give you a tolerably clear idea about the looks of the place. You will notice that a water-course of no mean proportions (the South Branch of Two Rivers) meanders its sinuous course along the eastern and northern boundary, forming several islands and peninsulas, with twists and turns innumerable. The town-site itself is prairie, but on the other side of the stream, down to the water's edge, is a heavy growth of primeval forest, affording shade in summer and shelter and fuel in winter time. Through the southwestern part of the town passes the St. Paul, Minneapolis and Manitoba Railroad.

Hallock is the county seat of Kittson County, which occupies the northwestern corner of Minnesota. It is bounded on the north by the Canadian Province of Manitoba, on the east by the Red River of the North, on the south by Marshall County, and on the west by that great unexplored wilderness which in the north part of the State extends all the way to Lake Superior. The topographical features of this county do not materially differ from those of the Red River Valley in general—an even, smooth, flat prairie, with a soil of unsurpassed richness. It is abundantly watered by Two Rivers and its numerous tributaries, which, ultimately united into one stream, empties its waters into Red River. The South Fork is the largest of these water courses and has plenty of fish—pickerel, pike, black bass, catfish and several other varieties.

As far as nature can make it Hallock is a pretty place, to say the least. As yet, only a fine, promising baby, to be sure; but such I take it, was once the case with every Hallock from time immemorial. For an infant of two months' existence it is uncommonly strong, vigorous and thrifty, owing to the tender care and watchful nursing it receives from the following sponsors: Peter Daly, Esq., who in his person unites the offices of Postmaster, Register of Deeds, Notary Public and mine host of the City Hotel; Thomas Newcomb, who represents the commercial interests of the town; Capt. H. Eastrom, County Auditor; Wenzel Newes, County Assessor and lumber-dealer; Sidney F. Austin, County Surveyor; Mr. Stack, who keeps for sale bottled lager and segars, and knows how to prepare lemonade "with a stick" in a way most grateful to the returning hunter or land explorer; H. Brown, railway agent, telegraph operator and representative of the American Express Company. Nearly all these gentlemen have their business houses on Pacific avenue. In the suburbs, their several residences surrounded by "ample grounds," are located Messrs. Robert Thompson and E. W. Jadis, the County Commissioners; O'Connel, McLeod, Hall, Eric, Norland. These are the earliest pioneers of Hallock, the starters of the embryo settlement—

"Genus unde Latinum
Albanique patres, et altæ mœnia Romæ,"

and I take pleasure in giving their names here as reference for the future historian.

Our infant Hallock is so far very strong and healthy. It has nothing to fear from the measles, whooping-cough, diphtheria, or other maladies to which infantile life is heir. But other dangers may threaten. Whether it will grow up to vigorous manhood and thus realize the expectations of its early guardians, or share the fate of so many other Western paper-towns, time only will tell. *Qui viva verra.* It has this much in its favor, however, that it is located in the geographical center of what is destined to be one of the richest farming districts in the whole Northwest, and has first-rate railroad facilities from the start.

The name given to the place we think appropriate. For here is "*Forest and Stream*"—here is the most ample opportunity for the use of "*Rod and Gun.*" Here you will find one of the greatest game resorts on this continent and stocked with a greater variety of animals and birds, objects for the hunter's pursuit, than can be found anywhere else within a single county. Or tell me, if you can, of another region where the moose, elk, cariboo, deer, bear and the large northern hare, the sharp-tailed and the ruffed grouse, woodcock, snipe and curlew, with ducks and geese by the thousand, may be found within a reasonable distance, and such a place reached, with all the comforts of sleeping and palace cars, within four days journey from the City of New York.

HOW TO GET THERE.

If coming from the East or South, find your way, the best you can, to Chicago. There by all means take the Chicago and Northwestern Road to El Ray, and thence the Chicago, St. Paul and Minneapolis Road to the capital of Minnesota. By my own experience I can vouch that on this line of railroad yourself and your dogs and other belongings will be well taken care of. Landed in St. Paul it may be worth your while to rest a few days, and in the meantime take a look at the sister cities of St. Paul and Minneapolis and notice the young and vigorous life there developing. Nor will you regret to make short

visits to the enchanting lakes in the vicinity—Como, Elmo, White Bear and Minnetonka, now thronged by thousands of tourists in search of health and recreation. Finally, you must not forget to give a glance to the falls of the "laughing waters" (Minnehaha) and the hoary battlements of old Fort Snelling.

Having duly seen and enjoyed all this, being rested and recreated to your heart's content, and feeling that peculiar itching in your trigger-finger with which we old hunters are so familiar—being thus in mind and body, I say, take the St. Paul, Minneapolis and Manitoba Railway. This is the St. Paul and Pacific under a new name, but with the old story of which we have so many examples in the West and elsewhere. Enterprising and patriotic men project a line of railroad through a wilderness in order to draw immigration. The money is borrowed and the road built, but at first hardly pays running expenses, much less interest on the bonds. Foreclosure proceedings follow, and the road falls into the hands of the bondholders. In the case in question, after years of vexatious litigation, the transfer was made by amicable settlement. A new company was formed under the above name and with the following strong team at the helm: George Stephen, of the Bank of Montreal, President; Norman W. Kittson, of St. Paul, Minnesota's earliest pioneer, Vice-President, and James J. Hill, our young and wide-awake business man, General Manager. Such is the story in a nutshell. *Le Roi est mort. Vive le Roi!*

The train leaves St. Paul 5 o'clock P.M. Daybreak next morning will find you in the valley of the Red River of the North, and the whole of that day you will pass along through this famous valley. There is nothing picturesque about it. Hour after hour you are carried over a smooth, flat prairie, here and there interrupted by cultivated fields or narrow belts of timber, bordering small tributaries to the main stream. But you travel over the American "valley of the Nile," one of the richest spots on this continent and destined in a not very distant future to send out one hundred million bushels of wheat to feed the starving multitudes of the old world. And do not think there is any exaggeration in this. One single farmer raises this year 400,000 bushels No. 1 wheat, and still this valley is hardly yet touched by the plow. There is room for all who may wish to come. J. S.

For Forest and Stream and Rod and Gun.

DOWN SUGAR CKEEK.

SEVERAL days previous to the 4th of July, 187—, we had organized a small party, consisting of Dr. B., Wm. C., Ben B. and myself, to take a fishing excursion down Sugar Creek, in Parke County, Ind. But by the time our arrangements were completed a heavy rain set in and prevented our starting until 12 M. on the 3d, when the rain ceased and the sun drove away the mists. We then loaded our guns, fishing tackle, fish-box and camp equipage on a Mr. C's wagon, he having agreed to haul our boat and selves to our destination. We then proceeded to the Wabash River, at Reid's Ferry, where we backed the wagon into the river and ran the boat on the running-gears of the wagon. We then put our traps into the boat, crossed the river, and started for Bryant's Ford, on Sugar Creek, some twenty-five miles from the mouth of the creek. We drove along as rapidly as the muddy condition of the road would permit, until after dark, when we drove up to a farm barn, about four miles from the Ford. We sent the Doctor to the house, as he was the talking man of the party, to secure permission to occupy the barn for the night. Doc returned and said that "the old gentleman was not at home." We then sent him back to secure the desired permission from the women and to get them to make us some coffee; but while he was there the old gent came home with a load of salt. He said we could occupy the barn, but we must help him unload the salt, which we cheerfully did; and then, having received our coffee, we repaired to the barn for supper and lodging. After eating a hearty supper from our mess-box, we spread our blankets on the bare floor and retired. We all enjoyed the shake-down splendidly, until we ceased talking and all became quiet, and the Doc had got asleep; then the rats came out. And such swarms of rats! And such squeaking and running over the floor! It was frightful. And finally a large rat jumped on the Doc's face. He sprang up with a yell equalled only by a Sioux Indian in his war paint. We had a hearty laugh at his expense. In the morning we were up before daylight, and hitching up our team we started for the Ford, where we arrived about 7 o'clock. We stopped on a gravel bar, and while part of the party unloaded the traps and boat, the rest built a fire and prepared breakfast, which consisted of chicken, young rabbits (that we had shot the evening before), biscuits, butter, jelly, cookies and good strong coffee, and to which we did ample justice. After breakfast Mr. C. started home with his team, and we launched our boat and rowed up the creek a mile, where we found a high, rocky cliff, with large piles of rock in the creek. We concluded to go into camp here and try for bass. We obtained some nice fresh minnows, and by noon we had a fine string of the beauties, which we put into our fish-box—made of wood and wire screen, and towed behind our boat—and so kept them alive and fresh. We had fish for dinner, and after resting through the heat of the day, we caught another small string of bass, and we were having a splendid time. But toward evening I discovered that "there is no rose without a thorn." An old, miserable, decayed tooth began to ache, and I could not eat any supper. That night we slept on a sand bar, under a cottonwood, and again the Doc was destined to be disturbed.

About midnight, I was lying awake nursing my tooth, when a large owl lit in the top of the tree over our heads, and uttered the usual "Hoo-hoo-to-hoo!" The Doc sprang up into a sitting position with "Ho! what's that?" And again we had the joke on him. At daylight I told Doc I could not stand the toothache any longer—to get his pullicans (he having his dental instruments with him). I sat down astride of a log, and Doc laid my head on his knee. A twist and a pull and the tooth was out. I looked up, and on the opposite side of the creek, on a cliff a hundred feet high, stood a man that lived close by, watching the operation with eyes and mouth open to their fullest extent. I managed to eat a little breakfast, and then after C. and Doc had procured more fresh minnows we resumed our fishing, which lasted until ten o'clock, adding several more fine bass to our box. We then loaded our camp equipage into the boat, and started down the creek for the twenty-five mile ride, singing "Pull, sailors, pull for the shore." We caught a few more bass during the four-mile run to the Narrows, which is a long, deep, narrow stretch of water, with high, solid sandstone banks on both sides of the creek and spanned by a single span of a covered wagon bridge. Many places the water has worn away the rock until it forms a high overhanging shelf, under which we moored our boat in the shade and fished out in the stream. We rested here about two hours during the heat of the day. From the Narrows we ran to a ravine called Turkey Run, passing some beautiful scenery on the way, consisting of high, towering rocky cliffs, some perpendicular, others gradually sloping back from the water, all covered with hemlock, cedar, oak and vines. Upon arriving at the mouth of Turkey Run we tied up and explored it, and found it a large, winding ravine, about 200 feet wide, and running back about one-half mile, with a spring branch running down the bottom. The sides were perpendicular sandstone rock, 25 to 100 feet high. Many places on the face of the rocks are covered with names, cut into them by parties picknicking on the table-land above the ravine, which is reached by a single-span covered wagon bridge. After spending a pleasant hour and a half here we proceeded on our trip. That night we camped on a large flat rock that extended out into the creek. After eating supper C. and I put up the tent, while Doc and B. went to a neighboring wheat field and "borrowed" a shock of wheat, upon which we made a capital bed, and on which we slept soundly. At break of day we were up, and while C. and I packed up the kit, Doc and B. carried back their borrowed wheat to the field and shocked it up again. We had a splendid run during the cool of the morning, and by nine o'clock we arrived at Rockport Mill, where we met a party preparing to start home that had been fishing at the dam for a few days, but they had not had the success that we did.

A kind young farmer hitched his team to our boat and dragged it around the dam. We then again embarked, and, while running about three feet from a steep bank, a large fine striped four-pound bass attempted to leap over the boat into the water beyond; but not making a success of it, it fell into the boat. The Doc grabbed it with his hands and saved it. It was the finest one we had caught.

Arriving at the mouth of the creek on the Wabash at noon, we stopped and cooked our last fish, and after resting two hours we started for a hard two-mile pull up the river to Reid's Ferry, our starting-point, where we arrived at four o'clock, July 6th. The ferryman kindly hitched up his team and hauled ourselves and equipage home. So ended a very pleasant trip, which we hope to repeat at some future time. R. E. S.

GROUSE HUNTING IN MINNESOTA.

Editor Forest and Stream:—

The long looked and wished for fifteenth of August has arrived, or rather the afternoon of the fourteenth, and one of the best parties that ever joined hands on a hunting excursion are getting their guns and traps together preparatory to getting on the hunting ground, that evening for an early shot at the birds in the morning The party is composed of Dick Richards, our driver, a thorough sportsman and wit, our chief of police, T. Woodward, disrespectfully called by the rest of the party, "Old Baldy," Dan Chamberlain, a young lawyer who has just purchased a fine new breech-loader, and never loses an opportunity of cleaning and fussing over it, and last of all, your humble servant; all of us good shots and jolly fellows, except possibly, the last mentioned. After getting all the necessaries in the wagon, not forgetting the jug to carry water for the dogs, you know, we make a brave start. That very necessary auxiliary to a hunt—a moderate rain—accompanies us. When about three miles out of town the dogs of war are let loose, and in less than five minutes we are among the birds. The atmosphere is heavy and not a breath of wind is stirring. The birds lie so close that it is almost impossible for the dogs to find them. Yours truly is trying to pacify the horses. There rises a covey of birds about twenty rods to the left, and coming directly towards us. Baldy blazes away at them and hits us. We raise our voice and tell him gently to be more careful next time. The words are scarcely out of our mouth when we get the other barrel. We expostulate more gently than before, but no matter, he got three birds. When our party leaves that field we have thirteen fine birds. We soon put up at a farm house, and after the customary jokes retire for the night. The next morning we are out bright and early, but the pot-hunters are ahead of us, and we are obliged to return home with only thirty-five birds. While coming in a seeker after information asked us what we got. "Got back," promptly answered Dick, and that is all the information the seeker got.

About twenty hunting parties left our town on the fifteenth, and each bagged from twenty to fifty birds. The grouse shooting here is splendid during the entire season. Woodcock shooting on the bottoms can't be beat, a bag of twenty being common for one hunter in a forenoon. E. H. S.

Hastings, Minnesota, Aug. 19th.

Fish Culture.

SALMON IN THE CONNECTICUT RIVER.

THE history of American fish culture is nowhere more aptly illustrated than in the restoration of salmon to the waters of the Connecticut River. We have here the three stages of primitive abundance, subsequent depletion and artificial restocking.

When the English settlers first came to New England they found in the Connecticut and its tributaries great numbers of fine salmon. The fish penetrated to the head waters and spawned in Israel's River and the Upper and Lower Ammonoosuck. Down to the last century salmon were caught in the Connecticut and sold for fifty cents each. But in 1798 a high dam was erected just below Miller's River, which so effectually shut the fish away from their spawning grounds, that within a dozen years they were almost exterminated. It was not until more than half a century later, in 1869, that the first lot of salmon fry—two thousand—were artificially introduced into the river. In 1870, 30,000 more were planted; in 1873, a still further supply of 150,000; in 1874, 458,000, besides 160,000 put in by Vermont, 271,000 by Massachusetts, and 300,000 by New Hampshire. In the two successive years this supply was further increased by plants of 500,000 and 300,000, making the total for the last four years about two millions.

But the labors of the Commissioners had been by no means confined simply to the planting of fry. Not less important than this part of their work was the providing suitable fishways over the dams, and here it was necessary to carry through tedious law suits, compelling the manufacturers to furnish a passage for the fish over their water works.

In 1874 and 1875, the first evidences of success were seen in the Farmington River, where smelts were seen and caught in the vicinity of the spot where the fry had been planted. In the following year, three fine fish were reported as caught, and a dozen more in 1877. Finally in 1878 the salmon in great numbers began, towards the end of April, to enter the river, and were caught at various points from its mouth to the Holyoke Dam. Before the 11th of May, one hundred had been captured. On the 7th of June, a fifteen pound fish was captured, and on the 11th, a "twenty pounder" was netted; the largest recorded by the Commissioners was one of 22 lbs., 8 oz., caught at Chester. The total number of salmon caught during the season may be estimated at 500. These returns naturally gave great satisfaction to the Connecticut State Fish Commissioners, who had been working nearly ten years for such a result. The successful culture of salmon in the Connecticut was thereby demonstrated as an assured fact. With proper legislation and a moderate expenditure each year for artificial spawning, supplementary to the natural increase, there exists no good reason why the salmon of the Connecticut should not always furnish cheap and desirable food. The necessary legal enactments, which would insure temporary protection to the fish, have been overruled by the unwise efforts of the fishermen, who stolidly maintained a skepticism of the utility of the Commissioners' efforts. Now that artificial propagation has proved effective, these same fishermen evince a more sensible regard for protective measures, although they still embarrass the would-be protectionists and sadly hamper their work. The inefficient and unfair legislation of Connecticut in regard to protecting the fishing industries of her sister States has long been a reproach, which the Commissioners have been as yet powerless to remove. The merits of the case have before this been referred to in our columns.

From the Thirteenth Annual Report of the Fish Commissioners, now before us, we learn that for various reasons, but chiefly for lack of suitable appropriation, the artificial hatching of shad at Holyoke has been discontinued, and a consequent decrease in the catch may be looked for.

The work of the State in the culture of land-locked salmon has already been detailed in this journal by Com. Wil. H. Hudson.

The report closes with a plea to the friends of fish culture and game protection to secure the appointment in their respective towns of efficient and responsible wardens, and then to themselves "boldly assume the odium of uncouraging and sustaing the wardens in their disagreeable duty of enforcing the law;" a consummation devoutly to be longed for. Fish culture and fish protection must go hand in hand. The man who takes fresh salmon from the stream, when the law says no salmon shall be caught, must be put on a level with the man who surreptitiously takes pickled salmon from a grocery store.

McDONALD FISH-WAY.—At last we have a cheap and practicable fish-way, which it is altogether probable will take precedence of all others. It is known as the McDonald System of Fish-Ways, and has been adopted by the Board of Public Works of Virginia for future use in that State. The Lynchburg (Va.) *News* says of it:—

"We are indebted to the courtesy of Colonel McDonald, the distinguished Fish Commissioner of this State, for an opportunity of examining a model of the ingenious fish-way invented by him. We saw the water flow down this way at an angle of about thirty degrees, and the current was even *slower* at the bottom than at the top, nowhere being sufficient to hinder the weakest fish from easily passing up it. The important features of the McDonald fish-ways are that they require not more than one-half the quantity of water of any others in use; that they cost only only about one-sixth to one-tenth as much as the others, are simpler in their construction and less liable to get out of order, and above all are more efficient in their operations. We hope the day is not distant when one of these "ways" will be provided for every dam in the State, so that fish may have free and unobstructed access to their spawning grounds. By this means alone will our streams become what they ought to be, an ever failing source of profit and pleasure. The adoption of the McDonald Fish-Way by the Board of Public Works, was but a just acknowledgement of the merits of a Virginia invention."

SOME TROUT QUESTIONS.

Bloomsbury, N. J., Aug. 12th.—Mr. Editor:—We were out fishing in Pike County during the last week in July, but the trout would not bite. The Saw Creek was so very low that the fish were only found in the deep pools, and would seldom notice any bait, natural or artificial. We found in one's stomach a small stone-crab; in another's a large green worm—we did not know what to think of it—when in nearly every pool we counted scores of fine trout, and they would notice no kind of fly or bait. Could they have been spawning, or was it owing to the low water? The little brooks running into Saw Creek were alive with trout, and from Red Rock we caught some very fine ones. Every run is full, and it will be a long time before Saw Creek will become as our streams. The fishing here is very poor, and we want to stock our stream (Muscanetcong) as soon as possible with trout.

P. HULSINER.

We will inform our correspondent that there were several reasons, possibly, why the trout did not bite in the

low-water stream he speaks of. First, the water was too warm and the fish were sick; second, they could easily detect the approach and movements of the angler and were shy; third, they were probably as well satisfied as their appetite required by the wash of food into the holes where they were lying; possibly they were dazed by the glare of the sun if they were exposed without shade.

As to the contents of their stomachs there is nothing strange. for trout are almost omniverous.

We have long sympathized with the anglers in the vicinity of the Muscanetcong, who have seen their favorite stream drained of its trout. As it is a natural stream it would be advisable to stock it with both mature fish and fry. It would be worth while to go to considerable expense to do so, and to keep the river close for two years. Supervisors have power to manage this, and residents will assist them. When the fish are put in, care should be taken to see that they have been made accustomed to the temperature of the water. Many fish die from a too sudden change from one degree of temperature to another. Few breeders are sufficiently informed on this point. Millions of fish, both adults and fry, are lost annually from this cause.

LARGE TWO YEARS TROUT.—*Blacksburg, Va., Aug. 15th.*—In March 1877 I placed several thousand trout in a small stream near this place in which were no fish. About three weeks ago a trout was caught there which weighed one pound. Another has been recently picked up by a gentleman where it had been left in a small pool near an intermittent spring which was fifteen inches long. This appears to be unusual growth for such circumstances.

M. G. ELLZEY.

Natural History.

MIGRATORY QUAIL.—Advices from Messina, under date of June 16th, speak of a rumor that no license will be issued for catching migratory quail for export. The sportsmen of Messina are said to have applied to the Government to stop the netting of the quail, which netting, of course, interferes somewhat with the shooting of the native sportsmen. Later advices (July 17th) run: "Have not as yet heard that any decision has been arrived at as regards withdrawing the licenses for catching the birds, and hope it was merely a rumor."

The decision of this question will be of interest not to Americans alone, but in England also, to which country 100,000 birds were sent from Messina last spring. The rapid increase in the demand for the birds for export has excited the jealousy of those sportsmen in Messina who look forward to the annual arrival of the quail for the most exhilarating sport of the year, and who consequently view the quail-catcher and his nets in much the same light that the partridge-trapper is looked at here. It is to be hoped that no repressive measures will be put in force in that little island until a good stock of the lively migrators shall have been secured to replenish the depleted game preserves of this country.

MIGRATORY QUAIL.—*New Haven, Aug. 16th—Editor Forest and Stream:*—If the note of the migratory quail is as follows, I have found a flock near this city. Three loud, clear notes, with a metallic sound; the first two of equal strength and louder than the third; uttered quickly, and repeated three or four times, thus "Whet-whet-whet, whet-whet-whet, whet-whet-whet."

This morning, while passing along the road to the lighthouse, about half a mile from the city, I heard the above notes coming from two or three birds in a patch of sowed corn by the side of the road. They were uttered very energetically, and in them you could easily recognize the *timbre* of the common quail's voice. I heard the birds running around among the leaves, but could not catch sight of a single one. Judging from the sound, there were anywhere from half a dozen to twenty of them.

I walked through the piece two or three times, hoping to raise the birds and have a look at them, but they skurried along under the bent leaves and skulked too closely. The man who owns the corn had much better success in driving me out of the piece than I did the birds; and, although I had to leave, I shall keep one eye on this locality for some time and report observations.

MARK WEST.

Our correspondent is correct; the notes were undoubtedly those of the migratory quail.

SNAKE AND TOAD.—R. H. Dixon, of Canandaigua, New York, sends us the drawing of a toad which has been partly swallowed by a snake, the head and fore feet protruding from the snake's mouth and the hind legs from a fissure in the snake's throat. Both toad and snake were found dead. The question as to what was the immediate cause of the double fatality, may readily be answered as to the snake, by stating that he was not able to open his mouth sufficiently wide, while the toad kicked through the skin of the throat when it was very much distended, and consequently thin.

A MANTIS SHRIMP.—Mr. Oscar B. Smith, who is spending the summer at Whitestone, brought us the other day a very fine specimen of the *Squilla mantis*, family Squillidæ, taken near that place. Of course, as may be inferred from its name, it bears some resemblance to a shrimp, more, perhaps, than to a lobster. The Squillidæ are usually found about six miles from shore, where the ocean bed is sandy. They are voracious, active and strike freely with their formidable claws, which, with their sharp eyes and threatening attitude, give the creatures the character of diminutive monsters—if there be such things.

HABITS OF THE BEAVER.

CAPE ROUGE, P. Q.

Editor Forest and Stream:—

My last number of the paper came duly to hand. And here let me tell you that a friend of mine is canvassing the city for subscriptions to the FOREST AND STREAM, and the last time I saw him, two days ago, his success was gratifying to me, as I like to see my favorite paper well upheld, both in a literary and money point of view. And some of the items interested me much. Especially the Natural History department, in which I see you mention the habits, etc., of the beaver. There was a time when these interesting little animals must have been very plentiful throughout the whole Province of Ontario, but now they are only to be met with in the back woods, and there only in small numbers. The last that I know of to be found in the vicinity of civilization are, or were four years ago, to be found upon a small stream called the Black Creek, running through a thick swamp in the county of Perth in the center of the western peninsula. The brushwood and undergrowth, for half a mile on each side of this creek was so thick that it was impossible to get to the water, except at one or two points, and these points were runways made by the beaver themselves to go to the dams. Of these latter there were no less than a dozen, some of them small and not very strong, but two or three had stood for years, and what with the growth of the sticks used in making them and the constant additions made year after year, they had come to such a thickness and strength that a gang of men with all the necessary tools would scarcely clear one of them in a month. The largest of the dams was about three hundred feet long, ten or twelve feet high, and over fourteen feet thick, and it backed up the water of a large creek for nearly three miles. The raising of the water by these dams caused it, of course to flow off over the sides of the banks and find its way to the stream by other channels, but these the beaver followed and confined by other dams, and thus they kept up, until the marsh they formed was impassible in anything but a boat, and that only in the main stream. Here they lived in comparative security, as it was almost impossible to catch them, owing to the thick brush, the treacherous nature of the footing, and the depth of the water. Every fall one or two passed in their checks, but these were nearly always shot by the Indians, as they were seldom or never molested by the white men. Their dome-like houses were plentiful enough, and are yet, although now deserted by their busy occupants. They were well built and strong, as I can testify, for did not I and Wm. Ramsey, of happy memory, try our hand at opening one, and gave it up in disgust sometime afterward. Frequently, also, have we pulled down some of the smaller dams in the evening, to find them all sound and strong again at daylight the next morning, but never on any occasion have I been able to find the animal at work, although I have seen them floating motionless on top of the water, after the manner of the muskrat. The smallest motion was sufficient to put an end to this amusement, and in a second a loud blow of the tail upon the water and a few ripples showed that the animal had left for parts unknown. As a sample of what they will cut, I can show any one a tree, the stump of which is yet standing, and which is the largest I have ever seen them try. It is a sound, hard maple, with two trunks from the one root. One trunk is completely cut off, and the other partially so, and neither of these trees are less than eighteen inches in diameter, and one is much larger than the other. It stands at some distance from the water, and when felled would have been troublesome to get there, but I suppose if not disturbed, the animals would have found some means of overcoming the difficulty. I once opened a house and managed to find a litter of young, which we took home, but with all my trouble and attention they died one by one, and so I lost an opportunity of being able to study their habits in confinement. One thing I do know, they are exceedingly clean and neat, and during the month that I managed to keep one of them, his occupation, when not eating or sleeping, seemed to be cleaning himself, which they do somewhat after the manner of a rabbit, but more leisurly and with greater care. They seemed to eat anything in the vegetable line, but their favorite dainty was a piece of fresh birch or sassafras root, and for this they would tug and squabble among themselves until all had a share. Dam building seems to be an instinct with them, as they would take the small pieces of stove wood and any little articles they could carry, and put them across a corner of the room or under a chair, after the manner of the dam; and if supplied with small branches they first eat the bark, if acceptable, and then cut the wood into pieces, and piled them up with tolerable regularity till they had a small wall between them and the rest of the room. After this they would curl up inside and sleep in a bunch together, like young kittens or puppies. They were very amusing, and great were the lamentations of the smaller members of the household when the last one went to the happy hunting grounds. In conclusion, I would say that I do not know if they breed more than once in a season; if not the ones I got must have been caught when quite old, but very small, as they were got late in the season, and were then only the size of a good muskrat. The fur was a grayish brown, as they had not commenced to get on the winter coat, which in this climate is a very rich dark brown, almost black in the centre of the back.

AN. SAUBLE.

IS SKUNK BITE POISONOUS?—*Editor Forest and Stream:*—I have noticed in your interesting columns, at different times, various opinions in regard to the bite of the skunk. Some assert it is dangerous out West, and others that down East it is harmless. I never heard of but one person, and that a woman, who died from the bite. She had a pet skunk, and it bit her in the thumb (served her right). I have also read of persons being bitten, or stung by the tongue, by snakes supposed to be harmless. A man died from the point of the tongue of a little green snake entering the ball of his thumb. I knew a woman who died from a rat bite on the arm, and a boy is said to have died from a wound made by an arrow another boy had just used to kill a garter snake. Do not all these examples (supposing them to be the truth) substantiate the fact that it is rather the condition of the blood of the person [and the temper of the animal—ED.] injured at the time which renders the bites of harmless animals and reptiles poisonous, than any poisonous quality of the saliva, etc.?

I have known men who nearly died from a pin scratch, simply because their system was in a most unhealthy condition.

R. W. H.

SNAKES FROM HORSE-HAIRS.

Editor Forest and Stream:—

It has long been a popular belief that horse-hairs, when placed under favorable circumstances, would veritably transform into snakes, but the results of scientific investigation have long since taught us differently. The *Gordiacea* (hair-worms) are of distinct sexes, and are developed from true ova deposited by the female in long chains either in water or some moist locality. After the young are hatched they work their way into the body of some insect or animal, usually an *orthopterous* or *coleopterous* insect. There they live and grow by imbibing the juices of their host, and when the adult condition has been attained they pass out of the body of the insect, generally near or in some body of water, for the purpose of breeding.

The male differs quite materially in structure from the female, in having the posterior extremity of the body slightly cleft. Moreover, the females are usually paler in color.

These *Gordiacea* during a dry season frequently become dried, stiff, and "horny," and are easily broken; nevertheless the vitality is retained (*i. e.*, if the creature is uninjured), and if immersed in water will imbibe it and shortly become active.

During the past spring I had the opportunity of witnessing a Gordius working its way out of the body of an insect (*Harpalis compar*); was making its exit with the anterior extremity foremost in one direction, and the insect being alive was struggling in the opposite direction; all this occurring in a small pond.

A few years ago I also witnessed a Gordius making its exit from the body of a *Menopoma*, near the vertebral column. Its manner of coming out varied from the above in that its body appeared to form a loop, so that the middle of it was first to appear. Sometimes in spring the hair-worms are found in great numbers of both sexes, twisted and knotted together, and if separated will become entwined again. An instance of this was exhibited by Professor Leidy at the Academy of Natural Sciences a few months ago.

H. E. EVARTS, M.D.

Philadelphia, Aug. 22d.

SHAD IN THE COLUMBIA—*Astoria, Oregon, Aug. 7th, 1879.*—I have read with interest the communication of William Lang, of Portland, Oregon, in regard to the presence of shad in the Columbia River. I have seen two of the three fishes supposed to be shad, have measured and observed them carefully and have eaten one. The three fishes were caught, not "drifting," but in a stationary fish-trap in Baker's Bay on the W. T. side of the river by fisherman in the employ of J. Williams & Co., Tanzy Point Cannery, near Fort Stevens, Oregon. The trap is just inside the bar in brackish water. The first one caught measured 15 inches long. The two others caught, the same weight, a week later than the first, may be described as follows: Length, 11 inches; depth, 2¼ inches; thickness, one-half inch; number, shape and position of fins, shape of tail and outline of fish precisely like picture of shad in Webster's Unabridged Dictionary; color nearly a uniform silver, slightly darker on the back, with a single row of dark spots, very faint, along the median line, the largest in the middle, the size of a B. B. shot. The belly was armed with a sharp sickle-edge, extending from head to tail. The scales were rather large for a fish of that size, being, I should judge, about one-fourth of an inch in diameter, with a few along the belly, most numerous towards the head, of a larger size, nearly a half-inch in diameter. On opening they were found destitute of spawn. The flesh when cooked was about the color of a fresh herring, with no tendency to break into flakes, like a fresh cod, for instance; was full of bones of an almost invisible fineness, and of no pronounced flavor of any kind and would be best described by the word insipid. It is claimed by those who subscribe to the shad theory that these are the young of that fish; that being lost outside the mouth of the Sacramento they drifted north in the ocean current that runs along the coast until meeting the waters of the Columbia they turned in, according to the instinct of that class of fishes. By others it is claimed that they are only a variety of salt water fish that has not been caught before for the reason that salmon fishing has never been carried on so near and in salt water before. Having never seen a shad myself I do not feel competent to express an opinion on the subject; but if Frank Forrester's judgment can be depended on, that "the shad is the most delicate of existing fishes," we shall have to conclude that this is some other and widely different variety. I will say that some time ago I sent a description of these fishes to Mr. Webber, Commissioner of Fisheries for New Hampshire, but have have not yet heard from him.

S.

The fish are most undoubtedly *not* the true shad. (*Alosa sapadissima*).—ED. F. AND S.

SCOTTISH-AMERICAN ATHLETIC CLUB.—*New York, Aug. 24th.*—Handicap games:—100 yards dash: First heat won by J. S. Voorhees, scratch, 12s.; second heat, W. Childs, 8 yards, 11s.; third heat, G. D. Smith, 7 yards, 10⅘s.; fourth heat, T. R. Bourne, 5 yards, 11s.; final heat, 10⅘s. Half mile run; seventeen competitors; J. Randall, 25 yards, 2m. 9⅕s. Two-mile walk; sixteen competitors; J. P. Fox, P. A. G., 1m. 80s., won in 17m. 3⅘s.

—Read Henry C. Squires' advertisement.—[*Adv.*

The Kennel.

HOW MUCH MAY A DOG BE WORTH?—We often hear of fabulous prices asked for dogs, though few persons, we venture to say, stop to consider what may be the basis of their valuation. Of course a dog, horse or cow, is worth what it will earn; and when we hear of a horse being actually sold for $20,000, we immediately go back to his record, and discover him to be a prize winner at the course. His earnings are a basis for his commercial value. A cow may be estimated by her capacity of giving milk, as well as by her breeding capacity; so that if we propose to buy we naturally enter into some calculation as to the number of quarts of milk and pounds of butter she will afford per annum; and we also ascertain the average duration of the natural life of the horse or cow so purchased; and we take into account the risks to which they are exposed. In other words, if we invest large capital, we look for fair interest on our money. We do not propose to furnish well-known statistics here to illustrate our position and statement; they can be had by any one who wishes to buy a cow or a horse.

Now, as to dogs, we are not aware that any such statistics are available; indeed, the capacity of a dog to earn the price paid for him, is comparatively limited. He does not produce food like the cow, yet he enables his master to obtain marketable food by finding it for him and often retrieving or catching it for him; neither does he, like the draught horse, carry burdens, draw vehicles or turn machinery, except to a very limited extent; nor does he afford much material for high wagers, as his competitive merits are tested only in the pit by patrons of a low order. Essentially the dog is more of a luxury than the other domestic animals, because his producing capacities are less. His average age is less than the horse or cow, and his vital risks greater. He is more exposed to accidents, and more liable to be shot or clubbed, because he is less protected by law.

We read of such figures as $50,000 being placed upon pet dogs when exhibited at shows, and $5,000 is no uncommon price. Of course it is understood that these prices are merely prohibitory and signify that the dog is not for sale; yet if the owners of these dogs were interviewed we would probably find that the actual selling figures for their pets would be very high; so high in fact as to be utterly inordinate and unreasonable, as can be shown by what the dog is likely to produce or realize. As an adjunct in shooting, the value of a dog, allowing him to be an excellent field performer, depends very much more on the length of his owner's purse than on his own intrinsic merits, as he might be worth a thousand dollars to a man who could afford to gratify his whims and have the best, while another could not afford to own him at $250. If the killing of game were made a matter of business and the dog were credited with his share, say one-half of the pounds of the birds killed, we would here have an actual value proportionate to the sum realized. Say that a man killed game to the value of $500 in a season, and the dog was credited with one-half of it, or $250, we would have interest on a capital of a little over $3,500, which might be said to represent the value of the dog, were it not that the duration of his life is extremely limited and he is also liable to all sorts of accidents and contingencies which would render his value *nil*. Considering his use for field purposes alone, therefore, we must conclude that a dog's value is just what he will bring in the market, be it more or less, as depends upon the purchaser and his desire to possess him.

Looked upon from another point of view, that of breeding, the dog has a distinct value, which is in proportion to the success of his or her progeny, and as he or she ranks as a celebrity. If a female, the price for which her puppies can be sold regulates, in a measure, her value We have no doubt that there are bitches in this country whose owners realize quite a handsome little income from the sale of puppies. We will say that they have two litters a year, and that of each litter five puppies are saved and sold at $25 each. This would bring in $250. And yet such is the uncertainty of breeding that very probably but few of these bitches would fetch that sum if offered for sale. Celebrated stud dogs have brought the largest prices, and produce the largest incomes. For instance, the highest stud fee paid in this country is $75 to the imported pointer Faust, owned by the St. Louis Kennel Club. Faust, it is said, cost in England $1,250. Mr. Llewellin paid Mr. Brewis $2,500 for the setter Dash II. It is probable that in both of these instances the investments were good ones. Yet how many people would scout the idea of paying such prices.

We have been considering more particularly dogs used for field sports, excluding hounds of various breeds. Immense sums have been paid in England for celebrated greyhounds, but here the purchasers expected to recompense themselves either by stud fees or by winning some of the many rich stakes run for at the numerous coursing meetings in Great Britain. Fox-hounds have also brought very large prices, the value in these cases being represented by the blood of some strain celebrated for speed and stoutness. Probably the nearest approach to a "market value" is that obtained for small pet dogs, such as pugs and black and tan terriers. These being in the hands usually of dealers, have prices affixed to them which also vary with particular specimens, according as they fall short of or approach the standard of perfection. On the whole, a dog's *selling* value may be said to be what some one will pay for him, and, owing to the uncertainties of canine life, it is difficult to estimate accurately his intrinsic worth.

We have said. Now will any reader answer our question, categorically, as first put?

A DOG WORTH HAVING.—This is the kind of pointer we can recommend to such of our readers as propose to emigrate to India or other countries where reptilian monsters are popularly supposed to abound. The Leavenworth (Kansas) *Times* of Aug. 9 says:—

When Mr. W. T. Lockwood, a young man who lives in that part of the suburbs of the city known as Maple Grove went to bed night before last, he as usual left everything open and slept soundly until morning. As is the usual custom, the family sent his favorite dog, Flora, a fine pointer, to the room to wake him. It seems that when she got into the room she found that her master had a bedfellow, and she, after groping around among the bed-clothes, found something she considered game. She, by rubbing her nose over the speaker's face, caused him to awake, and, as soon as she could attract his attention, "pointed" to another part of the bed. Mr. Lockwood knew something was wrong, and immediately sprang out and began to look through the bed. He did not proceed far until he found a young rattlesnake about a year old cosily coiled under the cover. The dog stood watch while the intruder was captured, after which she showed by every means possible that she was glad, and her master fully appreciates that she has just as much sense as anybody.

"THE SETTER"—*Hudson, N. Y., Aug.* 16.—In FOREST AND STREAM I observe advertisement to the effect that a setter by Laverack could be purchased at your office for $3. If the dog is still for sale and is all right and sound please inform me. Please give his age. G. H. O'N.

We would inform our correspondent that "The Setter" is all right and can still be had for the low price of $3. He is well bound and of the right type, is excellent on a "stand" (book) and covers the ground perfectly. He "points" (a moral in dog-breeding) and "retrieves" (errors). In other words, "The Setter" we have for sale is Mr. Laverack's book on the subject—a fact which we supposed any schoolboy would be aware of on reading the advertisement.

PRIZES AT DOG SHOWS.—In a recent issue of the *Fancier's Gazette* we find the following, apropos of certain awards at dog shows. Some of our own judges and committees may find it interesting:—

Some time ago attention was drawn to the undesirability of awarding commendations in champion classes. It was then fairly argued that any dog that had qualified for a champion class was, *prima facie*, a good one, and needed no commendation. Now another startling practice has arisen, namely, awarding equal firsts in the same class. We can understand this being done when two judges officiate and differ, or a variety class has to be judged. But it seems incredible that a pair of dogs can be so nearly equal in merit that a single judge cannot separate them; and an equal first reads very like a vacillating judge in many instances.

In the same journal we find the following sensible remarks:—

Now that the show season is in full swing, scarcely a week passes but we read of disappointed and consequently angry exhibitors refusing a second prize or highly commended card. There is something very ludicrous in the figure a man cuts when he is tearing down the obnoxious honor which is thrust upon his dog, and if the delinquents were only to see themselves as others see them, this absurd practice of "punishing judges" in so childish a manner would disappear. Exhibitors have only themselves to blame if they show under incompetent judges, and if they get tempted into doing so, they had much better refrain from adding to this indiscretion by making themselves the laughing-stock of the show.

LONDON (ONT.) DOG SHOW.

LONDON, *Ont., Aug.*, 1879.

Editor Forest and Stream:—

By mail I send you prize list of the second International Bench Snow of Dogs, to be held in London during the Western Fair.

The committee offer much more liberal prizes than at the last show, and have also increased the number of classes, so that now nearly all breeds of dogs will be represented.

The show promises to be a great success, as many of the most noted dogs from the United States will be exhibited. Entries close 15th September. CHAS. LINCOLN, Supt.

NAME CLAIMED.—Mr. H. R. Bradstreet, of Boston, claims the name of John for his lemon and white Laverack setter dog puppy, whelped October 7th, 1878, out of Felt's imported Daisy, by Waters' Dash, both of Salem—a very promising puppy. If John is already claimed make it John II. The dog is now in training by Col. W. F. Davis, at Kittrell's, North Carolina.

—Dr. H. B. Wygant, of Peekskill, N. Y., claims the name Music for his liver and white ticked cocker spaniel dog pup, purchased from Mr. J. B. Harrington, of Buffalo, N. Y. Bred by Mr. J. H. Whitman, Chicago, Ill. Whelped July 1st, 1879.

—Dr. William Jarvis and Mr. Benjamin F. Clark claim the name of Meg for red Irish bitch whelped April 20th, 1879, by champion Elcho, out of Rose.

NATIONAL AMERICAN KENNEL CLUB.

FIELD TRIAL RULES—FOR AGED POINTERS AND SETTERS.

Rule 1. Managers of field trials must advertise the time and place where the meeting will be held, the date of closing entries, the scale of points and the names of judges, at least thirty days before the trials take place. In the event of any judge or judges failing to act, the competitors shall fill all vacancies, each competitor being entitled to one vote.

Rule 2. Dogs shall be drawn by lot and run in heats, the beaten dogs to be retired (except as hereinafter provided), and the winner to be drawn and run again. The dog winning the final heat in the first series of heats shall be declared the winner of first prize. Then the judges shall select from among the dogs which have been beaten only by the winner of first prize such dogs as they think possess sufficient merit to entitle them to a chance of winning second or third prize, and run them against each other. The winner among these shall then compete with the dog that ran the final heat with the winner of first prize. The winner of this last heat shall be declared the winner of second prize, and his last competitor shall be declared the winner of second prize. The fourth dog in order of merit to be declared by the judges without further running.

Rule 3. When two dogs owned or trained by the same person shall be drawn together, one shall be run only, and he with another dog, which shall be immediately drawn, and the dog left over shall be drawn again. If at the latter end of a trial it be found impossible to avoid running two such dogs together, it may be permitted.

Rule 4. The judges shall order up the dogs as soon as they have determined which is the best, according to the scale of points in Rule 5. The privilege is granted the judges of ordering up any dog or brace of dogs that have not sufficient merit, in their opinion, to get placed, but these may be put down again if there is a possible chance for them to win.

Rule 5. Positive points for merit:—Pointing, 30; pace, 20; backing, 10; style, 7; staunchness, 8; ranging, 5; quartering, 5; obedience and disposition, 10; retrieving, 5; total, 100. Negative points for demerit:—False pointing, 1 to 7; breaking in (each offence), 3; breaking shot (each offence), 5; chasing, or breaking shot and chasing (each offence), 10.

Rule 6. No person except the judges, attendants and reporters will be permitted to accompany the handlers of dogs. Two persons will not be permitted to work one dog or a brace of dogs. If from any cause the handler of a dog or brace of dogs is disabled to such an extent that he cannot shoot, the judges shall appoint a person to shoot for him. The handlers of the two dogs shall go together as if it were a brace of dogs, so that the dogs shall be upon an equality as to ground, opportunities for pointing, &c. No spectators shall be allowed nearer the handlers of dogs than seventy-five yards to the rear. No person shall make any remarks about the judges or dogs in hearing of the judges. Such persons so offending shall be expelled from the ground. Should any handler of dogs annoy the judges after having been ordered to desist, the judges shall order such dogs as he is handling up and out of the race. The privilege is granted the handlers of asking for information or explanation that has a direct bearing upon any point at issue. Pending such question the dogs shall not be under judgment. Dogs afflicted with any contagious disease or bitches in season will not be permitted on the grounds.

Rule 7. Pointing hares, turtles, larks, "stink-birds" or bitterns, or any bird generally considered game, shall not be deemed a false point. A dog making a false point and discovering it to be such without encouragement from his handler shall not be penalized.

INSTRUCTIONS TO JUDGES.

Pointing.—The judges will allow only those dogs the maximum that point all the birds possible for them to point under existing circumstances. A dog to earn the maximum number of points under this head must display a first-class nose and exhibit great judgment in finding and pointing his birds, and make no flushes that a dog with the above qualities would avoid in ordinary hunting. The dogs are to be hunted in all respects as in an ordinary day's shooting. Inexcusable or wilful flushes will detract from a dog's score under this head, but the character of the flush must always be taken into account in estimating the penalty, if any. The judges must not ask the handlers if their dogs are pointing, but must decide for themselves. They shall always consider the nature of the ground, the wind and the birds, and shall not penalize a dog for flushing a bird it would be impossible to point; the penalty for flushes to be graded by the character of the offense. The judges shall not require the handlers to hunt their dogs down wind.

Pace.—The dog that maintains the fastest gait throughout the trial, except when in cover or on game, to receive the full number of points; all others to be graded by him.

Backing.—The maximum only allowed such dogs as stand or drop instantly at sight of another dog on a point, but no dog shall be expected to back unless the dog pointing stands and is motionless. A dog shall not be said to refuse to back unless he sees the dog pointing. To get credit for a back the dog must stop at least ten yards (when practicable) in front of the handler.

Style.—The judges shall consider the dog's grace in ranging and drawing and attitudes in pointing and backing.

Staunchness.—The maximum allowed such dogs as do not advance from their point when on game until ordered on.

Ranging.—The maximum only allowed the dogs that maintain the most killing-range throughout, viz., wide or close as the necessity of the case may require.

Quartering.—The maximum only allowed such dogs as work at right angles with the handler, unless the nature of the ground renders such work impracticable.

Obedience and Disposition.—The maximum only allowed to a dog that works promptly to the gun without noise or severity, and is prompt, cheerful and easily handled.

Retrieving.—To receive the full number of points under this head a dog must go promptly and cheerfully for the bird and deliver it to the handler without mouthing or mutilation.

False Pointing.—The judges shall give a dog ample opportunity to discover whether or not he is on a true

point, and the penalty shall range from 1 to 7 for his acts throughout the heat.

Breaking in—Is when a dog, through improper training or from excitement, leaves his position when the birds rise, whether the gun is fired or not, and starts to break shot or chase, but stops within a few feet of the point from which he started of his own accord or by command.

Breaking Shot—Is when a dog runs in when the gun is fired with the intention of getting the bird, and does not stop at command.

Chasing—Is when a dog follows the birds, either when the gun is fired or not, to an extent to be beyond the control of the handler for the time being.

PUPPY STAKES.

Rule 1. Dogs over eighteen months old shall not be eligible for the puppy stakes. There will be no points allowed for retrieving in this stake. Rules otherwise as above.

BRACE STAKES.

The rules governing the brace stakes shall be the same as used in the all-aged stakes, with the following exceptions: The maximum for ranging shall be 10 instead of 5 and the total 110 instead of 100. The braces, to earn the maximum for quartering, must cross each other systematically and work independently of each other, or one dog must quarter the ground on one side of the handler while the other dog quarters the opposite side, the dogs meeting at or near the centre. Each brace will be run separately (instead of running in heats) and be judged by the scale of points as laid down and explained.

E. C. STERLING, PATRICK HENRY, C. B. WHITFORD, } Committee on Field Trial Rules.

—P. H. Bryson, Esq., of Memphis, Tenn., and E. F. Stoddard, Esq., of Dayton, Ohio, have consented to act as judges for setters and pointers at the St. Louis Dog Show. The judges for the other classes have not yet been selected, but will be duly announced. Many inquiries have been made as to whether dogs that have been hunted will be allowed for want of coat, feather and condition. I am authorized to state that instructions will be given to the judges to make due allowance for the same. The entries close 20th September, and should be made early in order to secure admission, as the space is necessarily limited. CHAS. LINCOLN, Supt.

HYDROPHOBIA—ITS ORIGIN.—*Monro Union Co., N. C., Aug.*, 1879.—*Editor Forest and Stream:*—I saw in one of your back numbers an article from the great protector of animals, Mr. Bergh, of New York, in which he contends that there is no such specific disease as hydrophobia, and that therefore the bite of a dog, sane or mad, does not necessarily infect any person he bites, with the specific disease known as Hydrophobia. On reading this article—a friend gave me the following memorandum which I send you. H. SMITH.

"Mr. Bergh and his learned authorities may be right; but the scientific schools, through all time have been so given to tricks and hobbies that they will bear watching.

"A farmer in Eastern North Carolina, one day saw a beautiful dog trotting along the path by his house; presently a farm-hand came in, and told the farmer that the dog was mad, and had bitten his young boar through the ear, and had also bitten other hogs at a mill, a half a mile off, where a hard sense old negro was miller. The farmer immediately had a pen made and the boar put into it. He then went to the mill where the same dog had bitten a fine blooded sow nursing a dozen or more pigs, and had also bitten several shoats—females not spayed—several months old, all of which ran mad and died in a few days. The farmer then asked the old negro if it was not safest to kill his boar? The old negro said, no; don't kill him, but cut him—(that is, castrate him); for, said he, a cut dog never runs mad. The farmer followed his advice the same day, and the next winter the hog made two hundred pounds of good pork. Some years afterwards, a young physician, without knowing any thing of this old negro's notion, gave it as his opinion that Hydrophobia among dogs was caused chiefly by want of opportunities to gratify their venereal appetites, because it is customary to kill most of the female pups, and to save the males, thereby causing an unnatural disproportion of the sexes among a race of animals highly prolific. He thought this deprivation of their natural gratifications caused the nervous system of dogs to become so radically depraved, that they become mad, perhaps with some disease akin to *virulent erysipelas*, and they could communicate the virus by biting other animals. This is popularly known as hydrophobia, and believed to be a specific disease. These notions are strengthened by the fact that dogs go mad both in winter and summer, the seasons making but little difference in the disease as an epidemic. The evident remedy among dogs, is to alter (castrate) enough males to equalize the sexes, provided the above opinions are correct."

—Mr. Christopher Roache's (Natick, Mass.) pointer bitch Lo Lu whelped July 20th seven puppies, sired by Pete, Jr.

—Mr. A. L. Hawkin's (Media, Pa.) imported Irish setter bitch Juno whelped on the 25th of July ten fine puppies, sired by Mr. F. F. Fassitt's imported Irish setter dog Sport.

—Mr. W. P. Shannon of N.Y. claims the name Gelert for a red Irish setter dog, sired by Bishops Doctor out of Mr. Oscar Purdy's imported bitch Nell.

—The archery score cards and books published by A. S. Brownell, Boston, are the most complete arrangement for archery scoring yet published, and are adapted for recording fully every arrow shot at any of the rounds adopted by the Eastern and National Archery Associations.

In using these books each arrow shot is recorded in its order, be it a hit or miss, the total value of hits at each end shown, and a summary shows the total hits and hits in each color. Each left-hand page is left blank for notes, observations, etc.

Club score books take four American Round scores on each page. For individuals they are one half width, a convenient size for pocket use. They are for sale by all dealers, or will be mailed by the publisher on receipt of price. Individual books, 75 cents, or two for $1. Club books, 600 rounds, $1.50; 1,200 rounds, $2.—[*Adv.*

Oct 15—Seawanhaka Y C Ocean Match, Center Cup.

THE RECENT DISASTERS.

A contemporary, which in its enthusiasm over some lake "dugouts," so far sheered off its course as to counsel the construction of yachts *without ballast at all*, has the the following: "The dangers of yachting by inexperienced navigators have been fearfully illustrated within the last few days. It is noticeable that the disasters recorded are mostly on inland waters, while the large fleets on the seaboard are comparatively exempt." Our contemporary, professing to know something about naval design, ought to be able to assign the correct reason for the annual recurrence of the many disasters to our yacht fleet which send hundreds to a watery grave every season. It is not so much because of inexperienced "navigators," but because we attempt to gain through excessive beam and light draft, qualities which, if sought for in greater depth and more ballast, would secure immunity from danger. The idea that ballast is a detriment to a vessel's performance is the unfounded bugaboo of unread persons, and the idea that yachts can be built without ballast to cope with the sea and show speed, is the crackbrained vision of an unbalanced mind.

ROYAL CANADIAN YACHT CLUB.

All members joining before September 15th will be exempt from paying entrance fee. The annual open regatta has been fixed for September 6th. Classification and prizes: First class, over 10 tons, prizes $150, $75, and $25. Also cup, for deep draft yachts, presented by Mr. Geo. Hawke with a purse of $30 thrown in. Yachts belonging to the R. C. Y. C. will also race for the Prince of Wales Cup, and the deep draft club yachts for the cup presented by the late Commodore, Dr. Hodder. Second class, 5 to 10 tons, prizes, cup presented by Com. A. R. Boswell with $100 added, $60, $30, and $10. Third class, under 5 tons, prizes $30, $15, and $10. A large list of entries is hoped for, but it would seem that a very foolish move on the part of the R. C. Y. C. will keep many of the smaller yachts away from the line. We refer to the rule permitting the shifting of ballast. If the Royal Canadian is bent upon retracing its steps and eager to give a set back to legitimate yacht racing and yacht building on the lakes, or at least in or about Toronto, it could not have adopted a more certain and quicker means than this pernicious rule, which can only cause the substitution of a worthless, expensive, and dangerous class of shingle-bottom sailing machines in place of yachts possessing the advantages of roominess, comfort, safety, seagoing qualities and cheapness. We do not think the R. C. Y. C. is prepared intentionally to aid in the destruction of the honest, wholesome fleets of which the lakes already boast, but are inclined to think that the club has been acting in the dark, unaware of the poison with which it was undermining the future welfare of its own interests, and that the rule concerning shifting ballast was passed at the instigation of a reckless few who care nothing for nor appreciate the noble art of sailing, but whose only ambition is to capture the purse, whether legitimate sport be thereby ruined or not. It is not too late for the club to retrace its fatal step and to redeem itself as an organization which does not propose to be carried away by the ignoble influence of the yachting jockeys and racing gamblers. If the club desires a full understanding of the question, its members are referred to previous issues of this journal, and we may here add, that all clubs of repute in the United States are and have been abolishing this nuisance, the evil being at present confined only to a few clubs of no national significance. The Royal Canadians may also learn a lesson by reviewing the course of British yachtsmen in this matter. Shifting ballast is no longer permitted in English, Irish, or Scotch waters, and yachts which must shift ballast to keep on their legs or to show speed are justly regarded with contempt as mere machines undeserving of being classed as yachts. We regret that the *Toronto Mail*, not comprehending the question, should have given its *quasi* indorsement to such an innovation backwards, by publishing some very foolish diatribe of a correspondent in favor of shifting ballast. But we can safely leave the *Mail* to the considerate care of the *Belleville Intelligencer*, which, we judge from the recent discussion in their columns, is quite able of taking care of the *Mail* and all others on this point. Shifting ballast is condemned by all who have the highest interests of building and sailing at heart as an unmitigated evil and a stupid nuisance, driving our racing community into the construction of the most dangerous and useless of craft, and the Royal Canadian Y. C. ought to know better than to let such a retrograde measure ever go on its books.

NEW YORK YACHT CLUB.

ANNUAL CRUISE—CONTINUED.

After spending the night in Newport harbor at anchor, and waiting for a breeze in the morning, the Commodore signaled the fleet at 10 A. M. Aug. 12th, to go to Beavertail light, and to heave to there and await his starting gun for that point. Schooner *Fleetwing* stole such a long lead on the fleet, that the other schooners of her class immediately made after her, the signal gun not being fired till about five minutes later. The leading yachts passed Nest Island Club in the following order: *Fleetwing, Estelle, Clio, Magic, Vixen, Peerless* and then, after an interval of a mile, the *Wanderer, Madeleine, Nettie, Niantic* and others. At two o'clock the *Tidal Wave*, which was sailing like a witch, came tearing along, having rushed through the second division of the fleet and traversed the long interval between them and the second class schooners far ahead. She then passed in succession *Vixen, Peerless, Clio* and laid herself out for a close race with *Magic*. Behind came the *Wanderer*, who was passing *Rambler, Dauntless, Nettie, Dreadnaught, Intrepid* and *Niantic*. This is the order in which these boats passed the Hen and Chickens lightship. The *Madeleine* had come up just after *Tidal Wave*, and was making a good fight for leading boat. The wind had been free from the start and rather light. After passing the Hen and Chickens the yachts squared away and went wing and wing, spreading out every available foot of canvass. As the wind kept freshening the wonderful little *Magic* increased her speed, and passing *Estelle*, made a close race with *Fleetwing*. Behind the *Vixen*, which was the last boat in the first division, and first sloop in the fleet, came *Wanderer* under a perfect cloud of canvass. She slipped by *Vixen*, and was well on her way to the mouth of the harbor, when the Commodore signalled the yachts to lay to and perform evolution. As it was blowing a young gale by this time almost the entire fleet disregarded the signal. They came into the harbor at racing speed, and as they rounded to, presented a magnificent sight. The *Tidal Wave* and *Magic* carried off the honors of the day, particularly the *Tidal Wave*, as she had a very poor (but a very *fair*) start. She really came in first. The following is the order in which the yachts anchored.

Name.	*H.*	*M.*	*Name.*	*H.*	*M.*
Fleetwing	3	31	Niantic	3	55
Tidal Wave	3	32	Vision	3	56
Magic	3	32	Dreadnaught	3	57
Clio	3	33	Kate	3	58
Estelle	3	33	Phantom	3	58
Madeliene	3	35	Wanderer	3	58
Peerless	3	36	Intrepid	3	58
Vixen	3	45	Psyche	4	12
Dauntless	3	53	Resolute	4	13
Rambler	3	54	Nettle	4	15

It will be seen by these figures what a magnificent race the first seven boats made. It was in some instances hard to decide the precise order in which several boats came in. The shipping in the harbor was gaily decorated with flags in honor of the fleet's arrival, and the large whaling vessels lying in the docks were black with enthusiastic spectators. The cannonading was deafening, and the reception altogether was the most gratifying met with by the club during their cruise. In the evening the yachts were brilliantly illuminated and many of them had fine displays of fireworks. The New Bedford Yacht Club gave a remarkably pleasant reception to the N. Y. Y. C. and its guests.

Next day, Wednesday, Aug. 13th, a most successful regatta took place. The following were the entries: First-class schooners—*Phantom, Tidal Wave*. Second-class schooners—*Clio, Peerless, Azalea*, N. B. Y. C. and *Magic*. First-class sloops—*Vision, Niantic*. Second-class sloops—*Vixen, America, Kate, Mistral*. The course was from Clark's Point to a stakeboat in Kettle Cove on Naushon Island, thence around the Hen and Chickens lightship and back to Clark's Point. The yacht *Nettie* was the judge's boat at the start. A flying start was taken and the yachts got off in the following order: *Vision*, 11.04; *Kate*, 11.06; *Niantic*, 11.07; *Tidal Wave*, 11.07; *Peerless*, 11.07; *Clio*, 11.08; *Azalea*, 11.09; *Mistral*, 11.10; *America*, 11.14; *Magic*, 11.12; *Vixen*, 11.13. The *Phantom* started before the signal, by accident, and her time was not taken at either end of the race, thus preventing the *Tidal Wave* from getting a record. At the very beginning of the race *Magic* carried away her foretopmast. The *Clio* at once ran by *Kate* and *Niantic*, and shortly after passed *Vision*, and was soon ranged with the *Magic*. *Peerless* and *Azalea* followed. The *Niantic* was a little way astern of *Vision* and making a good fight for the lead. The *Vixen* made very short work of her antagonists. She passed, first, *America*, 25 minutes after the start, and soon after, the *Mistral*. The first boat around the stakeboat at Kettle Cove was *Clio* at 12.07. *Peerless* and *Magic* followed at 12.15 close together. Most of the boats made short tacks along the land, thus securing smooth water. *Clio*, however, stood across, and by so doing allowed *Magic* to wind her. In the heavy windward work the finest sailing qualities of the different yachts were brought out. The *Peerless* was well buried to leeward, the water, which boiled up over her house, keeping her in a decidedly ticklish and unpleasant position, for it was blowing very fresh. *Vision*, too, was way down in the water, and her cockpit throughout this tack was afloat. The little *Vixen*, on the other hand, with housed topmast,

was running through the big seas with great ease, her lee scuppers scarcely wet. She passed the big *Kate* early on this course, so disgusting her as to cause her to give up the race and to join those yachts which had already rounded the lightship. The small sloops rounded the Kettle Cove stakeboat in the following order: *Vixen*, 2.39; *America*, 2.34; *Mistral*, 3.08.30. The yachts rounded the Hen and Chickens in the following order and time: *Magic*, 2.4.15; *Tidal Wave*, 2.4.45; *Clio*, 2.14.30; *Peerless*, 2.18.35; *Niantic*, 2.19; *Vision*, 2.20.15; *Vixen*, 2.34; *America*, 2.48; *Mistral*, 3.02½. When the boats squared away for home they ran wing and wing and ballooned out all the canvas they could carry. *Clio* made a gallant struggle for the lead on the run home, but she was too far astern to catch her rival and crossed the line three minutes behind her. The yachts finished as follows:

Name.	*H.*	*M.*	*S.*	*Name.*	*H.*	*M.*	*S.*
Tidal Wave	2	52	00	Vision	3	15	14
Magic	2	58	00	Azalea	3	16	00
Clio	3	08	00	Vixen	3	32	00
Peerless	3	11	00	America	3	51	24
Niantic	3	15	35	Mistral	4	15	41

Thus the *Magic*, *Niantic* and *Vixen* were the winners in their respective classes.

The next day, Aug. 14th, it blew nearly a gale of wind, and was decidedly the big schooners' day. But few of the yachts carried topsails while on the wind. Only fifteen out of the thirty boats started, many being deterred from doing so on account of the heavy weather, and others for various reasons. The *Estelle* had a good lead, and was first to Quick's Hole. Here she had to tack twice in order to get about the buoy, and so was passed by *Dreadnaught* and *Wanderer*. The boats went through in the following order: *Dreadnaught*, *Wanderer*, *Estelle*, *Rambler*, *Phantom*, *Intrepid*, *Niantic*, *Dauntless*, *Clio*, *Madeleine*, *Vixen*, *Nettie*, *Vision*, *Psyche* and *Volante*. *Vision* and *Nettie* soon after passed *Vixen*, and squared away for Oak Bluffs. The yachts arrived there in the following order: *Dreadnaught*, *Rambler*, *Estelle*, *Intrepid*, *Clio*, *Madeleine*, *Niantic*, *Vision*, *Vixen*, *Psyche*, *Volante*. The *Dauntless*, *Wanderer*, *Phantom*, and *Resolute* ran on and anchored in front of the Bluffs. In rounding to at Holmes' Hole *Rambler* carried away her masthead, and this accident put an end to the cruise. The next day the fleet started for Newport, but as they all, with the exception of three, started before the signal, the run is not worthy of mention, excepting the remarkably close and interesting race of the three schooners which started together, the *Dauntless*, *Intrepid*, and *Dreadnaught*. They came in the above named order, passing Fort Adams at 5:25, 5:27, and 5:28. The fleet disbanded that evening at midnight. It was an unqualified success, and the runs were unusually exciting. The *Dreadnaught*, *Tidal Wave*, *Magic*, *Clio*, and *Estelle*, *Niantic*, and *Vixen* carried off the honors in their respective classes. The *Dauntless*, under the command of Rear Commodore Waller, took the place of the flagship after the accident to Rambler, and Mr. Chester Griswold succeeded Mr. G. L. Haight as Fleet Captain. Most of the yachts left Newport Sunday morning, having been storm-bound Saturday by the bad weather. W.

THE ENCHANTRESS.—From the London *Field* we learn that this famous American schooner, one of "Bob" Fish's best productions, now the property of Col. Owen Williams, of England, and flying the burgee of the Royal Yacht Squadron, has again been at her old tricks and astonishing even the experts of the *Field* with her "wonderful bursts of speed" during the match at Cowes, Aug. 5th, for the Queen's Cup. Says the *Field:* "Nothing afloat in British waters could have shown the speed *Enchantress* did. * * * She sprung her luff in a way worthy of the *Sappho*. * * * *Enchantress*, with wind two or three points abaft the beam, was going along as upright as an ice-boat and traveling like one, too. It was the most wonderful piece of sailing we ever saw to see this rapid flight of *Enchantress;* and the only thing to compare it to was the flight of this same *Enchantress* four or five years ago in a match fro n Havre to Southsea. * * * In this run of twelve miles she gained twenty minutes (!) on *Formosa*, and we venture to say that such a performance was never before witnessed in British waters." * * *

Pretty strong testimony this, coming from such good authority, too; but it only confirms the opinion we have all along held of *Enchantress*, that with a fair system of measurement and an open course free from flukes, there is nothing afloat that can beat her unless it be *Sappho* herself. In the race in question the Queen's Cup went to the English schooner *Egeria*, of 156 tons (on time allowance), by the small margin of less than a minute. It must not be overlooked, however, that *Enchantress* was rated at 346 tons by the one-sided pressure of the Yacht Racing Association Rule, while in reality she measures only about 300 tons. Had the match been sailed on actual tonnage in place of a fictitious assumption, the cup would have been captured by the gallant Colonel and his smart American schooner in spite of her late and leewardly start and the splitting of her balloon-jib.

FANCY VS. WATER WITCH—*Editor Forest and Stream:*—Thursday, August 14th, at Nahant, a match race was sailed for $50 a side, between the Cat riga *Fancy*, of the Beverly and Nahasset Y. C's and *Water Witch* of the S. Boston Y. C.; distance, 14 miles. Wind very strong, southwest. Won by *Water Witch*. Courses from judge's yacht off new wharf, Nahant, leaving Winthrop Bar buoy on port hand; the sloop *Alice* of the E. Y. C. at the yacht anchorage at Nahant, on port hand; Winthrop Bar buoy on port hand, to judge's yacht, 14 miles.

From Nahant to Winthrop Bar was a dead beat to windward; the judges, by the kindness of Com. Peabody of the Boston Y. C., occupied the steamer *Adelita* of that club, and followed the racing boats closely over the course. Preparatory signal was blown promptly at two, and the boats crossed the line as follows: *Water Witch*, 2h. 8m. 27s.; *Fancy*, 2h. 9m. 12s. *Fancy* seemed to stand up better than her competitor and to go through the water much faster, though *Water Witch* sailed closer to the wind for at least two-thirds of the beat up. When the boats crossed for the first time, *Fancy* was seen to be ahead; though her metal cutwater, on to which the forestay fastened, was seen to be broken short off. This made it necessary to send a man forward to repair damages, which of course hurt her speed; still she gained steadily and rounded the buoy 2m. 35s. ahead of the *Water Witch*, as follows: *Fancy*, 3h. 14m. 5s.; *Water Witch*, 3h. 16m. 40s. Soon after rounding *Fancy* tried to jibe, but got a heavy puff of wind just at the wrong minute; the result was that the boom jibed but the gaff did not, and the patent jaws of the gaff were broken short off on one side and twisted off on the other. The sail was lowered, and every effort made to repair damages and continue the sail, but it was impossible, and on reaching Nahant, *Fancy* ran into the wharf, leaving the race to *Water Witch*. The latter lowered the sail half way and jibed round the buoy; then set mainsail and spinnaker and ran in very fast, rounding the *Alice* at 3. 48. 12. A very ugly-looking thunder-squall now began to show itself from the northward, and *Water Witch* put in two reefs before starting for her second beat; she rounded the buoy at 5. 2. 50, and started for Nahant; but about a mile from the judges' boat was caught in a calm, caused by the edge of the squall killing the wind, and lay almost motionless for some twenty minutes, when the breeze came up again and she crossed the line at 6. 5. 14, winning the stakes. The judges were, for *Water Witch*, Mr. Wm. Morris, Sec'y of the S. B. Y. C.; *Fancy*, Com. Jeffries of the Beverly Y. C. Referee: Com. Peabody of the Dorchester Y. C. SKYLIGHT.

THE GREENPORT REGATTA—*Shelter Island, Aug. 24th.*—The boat race for the 22d was postponed to the next morning, as the strong west wind was too much for the little craft. The morning of the 23d was very favorable for the start, with a light breeze from the southwest. But three shells took part in the three mile race, the first prize being won by Lee, of Newark, in 28m. 11s. Knoth, of Brooklyn, finished his three miles in 29m. 23s. The third boat, rowed by Ten Eyck, of Peekskill, was swamped on the return, and was picked up by a sail boat. The three prizes for this race were $100, $50, $15—one for each.

But five boats out of fourteen contended in the second race for pair oars. Three prizes—$125, $75, $25. The first prize was won by the Portland boat, 22m. 31½s.; the second by the Godkins, of Boston, in 22m. 32½s.; Faulker, of Charlestown, Mass., 22m. 47½s.; Brawley, 23m. 9½s. The race was witnessed by a large concourse of people, who were greatly pleased with the exciting scene. We never saw so big a crowd in Greenport on the 22d. The bay was filled with steamers, yachts and small sail boats. McL.

CORINTHIAN YACHT BUILDERS.—From an exchange we clip the following: A very fine yacht was recently launched on Lake Lisgar by Messrs. F. B. and Geo. Tillson, of Tillsonburg, Ont. She is a splendid model, was built and rigged entirely by the Messrs. Tillson and would do credit to a professional shipwright. Her measurements are 22 feet long, 6 feet beam, 30 inches deep and spreads 450 square feet of canvas. Her cockpit is beautifully finished in maple and black walnut, oiled and varnished.

COLUMBIA YACHT CLUB.—An open race will be sailed under the auspices of the club, Sept. 9th, for a beautiful silver challenge cup presented by the Derby Silver Plate Company. Club course, flying start, time allowance, 1½ min. to the foot; crews limited to one hand for every three feet of length and fraction; open to yachts from 18 to 25 ft., cat-rigged; entrance fee, $1. Particulars from the Secretary C. Y. C., Mr. John Frick, 21 Maiden lane, New York.

TO AMERICAN YACHTSMEN.—For complete records of all yacht races in England, as well for as for a great variety of other matter of interest, such as cruises and yachting tales, read *Hunt's Yachting Magazine*, established 1852. Can be had of booksellers generally, or direct from Hunt & Co., 119 Church Street, Edgware road, London, E. C., England. Published monthly, one shilling sterling per number.—[*Adv.*

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.

Trout, *Salmo fontinalis.*
Salmon, *Salmo Salar.*
Salmon Trout, *Salmo confinis.*
Land-locked Salmon, *Salmo glaveri.*
Grayling, *Thymallus tricolor.*
Muskalonge, *Esox nobilior.*
Pike or Pickerel, *Esox lucius.*
Yellow Perch, *Perca flavescens.*
Black Bass, *Micropterus salmoides; M. nigricans.*

SALT WATER.

Sea Bass, *Serranops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Striped Bass, *Roccus lineatus.*
White Perch, *Morone americana.*
Weakfish, *Cynoscion regalis.*
Bluefish, *Pomatomus saltatrix.*
Spanish Mackerel, *Cybium maculatum.*
Cero, *Cybium regale.*
Bonito, *Sarda pelamys.*
Kingfish, *Menticirrus nebulosus.*

TROUT FLIES FOR SEPTEMBER.

GRAY COFLIN, NO. 10 AND 11.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's herl; wings and setæ, hyaline.

BROWN COFLIN, NO. 10 AND 11.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's herl; wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wings.

The white moth for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season.

At this season use the small flies for day fishing and the large flies for evening and night.

NEW FISHING GROUNDS.—It's an ill wind that blows no one good, even though it sinks a ship in the harbor. For while Antonio on the Rialto is reckoning up his losses, the fisherman is musing upon the time when that wreck shall become barnacled and covered with mussels and furnish a feeding ground for the black fish and sea bass and sheepshead. We have spent many an afternoon of famous sport drawing up huge sheepshead from the hulk of an old schooner, sunken because she would persist in attempting to enter the harbor in spite of cannon balls and shells. We were younger then than we are now, but today, we confess it, the satisfaction of a good catch of big fish is not marred by untimely reflections upon the fate of the ship's crew and owners, over whose ruined venture we have anchored our skiff. Every man to his trade. One half of the world lives from the misfortunes of the other half.

The anglers of New York and vicinity are just now in good luck. Not that any ships have sunk in the Bay however. Their good fortune is rather assured by recent summer resort improvements. The new piers at Long Branch and Coney Island will by-and-by attract the fish, and new angling grounds will then be open to the cit's line.

THE SECOND PRESBYTERIAN FISHING CLUB.—"As the twig's bent so the tree's inclined." Send a party of small Presbyterian boys off year after year on Sunday-school picnics, and if, when they grow up, they do not organize Presbyterian fishing excursions, it is only because the unexpected always happens in this illusory and contradictory world. At all events, this reasoning will hold good with the Second Presbyterians of Philadelphia, who have just published the Log of their ninth annual cruise on Delaware Bay. The Log is a curiosity. From the wealth and grotesqueness of the illustrations we should imagine that every printing office in Philadelphia, from Ben Franklin's time down to the present, had been ransacked for the cuts. That one, particularly, of the Whale may, for aught we know, have illustrated the shipping news columns in one of the Ninevah morning papers some thousands of years ago. The piscatorial Second Presbyterians, of whom there were fifteen, namely: J. L. Smith, Pres.; John Lammon, Vice-Pres.; C. P. Allen, Sec. and Treas.; W. Mousley, H. J. Christ, G. W. Knight, G. S. Gandy, C. Mousley, A. Barber, W. L. Allen, E. McCready, W. Hazlett, W. Sixsmith, S. Currie, R. Gregory, purser, and C. Cooper, steward, embarked on the staunch schooner *Emma Collins*, July 8d, and returned to their families on the 14th of the same month. The adventures of the club, if put into heroic verse, would rival the Lusiad.

We are not pleased to see the club array themselves against science, as they do in the regulation reading: "No shark, sucker, tadpole, smelt, or sea serpent shall, under any circumstance, be admitted on our lines." The capture of the sea serpent would be an event of such signal scientific importance as to redound to the glory of any fishing club afloat. Nor do we approve of the Second Presbyterian Club's hostility to long-standing beliefs and practices of the craft set forth in another regulation: "Any member caught using charms, spells, &c., such as spitting on his hooks, using asafœdita on his bait, or making use of any superstition to draw the fish to his line shall be expelled." Such fallacies, obviously arising from the sectarian character of the club, are little ameliorated by their temperance platform as set forth: "The regular appetizers and brain exhilarants shall be lemonade, ice water, bilge-water, rain-water, salt-water, eye-water, dish-water, pump-water, blue-water, white-water, and —water." We should be glad to hear from the Third, and the Fourth, and the Fifth Presbyterian Fishing Clubs, and the Congregationalists and Methodists and Baptists and Quakers; for we hope they, too, all go a-fishing.

TROLLING FOR SALMON.—This is a favorite sport with some who fish in the Columbia River. An Astoria (Oregon) correspondent speaks of it as "a new sport, invented last year." They are caught weighing from 15 to 20 pounds, and some few big ones as high as 75 pounds and upwards. The writer wonders why the Fish Commissioners of the Eastern States do not get their supplies of salmon eggs from the Columbia instead of the Sacramento, as they are much superior in size and quality.

FREEZING FISH.—The wholesale fish-dealers of Fulton Market, this city, have prepared a large freezing-house on Front street, where great quantities of fish are now being frozen and packed away for winter use. The design is to provide in winter such fresh fish as are otherwise to be procured only in the summer season. The storage will probably be about 100 tons.

MOVEMENTS OF THE FISHING FLEET.—Thirty-two arrivals have been reported, with an aggregate of 544,000 lbs. codfish and 22,400 lbs. halibut,

The mackerel receipts continue good, and the quality excellent, but the market is dull and prices show no improvement. Since our last issue 14 arrivals have been reported from Shore trips, bringing 1965 bbls. The number of Bay arrivals for the week has been 8, and the receipts 750 bbls. One arrival has been reported in the Shore codfishery, and one from a Newfoundland squiding trip.—*Cape Ann Advertiser, Aug. 22.*

CANADA—*Rice Lake, Harwood P. O., Canada, Aug. 16th.*—Black bass angling and spoon fishing for muskinonge are superb here just now. H. M.

CANADA—*Lake Megantic, Quebec, Aug. 8th*, 1879.—I have just returned from a two days' cruise to the upper Spider River, with about thirty pounds of trout, averaging about three to the pound. I saw one beaver and several moose and deer signs. Both fish and game are fast disappearing from this section, as the country—and such a country of rock and boulders!—is being rapidly settled. The energetic endeavors of the Eastern Townships Game Protection Club may prevent the total extermination of fish and game here for some time to come; but never will game exist again in such numbers as to attract distant sportsmen, as the distance is greater and the hotel and guide rates quite as high as in either the Maine or Adirondack regions. STANSTEAD.

OREGON—*Portland, July 27.*—On Friday morning the 20th, a small party of "Waltonians," Billy B—, Bob B—, Hal M—, and the writer, might have been seen on the neat little steamer *Latona, en route* for the thriving hamlet of La Center, on Lewis River, W. T. We cast off at 10 A.M. sharp, and were soon steaming down the beautiful Willamette toward the mighty Columbia, and arrived at our destination at 4:20 P.M. and found very good coffee. After breakfast the following morning, we threw our traps into a lumber wagon, and were on our way to the "Crick" as it is called by the natives. After a very tiresome ride of four hours, we came to the mouth at Peep Creek, and there pitched our camp. The late rains in the spring have not yet run out, and as the stream drains a large area of country, we saw to our great dismay that there was too much water there. But Billy B—cast his brown palmer in the water in a very scientific way, and immediately a beautiful half-pound trout took it and was soon in Billy's basket. I followed suit; Bob and Hal then started down, and Billy and I up the stream, and when we returned to camp at dusk, our catch was: Bob, 25; Billy, 11; Hal, 1; and the writer, 14. Every fish taken was over 8 inches in length, and the majority over 12.

But things were not as we had fondly imagined, and so we concluded to go home the following afternoon. We fished down to the mill, about two and a half miles from the camp, where the team waited for us, and caught about thirty more; two of them, one taken by the writer and one by Bob, were over seventeen inches long and very heavy. We arrivéd at La Center that evening and the next morning got home, tired but happy, and vowing to go to Cedar Creek when the water was down and get even. The trout there are of unusual size and very gamy; much more so than in any other creek fished or known of by WILLIAM LANG.

OREGON—*Astoria, Aug. 7th.*—Mountain trout fishing is now at its best with us, and in a few days I intend to wet a "Royal Coachman" in the waters of the Klaskamine.
C. J. S.

—Every one knows that a girl cannot throw a stone. Anatomists tell us it is because they are not made for throwing stones. But we have known many ladies who could cast a fly as skillfully as any masculine adept. The Brooklyn young lady who went to Cushing's Island the other day made a brave cast, but all she hooked was her own nose. Not believing in the kind of adornment affected by more savage belles she followed her nose to a surgeon's office and had herself unhooked from her own line.

RAGGING.—The Oswego river method of fishing is known as "ragging." It is practiced by the farmers' boys, who tie a red rag for a fly and yank out great quantities of rock and black bass.

BASS FISHING ON NOLIN RIVER, KY.

ELIZABETHTOWN, KY., *Aug. 15th.*

Editor Forest-and Stream:—

Six of us left here at daylight one morning last April in a two-horse spring wagon for a point on Nolin River called Dickey's Mill, forty-two miles away. We followed the line of the P. & E. R. R. for twenty-six miles over a road that excited only an ordinary amount of blasphemy, and then, oh! dear, how we ever got over that last sixteen miles, climbing hills and wading mud holes.

But I started out to tell you of fishing and will stick to that. We arrived at the aforesaid mill at 4 o'clock P. M. and found that Providence had favored us and sent our friend, tutor, and general guardian angel, Harvey W., of Millwood, ahead of us as promised (no promises from P., of course). Said W. had tent pitched, campfire alight, and hot coffee ready. That evening we devoted to healing wounds, both bodily and socially, for sixteen miles of such a road would have caused Damon and Pythias to quarrel. An early supper, a pipe and a sound sleep fixed us for business next morning and an early start for the dam, where the real business of the expedition commenced. It is always monotonous to detail the catch, so I shall give the day's total for seven of us. Forty bass averaging two pounds each, eighty pounds. Supper, tobacco and bed with attendant dreams, fixed us for the second day's sport, in which we averaged or duplicated the previous day, making a grand total of one hundred and sixty pounds of bass in two days' fishing. One bass, considered a giant, weighed four and a half pounds; from that to three and a half down. It was glorious sport and well paid us for the whole trip. Sunday's rising sun found us hitching up for the long trip home, and the rain was falling in that insinuating manner that calls forth words deep if not loud, and the sixteen miles were done again, in which the firmest friendships were ruptured hopelessly to all appearance. Elizabethtown reached in soaking condition, the spoils divided, a handshake around, and all of this trip closed.

A word or two about "our bass." We considered our four and a half pounder a prodigy, yet I see by your paper scores are made in the bass line, which by weight would make our candidate a "small fish." It must be that the fish we catch under the appellation of bass is something different. Our big bass measured 22 inches and weighed 4½ pounds. They are called by the natives trout, but by fishermen black bass. We fish for them with minnow and float; they will not bite at either spoon or fly, nor at minnows caught from the same stream fished. In spring the foot of dams is the only place that they can be caught, while in the fall any pool contains them, but more especially those pools having a riffle or gravelly rapid at their heads. We use a multiplying reel, usually Meek & Milam, and 100 feet of line, a No. 7 hook and snell. We go again in October and you shall hear the particulars.
M.

—Read Henry C. Squires' advertisement.—[*Adv.*

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We cannot attempt to give specific directions where to go for game or fish. Correspondents must keep themselves posted by consulting our news columns.*

☞ *We make no charge for answering inquiries in this column.*

SETTERS, Boston.—Try rubbing a little crude petroleum on the bare places.

J. P. W., N. Y.—For the information you want write Fred Miller, Esq., Union Club, New York.

H. F. L.—Neilson's "Boat Building for Amateurs" will come nearest your wants. Price, $1.25.

SWIMMER, New York.—Captain Webb and other swimmers oil themselves all over with vaseline before entering the water.

G. N., Grantville, Mass.—You will find in the vicinity of Vineland, N. J., quail and a few partridges. You must inquire there for particular localities.

OLD BAT.—The rapid explosion of Dittmar powder when tightly rammed appears to be the reason for the bursting of so many guns. The wads should only just feel the powder.

C. O. B., Unionville, Conn.—As your dog has *some* nose a competent breaker could probably make something of him. The spike collar can be had of Mr. Von Culin, Delaware City, Del.

POLARIS.—Length of schooner *Frolic* on water line about 48 ft. Has raking or overhanging stern and elliptic counter. Least freeboard 2½ in., load line to deck. Above this is about 15 in. bulwark.

S. D. Mercersburg.—General Meyer of the Signal Service Bureau, Washington, D. C., has used Lyman's bow facing rowing gear and may give you his experience with it. Or will some of our readers oblige.

SHELDRAKE, Lynn.—Where shall I send for copy of London *Field* of May 10th. It has a report of a trial of small bores, 16 and 20 against 12 and 10. Ans. London *Field* can be obtained from August Brentano, 39 Union Square, New York.

A. R. S., Goulsborough, Pa.—Black bass culture is pursued by introduction of parent fish, not by transportation of spawn. You will probably, by representing your case to your State Fish Commissioners, receive from them the necessary fish.

J. S. S., Cambridgeport, Mass.—For a fortnight's sport between Quebec and Montreal, go to the town of Three Rivers, where you will find good duck shooting on Lake St. Peter; and you can go up the River St. Maurice, the whole country thereabout affording abundant sport.

S. W. B., Baltimore.—The soreness in my dog's eyes is caused by the under eyelid turning in the eye, and the hair rubbing the eyeball keeps it sore and running. Ans. You had better show the dog to a surgeon, as an operation on the lower lid may be necessary.

J. W. S., Smyrna, N. Y.—1. What is the price of Belmontyle oil, and where can I get it? 2. What is best to keep a choke-bore from leading. Ans. 1. H. C. Squires, No. 1 Cortlandt street, this city. Price 50 cents per bottle. 2. Fire a blank charge of powder in your gun before commencing to shoot.

G. H. T., Media, Pa.—My puppy has had distemper, and it has left him with a nervous twitching in the forequarters. Please let me know through your valuable paper if there is any remedy. Ans. Country air, tonics, and good nursing may bring him around, but chorea is rarely cured.

W. M. W.—Why a copper boat? Very seldom made of this material. Sheet iron, galvanized or painted is much cheaper. Boat for three persons should be about twelve feet long. Cost seven dollars per foot. Possibly you may find a sporting boat suitable to your purpose in our advertising columns.

C. F. G., Near Fort Monroe, Va.—Will you inform me where I can buy an English mastiff dog? I saw in your paper some time ago a cut, also description of this kind of a dog, and feel it is just what I want for a house dog, also pet for children. I trust I am not treading on "dangerous grounds" in thus presuming. Ans. We can only refer our correspondent to our advertising columns.

H. P., Oquawka, Ill.—Books on the horse are:—"Handbook on the Treatment of the Horse in the Stable and on the Road," by Charles Wharton. J. B. Lippincott & Co. Philadelphia. "Stonehenge on the Horse in Stable and Field," $2. Orange Judd & Co. New York. The same firm also publish "American Gentlemen's Stable Guide," $1.

R.—What constitutes the food of the American bittern? Does it live on anything which ought to render it repulsive to a human stomach? Our Indians will eat anything almost, but they will not eat a bittern. Ans. The bittern, like the other members of the Ardeidæ family, feeds upon fish, frogs, other reptiles, testaceans, insects, etc.

F. G. W., Philadelphia.—Go to John Krider's, and he will tell you where to go for squirrels. If you had inquired about Petersburg, Va., we could have given you some magnificent shooting, opossums, rabbit and quail. The game down there does not hide in the woods and wait for the sportsman and his dog to come out and find it. It enters the town and posts itself in the back-yard and waits to be shot.

A. F. H., Worcester, Mass.—I have a pointer dog two years old, and a day or two since noticed a bunch on its back and thought it was a fly bite, but now it is about as large as a two cent piece, and looks red and raw, puffed up a little, and the hair seems to be partly off; his appetite is good and he is as lively as ever, and it does not seem sore to touch it. Have been washing it with castile soap, and when dry putting on cosmoline. Ans. Anoint it with carbolic salve.

T. J., Germantown, Pa.—I have had four rabbits die of a disease which begins in the mouth and then goes to the paws, a kind of running sore—the hair all falling off. What is the trouble? and what can I do? Ans. Your rabbits probably have the rot, caused by too much green food. Kill all the sick animals at once, as the disease is contagious—one of its features being a parasite that attacks the skin. Flour of sulphur has been recommended for the scabbiness.

D. B., Haverhill, Mass.—My pointer dog is two years old, has never had a good appetite, has always been very poor. Three weeks ago his appetite seemed to improve, then his bowels commenced to swell, the swelling spread to his dulaps, then his legs swelled to about twice their natural size; his fore legs have burst, are continually discharging water, he does not seem feverish nor very weak. A. Your dog, from your description, has anasarca, or dropsy; give him six grains of nitre twice a day in the following mixture: Iodide of potassium, three grains; digitalis, one-half grain; extract of gentian, five grains.

W. L. B., Staunton, Va.—What food shall I give mountain trout in an aquarium? They will not eat anything I give them. Ans. See that you tank is throughly cleaned of all scourings of the fish; also note if your fish are not eating each other. You should give them food that will not sink to the bottom, as they will not go to the bottom of the tank for it. It will remain there and pollute the water. Fish will also sometimes gorge themselves and pollute the water afterward with there excrement. Try natural and artificial food, and feed neither too abundant or too sparingly. Fish with voracious appetites w ll eat each other and become surfeited for a time, and their refuse food until they become hungry again.

M. B., Batavia. O.—1. I have a pointer dog two years old. When he was one year old he did not do as I wanted him to, so I whipped him, and he started to go home. I shot him and he has been afraid of the gun ever since. He will hunt well until I shoot the first time and then he gets behind me and I can't get him to hunt again. Do you think by buying the "Sportsman's Gazetteer" that I can break him of gun shiness? 2. I got of William Read & Sons a breech-loading gun made by R. Grove, London, for which I gave $80; do you know anything of the manufacturer? Ans. 1. By exercising great care and patience you may be able to cure your dog of gun shyness. 2. We do not.

EMMA, City.—The German canaries are the best singers, and in Hanover no less than 75,000 are raised annually. About 70,000 are imported to this country from France and Germany every year. While the German fanciers have bestowed their whole efforts upon the vocal power of the canary, French fanciers have by judicious breeding greatly increased the size and symmetry of the birds. It is said that the reason of the success of German fanciers in training their birds is due to placing their young birds in cages with larks and other European songsters, from whom the canaries learn many of their most beautiful melodies. German canaries sometimes sell at from $10 to $25 apiece.

SUBSCRIBER, Oakland.—1. Where can I get the rules for glass ball shooting? 2. What is the proper load and size of shot for a 10-bore gun at the Card rotary trap? 3. Is a 10-bore allowed at matches on the same terms as a 12-bore, or must I shoot at longer distance? Ans. 1. Different clubs have different rules for glass ball shooting. You can probably get Bogardus' rules by writing to H. C. Squires, No. 1 Cortlandt street, this city. 2. It depends upon the weight of the gun, and would be about the same as for quail shooting with the same gun. 3. Again the club question comes in. As a rule, 10-bores are penalized from one to three yards.

X., Cleveland, O.—I have a dog who was quite lame in his hind legs some time since, the lameness shifting from one leg to the other. He got well without any special treatment; but now, after a lapse of several months, he is lame again—walking on three legs. If I pull the lame leg he cries out suddenly, as if it hurt him. Otherwise, he is in good condition and appears to be all right. Do you think he has chronic rheumatism, and what should I do for him? Ans. The following remedy is recommended by "Stonehenge," and is frequently successful: Score a red herring with a knife and well rub in two drachms of nitre; give every morning on an empty stomach, and keep the dog without food for two hours afterwards. At night give a drachm of camphor made into a ball.

J. P., Peoria, Ill.—To waterproof buckskin the Indians boil it in oil; and Nantucket fishermen water-proof leather by soaking it a week in boiled linseed oil. Other recipes for tanning leather are as follows: 1. Melt 6 ozs. mutton suet, 6 ozs. beeswax, 4 ozs. rosin, and add 1 pint linseed oil. 2. Tallow 6 parts, beeswax 2 parts, rosin 1 part, 2 parts caoutchouc, 1 pint castor oil. Apply warm with a brush. 3. Shoemaker's dubbing ½ lb., linseed oil ½ pint, strong solution India rubber ½ pint. Dissolve with gentle heat (it is inflammable) and apply with brush. 4. Melt 1 lb. tallow, ½ oz. neatsfoot oil, 1 oz. rosin, ½ oz. lampblack, 1 tablespoonful linseed oil. Articles should be warm when applied. 5. Neatsfoot oil ½ pints; beeswax 1 oz., spirits turpentine 4 ozs. Rub this on the leather when it is damp. 6. Melt 2 ozs. yellow wax and 1 oz. Burgundy pitch; mix with 1 pint drying oil and 2 ozs. spirits turpentine. Saturate thoroughly.

E. G. F., Concord, N. H.—1. What is the color of our common linnets during the first, second and third years of their lives, and does keeping them in a cage usually cause their plumage to differ from their wild brethern? 2. How may the male linnet be distinguished from the female? 3. What is the best method of setting snares for partridge? Ans. 1. Continuously streaked above with dusky and olivaceous brown or flaxen, below with dusky or whitish, the whole plumage in the breeding season more or less suffused with yellowish, particulary bright on rump. Young birds frequently show a buffy or flaxen suffusion, and resembles a red poll. Adult males with definite black on the crown, wings, and tail (Coues). 2. Caged birds have duller plumage, though in wild birds the plumage is extremely variable. 3. The spring snare is the best. Make a noose at one end of a cord; just above the noose tie a six inch stick by the middle to serve as a trigger. Bend down a sapling, and attach the free end of the cord to it. Now set the trigger in notches cut in two upright sticks, at a sufficient distance from the ground to permit the noose to fill the space underneath. Then build up a brush fence leading off to either side of the two uprights.

MESSINA, Lewiston, Me.—I have a pond covering some fifty-three acres, inhabited by pickerel alone. It has no perceptible inlet or outlet, and yet the water is remarkably clear and cold, with an average depth of ten feet. The pickerel that now inhabit the pond do not grow to be very large, but are very uniform, weighing from one-quarter to one-half pound. Will you tell me how much soft-soap (providing that was not a soft-soap story you recently told a correspondent,) or lime it will take to destroy the pickerel, and how long it will be after I add the soap or lime before I can safely put in trout? I also want to add Michigan grayling. Would they do well with trout? And would they breed in this pond? I infer trout would not. When and where can I procure the Michigan grayling? I also want to add an order for Messina quail, and some of the Norway and Sweden species of grouse to the next importation. Ans. Your pond is fed by bottom springs. If you cannot draw off your pond at all, considerable lime will be required; how much you will have to ascertain by trial. The fish will turn on their backs when dead. The very strong lye in the soft-soap is what kills the fish, and the substance diffuses itself more thoroughly through the water than lime does. Row about the pond and put a handful of soap or a pint of unslacked lime here and there, at frequent intervals. Grayling would not do well in a pond. They thrive only in swift streams with sandy bottom. You can get grayling by addressing the postmaster at the town of Grayling (his name forgotten), but you will have to send some one to transport them. For migratory quail, address Horace P. Tobey, 17 Oliver street, Boston; for Norway birds, write to John Swanson, St. Paul, Minnesota. He will tell you where to send for them.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

— AT —

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

***Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, AUGUST 28, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remited to us is lost.

☞ Trade supplied by American News Company.

HOW WE SUFFER.—As our advertisers are constantly insisting upon more space, and new advertisements are pouring in every week without solicitation, we will evidently be compelled to add more pages at an early period, in order to make room for reading matter. But a few years ago we had twelve pages of reading matter and only four of advertisements. Now we have thirteen of reading matter and eleven of advertisements. This week at least a half-page of advertisements were refused on account of space. If our patrons will possess their souls in patience for a while longer we will give them the largest weekly in the world, saving only the London *Field*.

We have availed ourselves of the occasion to don a new heading, which we hope will be accepted by our readers as an improvement on the old one.—*Chicago Field.*

The foregoing is from our Chicago contemporary. Our congratulations would certainly be in order and forthcoming, were it not for the fact that the *Field*, in donning its new heading, adopts a portion of our own which has been copyrighted for a long time. We refer to the words "AMERICAN SPORTSMAN'S JOURNAL," which are incorporated into our title, and held under certificate from the Librarian of Congress. Of course, when our Chicago friend in a subsequent self-laudatory paragraph speaks of "an unscrupulous opposition in New York, descending to underhanded acts," he can not include the filching of another's good name, or the sailing under adopted colors.

RICHARD F. BOISEAU.—Our readers will learn with regret of the death of Mr. Richard F. Boiseau at Washington last Monday. Mr. Boiseau was the Senate Reporter of the Associated Press and a journalist of high standing. His Washington letters to this paper in 1876, 1877 and 1878 made him known to our readers as a most entertaining writer. The letters contained a vast amount of information about the shooting and fishing in Maryland, and in the vicinity of the Capital. For several months past our friend was incapacitated by the fell disease consumption from performing any journalistic work. It is with the sincerest sorrow that we chronicle his death.

BRIGHTON BEACH RACES.—Notwithstanding the rain last Monday, the entire programme of races at Brighton Beach was carried through with the spirit characteristic of this new course. Indeed the track is in such splendid condition that only the most drenching rain can interfere with the races. As the probabilities favor fine weather the first of the month we may look for excellent sport Sept. 2d and 4th.

FARM COLONIES FOR SPORTSMEN.

SEVERAL hundred times a year the questions have been asked of FOREST AND STREAM: "Where shall we go to hunt and fish?" "Where is the best place for game in this State or that?" "Where, within one hundred miles of New York, or Boston, or Chicago, can a good day's sport be guaranteed?" Many business men of sporting proclivities, who have desired to migrate to the West, have inquired to learn where a good grazing range, sheep ranch, or wheat farm could be located *near a good game region*—their object in making a change being to combine out-of-door pleasure with business profits. The information desired has always been given as faithfully as possible through the columns of this paper; but lest it should prove inadequate, a Guide to the leading game and fish resorts of all the States, Territories and Provinces was prepared by the editor, which embraced upwards of four thousand localities, and occupied more than two hundred closely printed pages of the "Sportsman's Gazetteer." We are now prepared to do even more than this: We are ready not only to answer the stereotyped question, "where to go," but have actually sought out and provided a place to go to!

On the first page of the current issue of FOREST AND STREAM will be found the plan and description of a scheme as startling in its novelty as it is bold in inception and purpose, and attractive in character. Through the active coöperation of John Swainson, Esq., a gentleman who introduced the Swedish element into Minnesota in 1856, and has since been instrumental in colonizing or settling 20,000 of his countrymen, the editor of this paper has secured a locality, easily accessible by rail, and in the centre of an illimitable grain-growing region, which embraces within its immediate limits a greater variety of game than can be found in any specified section in America. An enumeration of its fauna would include moose, elk, caribou, red deer, sharptailed, pinnated and ruffed grouse, quail, and innumerable water fowl in great variety, and all in an abundance which need not be soon depleted if properly cared for and protected by the gentlemen whose direct interest it will be to look after it. The tract includes a forest of hard wood timber of various kinds—oak, elm, ash, linden, poplar, &c., a rich, fertile prairie with no apparent limit, and a beautiful river of clearest water, well stocked with black bass and other fish. It is accessible to Selkirk, in Manitoba (a city of 20,000 people) in three hours, and to St. Paul in twelve hours, while several growing towns are located within a few hours' ride, on no less than seven railroads in active operation. It is a paradise for a sportsman, and a big bonanza for a farmer or stock-raiser, who has his choice of markets quite at hand. To discover and secure a tract of land combining so many desirable and unusual features, has required several years of unremitting research, and involved two personal visits of the editor in 1877-8, to say nothing of a previous visit made twenty years before.

FOREST AND STREAM was one of the earliest to interest itself in Farm Colonies, strictly agricultural. It now takes an entirely new departure, and proposes to plant a colony of sportsmen who may combine farming with sport at their option, or who may establish themselves permanently, or only sojourn temporarily. Here any gentleman who wishes recreation merely may put up a shooting box and make himself at home; here the overworked business man may retire to a summer residence, and enjoy the fishing in summer and the shooting in fall. He can vary his pastimes by an excursion to Lake Winnipeg by steamboat or rail, or to various parts of the State of Minnesota, which is noted for its charming scenery. Here the city merchant who is tired of mercantile life may adopt a new vocation which is certain to yield him rich returns; here the small farmer and stock-raiser, or the rich capitalist may engage in business proportional to their means, and with an assurance of pecuniary profit scarcely to be found elsewhere. For the past two years attention of immigrants has been turned to Minnesota more than to any other State. The rapid extension of railroads, the influx of settlers and improved machinery, and the constant development of the State, cannot be realized except by those who visit it personally.

In locating the town of Hallock a special prominence and special advantages have been secured to it by gentlemen who are sympathetically interested in promoting the enterprise. It is the county seat of Kittson county, and the terms upon which land can be acquired, conditionally, have been made most comfortable. There are at present available four thousand acres of fertile prairie and four hundred town lots. In disposing of town lots a desirable scrutiny will be exercised, so that all the elements which may be gathered together shall be homogenious, mindful of each other's prerogatives, and united in a common policy for the welfare of the town and the protection of the abundant game around about, which was the first desideratum sought in making a selection of a town site.

FOREST AND STREAM has labored for more than six years to inculcate in men and women a love for refined field sports. It now offers the most attractive place in the land where they can cultivate their enjoyment. Maps can be furnished on application at this office.

THE AMPHIBIOUS LEG.

IN one of De Quincy's weird opium visions the waves of the sea present themselves to the dreamer as filled with human faces, advancing and retreating, appearing and disappearing; a horrible host of misplaced features. We seem likely to realize this vision. Our waters are about to be filled with an unnumbered throng of human faces.

The muscular leg has about run its course on the sawdust; its little system has had its day, and passed away. Pedestrianism is on the decline—a very steep down grade. Public interest in the business has died out. Only the most sanguine managers can hope to net a fortune in the long-distance matches arranged for the fall.

A new mode of competitive endurance has been inaugurated. The pedestrian leg has given away to the swimming leg—taken to the water, so to speak. Public enthusiasm "has its sea legs on."

It is England and America this time, too. The walking craze owed its origin to an American, who went to England, showed the Britishers how to walk and taught them to beat the Americans at their own game. The swimming mania now threatening us presents a curiously similar course of development. This was also started by an American, Boyton, who in 1875 crossed the English Channel in his novel life-saving suit. Stimulated by this feat, an Englishman, Matthew Webb, succeeded in his second attempt in crossing the Channel without any artificial aid at all, except stimulants and food; and subsequently Frederick Carill, another Englishman, performed the same undertaking. Now Webb having come to America, has inaugurated in this country a series of long-distance swimming competitions. His swim from Sandy Hook to Manhattan Beach a fortnight ago immediately drew forth in the daily papers a host of challenges from emulous swimming experts. If he accepts only a small proportion of them he will have enough employment until cold weather. Already his exploit has been very nearly equalled. Last Thursday George Werham, a produce dealer of this city, and Hans Tuelff, a professional swimmer, swam from Pier No. 1, this city, to Norton and Murray's Dock, Coney Island, a distance of thirteen miles, which was made in four hours and twenty minutes. these are only the advance fish of the great schools to follow. It is not difficult to foresee the day when all New York harbor will be given over to the long-distance swimmers, official "management" boats and excursion steamers crowded with spectators.

The *Herald* has raised its voice of warning that our channels are being destroyed by the dumping into them of garbage. No paper has yet had the perspicacity to see that this swimming era by blocking up the Bay will ruin our commerce. Let us hope that this direful possibility may be recognized in time and its realization averted. A 3,000 quarter-miles swim in 3,000 quarter-hours should be summarily punished; penalty, drowning.

The swimming record which has already been achieved, and which it is probable will be improved, is worthy of notice, as an exhibition of human endurance hitherto undeveloped and unsuspected. Leander has been famous for centuries because he nightly swam the Hellespont, from Abydos to the love-lorn Priestess of Aphrodite in Lesbos; and Lord Byron who achieved the same task (minus the Priestess) has linked his name to the natatory fame of the bold Greek lover. But the distance here does not begin to compare with that of the performances we have mentioned. Possibly the respective rewards have something to do with the result. If Leander could swim five miles for love of Hero, and Byron the same distance for fame, surely Captain Webb could swim seventeen miles for a fat purse of money. It is love, fame and money; and money wins. To do Leander justice, however, his feat was dependent simply upon the geographical formation of the country. Had the Hellespont been twice as wide, even had Hero been not more beautiful, who shall say that he would not gallantly have achieved the task?

THE DEATH OF CAPT. HANSEN.—The incidents connected with the untimely death of the late Capt. Hansen, member of the Fountain Gun Club of Brooklyn, melancholy as they are, will, we fear, pass from the minds of all except ours, as the lesson in this instance, like the almost weekly rehearsal which we are compelled to pass through, has, alas! been learned too late. The true facts in the case, as set forth in the sworn statement of Dr. Ferchland, may be briefly given as follows:—

On the morning of August 19th Captain Frederick W. Hansen and Dr. Ferchland started out gunning. They went to Sheepshead Bay expecting to find snipe, and having procured a boat to drift along shore in, found occasion to bail out the water which the craft contained. While doing so Capt. Hansen observed a brace of snipe, and at once ordered the Doctor to load his own gun. which, though instantly done, they had not occasion to discharge, as the birds wheeled off in an opposite direction. Having emptied the boat of water, and getting her adrift, Capt. Hansen proceeded to bring the guns, which lay upon the dock. Taking his own fowling piece and

ammunition bag in a cautious manner, he took also Dr. Ferchland's gun by the muzzle, knowing at the time that the same was loaded, and dragged it along the dock. In some unaccountable manner the hammers of the gun encountered an obstacle which drew them not quite back to half cock, discharging the contents of one of the barrels into his left thigh, carrying away a piece of the hip bone about five inches in length, which culminated in his death at the Long Island College Hospital.

Were this a case of some tyro, sportsmen and the community at large might dismiss the subject from their minds as being merely frivolous; but it is not so. The deceased was forty-two years of age, an accomplished sportsman, and an expert in the science of gunnery, of which he was passionately fond as a recreation, though he had for once—and it causes us much pain to remark—lost his presence of mind in the expectation of procuring a brace of snipe, and became careless. The obsequies were melancholy in the extreme; and we can but extend the oft repeated advice, if people will only take it for its worth—that, no matter how extensively versed in the science of guns and shooting, they may expect at any time to share a similar fate to that of our departed Hansen unless they can keep their wits about them when in the hunting field, and not become dangerous by giving way to what may be termed a sportsman's dementia.

Therefore, we beg of not only the sporting fraternity, but every one concerned, to use the utmost caution in crossing fences and hedges, in all cases seeing the gun over first, afterwards yourself, and that at a point at least four feet above or below the spot from where you placed the gun, and at no time allow yourself to stand in front of the muzzle of any firearm. Make it your business to keep always behind the locks. And finally, never leave a gun standing around the house, barn, or in the open air loaded, thus avoiding a possibility of killing, if not yourself, somebody else by your carelessness.

Some people when out gunning point their infernal weapons to the four winds of heaven, and the marvel is that there are not more accidents from the careless use of firearms than those which find publicity, as examples, in the press.

HARRY FENWOOD.

ELEPHANTINE CREMATION.—That famous unfortunate wight who was crushed by the weight of an elephant on his hands lived before the advent upon this sphere—rather let us say, before the cinerary exit from this sphere—of Baron Von Palm. The fancy of the Arabian story-teller who brought forth from a small hidden casket the mighty form of a towering monster, has been reversed by the science of the Nineteenth Century, which reduces a man to the confinement of a tiny glass bottle. And what this science can do with men it can accomplish just as easily with elephants. "Boy," the elephant of the Berlin "Zoo," died the other day, and the directors had two tons of elephant on their hands, not counting the skeleton which was to be set up. Eight strong men were unable to lift the hide, which alone weighed twelve hundred pounds. It was something of a hide, too, being two inches thick in some places. "Boy" was not fat either. Chemical analysis failed to discover the least trace of adipose matter in his muscular flesh, which was as tough as the "cheap meat for boarders, Mrs. Mack," they sell in Washington Market. They put the whilom monarch of the Indian forests into the crematory furnace, reduced his four thousand pounds to a small wheelbarrow load of ashes, and sold them for 18s. to a gardener, to be carted off and spread over the ground as a fertilizer. Alas, poor Yorick!

A THUNDER-STORM IN HIGH LATITUDES.—Our friend Philip Vibert, under date of August 9th, sends the following account of the remarkable freaks of lightning which occurred near Perce, District of Gaspe, Province of Quebec:—

On Wednesday, 6th inst., we had a severe thunder-storm—one of the worst I remember; it struck here about 10 A.M. A boat on the moorings had her mast broken in two and sail burnt. On Mount Joli, the fluid entered a house by the stove-pipe, coming out by the stove door which was closed, burnt the shoe and sock on the foot of a girl who was sitting near the stove; blackened the foot and lower part of leg; passed over father's shoulder who was kneeling at the window, through a pane of glass, leaving a round hole. The girl's shoe and sock were so much burnt, that when the mother touched them they crumbled to pieces. It struck a house about a quarter of a mile from this, entering the gable just below the saddle, ran down the rafter, split the corner post from head to heel, shattering the boards; they discovered that the roof was on fire in time to put it out. Several telegraph poles in this vicinity are split; pieces of ten and twelve feet are lying on the ground; and on the road between Cape Cove and Grand River, seventeen posts in succession were struck to the ground. It did not blow, but rain fell in torrents during the storm.

The Valley Farmer Live-stock and Poultry Magazine, published at Staunton, Va., Alex. Y. Lee, Editor, is the only Live-Stock and Poultry Journal published in the great Shenandoah Valley. The great State of Virginia, once famous for its live-stock, is now rapidly recovering from its depletion and drain resulting from the war, and the presence of so ably edited a journal in one of her finest districts is one of the best indications of increasing prosperity.

GAME PROTECTION.

THE MASSACHUSETTS WOODCOCK LAW.—Massachusetts sportsmen are much interested in the case of Messrs. Whipple & Hall, the proprietors of Young's Hotel, Boston, who have been prosecuted by the Massachusetts Fish and Game Protective Association for having in their possession woodcock out of season. The old law, it will be remembered, proved inefficient because it allowed possession during the close season, provided the birds were killed in another State, and the members of the Association found it a most discouraging task to secure conviction by proving the birds killed in the State. In the new law this clause was purposely omitted by the framers of the bill. But the counsel of Messrs. Whipple and Hall (the Government admitting defendants' claim that the woodcock had been killed in Pennsylvania) argued that although the clause referred to above had been stricken out, it was still clearly the design of the legislators to prohibit possession of game killed within the Commonwealth, such intent being clearly shown by the word "said," which embraces the previous description. Mr. Noyes, attorney for the plaintiffs, on the contrary argued that the law was meant to prohibit the possession of woodcock during the fixed close season for these birds without regard to when or where they were killed. Judge Parmenter ruled that the defendants had violated the law. They appealed, and the case is to come before the higher courts. We sincerely trust that the decision will be sustained. If it is reversed then the same difficulties will be encountered by the Association that formerly rendered their efforts futile. This is a test case. In giving it due consideration quibbles of ingenious counsel should not be allowed to overrule what is the evident intent of the statute.

HE RETRACTS.—Our impulsive correspondent, "Harry Fenwood," has discovered the imprudence of his onslaught upon the New Jersey non-resident shooting regulation. His communication published a fortnight ago has called out a score of indignant protests, and to avert a further storm he requests us to publish the following:

MR. EDITOR:—Becoming incensed at the condition of game laws in general, I penned a few hasty remarks, some of which were true in a great measure, though now, I desire to retract, and to palliate as far as possible, not at my leisure, but at a season which seems to me most opportune. I do love the brotherhood of sportsmen, and have a friend or two in New Jersey, whom, should I insult, or parade myself before them in any other wise than that becoming a gentleman, I should entertain no little remorse in that I was rash. Not to those only I desire to make an *amende honorable*, but to every one, and to the author of that editorial, "A Plea for the Woodcock," of last week's issue, which excited my anger more against myself, than did the readers of my effusion against me. It would afford me infinite pleasure to meet in your sanctuary at a future day, any whom I have offended, that I might embrace the opportunity to prove that, no matter what enmity may exist between myself and an unrelenting world, there is none whatever, or at least I hope none, betweed the brotherhood of sportsmen and their friend and servant.

HARRY FENWOOD.

Most apropos to the above, and to the whole question, is the following letter from a prominent member of the West Jersey Game and Fish Protective Society. It puts the case so intelligibly, that hundreds who may have misconstrued the law, or been misinformed, will hasten to make the *amende honorable* as the ingenuous "Harry Fenwood" has now done, and to admit that the law is very proper, and that for the purposes intended, it is the most effective measure yet devised and put in operation. We may have more than this to say in its behalf at a day not distant:—

In defence of New Jersey depriving native-born citizens the enjoyment of constitutional rights, I answer that constitutional rights are good but in this case, State sovereignty is better. But the law does not debar anybody from shooting: that is not the spirit of the law. The spirit of the law is to give better shooting, and to facilitate the management for the better protection of game and game fish. The State has spent thousands of dollars in restocking our waters with fish, and now game societies are being organized for the purpose of protecting and replenishing our quagmire with game. Our farmers, our residents, our sportsmen rally to the rescue. Non-residents are allowed, for just the same fee, all the privileges of a native. Are the rabbit garroters, the reed bird murderers, and blackbird assassins of New York, Philadelphia and Brooklyn, such desirable individuals, that, after plundering and shooting all the game, we must now replenish, and allow them all the rights of one who owns his land, pays taxes on it, pays for game and helps protect it? Why, to think that a plucky Centre Market stall boy, who would overturn cord wood, or burn a hay stack for a cotton-tail, is not entitled to all the rights and privileges of a citizen, is truly unconstitutional!

State of Delaware, look out for Fenwood. You charge $5 for non-residents! See what a fearful *exposé* his pen has given New Jersey; what fearful names he calls us; and *we* only charge $2! But there are always some good grains among the chaff; so Brother Fenwood keep on about the woodcock, we will all join in. I would like to say more, but when a man puts the words, jurisprudence, quagmire, incompetent, unconscionable, and over-abundance, into four lines and makes sense, I'm afraid of him.

Plainfield, N. J. P. C. O.

LEWISTON, Me., *Aug. 21st*, 1879.

Editor Forest and Stream:—

I was much pleased with your editorial "A Plea for Woodcock," as it corresponds with my views exactly, particularly the "too much tinkering with the game laws." A change in our woodcock law has been and is now advocated by a faction of the sportsmen of the State, permitting August shooting, but owing to the recent alterations of the opening season by neighboring States, and the co-operative plan urged by FOREST AND STREAM, I think it may safely be said no change will be made. In extenuation of the plea I argue that the migratory "Messina quail," whose acclimatization seems assured, is destined to become one of Maine's principal game birds and that August shooting would damage these quail incalculably. I also maintain, and shall make the attempt another spring, that owing to the milder winters we have recently been having (it being an admitted fact that for the past five or six seasons our winters have been remarkably mild in comparison with former years) the native quail can be acclimated. Probably we shall have to assist them through the winter, and this is the least we can do to add the noble game bird to our already depleted stock of game. This failing, we can procure a few pairs every spring and bag the broods each fall, which would increase enough to warrant the outlay. The Maine Sportsmen's Association seems assured. The matter has been referred to a number of clubs, and all favor the project. A general interest is manifested, and public opinion is setting in favor of a strict observance of our game and fish laws.

If you can say anything editorially in relation to this non-tinkering with our present law I think it would have considerable weight. Those favoring a change—and they embrace the majority of the sportsmen of this country—claim that August is the only time we have any woodcock to speak of. They say in September they are hid away moulting, and as soon as done moulting they leave us, and Massachusetts and New York sportsmen bag the birds we breed. For this reason the present law is violated extensively in this county, and to discountenance this violating of our present law is one of the chief objects of this State association, as they incorporate in their constitution a very strict obligation to be subscribed to by every member and club of the association, and will probably advocate the appointment of a Game Commissioner, whose duty it shall be to look after the importation and propagation of game, but more particularly see that our present and future laws are strictly observed. It is advised that this Commissioner have control of our State wardens (who now without a head don't amount to shucks), that he employ them to keep him informed, and use one from a different section of the State when he desires to catch and prosecute transgressors. Our wardens are appointed from the sportsmen to look after and prosecute their comrades and fellow-associates, which they will never do; but with a head in the shape of a Commissioner they will keep him informed, and he can himself, or through a warden brought from another section of the State who would have no compunction in the matter, soon put a stop to what is now a great injustice to those who do observe the laws, and I'm happy to say this class is in the majority.

FRANK HENSHAW.

A MANLY LETTER FROM OHIO.

Editor Forest and Stream:—

I find the sentiment expressed by Mr. Owen of Woodstock, on page 533, FOREST AND STREAM, of August 7th, is quite prevalent. I think the law in question was uncalled for and unwise, and I so expressed myself in a letter to Mr. Reed (our member of the Legislature) before the law passed; but I regret to hear men openly defy and threaten to violate any law. I have never seen nor known a finer hatching of birds than we have this season; and with two fine pointers and a nice gun, the temptation to shoot will be a serious one for me to struggle against. Let me ask, is there not some honorable and gentlemanly way to get out of our dilemma? Can we not by petition get the law changed or annulled? It is not pleasant even to contemplate the feelings I should experience in starting out with my dogs and returning with a bag of birds killed in violation of law. This law will be but imperfectly enforced, and prove a social evil; it will be violated with impunity by hundreds; and all such violations beget in the popular mind a careless disregard of all laws. It is not difficut to persuade old and young that a reasonable close season wherein birds and fish are protected by law, is right; but this "Granger law," as friend Owen calls it, is not right; the people know it; and I pity the fool who shall attempt to put it in force, unless it be in cases where rowdies and roughs disregard the farmer's interests and rights, by shooting among and injuring, or frightening stock. I know the farms belong to the farmers; I know the farms have produced the food that has developed the birds; therefore, strictly speaking, and to be very nice about the matter, the birds belong to the farmers; but if the birds are of such infinite value to the farmers, let them be enumerated, and let the farmer pay tax on them as I am compelled to pay tax on my dogs, or any and all other property I own. I have found as many native gentlemen among farmers as among any other class of the same number of men, and I know that they are not only willing but are pleased, to have a gentleman spend a day or so hunting on their premises. Even now, I have more invitations of this kind than I could fill this season, and the invitations are often coupled with the defiant remark, "I will stand between you and the fool law." Farmers often go along and enjoy the sport hugely. Mr. B—— (for example) went out with me in the morning, "just to see the dogs work," you know. At nine o'clock he remarked, "If you think you can get as many as you need between this and time to quit, I will take these ten up to the house and have them cooked for our dinners. I will also stay and help at the house until after dinner, and then come out with you again." Knowing Mrs. B——'s skill in the culinary art, nothing could have pleased me more; but just as I was about to assent, I noticed another point was made, and requested him to hold one moment and see if I could not add to his freight. In one moment I rewarded his delay with two beautiful double shots, and he started in hot haste; but in less than an hour here he came back, tearing through the weeds, all flushed and red in the face with pleasure and excitement, to inform me there was company at the house, and that, when cooked, the fourteen birds would make two for each of us. Perhaps some old two-legged mud-turtle, who never had a drop of warm blood in his veins, may think I did not enjoy that day? Let him think. I do not blame farmers for rising against netters and pot-hunters; I will do all I can to protect them and myself against this class of creatures; but all should know that between extremes lies a beautiful mean, and they who

were so clamorous for a law to prevent *all* shooting until 1880, were not walking the beautiful mean. Let us get up petitions, Brother Owen, and have the law changed if possible, but not threaten to set it at defiance.

S. L. N. FOOTE, M. D.

Yellow Bud, Ross Co., Ohio.

We like the tone of our correspondent's remarks. If we mistake not, however, the obnoxious law was passed at a time when the cold and heavy snows threatened destruction to the birds. As a protective measure, we thought at the time it was a wise one and so commented upon it. If, however, as several correspondents have written us, there has been no diminution in the usual game supply, we cannot see sufficient benefit in the law to counterbalance the objections urged in the letter above.

The Rifle.

WATCHING THE FLIGHT OF BULLETS.—At a shoot of the Hopkinton Rifle Club a short time since, was witnessed the novel and rare sight of seeing the flight of the rifle balls shooting over the 500 yard range. The rifle used was the Springfield breech-loader, 45 calibre, 70 grains powder canelured bullet with lubricant, and the paste of the bullet was shown by a very small white line and with a field glass could be seen (until it struck the target) clear and distinct. It could also be seen with the naked eye, but for only about 300 yards of its flight. As near as could be judged, it passed at its highest point some fifteen to twenty feet above the level of the bull's-eye, and was seen by quite a number with interest.

W. M. Farrow is doing good work with his Ballard abroad. A few weeks ago he was filling up the "highest possibles" at Wimbledon, then after a spin home he is back again at Versailles taking away first prizes. Germany had had a taste of his skill and an opportunity to see the excellent work of the prince of off-hand rifles; and every Schutzen corp grounds and rifle range in the States bears record to its merits.

For Forest and Stream.

SOME RIFLE REMINISCENCES.

THE wonderful performances of Mr. Lord, which appear in your issue of the 19th June, recall to my memory days of yore. I was never a crack shot. My occupations, except when at sea, prevented my devoting much time to practice, without which no man can possibly become a dead shat. A quick eye and iron nerves alone made me, nevertheless, a tolerable sportsman; and well do I remember my exultation when I ran to pick up the first hare I ever fired at.

I had a cousin who was a dead shot with the pistol. He would cut a rose bush trained against a wall inch by inch at fifteen paces, without missing once, or hit a card held at the same distance, when any of us had the nerve to stand before him. Strange to say. he was near-sighted, and always wore spectacles. Under his tuition I soon became a fair shot. His first lesson was to replace the flint by a wooden one, on the principle of economy. Caps were not constantly used then. Aim at an object, pull the trigger, and notice the effect on the arm, which, in all cases, so far as my experience goes, causes it to incline slightly to the right or left—to rise or fall. The effect is the same with gun or pistol. The next lesson was to fire at a target, allowing for the aforesaid rise or fall, &c., until the correct sight was attained. A few lessons made me a fair shot. But no amount of practice, I candidly admit, would ever have enabled me to compete with Mr. Lord, whose performances are truly wonderful.

Recoil reminds me of a reminiscence of my experience at soldiering which may amuse some of your readers. The Jersey militia is, I believe, considered equal to any in the United Kingdom. Every inhabitant must serve in some capacity until the age of sixty, or pay a certain fine per annum. Boys at the age of fourteen attend drill every Monday morning until they are eighteen, when they are drafted into the militia. I, as a matter of course, had to serve, and belonged to the First, or Northwest Regiment, then commanded by Colonel Le Conteur, who was an officer on half pay, and one of her Majesty's *aides de camp*. A thorough soldier, he took a pride in his regiment, and was universally respected by both officers and men. We had a queer character in my company, a shoemaker, who was very much disliked by the adjutant. The old Black Bess was still in use, and this man had one that kicked to such a degree that he was afraid to fire it. All his applications to the adjutant to have it exchanged had hitherto proved fruitless. We were out at target practice on one occasion, each man having three rounds of ball cartridge only. The colonel always watched the men firing, and noticed that the son of Crispin did not fire all his. Walking up to him he asked why he had fired every round. "Because my gun kicks so, colonel, that my shoulder is sore for a week whenever I fire her," was the reply. "Bah!" exclaimed the colonel, "if you held her firmly to your shoulder she would not kick. Give me the gun," which Crispin did with a malicious grin. The colonel fired, and was knocked down flat on his back, the gun escaping from his grasp. My first impression was that he was killed or seriously hurt; but he rose slowly with assistance, evidently in great pain, called the adjutant, ordered him to change the gun, and rated him well for not having done so before. It turned out that there were two rounds in the gun. the first only having been fired!

Now for a crack shot. I became acquinted with Admiral Digby after he had retired from active service, and resided near Dorchester, England. He once related to me the following anecdote:—When first lieutenant of a British line-of-battle ship—the *Ganges*, I think—being on the Mediterranean station, they entered the port of Naples, to see the lions and, doubtless, have a peep into the crater of Mount Vesuvius—rather difficult of approach just now, from all accounts. The day after their arrival the *Washington*, which, if I mistake not, was the first three-decker built by the United States, also came into port. There was a large shooting gallery in Naples in those days—a regular lounge for all idlers, and where the officials of the two ships met. Lieut. Digby accompanied some of his brother officers to the gallery on one occasion when several American officers were present. All had exhibited their skill but himself, when he was called upon by one of his companions to show what he could do, but he stoutly objected, on the ground that he was out of practice. Finding they would not accept his excuses he took the pistol, fired, and to his surprise made a bull's eye—clean—*no marginal notes*. His brother officers were quite delighted, and wished him to repeat the operation. "No," replied the wary lieutenant. "I have shown you what I can do; that is enough." From that day he was considered a dead shot. He assured me it was mere chance; he had never practiced, and gave all shooting galleries a wide berth ever after.

Fog and rain, rain and fog.
Is the daily entry in the Percè log.

Percè, 12th July, 1879. PHILIP VIBERT.

LADIES AT THE TARGET.—*Rawley Springs, Aug. 17th.*—MR. EDITOR:—The readers of your paper at this place, the ladies especially, were very much disappointed at the non-appearance of this week's issue. They had looked forward to its coming with more than ordinary interest as they knew it contained an account of the first match between the Pocahontas and Matoaca Clubs. Next to shooting, the pleasure of reading it seems to be the thing, and I am quite sure that many of them will leave here as much determined to read the FOREST AND STREAM regularly as to make their husbands or fathers buy them a 22 calibre rifle. Some of them have been wonderfully proficient, enough so for me to say, they could without fear, meet any five ladies in the United States and do credit to both themselves and their instruction.

In the final match which took place to-day the Pocahontas was again victorious by twelve points. This it must be remembered is remarkably close shooting. There were twelve in each club, the individual "possible" being sixty, so that the difference was less than two per cent. Mrs. L. L. Walter, of Baltimore, having made the best total score for the season was declared champion, very much to the satisfaction of the members of both clubs and greatly to her credit. They all say, and I am positive with a great deal of sincerity, that as the past rolls by in panoramic view before their mental vision, they will gaze long and fondly on every incident connected with the Rawley Rifle Club, around which are clustered the brightest recollections of the stay at this charming place. HANDICAP.

MASSACHUSETTS—*Boston, Aug. 23d—Mammoth Rifle Gallery.*—The shooting during the week has been exceptionally good. Although no clean scores have been made, Mr. E. Whittier of the Massachusetts Rifle Association still heads the list. The following is the standing of the several competitors; 150 feet; rounds, 8; possible 40:—

E. Whittier	5 5 5 5 5 5 4 5—39	F. M. Cudy	5 5 4 4 4 4 5 5—36
U. A. Pollard	5 5 5 4 4 5 5 5—38	H. K. Lyman	5 5 4 4 4 4 5 5—36
I. A. Pickering	5 5 5 4 4 5 4 5—36	E. F. Brooks	4 5 4 5 4 5 5 5—36
Wm. H. Harrison	4 5 5 5 5 4 5 5—38	S. S. Burnstead	4 4 4 5 4 5 5 5—35
E. F. Richardson	5 4 5 5 5 5 4 5—38	Geo. E. Everett	5 4 4 4 4 4 5 5—35
Geo. Estes	4 4 4 5 5 5 5 5—37	Geo. W. Morse	5 4 4 4 4 4 5 5—35
M. O. Johnson	5 5 4 4 4 5 5 5—37	H. A. Hopkinson	4 4 5 4 4 4 5 5—35
Geo. M. Smith	5 5 5 5 4 5 4 4—37	Chas. Tupper	5 4 4 5 4 4 5 5—35
A. S. Lord	5 4 4 4 4 5 5 5—36	O. W. Clapp	4 4 4 4 5 5 5 4—35

CONNECTICUT—*Bridgeport, Aug. 23d.*—The Bridgeport Rifle Club's semi-monthly shoot took place to-day, with several closely contested matches. The leading scores were:—

1st match, 200 yards, 7 shots, for silver pitcher and two money prizes, H. P. Nichols, 31; I. McCourt, 30; S. V. Nichols, 30; S. H. Hubbard, 30.

2d match, 7 shots, 200 yards, for the "Nichols Gold Badge," S. V. Nichols, 30; S. C. Kingman, 30; S. H. Hubbard, 29; John Slatcher, 29.

3d match, 200 yards, 10 shots, for Sharp's rifle and two money prizes, S. H. Hubbard, 45; Dr. G. F. Lewis, 44; I. McCourt, 43; G. W. Kerr, 42; S. V. Nichols, 41.

Mid range match, 500 yards, 10 shots, carton target, I. McCourt, 54, possible 60; David Conger, 52; S. V. Nichols, 51; Harry P. Nichols, 50. S. H. H.

NEW JERSEY—*Brinton, Aug. 23d*—3 P.M.—Winchester match; fourth competition; rifle won by F. H. Holton, F. J. Donaldson leading all competitors, but having previously won a rifle in this match scored one competition for final prize; 29 entries; the following being the best scores:—

Name.	*Rifle.*	*Score.*	*Allowance.*	*Total.*
F. J. Donaldson	Military	5 5 5 4 5 5 4 4 4 4—45	—	48
F. H. Holton	Sporting	4 5 5 5 4 5 5 5 5 5—47	—	47
T. J. Dolan	Military	4 5 4 5 5 5 4 4 4 4—44	3	47
Dr. M. M. Maltby	Military	5 4 5 4 4 4 3 4 5 5—43	3	46
D. F. Davids	Military	5 4 4 4 4 5 5 4 4 4—42	3	45
J. K. Green	Military	5 4 4 4 4 4 4 4 3 5—41	3	44
J. W. Todd	Sporting	4 5 4 4 4 5 5 4 4 4—43	—	43
H. Fisher	Military	4 4 4 4 4 4 4 4 4 4—40	3	43
R. W. Swope	Military	4 4 4 3 3 4 4 5 4 3—39	3	42
C. P. Bonnett	Sporting	4 3 4 5 5 4 3 4 4 3—39	—	39

Association match No. 2; 4 P.M.: 18 entries; the following being the best scores:—

T. Fitz	5	5	5	4	4	5	5	5	4	5—47
F. H. Holton	5	4	5	4	5	5	5	4	4	5—46
H. Fisher	4	4	4	5	5	5	5	4	4	5—45
P. Alder	4	4	4	5	5	4	4	4	5	4—43
R. R. Hall	4	4	4	4	3	4	4	4	4	5—40
J. W. Todd	5	5	4	3	4	4	3	4	4	4—40
C. P. Bonnett	4	4	4	3	5	3	4	4	4	4—39

Aug. 21st.—Association long-range match; seventh competition:—

	800 yards.	*900 yards.*	*1,000 yards.*	*Total*
J. M. Dart	73	73	72	218
H. Fisher	68	64	68	200
A. McInness	66	69	58	193
A. G. Holcombe	70	65	55	190

One competitor retired.

WASHINGTON, D. C.—*Aug. 16th.*—The fifth contest for the Harkness Gold Badge was shot at Benning's range to-day. The day was by far the worst for long-range shooting, the club has had this year, and as a consequence the scores were knocked down to old-time figures. The wind blew at times almost a gale, varying from six to nine o'clock on the wind-dial, and the changes were very sudden and violent. Sunshine, clouds, and showers succeeded each other rapidly throughout the afternoon, the war of the elements torturing the riflemen in their almost vain efforts to "keep on the target," each man feeling very well satisfied on firing to see the "trap" opened to mark him a shot, without being very particular as to where the shot was so it was "on:"—

	800 Yards.	*900 Yards.*	*1,000 Yards.*	*Total.*
Col. J. O. P. Burnside	70	64	65	199
Dr. S. J. Scott	69	69	61	199
P. J. Lauritzen	67	57	63	187
A. A. Adee	72	53	59	184

The best three scores of each of the three leading contestants in this match are now as follows:—

Colonel Burnside	214	216	218—648
C. H. Laird	206	208	209—623
Dr. S. J. Scott	199	209	214—622

BROOKLYN—*Aug, 14th.*—A sweepstakes match under the management of the Brooklyn Rifle Club took place to-day at Locust Grove, 200 yards, rifle range:—

D. Trotter	44	A. H. Andrews	40
C. H. John	43	J. H. Roche	39
J. W. Naughton	42	P. Fletcher	38
Dr. G. W. Wetty	41	W. J. Roche	37
T. A. Stratton	41	J. F. Burns	37
J. B. Hazelton, Jr.	40		

GEORGIA—*Savannah, Aug. 20th.*—The rifle contest between Mr. W. N. Nichols and Mr. Geo. Allen, members of the Savannah Rifle Association, took place at Schuetzen Park to-day, and attracted a large gathering notwithstanding the forbidding aspect of the weather.

The contest was at 200 yards, 100 shots each, for a silver medal and the cost of the match, and resulted in the victory of Mr. Nichols, who, it will be recollected, was the successful competitor in a similar match last April with Mr. D. M. McAlpin. The full score of the contest yesterday was as follows:—

W. N. NICHOLS.

5 4 4 4 4 4 4 5 4	42
5 5 3 4 5 5 5 5 5 4	46
5 5 4 4 4 5 4 4 4	43
5 3 4 4 4 5 4 4 5 5	42
4 4 4 5 5 4 3 4 5	42
Total	423
4 5 4 4 5 4 5 5 3 4	43
5 4 4 4 5 4 4 4 4 5	40
4 4 5 5 4 4 4 5 5 4	41
5 4 4 3 4 5 4 4 4 4	41
5 4 4 4 4 3 5 4 4 4	40
4 4 5 5 4 5 4 5 4 0	40

GEORGE ALLEN.

4 5 5 4 4 4 4 3 5	42
4 4 4 4 4 4 4 4 4	40
4 5 4 4 4 4 5 3 4 4	41

Emmet Guard	765	Washington Guard	738
National "	754	Carson "	723

The next meeting of the teams will be at the Miners' Union Picnic, September 13th. BELL.

LONG-RANGE TOURNAMENT—*Creedmoor, Monday, Tuesday and Wednesday, Sept. 22d, 23d and 24th*, 1879—(the week following the Fall Meeting of the National Rifle Association) 10 o'clock A.M. each day. All comers. Fifteen shots at each range—800, 900 and 1,000 yards—each day. No sighting shots. Previous practice of every description must cease at 10 o'clock. No restriction as to method of loading. Any rifle; any position (Rules N. R. A.). No coaching. Competitors may not fire their own shots, but no one to call out the location of any shot. Scorers to be fifteen feet behind the firing points. No one but one competitor to be at one firing point at once, and no one not a competitor in the match to pass in front of the firing. Scorers on any pretext whatever. Entrance fee, $5 each, each day.

Should the weather be unfavorable the competitors present at the firing points at 9.55 o'clock shall vote whether to proceed or not, the majority to govern. During the shooting if the weather shall be so unfavorable as to prevent "aiming," the executive officer may suspend the shooting—not to exceed thirty minutes at any one time. Any further suspension to be subject to a majority vote of the competitors present at the time of firing. Should any portion or portions of any of the three days' scores be uncompleted on Wednesday evening, September 24th, 1879, the competitors will present themselves at the firing points at 9.45 o'clock A.M. on the succeeding day, and proceed to complete said scores in such manner as the majority of the competitors at the firing points at that time shall by vote determine, until all the scores shall have been completed or abandoned, according to the rules of the N. R. A. in starting to complete a score as after Wednesday evening, September 24th, 1879, one sighting shot will be allowed if the majority of competitors shall, by vote, so decide. Targets shall be assigned by drawing each day, and the order of shooting in each squad shall be decided by drawing at each range. Each competitor shall certify on honor, on blanks to be furnished at the firing points each day, the kind and quantity of powder to be used that day, the kind, weight and hardness of the bullets to be used that day; the kind of primer to be used that day; if wadsare to be used in loading; the kind and length of shells to be used that day; the kind of primer to be used that day; if fixed ammunition or muzzle-loading is to be used that day. Each competitor shall further certify on honor the highest scores ever made by him in any match (stated prizes or subscription; association or private) in forty-five shots at the three ranges. No entry will be accepted after 9.30 o'clock A.M. on any day except by unanimous consent of all the competitors then entered.

PRIZES:

First Day—To the competitor making the highest score (forty-five shots), $50. Second highest do., $25. Third highest do., $15. Fourth highest do., $10; and to each of these and the next ten highest scores an equal share of the entrance fees for the day in excess of thirty entries. Total besides entrance fees, $100.

Second and Third Days—Same as the first. Total besides entrance fees, $200.

ADDITIONAL PRIZES:

Class I.—To the competitor making the highest aggregate score of three days, $100.

Class II.—To the competitor (not a winner of the next preceding prize) who, having exceeded 200 points in any match, same distances, has never exceeded 207 points in any match, same distances, making the highest aggregate score of three days, $100.

Class III.—To the competitor (not a winner of either of the two preceding prizes) who, having exceeded 196 points in any match, same distances, has never exceeded 200 points in any match, same distances, making the highest aggregate score of three days, $50.—Prize offered by Judge R. A. Gildersleeve.

Class IV.—To the competitor (not a winner of either of the three next preceding prizes) who has never exceeded 196 points in any match, same distances, making the highest aggregate score in three days. A badge, value $50.—Prize offered by "Forest and Stream" Publishing Company.

To the competitor making the second and third highest aggregate scores, second class, $25 and $15.
To the competitor making the second and third highest aggregate scores, third class, $25 and $15.
To the competitor making the second and third highest aggregate scores, fourth class, $25 and $15.
To the competitor making the highest aggregate score of three days with a Remington rifle, a Remington Creedmoor rifle. Value $100.—Prize offered by E. Remington & Sons.
To the competitor making the highest aggregate score of three days with a Sharp's rifle, a Sharp's standard long-range rifle. Value $100.—Prize offered by Sharp's Rifle Company.
To the competitor making the highest aggregate score of three days with a Ballard rifle, a Ballard long-range rifle. Value $100.—Prize offered by Schoverling, Daly & Gales.
To the competitor making the highest aggregate score of three days with Laflin & Rand powder, $50.—Prize offered by Laflin & Rand Powder Company.
To the competitor making the first completed score in the three days, forty-five shots, exceeding 219 points, $50.
To the competitor making the most centres, 135 shots, one year's subscription to the *Turf, Field and Farm* and one copy of "Perry's Green Book."
To the competitor making the most inners, 135 shots, one year's subscription to the FOREST AND STREAM and one copy of "Perry's Green Book."
To the competitor making the lowest score, 135 shots, one copy of "Perry's Green Book."

Game Bag and Gun.

GAME IN SEASON FOR SEPTEMBER.

Moose, *Alce Americana.*
Caribou, *Rangifer caribou.*
Elk or wapiti, *Cervus canadensis.*
Red or Va. deer, *C. virginianus.*
Squirrels, red, black and gray.
Hares, brown and gray.
Reed or rice bird, *Dolichonyx oryzivorus.*
Wild turkey, *Meleagris gallopavo.*
Pinnated grouse or prairie chickens, *Cupidonia cupido.*
Ruffed grouse or pheasant, *Bonasa umbellus.*
Quail or partridge, *Ortyx virginianus.*
Black-bellied plover, ox-eye, *Squatarola helvetica.*
Ring plover, *Ægialitis semipalmata.*
Snipe.
Stilt, or long-shanks, *Himantopus nigricollis.*
Woodcock, *Philohela minor.*
Red-breasted snipe, or dwitcher, *Macrorhamphus griseus.*
Red-backed sandpiper, or ox-bird, *Tringa Americana.*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tattler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limacolæ* or Shore Birds.

☞This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

☞The seasons for shooting pinnated grouse or prairie chickens and other birds are as follows in the States named herewith:—

States	Pinnated Grouse.	Ruffed Grouse	Quail.	Woodcock.
Ill....	Aug 15 to Dec 1	Oct 1 to Jan 1	Oct 1 to Jan 1	July 4 to Jan 1
Ind...	Oct 1 to Feb 1	Nov. 1 to Jan 1	Nov 1 to Jan 1	July 1 to Jan 1
Iowa..	Sep 1 to Dec 1	Oct 1 to Jan 1	Oct 8 to Jan 1	July 10 to Jan 1
Minn..	Aug 14 to Oct 1	Sept 1 to Dec 1	Sep 1 to Dec 1	July 8 to Nov 1
Wis..	Aug 25 to Jan 1	Aug 25 to Jan 1	Aug 25 to Jan 1	Aug 25 to Jan 1
Neb...	Aug 15 to Feb 1	—	Oct 1 to Dec 1	No Restrictions
Kan...	Aug 1 to Feb 1	"	Oct 1 to Jan 1	Forbidden

NEW JERSEY STATE SPORTSMEN'S ASSOCIATION.—The birds have been heard from, and Tom Stagg assures the committee that he will be on hand with several thousand about the middle of next month. The committee are hard at work perfecting their arrangements. The prizes are ample and everything bids fair for a grand success of the first tournament of the State of New Jersey. We hope to be able to publish the days of the meeting with full programme of events and prizes in our next issue.

DESIRABLE SHOOTING PRIVILEGE TO LEASE.—We call attention of sportsmen to the advertisement of Dr. John R. Baylor, Greenwood Depot, Virginia, who offers to lease to approved parties desiring excellent quail shooting, one of the most desirable localities in the State. There is no doubt of the quality of the tract offered. The doctor, however, wishes us to call attention to the fact that the 2,000 acres which he advertises to lease, are a part of the very section recommended by "Goshawk" in our last issue, for the hunt and field trials of the Sportsmen's National Association this fall. While he is ready to welcome any reasonable number of proper sportsmen to his abounding fields, he notifies any or all concerned that if they shoot over his land, he will expect to be *paid* for it. He has two rooms and three horses at the disposal of guests.

CANADA—*Harwood P. O., Rice Lake, Aug. 16th.*—The water is low in the lake, and the wild rice is looking fine. Summer duck shooting begins on September 1st, and from present indications large bags may be looked for. Sportsmen may expect good fall duck shooting, as the feed is here for them in large quantities. Guides are making preparations already for the fray with canoes, decoys, and camping outfits. HENRY MERRIAN.

Quebec, August 22d.—Our shooting season will open in a few days and I am happy to say that the grouse shooting promises to be exceedingly good. I can go out at any time and raise two or three coveys within a few hundred feet of my residence, as I live in the woods. Snipe and ducks will not come until the storms of fall drive them south. J. W. D.

Magog, Aug. 18th.—I have have been to Megantic Lake this summer, and had a fine time. I believe deer are as plenty as red squirrel, as we saw three on the banks of the Spider, and I tell you it required an early religious training to keep me from having a crack at them. But it is close season, so I thought I would see them later. A. W. HUBBARD.

MAINE.—*Buckingham, Aug. 20th.—Editor Forest and Stream:*—Sportsmen who like to see nature in its wildest forms should come here via M. Q. O. & O. R. R. from Montreal and drive back thirty miles to some of the lakes near the source of the River Blanche. These waters are unrivalled by any in the world for the number of *salmo fontinalis* that they contain. A few days ago two rods, one evening at Little Trout Lake, killed 175 pounds of trout weighing from half a pound to four pounds each. Deer, beaver, and other game are said to be very numerous there. These lakes are easily reached by a passable wagon road from this village, and are fairly within the great and unexplored wilderness that extends back to the North Sea, and will sooner or later become a favorite resort for sportsmen. So far but few parties have visited these waters. A party have just come in and say that in a few hours they could catch more trout than they could save or use up in a camp in a week. Two dollars a day will, at the outside, cover all expense per man from the time they leave the hotel until they return. Railroad fare from Montreal (return ticket), $5.05. Parties contemplating a visit to this great northern wilderness would do well to communicate with J. W. Lynch, Montreal Hotel, Buckingham, Quebec. Don't imagine by the above name that either the hotel or village are "swell." The hotel is small, but clean. The proprietor, Lynch, is somewhat of a sportsman, and the village—well, deer and bear are often killed within its limits. STANSTEAD.

MASSACHUSETTS—*Plymouth Co., Aug. 24th.*—Bay bird shooting opened with us the first of the month, and has been better than for some years past. During the four days of storm last week the gunning on the North river was all that could be wished—also at Cut river and Clarke's Island. There is room for all on North river, and I can recommend the Fourth Cliff House, Scituate, to any sportsmen who want good shooting near Boston. A few coots have made their appearance, and one party bagged four this week. Woodcock are quite plenty this year, and some sport will be offered when the law is off.
S. K. Jr.

Boston, Aug. 20th.—T. C. Snow, son of the secretary of the Tremont Sportsman's Club, of Boston, shot 13 upland plover in the vicinity of East Concord, New Hampshire, on the first day of the open season, H. R. B.

Hampton Marshes.—An Amesbury (Mass.) correspondent writes relative to a recent report published in these columns, that the abundance of game there stated is not to be found; that sportsmen visiting the Marshes for bay bird shooting are sadly disappointed and will be prudent if they stay away.

Mendon, Aug. 18th.—Very few partridge here. Quail bid fair to be plenty this fall. Very few woodcock.
C. T.

CONNECTICUT—*Bridgeport Aug. 22d.*—Game promises to be quite abundant this fall, if not slaughtered before the law goes off. Some woodcock have been killed by the pot-hunters, but I don't think that the practice is as prevalent as last year, when the law was broken with impunity from June 1st on through the summer. As there is no game club here no one likes to take upon himself the responsibility of prosecuting. S. H. H.

NEW YORK.—*Cohoes, Aug. 21st.*—There are a few partridges here, but the pot hunters have been shooting since the first of the month, and by the time the season opens there will be none left for those who observe the laws. What are we going to do to stop it? The only way that I can see is to stop all summer shooting, and make it a misdemeanor, to preserve game, and enforce the laws. The laws as they stand now are a dead letter, and might as well be abolished. It would not interfere with woodcock shooting in this section, for there is none to shoot, I only saw three last August, and they were as wild as Comanche Indians. H. M.

NEW JERSEY—*Bloomsbury Aug. 20th.*—We have had a pretty good woodcock season, and think game will be quite plenty this fall. P. H.

ILLINOIS—*Newport, Ind., Aug. 18th.*—The open season for prairie chicken shooting in Illinois commenced August 15th, and on the 14th my friend, William S. Reed, of Richmond, this State, and myself started for White's, our old stopping place on the prairie, 12 miles from Newport. But our hopes were blasted, for the next morning it was raining a cold, drizzling rain, and continued during the day. White went out with us, but we only obtained a few hours' hunting. The chickens were mostly under cover in the corn, and we only secured a bag of 22, and those at the expense of a wetting. The morning of the 16th was cool and pleasant, and Read and I had an early start. We took a long tramp over some unacquainted lands which promised well, but were not very fruitful—only getting an occasional chicken. About ten o'clock we returned to the pasture lands we had permission to shoot upon, where we found several fine large coveys of young chicks, and had some splendid shooting until noon, making about one day's shooting, and a total bag of 39 chickens. R. E. S.

OHIO.—*Fulton, Stark Co.*—My brother Bert and I were out for woodcock July 18, and bagged twenty-five. Twenty-four woodcock had been shot on the same ground before, making forty-nine killed along a creek in one mile. Bert and I killed all we saw but three. Our dog, Old Bob, is an A1 dog, and knows better where to find game than most hunters. I also shot a crane five feet high and six feet stretch of wing, that had a bass in his craw nine and a half inches long.
GEO. HOOVER.

WISCONSIN.—*Baraboo, Aug. 19th.*—A few of our noted Nimrods, consisting of the following gentlemen: C. A. Swineford, B. K. Cowles, R. H. Strong, George Vittum, A. M. Daggett, and George Potter, have just returned from their annual chicken hunt near Tracy, Minnesota. They say that chickens are not as plenty as last year. But had fine sport, bagging about 300 and a number of Jack rabbits. E. HOLLAND.

TEXAS—*San Antonio, Aug. 9th.*—In traveling about I have seen abundance of game. The quail are so thick that I have not a doubt that an ordinary shot could go out almost any where and bag a hundred birds in a day. "Bob White" is heard on every side. The deer were badly thinned out last year owing to the "black tongue." At "Camp Verdie," from which place I have just returned, it was almost impossible to ride a mile on the "Divides" without seeing one or two skeletons. J. O

Graham, Young County, Aug 15th.—Editor Forest and Stream:—DEAR SIR: Will you pardon my again bothering you about the special wads mentioned by me in my communication which you were kind enough to publish May 23d? The letter of "Forest Aisle" in my last FOREST AND STREAM of August 7th, again brings this subject most forcibly before me, and I would most earnestly solicit your kind offices in inducing some one or other of the large gun firms to get on some of these wads—please give me a line or two on this subject in the column to correspondents. MATABAN.

ONE WAY TO KILL A DUCK.—*Editor Forest and Stream:*—Of course, the more plentiful the game the greater sport, yet it is not always so; and, if not too tedious, I will narrate how my mental faculties were profited and my patiences brushed up by the pursuit of one duck. Hunters, like doctors, have great need of patience whether in sitting all day watching or learning to bear a loss occasionally. This was a fine, dreamy, hazy, drowsy, golden October day, and just breeze enough to make an inland swell from the bay. Far and near the tall rice, bent with the weight of a lavish harvest, stretched away to the right and left. It was near noon, when the teal and mallard sat priming themselves on the bogs, the wood-duck in the bullrushes on the margin, and the blue-bills far out on the bay. One blue-bill, an old drake, probably sent in as a scout to reconnoiter the situation, preparatory to the evening's flight, came suddenly along a cross-shot athwart my bow. To cram down the rest of my biscuit, snatch up my gun, blaze away, and wing him was the work of a moment. The next instant he dove. When he came up he was a long shot, but I let the other barrel at him, as a signal to heave to, but he didn't heave worth a cent except to "hove up" his tail and go under. I re-loaded, picked up my pole (for we use a pole instead of oars in the rice) and started after him. When he next appeared he was four rods ahead of the boat. I dropped the pole and fired at the tip of his bill which was all that was visible; still he did not heave to, but went down. When next he rose he was behind the boat but dove too quick to shoot. I laid down the gun and concluded to drown him; so awaited his fourth appearance, which was only a little snake-wake on the water away out, steering fast for the bay. To pole a boat well is a science requiring skill and strength. I flatter myself I have become a sort of combination variety of both at the poling business. I went for that duck with a vim worthy a better cause. The duck had dived, and to see him now, as the boat began to rise and fall with "the swell," whenever he appeared for an instant, was no slight accomplishment. The water runs out pretty shoal for a half mile and the bottom is good, still it requires effort to keep up to the duck and not lose him. At last he comes up near the boat again. Shew! I say, on a motion to strike him, and down he goes. The main thing now is not to let him get breath, so every time he comes up it is necessary instantly to scare him down. At last he begins to swim under the boat and shows signs of striking his colors, and what's more, if you notice his breathing he begins at last to *heave* too. Soon he cannot dive, and then a blow on the head with the pole (which it takes several strokes to hit, without missing at all, at all), and the cunning old rascal is secured. If the hunter don't lose his poles, don't lose his balance, don't fall overboard—one thing he does lose, and that is about half the usual excitement of the chase. R. W. H.

FINE GUNS.—In another column Francis Tomes' Son advertise some very fine imported guns for sale at prices below the cost of importation. This concern is winding up the gun department of their business which is the reason of their offering guns made by such well known manufacturers as Westley Richards, Scott, Hollis, etc., at such low prices.

—We had a pleasant call the other day from Mr. E. L. Raulett, of the New Orleans Gun Club, who has been inspecting the grounds of the various shooting clubs in the vicinity of New York with a view of introducing their best features upon the New Orleans grounds.

SHOOTING MATCHES.

MASSACHUSETTS—*Walnut Hill Range, Aug. 20th.*—Match at glass balls; singles, 18 yards; doubles, 15 yards; Bogardus' rules:—

J. Nichols,...	Single	1	1	0	1	1–4					
	Double	1	1	0	0	1	1	1	1	7–16	
	Rotary	1	1	1	1	1–5

Oates	1 1 1 1 1 0—5	Phillips	0 1 0 1 0 1—3

Shoot off ; 21 yards ; miss and out :—

Mitchell	1 1 1 1 1 1 1 0—8	Jones	1 1 1 1 0 —4
Meaders	1 1 0 —2	Phillips	1 1 1 1 1 1 1 1 1—9

Ties on five :—

Oates	1 1 0 —2	Seiferle	1 1 1 1 0—4
Maskey	1 1 1 1 1—5	Valentine	0 —0

Third match :—

Mitchell	1 1 1 1 1 1—6	Meaders	1 0 1 1 1 0—4
Phillips	1 1 1 1 1 1—6	Maskey	1 1 0 0 1 0—3
Legler	1 1 1 0 1 1—5	Valentine	0 1 1 0 1 1—4
Jones	0 1 1 1 1 1—5	Seiferle	1 0 0 1 1 1—4
Bryan	0 1 1 1 1 1—5	Bailey	0 1 0 0 1 2

In shoot off, 21 yards, Mitchell and Jones won first and second.

Fourth match :—

Mitchell	1 1 1 1 1 1—6	Valentine	0 1 1 1 1 0—4
Phillips	1 1 1 1 1 1—6	Legler	1 0 0 1 1 0—3
Meaders	1 1 1 1 1 1—6	Maskey	1 0 0 1 0 0—2
Oates	0 1 1 1 1 1—5	Seiferle	1 0 0 0 1 0—2
Jones	1 1 1 1 0 1—5		

Shoot off, 21 yards, won by Mitchell and Oates respectively.

Fifth match :—

Mitchell	1 1 1 1 1 1—6	Valentine	1 0 0 1 1 1—4
Jones	1 1 1 1 1 1—6	Legler	1 1 0 1 0 1—4
Oates	1 1 1 1 1 1—6	Meaders	0 1 1 0 1 0—3
Phillips	0 1 1 1 1 1—5	Seiferle	1 0 0 1 1 1—4

Shoot off, 21 yards, won by Mitchell.

Sixth match :—

Phillips	1 1 1 1 1 1—6	Oates	1 1 0 1 1 1—5
Valentine	1 1 1 1 1 1—6	Legler	0 0 0 1 1 1—3
Jones	1 1 1 1 1 1—6	Turner	0 0 1 0 1 1—3
Mitchell	1 1 1 1 1 1—6	Meaders	1 1 1 1 0 0—4

Shoot off, 21 yards, won by Phillips.

Seventh match ; miss and out :—

Mitchell	1 1 1—3	Phillips	1 1 1—3
Turner	0 —0	Oates	0 —0

Mitchell and Phillips divided :—

Eighth match ; miss and out.

Mitchell	1 1 1 0 —3	Oates	1 1 1 0 —3
Turner	1 1 1 1 1 1 1 1 1—9	Phillips	1 1 1 1 1 1 1 1 0—8

FLORIDA—*Tallahassee, Aug. 16th.*—Match at glass balls; 20 yards rise ; balls thrown from the hand :—

TEAM NO. 1.

C. C. Pearce	0 0 1 1 1—2	R. A. Shine	1 1 0 1 1—4

E. K. Hollinger	0 1 1 1 1 0 1 0 0 1—6
Total	24

Shine and Davis tied on one bird each; match decided by finally Hopkins and Davis shooting at glass balls, balls missing, and thus giving match to Team No. 1.

—Read Henry C. Squires' advertisement.—[*Adv.*

Rational Pastimes.

CHICAGO NATIONAL ARCHERY TOURNAMENT.

THE grand annual meeting of archers of the United States, held at Chicago on the 12th, 13th and 14th of August, under the auspices of the National Archery Association, was certainly a great success, and has done more for the cause of archery than anything since the publication of the "Witchery of Archery" by Maurice Thompson. More than 100 archers took part in the meeting, and 54 gentlemen and 20 ladies shot the Double York and Double Columbia Rounds through in the three days. Several gentlemen and ladies shot in the handicaps who did not shoot for the medals.

The grounds at White Stocking Park are not well suited for an archery meeting, as the proximity of the railways brought an annoying smoke at times, and the adjacent buildings dwarfed the appearance of the targets and rendered the aim uncertain, reducing the average score of every archer at least 20 per cent. But the enthusiasm of the assembled archers was unbounded, the rivalry, though extremely generous, was keen, and especially during the "team shoot" on the last day was the excitement intense. That the financial returns did not equal the outlay was solely due to the showery weather of the first two days, which prevented the attendance of spectators. On the last day a fine crowd of spectators graced the grand stand, and the applause which came from the stand whenever a fine shot was made evinced their appreciation of the pastime. The shooting was at ten targets ranged from west to east across the grounds, the gentlemen shooting at eight targets and the ladies at two. There was a great deal of curiosity manifested to see Mr. Maurice Thompson shoot, and his friends regretted as deeply as he himself did that he was not in condition to attempt the use of a bow. Early this spring he seriously affected his left shoulder by the use of an extremely powerful bow, and in consequence his shooting has been ruined for one season at least; but it is hoped that by the next season he will have wholly recovered the command of the bow. For the good of the cause of archery only he consented to shoot through this meeting regardless of his unfit condition, and although his scoring was very low, the absolute perfection of his line shooting attracted much notice. None of his arrows went wide, but he was not strong enough in his left arm to keep the proper length, and the monotonous falling of his arrows, just under and just over the target at the longer ranges, was no doubt a trial of his patience. In style he is careful rather than brilliant, drawing his arrows to within about six inches of the pile, then pausing two seconds upon his aim, drawing slowly and steadily from thence to the finish and loosing on the draw. He used two bows of finest Spanish yew—one of 51 pounds weight, made by Thomas Aldred, of London, and one of 46 pounds, made by Horsman, of New York. His arrows were made by Horsman and were of 5.0. weight.

Mr. Will H. Thompson, who bore off the champion medal, was also an object of curiosity to the assembled archers as well as to the spectators. His friends were sorry to see him appear upon the target field in a very poor state of health, he having been prevented from touching his bow for several weeks on account of sickness. He was, however, improving from day to day, and though his shooting was marked by feebleness on the first day, he seemed to gain strength and nerve, and on the second day made the fine run of 42 hits from 72 shots at 100 yards, though the hits ran low, only yielding him 130 points. With the same number of hits he has frequently scored 180. Many of the assembled archers, who have frequently seen him in matches score from 270 to 300 points at the 60-yard range, were astonished to find a score of only 155 to his credit at that range. His feeble condition furnishes the reason. His total of 624 at the Double York Round falls 350 short of his better practice scores. His style of shooting is peculiar and very attractive. He keeps his eyes fixed upon the target while he leisurely draws the arrow from the quiver and places it upon the string. Never for a moment glancing at the bow or arrow, he raises the whole to the proper elevation, drawing the string back as he lifts the bow till the pile of the arrow barely shows beyond the bow, and looses the arrow exactly as the full draw is reached. The whole process does not occupy more than one second from the time the arrow is nocked on the string to the loose. And yet in that one second he coolly finds his line, draws to the pile of his arrow, settles the arrow point upon his point of aim, and looses. To the spectator it appears like a flash. The second score on the list was made by Dr. McMechan, of the Wabash Merry Bowmen. While 478 is not a large score at the Double York Round, it is really fine work for an archer entering upon his second season and at his first great public meeting. He made no "spurts," but shot steadily throughout, and won second place by good nerve and careful shooting. He used a lancewood-backed bow of 48 pounds weight. For third place Mr. Ford P. Hall, of the Highland Park Archers, and Mr. Charles Leach, of the Kokomo Archers, tied with a score of 439 each. No two styles could be more unlike than those exhibited in the shooting of these two gentlemen. Mr. Hall, who is of slight frame, shoots with a very quick, nervous draw, takes no aim, but so soon as the bow is raised to the elevation which the mind thinks is right the string is whipped back to the check, the recoil of the bow is heard and the arrow is gone. He is decidedly a "sensational" shooter, sometimes making a Single York Round of nearly 400 points, sometimes dropping to less than half that amount. Mr. Leach is a man of great physical and nervous force, a symmetrical athlete who draws a seventy pound bow with perfect ease, but has the good judgment to confine himself to the use of a fifty-pound self Spanish yew, and exhibits a command over it which renders his shooting a very beautiful thing to look upon. He is one of the coming archers, and we should advise Mr. Will H. Thompson to keep an eye upon him, for in all future contests for the medal Mr. Leach will be an adversary of great power. Mr. Hall's score of 102 with his second 24 arrows at 60 yards, and Mr. Leach's score of 92 points with his second 72 arrows at 100 yards were among the most creditable performances of the meeting. We should very much like to give a short description of the style of shooting of each of the archers who took a part in this first grand annual meeting, but our opportunity for separately observing them was not good and we must forego that pleasure. We must, however, give a few lines to the ladies, and here the same difficulty meets us, for we were only permitted to observe the shooting of a few of them. The lady champion, Mrs. Spaulding Brown, of the Hastings Archers, draws a 35 pound bow with evident ease, and shoots with great steadiness and the most imperturbable coolness. To her nerve upon the first day she owes her success, for on that day she gained a lead over her principal adversary, Mrs. Lee, of 37 points, a gain which that lady, though shooting with great brilliancy at 40 yards, could not overcome. Mrs. Brown is just beginning her second season with the bow, and we feel no hesitation in saying that the lady who shall win from her the champion medal next year will have to score 700 points at the Double Columbia Round. Her gross score of 548 points was a very fine record for the first grand annual meeting. The second gross score of 510 points, by Mrs. Lee, of the Wabash Merry Bowmen, was only prevented from being very much larger by her extreme excitment and nervousness at her first public match. In private practice she has scored 743 at the Double Columbia Round, and is generally very reliable for 650 points. She shoots with great deliberation, aiming her arrows carefully and drawing steadily and slowly. Her loose is perfect and in the contest next season she will be one of the champion's principal competitors. The third score was made by Mrs. M. C. Klein, of the Wabash Merry Bowmen, and in the beginning of the race it seemed as though the medal was almost within her grasp, as she led the 30 yards score by eight points over the champion, and by 45 points over Mrs. Lee. Her shooting at times was brilliant, her three golds at 30 yards eliciting a storm of applause. Like Mrs. Lee she was greatly affected from her first attempt to shoot in public, and fell far below her practice scores.

The fourth gross score was made by Miss Laura Owens of Des Moines, Iowa, and the Des Moines Toxophilites may well be proud of her success. She shot well at 30 and 40 yards, but fell off greatly at the 50 yard range, caused we think by the use of an outrageously strong bow. While Miss Owens has great nerve, and more strength than is usual for a lady of her size, yet there can be no hope of her ever attaining the first place among our lady shots while she endeavors to master a 46 pound lancewood bow. There are very few gentlemen who need a stronger bow than the one she shot with at this meeting. If she will get a self yew of 28 pounds, her arrows will fly as sharp and low and far more truly than they now do. Considering the weapons she used, her scoring was very fine. Miss Janie Street of the Highland Park Archers scored 401 for fifth place, getting a fine score at 30 yards, but falling off badly at the longer ranges. Miss Street is perfectly unaffected by the circumstances of a public meeting, shooting with the greatest coolness during the whole meeting. Her self-control and fine nerve was well exhibited in shooting off a tie with the lady champion and Mrs. Klein, each of whom was scoring much higher than herself. The three were tied upon "most golds," and shot off the tie with 15 arrows at 35 yards. The champion and Mrs. Klein were each somewhat excited, but Miss Street shot with the same quiet nerve which she had before exhibited, and won by one point over Mrs. Brown and two points over Mrs. Klein. We have space to speak of the shooting of only some of the lady archers, and we call attention to Miss Bixby's style of shooting as something rarely observed on the target-field. She secured sixth place by a fine score at 50 yards after appearing to lose all place by a very poor score at 40 yards. This young lady archer shoots left-handed, uses a very strong bow, and in the 60 yard handicap showed that with her, distance only "lends enchantment to the view." She seems to shoot almost as well at 60 yards as at 40, and was universally admitted to be the most graceful shot on the grounds. If Miss Bixby will accept our advice to obtain a 30 pound Spanish yew bow instead of the powerful hard wood with its terrible recoil, she will score over 700 at the next national meeting at the Double Columbia Round. We should very much like to touch upon the shooting of other ladies who graced the first great meeting with their presence, but want of space forbids. We can only say generally that they preserved their nerve better, and shot nearer to their practice scores than the gentlemen did. At the great meeting of 1880 we shall see instead of twenty shooting through the meeting, more than a hundred lady contestants. All honor to the twenty who graced the first! We append the score list of the three days shoot for the National Medals, and the prizes won by the several contestants. We are sorry that it is impossible to give this week the scores and prizes in the several handicap shoots, but we will do so next week and accompany them with some further comments upon the shooting and other matters of interest connected with the shooting. On the last afternoon during the "team shoot" a fierce wind was blowing which whisked arrows about as though they were straws, and effectually prevented any high scoring only one archer, Mr. Will A. Thompson, passing 400 points at the American Round. On Thursday evening the archers assembled in the ladies' dining hall of the Sherman House and the prizes were awarded by the president, Mr. Maur-

ice Thompson. The National medals he had awarded upon the target field in a neat speech to each of the winners, his bantering address to Mr. Will H. Thompson provoking a continuous roar of laughter from the assembled archers and spectators. Mr. Will, however, in a brief reply neatly turned the laugh against his brother by an apt quotation from the latter's writings, and the archers cheered rapturously. The winners wore the medals at the presentation of prizes on Thursday evening and upon entering the room were enthusiastically applauded. Altogether the meeting was one long to be remembered, and every archer who shot it through has done his or her mite toward the firm establishment of the most innocent, graceful and noble pastime ever introduced into polite and refined society. No doubt Mr. Maurice Thompson felt intense gratification as he saw the ripening of the fruit which his hand has planted. Let all true lovers of honorable and beautiful pastimes rejoice with him.

Mr. Saunders	27	110
Miss Penrose	22	100
Mr. H. Bruce	29	129
Miss J. Miller	19	75
Totals	195	893

A pleasant feature of the game was the competition for two prizes, the one for the ladies being a fine bow, and for the gentlemen six fine arrows, to be awarded respectively to the one making the highest score in any one round. Miss Penrose, of the Westwoods, won the bow, making 23 out of a possible 27 in the sixth round. The arrows were taken by Mr. F. Miller, also of the Westwood Club, he making 35 out of a possible 27 in the fourth round.

THE GAME OF CRICKET.

FIXTURES.

Aug. 29.—Patterson, N. J.—Newark vs. Patterson.
Aug. 29-30—Staten Island.—Hamilton vs. Staten Island.
Sept. 4.—Hoboken, N. J.—Young America (2d) vs. St. George's (2d).
Sept. 5.—Orange, N. J.—Newark vs. Young America (2d).
Sept. 6—Staten Island.—Young America (2d) vs. Staten Island (2d).
Sept. 10-11—Toronto.—Daft's English eleven vs. 22 Canadians.
Sept. 12-13—Toronto.—Daft's English eleven vs. 22 English.
Sept. 15-16—Ottawa.—Daft's English eleven vs. 22 of Ottawa.
Sept. 16-17—Hoboken, N. J.—Marsh's Irish Team vs. St. George's fifteen.
Sept. 18-19.—Staten Island.—Marsh's Irish Team vs. Staten Island fifteen.
Sept. 22-23.—Hoboken, N. J.—Marsh's Irish Team vs. Eleven All, New York.
Sept. 25-26-27—Nicetown.—Marsh's Irish Team vs. Philadelphia eleven.
Sept. 25-26-27—Detroit.—Daft's English eleven vs. Detroit.
Sept. 30-Oct. 1.—Syracuse, Daft's English eleven vs. 22 Central New York.

As will be seen from the above list of fixtures, five matches have been arranged for by Daft's English Team of professional players, and four matches by Marsh's Team of Gentlemen of Ireland. Other game swill be played by both in New York City and State, Philadelphia, and Canada, but at present the dates have not been decided upon.

DAFT'S ENGLISH TEAM.—The Nottingham *Daily Guardian* has this to say of the visit of Daft's Team :—

For many years past there has been a desire on the part of our Transatlantic friends, who take an interest in the noble game of cricket, to witness the play of the most finished and graceful of English batsmen, as also of several others who have never taken part in any foreign expedition. This wish will now be gratified, and the Canadian and American public will have an opportunity of seeing the performances of the pick of professional talent, as the Eleven taken out is unquestionably as strong in all departments as could possibly be. The Eleven (or rather twelve) will consist of the following: R. Daft, A. Shaw, G. Ulyett, W. Oscroft, W. Bates, J. Selby, F. Morley, E. Lockwood, W. Barnes, T. Emmett, A. Shrewsbury, and G. Pinder. Nine or ten of these men were selected this year by the Marylebone Club to play in the Gentlemen vs. Players' match at Lord's, and the people of Canada and America may rest assured that no better exponets of the art could be well put in the field. Saloon passengers' berths for the team have been secured in the *Sardinian*, of the Allan Line of steamboats, to leave Liverpool for Quebec on the 28th of August. The first match will be played at Toronto on the 10th September, under the patronage of the Marquis of Lorne, the Governer-General of Canada, who, we may add, is expected to play against the Eleven. About twelve matches will be played, and among the places to be visited are Ottawa, Montreal, Detroit, Hamilton, New York, and Philadelphia. The tour is expected to last six weeks, and we have not the least doubt it will be a thorough success. The presence of Richard Daft as captain of the team, may be taken on the other side of the water as a sure guarantee that the visit will be conducted in the most satisfactory and honorable manner.

HAMILTON VS. CARLTON OF TORONTO.—This match was played at Toronto on the 26th ult. The Hamiltonians won by one innings and 11 runs.

ST. GEORGES (2d.) VS. STATEN ISLAND (2d.)—This return match was played at Staten Island, Aug. 23d, and won by the visitors by 120 runs. Both teams were weak. The score tells the story, and shows the names of the absentees in the second innings. This half and half way of playing the game should be put a stop to at once :—

CANADA—*Whitby, Aug. 13th.*—A cricket match was played here to-day between Cobourg and Whitby, which resulted in favor of Whitby by one inning and eleven runs to spare. For Cobourg Hayden, Oseer, Lawless and Kennedy batted in very good form, as did also Ray, Laing, Laing, Mathison and Reynolds for the Whitby club. The following is the score :—

YOUNG AMERICA CRICKET CLUB OF MILWAUKEE, WIS.—This new organization was recently formed, and the members' list already shows over thirty names. The club is under the direct management of Mr. George Oxborrow, an old time cricketer, who aims at the awakening of an interest in the game in the west. Mr. O., has under his direction two elevens, consisting of lads between the ages of eleven and sixteen, whom he is instructing with excellent results. The first eleven is partially made up of members of the old Milwaukee Club; it is to play against the Chicago and Racine Clubs during August. We trust that now the new club has started so prosperously, sufficient interest will be taken to make it a permanent organization.

CRICKETER'S PICNIC.—The Onondaga Club of Syracuse held their annual picnic at Riverside Farm on the 28th ult.

MONTREAL JUNIORS VS. LONGUEIL.—On the 26th ult, these elevens met on the grounds of the former, when the home team won by 36 runs.

THE NEWPORT SWIM.—Captain Webb was seized with cramps in his swim with Boyton at Newport last week, thus giving the race to the life-saving suit. Another meeting is talked of.

NEW PUBLICATIONS.

HUDSON'S SHAKESPEARE.—We can conceive no better plan for withstanding the mentally and morally enervating influences of the flippant literature current nowadays, than to present in attractive and convenient shape the masterpieces of English thought. Far too many of the fruits of genius which have attained the position of English classics, have attained also a present obscurity which, however unmerited, belongs to classics. Shakespeare cannot be rightly placed in this class of unworthily neglected authors. But one drawback even to Shakespeare is the unwieldy bulk of his complete works, provided legible type be used. To read the Merchant of Venice, with any enjoyment, we cannot afford to hold a huge volume and strain our eyes over the small type besides. Hence separate editions of the plays have long been popular. Among all these the Rev. H. N. Hudson's edition, published by Ginn & Heath, Boston, takes the front rank. The volumes may be carried in one's pocket; the type is clear, and the notes just what are required by nine hundred and ninety-nine readers out of a thousand. This has come to be recognized as the edition for the people. We are not surprized to learn of its very large sale. Each play is issued separately; cloth, 50 cents.

FORTY YEARS NOTES OF A FIELD ORNIthologist.—By John Krider, Philadelphia, 1879. In these notes the author of Krider's Sporting Anecdotes, a book widely famous among sportsmen, describes the species of birds which he has himself collected and mounted, and whose nests and eggs he has located. Every fact here stated is therefore vouched for; it is not hearsay evidence. The information is set forth in a concise, available way, which cannot fail to be of great usefulness to ornithologists. Mr. Krider has been through some curious experiences, as all men have been who go out with their gun. Almost on the first page we come to a disagreeable experience with a black vulture, the mother bird defending her nest by employing the unsavory methods provided for her; and on the next page is a funny story of a duck-hawk attempting to make off with a decoy duck.

BRUNHILD. A Tragedy from the Nibelung Saga. By Emanuel Geibel. Translated by George Theodore Dippold. Boston: Ginn & Heath, 1879.

The Nibelungen Lied holds the place in the literature of the German nation of the Iliad in Greek. It is the grand epic of the race, first sung in stirring strains by the Minnesangers of the glorious reigns of Barbarossa and Frederick II. From it German poets and tragedians have for centuries drawn their richest material. Geibel's Brunhild has attained a very high place among the modern tragedies which draw their material and inspiration from the Nibelungen sagas. The tanslator and the publishers of the little volume now before us deserve high praise for their inestimable service in presenting the poem to English readers; the translator for the faithful and happy rendering of the original; and the publishers for the tasteful and handy form of the book. We can conceive of no good reason why our youth should be trained to familarity with the actors and events of Grecian mythology and poetry while kept in ignorance of the not less grand epics of their own race forefathers. It has been and is now the custom of our colleges and seminaries to dig and toil year after year into the mines of classic lore. We hope to see the day when a part of this time, at least, shall be devoted to the Sagas of the Northmen, the Eddas, and the Nibelungen Lied.

Mr. Julius L. Hubbard of Cambridge, Mass., has written, and A. Williams & Co. of Boston, have published a handy little book entitled, "Summer Vacations at Moosehead Lake and Vicinity." Of making many guide books there is no end; they are of all kinds, good, bad and indifferent. The one now before us we should place under the first-class. It contains many useful hints upon camping out, plain directions as to routes, etc., and is embellished with excellent photographs of Moosehead scenery. Price $1.50.

SEPTEMBER MAGAZINES.—We have received from the publishers, "Harper's," "The Atlantic," "Scribner's," "Lippincott's," "Appleton's," "Popular Science Monthly" and "St. Nicholas."

FACE TO THE FRONT.—Sportsmen will be interested in the following incident relating to Colonel F. G. Skinner, so long connected with the *Turf, Field, and Farm*, and afterwards, for a time, with the FOREST AND STREAM. It is related by General P. T. Beauregard in a recent letter to the *Sun*. It occurred at Centreville, Va., during the visit of Prince Napoleon to Manassas:—

"General Longstreet's brigade, one of the best then in the Army of the Potomac, was stationed at the former town, and happened to be drilling near the Fairfax turnpike as the Prince and party were passing. Major F. G. Skinner, one of the field officers of the First Virginia Regiment, who had been educated in France under the auspices of General Lafayette, a great friend of his father, came to the carriage of the Prince to pay his respects to him and his suite. Major Skinner was also well acquainted with Count Mercier who introduced him to the party. Just at that moment his regiment had arrived close to the road in performing some manœuvre and presented its back to the carriages. It was one of the oldest regiments in the service, and its clothes were rather the worse for wear, especially about a certain part of the body. Major Skinner, rather disconcerted at first by the appearance of his gallant soldiers, soon rallied from his unpleasant emotion, and, with French wit, remarked to the Prince and party: "Messieurs, vous voyez là la partie de nos soldats que l'ennemi n'a pas encore vue et j'espère ne verra jamais!" which, of course, created a general laugh. Major Skinner writes as well as he fought: and, although multilated in body he still retains the full vigor of his intellect."

A CANADA CABANE.—The Earl of Dunraven says, in the *Nineteenth Century*, that the greatest luxury he ever found was in Canadian camp life. "No man who has not experienced it," he continues, "knows what an exhilarating feeling it is to be entirely independent of weather, comparatively indifferent to hunger, thirst, cold and heat, and to feel himself capable not only of supporting but enjoying life thoroughly, and that by the mere exercise of his own faculties." The Earl's directions for making such a camp are practical. Having selected a level spot, make four low walls of two or three small pine logs laid one on the other, and on these raise the frame-work of the camp. This consists of light thin poles stuck into the upper surface of the logs, and the upper ends leaning against and supporting each other. The next operation is to strip large sheets of bark off the birch trees and thatch these poles to within a foot or two of the top, leaving a sufficient aperture for the smoke to escape. Other poles are then laid upon the sheets of birch bark to keep them in their places. A small doorway is left in one side and a door is constructed out of slabs of wood or out of the skin of some animal. You next level off the ground inside and strew it thickly with the small tops of Canada balsam fir for a breadth of about four feet; then take pliant ash saplings and peg them down along the edge of the pine tops to keep the carpet in its place, leaving a bare space in the centre of the hut, where you make the fire.

SUMMER RECIPES.—We find the following hints in the letter of a *Sun* correspondent:—

Mosquitoes can be driven away from rooms by the smoke of insect powder, burnt on a hot shovel. When it is not easy to get fire, put a bit of gum camphor in a shovel, light, and the gum will catch as quickly as alcohol: then sprinkle a tablespoonful of insect powder (pyrothrum) on the flame, let it take fire, and blow out the blaze, close the windows, and let the smoke rise for five minutes.

Hanging a cloth on which a teaspoonful of carbolic acid is poured, at the head of the bed, will keep mosquitoes away.

A remedy for burns by carbolic acid is Canada fir balsm, spread on the part attacked.

A wash of fifteen or twenty drops of common carbolic acid in a half pint of water will immediately relieve the smart of mosquito bites, hives, prickly heat, and all irritations of the skin common in summer. If it causes any burning in a moment or so, it is too strong and more water must be added.

The pain of teething may be almost done away with, and the health of the child benefited, by giving it fine splinters of ice, picked off with a pin, to melt in its mouth. Instant quiet succeeds hours of fretfulness, and sleep follows the relief.

A speedy cure for poisoning by ivy is a wash of oxalic acid, a teaspoonful of the salt to a pint of water, with which the poisoned spots are bathed as often as they grow troublesome. The lotion smarts severely for a few moments, but is followed by cessation of the poison pain, which itches as if one should tear the part to pieces. The above may need reducing for young children. A dessert spoonful of sweet oil taken daily is said to drive the poison out of the blood. It should not be put in tin, or anything metallic, as it corrodes, and may form poisonous compounds.

A strong infusion of yarrow (white tansy) and boneset is a good substitute for quinine in fever and ague, or other malarious complaints. The plants should be gathered when in flower, and a double handful of each steeped in one quart of boiling water and drank freely three or four time a day.

The animal remains found in the Rocky Mountains show the gigantic size of the monsters of pre-historic ages. The backbone of one animal is three and-a-half feet wide, and implies a neck fully five feet in width. The diplodocus was fifty feet long. Dinosaurians were exhumed twenty-five feet long. The atlantosaurians, a lizard-footed animal, must have been forty feet long when alive. Another animal, embedded in a hard matrix of rock, which was removed with difficulty after much blasting, was thirty feet long. Such were some of the monsters that once enjoyed themselves around the Rocky Mountains. They were reptiles, and most of their friends and foes were the same, even the birds being half reptiles. What eggs some of these reptiles must have laid, may be imagined when one female atlantosaurian is described as 100 feet long, with thigh bones measuring nine feet, and probably twenty-five feet high.

BEEBE'S AUTOMATIC EXTRACTOR. — Mr. Frank N. Beebe exhibited to the shooting club his invention for extracting automatically the shell from an auxiliary rifle barrel to breech-loading shot-guns, so they can be taken hold of with the fingers and extracted, instead of making it necessary to take them out with a sharp pointed instrument, as is done now, the way they are manufactured. The extractor worked to the satisfaction of all, and with it very rapid firing could be done, in all probability as fast as with any single breech-loading rifle made, and a sportsman's outfit would hardly be complete without one of these auxiliary rifle barrels with the attachment just invented by Mr. Beebe.—*Ohio State Journal, Aug. 23d.*

The Duke of Sutherland, who is a thorough, practical engineer, drove the locomotive attached to the train which conveyed the Prince and Princess of Wales around the royal agricultural show.

—According to the Rev. Mr. Scudder, a missionary in India, four men bought a quantity of cotton in copartnership. That the rats might not injure it they bought a cat, and agreed that each should own one of its legs. Each leg was then adorned with beads and other ornaments by its owner. The cat accidently injured one of its legs, and the owner wound a rag round it, soaked in oil. The cat by chance set the rag on fire, and, being in great pain, rushed among the cotton bales, where she had been accustomed to hunt rats. The cotton was totally burned. The three other partners brought suit against the owner of the invalid leg to recover the value of their cotton, and the Judge decided that, as the injured leg could not be used, the cat carried the fire to the cotton with her three remaining legs. They only were culpable; and their owners were required to compensate the owner of the injured leg for his share of loss.

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-working at Washington, Richmond, and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Nearly Printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1.72. Orders for five copies and upward filled for $1.40 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.

CURE BY ABSORPTION.

"SAPANULE."

THE GREAT EXTERNAL LOTION AND FLUID ABSORBENT. Nature's Remedy Applied by a Natural Method. Used in Sponge or Foot Bath it Immediately Relieves Pain and Soreness of Body and Limb from whatever cause. It also brings a refreshing coolness, and destroys offensive perspiration. It is the only Lotion offered to the public to be used through the Bath. "SAPANULE" is a sure and specific remedy for Rheumatism, Neuralgia, Lumbago, Headache, Burns, Scalds, Bruises, Sores, Piles, Boils, Chilblaines, Bunions, Corns, etc. Cures all Eruptive Disorders of the Skin, leaving it smooth and soft. Soreness or Inflamation of Feet from whatever cause, immediately relieved and permanently cured by using "SAPANULE" in Foot Baths.

"SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

MESSRS SAMUEL GERRY & CO.: HEADQUARTERS OF THE SOCIETY, FOURTH AVE., COR. 22d ST., NEW YORK, March 4, 1879.

A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering. HENRY BERGH, President.

MESSRS SAMUEL GERRY & CO.:

For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it. MRS. W. H. KINSLEY, 158 West 22d St., New York.

SAMUEL GERRY & CO. FROM HON. JOHN BEATTIE.

GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully, JOHN BEATTIE, Providence, R. I.

MESSRS SAMUEL GERRY & CO.:

GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I suffered intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE." Truly yours, N. ORMS, 59 West 23d St., New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle. SOLD BY ALL DRUGGISTS.

SAMUEL GERRY & CO., Proprietors, 237 Broadway, N. Y.

VICTOR GLASS BALL TRAP.

STOCK & MORRIS PATENT.

This Trap is destined to revolutionize glass-ball shooting. It weighs but four pounds, and can be set up anywhere, without previous preparation, in two minutes. It is so simple that it can never get out of order. It throws balls without breaking, at any desired velocity, in any direction, faster than twenty guns can continue to shoot them. To become a good shot it is now unnecessary to go to club grounds for practice, as anyone can find a good place for shooting within a few rods of his dwelling, and have an hour's daily practice without the slightest trouble or inconvenience. The Trap has been entirely remodeled and greatly improved, both as regards efficacy and finish.

No. 1 (Plain), $4. No. 2 (Nickel-Plated), $5. Will close out the balance of Old Model Traps at $3.

CHAS. FOLSOM, Sole Agent,
For Sale by Dealers Everywhere, 53 Chambers street, New York.

PEORIA, *August 8th*, 1879.

Mr. Charles Folsom, Agent for the Stock & Morris Patent Glass Ball Trap, No. 53 Chambers street, N. Y.

SIR—You ask the opinion of the Peoria Shooting Club on the above trap, which is now used exclusively on our grounds. We give it decided preference over all. It delivers the balls with varying velocity, thus more closely imitating the natural flight of a bird, and in this point it has no competitor. We have yet to see its equal for any of the following qualities:—Simplicity of construction, rapidity and certainty of action, durability, lightness, and portability. It works perfectly and is so simple; it does not break down or get out of order at all. We recommend it in highest terms for the use of clubs, and also for amateurs for private practice. For those who would like frequent practice on their own premises, without the need of costly and tiresome preparation, it fully meets a long-felt want, as it weighs but four pounds, and can be set up ready for use anywhere in two minutes. It was to-day tested on our grounds for power and speed, when it threw fifty-nine (59) glass-balls an average distance of twenty-five yards from a single cup in sixty seconds, keeping two balls constantly in the air at the same time. The new model is a decided improvement upon the old. We wish you success in its introduction, and think its use will do quite as much to popularize glass ball shooting as anything that has yet been found. Yours, &c.,

V. M. LINCOLN, Pres., Z. N. HOTCHKISS, E. B. MCCLINTOCK, WM. MEYERS,
W. R. WILEY, FRED. KIMBLE, JOHN KELLY, GEO. W. BAKER, Sec.

Feather Filled Glass Balls,

PATENTED AND INVENTED BY

IRA A. PAINE.

THE ONLY SUBSTITUTE EVER INVENTED FOR A LIVING BIRD.

Awarded the Medal of Progress and Grand Diploma at the American Institute Fair, 1878.

A sweeping reduction in price. Ask your gunmaker for the FEATHER FILLED AND TAKE NO OTHER. **SPECIAL NOTICE TO DEALERS.**—Owing to the great demand for the FEATHER FILLED BALL, we will from this date pay strict attention to our factory and the careful production of the ball only, and have appointed the well-known house of **HAGERTY BROS. & CO., 110 Platt Street, New York,** as our authorized agents, to whom all orders and communications may be addressed. ALSO MANUFACTURERS OF THE BEST PLAIN BALL IN THE MARKET.

Office of the Bohemian Glass Works, 214 Pearl Street, New York.

Attention, Sportsmen!

Kay's Improved and Perfected Ball for 1879.

[PATENTED OCTOBER 13, 1877.]

A SUBSTITUTE FOR CLASS.

HAVING succeeded in producing a Ball for professional and amateur use at the trap, we offer the same with the following recommendations, viz: In breakage, the equal and superior to any glass; Uniformity, being of an exact uniform thickness of 1-30th of an inch, is superior to any blown material; Durability, is not affected by their solubility; Residuum, can be used anywhere, and on finest lawns, leaving neither injurious or unsightly refuse. Packed in barrels by a device peculiar to us, we guarantee against breakage in shipment. For particulars see circulars. Price, $2 per 100. All orders addressed to dealers, or **A. B. KAY & CO.**, Newark, N. J., Manufacturers of Duck and Heavy Drop Shot, Cartridges for Long-Range, viz.: Deer, Duck, and Geese, $2 50 per 100 also, the Chip or Expansive Concentrator, $1 25 per 100. A box of 50 sent on receipt of 75 cents by mail;

THE CARVER TARGET BALL.

[CAVEAT FILED.]

GREENVILLE, PA., May 26, 1879.

DEAR SIR:—We take pleasure in notifying all admirers of Target and Ball Shooting that we have introduced a COMPOSITION TARGET BALL for Trap Shooting that is perfect in every particular. It has been thoroughly tested by many of the leading Sportsmen, and pronounced by all as the only perfect and unobjectionable Target Ball in existence. This Ball is very uniform in weight and standard size, and when broken leaves no *debris*, but will EVAPORATE in five days and acts as a FERTILIZER. They can be used on Lawns, Gardens, Fields or Parks, thereby doing away with the danger and annoyance consequent in using Glass Balls. We are now prepared to fill orders. Drafts or P. O. Order must accompany all orders. Organized clubs are invited to send for Sample Box, (25 balls) and Circular free. J. H. WAUGH, Inventor

COMPLETE FISHING OUTFIT.

Having made special terms with the manufacturers, I am able to offer to the patrons of this paper the following **Complete Fishing Outfits** at the lowest prices ever offered.

OUTFIT NO. 1 Consists of a three-jointed Ash Rod, finely varnished, with brass mountings. A well-finished brass reel which fits the rod perfectly, an extra laid linen line and half a dozen hooks on good single snells. The regular price of this outfit is **$1 90** and I offer it for **$1 00.** This is just the thing for the boys and girls who want to fish a little and is bound to please all who receive it.

OUTFIT NO. 2. A fine three-jointed Rod, dark polished butt, Brass mounted with Reel Bands and guides. An elegant large brass reel with stop, and extra laid linen line with half a dozen hooks on single snell and half a dozen extra tied and finished on **double** snell. An elegant patent Bait-box (as shown in cut) finely painted, and warranted to suit every one, also a good sinker and float, making a complete outfit for any one. At the regular price this outfit would cost **$4 50** and my price is only **$3 00.**

OUTFIT NO. 3 Consists of an elegant three-jointed **Bass Rod,** with finely polished dark butt and middle joints, and **lance wood tip,** full brass mounted with reel bands, guides, etc., and is a rod good for any fish up to twenty pounds. A finely finished brass **Multiplying** reel (as shown in cut) made with stop and perfect in every way, an extra finely finished linen line with one dozen best double snelled hooks and bait-box, sinker and float. Regular price of this outfit **$7 50,** I offer it for **$5 00.** This outfit is just the thing for every angler who may want to fish for any kind of fish and yet have tackle suitable for all, as it is made throughout of the best material and in the best manner.

OUTFIT No. 4 Consists of a four-jointed BASS ROD, finely polished hollow butt, extra Lancewood Tip in butt, best Multiplying Balance handle. Reel best quality Braided Linen Line; one dozen Best Double Snell Hooks; Bait Box, Sinker and Float. Regular price of outfit, $10. I offer it for $7.

OUTFIT No. 5. General Rod. Hollow Butt; can be used with three joints, for Bass, or with four joints for trout. Has two light Lancewood Tips and one heavy Tip, finely finished. One best Multiplying Reel, with balance handle. One Best Braided Linen Line. One dozen Best Double Snell Hooks. One Double Gut Leader; Bait Box, Sinker and Float. Regular price of outfit, $12.50. I offer it for $9. Goods warranted as represented. Mention this paper to receive these outfits at the above price. Any of them sent by express on receipt of price. Send stamp for 64 page Catalogue of Fishing Tackle, Camping, Archery, Base Ball and Sportsmen's Goods.

EDWINSON C. GREEN,

Winner of London "Field" Gun Trial OF 1879.

Distancing all his Competitors-Greener, Malcham (Scott's), Lesson (Webley), and the Whole Competition.

"In the second class for 16-bores Mr. Green distanced his competitors in all the three classes, beating Mr. Greener's 12-bore by 32-28 points—a most marvelous performance truly. In the third class for 20-bores, Mr. Green again beat the winning 12-bores."—Editorial London *Field*, May 10.

Maynard Creedmoor Rifle.

THE MAYNARD AHEAD!

The following Targets were made by Prof. Chas. E. Dustin of Wheeling, West Va., on Range, August 12th and 13th, 1878, with a *Maynard Long Range Rifle*, and new Ely MARKANE-ON RECORD. The grand total of 247 in a possible 450—90 shots at the ten best scores ever accomplished by any Rifleman or Rifle, in the world.

The three scores were made in the competition for position on the American team for 1879; eighty born riflemen of the United States, and were shot under the rules of the N. R. A., Field and sighting shots at either distance. These scores were all witnessed and sworn to by James Poe, Secretary *Maynard Rifle Club*, Wheeling, West Va.

The Maynard Arms are the most perfect in workmanship as well as accuracy, of any rifle in the world, particular attention being paid to the fine shooting as well as the mechanical qualities of the arms. For full particulars and price list, address

DIRECT RIVER ROUTE

TO Ottawa.

TAKE THE OTTAWA RIVER NAVIGATION CO'S STEAMERS, to or from OTTAWA CITY. The Capital of the Dominion may be reached from MONTREAL, by *DAY BOAT*, leaving daily at 7:15 a.m., and from PRESCOTT (opposite Ogdensburg, on the St. Lawrence, the point where the great stream of American travel diverges), by St. L. & O. Ry. Every Tourist should make the trip UP or DOWN the River Ottawa. The scenery of the Ottawa River is very picturesque, and has been compared to the famous "blue" Danube; the approach to Ottawa City by the river is grand in the extreme, and unsurpassed. The steamers of this line are new, comfortable, and well-appointed.

THIS IS THE CHEAPEST and ONLY DIRECT RIVER ROUTE TO OTTAWA.

Ammunition.

Laflin & Rand Powder Co.,

No. 26 Murray Street, N. Y.,

Sole Proprietors and Manufacturers of

ORANGE LIGHTNING POWDER.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers are specially recommended for breech-loading guns.

ORANGE DUCKING POWDER.

For water-fowl, strong and clean. No. 1 to 5, in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

ORANGE RIFLE POWDER.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. BOGARDUS, the "Champion Wing Shot of the World."

Blasting Powder and Electrical Blasting Apparatus.

Military Powder

of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood-cut, sent free on application to the above address.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 50 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,

88 WALL STREET, NEW YORK.

ENGLISH

Sporting Gunpowder.

CURTIS & HARVEY'S

DIAMOND GRAIN.

A GOOD PLAN

The most profitable way of dealing in stocks is by combining many orders and co-operating them as a whole, dividing profits *pro rata* among shareholders, according to the market, monthly. Each customer thus secures all the advantages of immense capital and experienced skill, and can use any amount, from $10 to $10,000, or more, with equal proportionate success. "New York Stock Reporter" and new circular mailed free. Full information for any one to operate successfully. Lawrence & Co., 57 Exchange Place, N. Y.

DITTMAR POWDER.

BOX 836, P. O.

OFFICE 24 PARK PLACE,

NEW YORK.

PURE TIN-COATED AND BURNISHED

DROP AND BUCK SHOT.

American Standard--Eagle Brand.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM:— NEW YORK, Jan. 13, 1879.

HAVING been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 8,000 ball match Jan. 3 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD MANUFACTURING COMPANY, NEW YORK.

United States Cartridge Company,

LOWELL, MASS.,

MANUFACTURERS OF THE

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 and 209 Water st., NEW YORK.

A GREAT INVENTION!

IMITATION

S-T-A-I-N-E-D GLASS.

Patented December 3, 1878.

CURTAINS, SHADES, AND BLINDS

Dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Public Buildings, Churches, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of $1.00.

Agents Apply to **L. Lum Smith,** 717 SANSOM ST., PHILADELPHIA, Pa. Patentee & M'f'r. Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald*:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from infirmity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

The Largest, Spiciest, and only REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

by over 200 responsible advertisers in this month's issue of the *Agents' Herald*. Grand outfit, including circulars, terms, and a beautiful 10x14 engraving of the *Smithograph*, sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's *Agents' Herald*, all for 10 cents. Yearly Subscription, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste,

Volume 13—No. 4. No. 111 Fulton Street, New York.

For Forest and Stream and Rod and Gun.

A NORTH WOODS IDYL.

BY NED BUNTLINE.

BY the camp-fire's blazing light,
In the cheerful early night
We were sitting, hunters three,
With our smoking pipes alight,
Throwing dreamy clouds of white,
Far away upon the lee.

"Bennett, tell us all about
The time you, for a gray wolf sought,
In its dismal rocky den,
Up where Raquette's wavelets break
Upon the shore in snowy flake
Beside the gloomy panther glen."

"I will," he said, with quiet look,
And from his lip the amber took;
"I will, for I've no mom'ry wild
That equals this of that dread night:
My hair turned silver gray with fright.
Don't smile, it did, indeed, my child!

"The snow was light as brewer's yeast,
In it with ease I tracked the beast
Up to his rocky hiding place.
I looked within, 'twas dark, you bet,
But sparks like fire told where he set
By their blue uncanny gaze.

"I had a rifle, made in Troy,
By Lewis, and 'twas good, my boy,
At eighty rods in turkey time.
I raised and sighted for them eyes,
And blazed away, then came surprise,
Sudden, like a camp meetin' *hyme!*

"I'd overshot, or something so,
For out came wolf and no way slow.
He mounted me, I, under went,
And rough and tumble was the game,
Lord knows how long—that's why I'm lame,
And why this leg is thin and bent.

"He gnawed and chawed and ripp'd and tore,
While I for life did battle sore!
I think he'd won that little game,
If Lon Wood hadn't happened 'round,
To give the tyke a fatal wound.
I thanked my God, and Lon the same!

"'Twas o'er, and there lhelpless lay,
As crust-locked hounded moose at bay,
While Lon bound up each bleeding vein,
And then, as limpsy as a pack
He piled me on his broad strong back,
And thus I saw my friends again.

"Where George Dawson wields his facile pen,
In what he calls his 'Journal Den,'
A wolf skin lies upon the floor,
'Twas off the hero of that fight!
That's all, so now, old boy, good night—
Don't think my tale a stupid bore."

Eagles Nest, Aug., 1879.

Last Day on the Delaware.

IT is astonishing how many people escape serious injury in the abuse of firearms. Not one out of ten exercises good judgment or anything like reasonable care while handling and charging guns or pistols. I can recall over a dozen acquaintances who have been so near death that the additional weight of a feather or the breadth of a hair would have turned the scale, and yet most of them are alive and well to-day, though the larger number do not stand any danger of being drafted for a defense of the State.

It may not be amiss to preface this article with a brief description of two or three notoworthy examples by way of warning, for carelessness is so universal that every sportsman needs cautioning now and then.

The worst accident which occurs to me at this moment happened to a neighbor of mine some years ago, and his affliction is all the harder to bear from the fact that it resulted through the carelessness of another. He was serving as sponger and loader for a piece of ordnance which had been in use to fire salutes. The man who served the vent was endeavoring to perform the duty without a thumbstall, and just after a cartridge had been rammed home—while the ramrod was yet in the gun—heat or fire in the vent burned his thumb and he lifted it without any warning; a premature discharge was the consequence, and the loader was thrown heels over head a considerable distance and picked up for dead. He was laid on a table in the Court-house, when a skillful but thoughtless surgeon did all he could to save what was left of him—not quite all, either, for he said it would be impossible for the poor fellow to live, and so he was left all night alone, lying on his back, upon that table. Nevertheless he lives, and deprived of both forearms as he is, still he does more work every day than nine-tenths of men who have both hands.

Just before the war a schoolmate of mine was hunting gray squirrels in a grove not far from his home, using one of those deadly guns—a smooth-bore rifle—which had a long, heavy barrel and a stock reaching to the muzzle. To get a better sight of his game, which had "squatted" on a large limb of an oak, he set the gun down carefully and climbed upon a big pine stump; then, with his head inclined to the right and his eye on the squirrel, he caught up the gun by the muzzle. The lock hit the stump and the charge of shot passed in one lump through the muscle and bones of his left arm. But for the inclination of his head he would have been instantly killed. The wound, after causing him intense suffering through the hot months, healed but left a frightful scar, and his arm became as strong as ever, so that he served through most of the war and came out of it without a scratch.

A keen old sportsman, an uncle of mine, one accustomed to the use of guns all his life, had an unaccountable accident happen to him while bee-hunting one mild but not warm day many years ago. He laid his gun down on the grass and went down on his knees to examine a tree, and while so occupied, moving about some distance from the gun—which was not cocked—he chanced to get in range and the charge exploded on the instant, striking him in one knee with such effect as to destroy it for ever. This might be called a genuine accident, and shows how slight an amount of thoughtlessness is necessary to produce wounds that will maim one for life.

I might go on citing similar incidents, for there is no end to them; but these will suffice to exhibit the average lack of care with which guns are used. As for accidents with pistols I have generally found them to result from overloading on the part of those who carry them. In other words, a pistol is safe enough if the owner is not loaded! Whiskey is worse—more dangerous and more deadly—than Dittmar or any other powder.

A party of three enthusiastic sportsmen were camping on the Delaware in November, 1859, in pursuit of deer. They had a handsome birch canoe of ample capacity, in which they had floated from Deposit, N. Y., designing to proceed as far as the Gap if the weather was favorable and return by rail. But in the vicinity of Narrowsburg a little incident occurred which necessitated a radical change of programme.

For several days they had drifted among the magnificent rocks, devoting each pleasant morning to hunting and the balance of the day succeeding a 3 o'clock dinner to a prosecution of the voyage. It was delightful experience, for game abounded and fish could be captured almost anywhere for the trouble of "dropping a line" into the deep pools with which this tortuous but magnificent river is interspersed. The weather was most propitious, a week of Indian summer having been vouchsafed, and the hazy atmosphere robed the mountain tops with azure while nature herself seemed pausing in a contemplative mood over the fallen leaves. The sun looked like a member of some down-town club smoking at the expense of the nation, filling the air with interlucent clouds and dressing the gorges in mezzotint.

Makeriskitton,* the home of the peaceful Lenapes,† is formed by the Oquago and the Popacton, two beautiful streams which rise on the western slope of the Catskill Mountains in New York, and mingle their waters on the boundary line of Pennsylvania and the Empire State. From this point to the Water Gap no wilder or more diversified scenery exists in either state. The energetic hand of man has been mocked for a century by perpendicular walls of rock which dwarf the proudest efforts of masonary, and afford the nimble, sure-footed deer an impregnable fortress. There are boulders which three of the most powerful locomotives on earth could not move, while stones of every shape and color, many of them festooned with forest moss, defy the plough and shelter all kinds of small game. To look upon these unfrequented defiles one might easily imagine himself a thousand miles from the habitations of men, and travel days together without encountering any evidences of civilization except a thread of pale blue smoke curling upward from some hunter's camp which only renders the solitude more tangible.

It was a scene of this description which met the eyes of our adventurers one morning as they turned out of their blankets to seek the misty river and watch for a shot at some thirsty roe.

A quick breakfast having been disposed of and a lunch dropped into each one's empty game bag the three separated just as the fog began to rise and disclose the black, unrippled water which flowed along the shore almost noiselessly.

The Judge shouldered his rifle and strode away up the river at a quick pace. The other legal gentleman went over the ridge to the northward, where an outline of timberland was barely discernible, while the Doctor, whose turn it was to keep an eye on camp and prepare dinner, took his blanket to a convenient log, only two or three rods down the stream, and with his gun across his knees, the blanket over his shoulders—for the fog made the air feel chill—he brought out a handsome briar-wood pipe which was soon smoking like the funnel of an ocean steamer. Slowly the vapors thinned and curled away, allowing the sun a glimpse of the river here and there, while toppling cliff and ragged crag turned to shining tower and mist-hidden minaret which, by some optical illusion, seemed of gigantic proportions, hanging in the air like palaces in the Voyage of Life, as depicted by Cole, or shooting out of cloud-land and Pachoas into the blue and gold of sunrise.

The Doctor put his pipe in his pocket, left his blanket on the log and walked half way up the slope of a mountain, which flanked the ridge, and looked eastward to get some idea of the weather. The inspiration of the sunlight was manifesting itself everywhere. There was a clear sky and the warmth that permeated the air intensified the glowing splendors of the rock maples' fire-red foliage, the chestnuts' yellow leaves and the dark green luxuriances of hemlock and pine, the needles of which drifted down on the light breeze along with the silvery and light green leaves of the forest birch and mountain ash.

While the Doctor was lost in admiration over this magnificent panorama the sharp crack of a rifle resounded through the forest above him, and in a minute or two a wounded buck bounded down the ridge toward the river, apparently making a bee line for the log which the Doctor had left only a few minutes earlier. It was a splendid specimen, his dark flanks and red sides shining like silk in the sunlight as the Doctor raised his trusty smooth-bore with the deliberation of an old sport, and drawing a bead sent an ounce ball through the lungs of the animal at a distance of forty or fifty rods.

The blackbirds were assembling in solemn conclave south of the river when the Judge returned to dinner, with one lone canvas-back to repay him for his long morning tramp. He reported having heard the Counselor's shot-barrel several times at short intervals before noon, since which nothing of his whereabouts could be determined. The Doctor found one of his long balls in the young buck's right shoulder, and conjectured that he must have fired hastily or at very long range, the former proving correct.

Nearly an hour slipped away, during which the Doctor and the Judge were at their dinners, and just as the first was filling his pipe for the third time, two rifle shots were indistinctly heard a long distance down the river. The reports were not close together, two or three minutes intervening. Remarking that the absentee would "soon be in," the Judge threw away the stump of his after-dinner cigar, slid the canoe into the river, and proceeded deliberately with some preliminary arrangement of camp equipment, in order to get afloat as soon as possible. The Doctor cut a few fresh slices of venison, gathered some dry fuel, and settled himself to await the coming of his "second boarder." Five o'clock came, but no Counsel for the Crown was there to answer, and the Doctor thought "his watch must have stopped." The sun was dipping dangerously near the low western hills, and the blackbirds were at vespers. From among the things in the canoe the Judge produced a bugle and blew three long, loud blasts—the signal for abandoning camp. No response; and hastily putting the remaining stores, etc., on board, they paddled away from the shadows along shore, and swept down stream in advance of the current, blowing the bugle at every bend and listening intently.

After going about a mile they heard shouts some distance back and further down the stream, which came more distinctly as they passed a ledge of rocks jutting into the river. Landing, they began a search which resulted in finding the missing sportsman just before dark. In pursuing a deer toward the river he had slipped on a wet spot, slid down a bank of soft earth and over a nearly perpendicular rock to the sand and table-rock below—a sheer fall of ten or twelve feet—demolishing the stock of his rifle, which was discharged by the shock, one barrel only having been loaded. The lock on the empty barrel was broken and left behind, as the poor fellow was badly wounded in the right leg, the ball having passed clean through the middle of the calf, close to the bone. Though badly bruised, many portions of his body being black and blue, especially his left arm and hip, no bones were broken, and after they got him to the canoe—a painful and difficult task, owing to the condition of the cliff—the wound was carefully dressed, and the party started on to Narrowsburg by moonlight.

* Or Mack-er-isk-iskan, according to Lossing's "Field Book of the Revolution."

† Lenni Lenapes, the *Original People*, whom Lord de la Ware found inclined to agriculture; light of heart and affectionate, characteristics which Penn also records of them.

From the time consumed by the passage they estimated the distance at about four miles, but it may have been considerably less, as they found it necessary to proceed with great caution, the river being low and the obstructions quite numerous. Once they struck a rock, and came very near capsizing; but finally the journey was accomplished, and the patient made comfortable at a farmhouse near the river, from whence he was removed to his own home over the Erie Railway the next evening. The second deer escaped to the river, but he had a brace and a half of grouse, and these afforded him a comfortable breakfast.

That long and solemn paddle through the cool November moonlight remains a vivid picture in the memories of the Doctor and the Judge. The wounded sportsman recovered, and entered the army near near the close of 1861, losing his life at the second battle of Bull Run.

Ego.

TROUT FISHING—THE FLY vs. WORMS.

Judge Fitzhugh's favorite amusement was trout fishing. His nice appreciation of the piscatorial art gave him the name of "The Walton of Western New York." While fishing he always used the fly; there are many who still remember his skillful manner of throwing it. He entertained the most sovereign contempt for any other mode of capturing trout—the aristocrat of the brook, as he termed that fish. One day when on a fishing excursion he met a fisherman whose well-filled basket proved his success.

"You have a fine basket of trout there," said the judge.

"Yes, sir, but I should have caught more, only my bait give out," said the man.

"Bait! Bait! What, are you one of those fellows that kill a quart of angle-worms or a peck of grubs to catch one fish? One of those fellows who can't appreciate the nature of a trout any more than an ape can literature," said the Judge.

"I mean to say that I caught these fish with angle-worms for my bait, and I'd like to know what that is to you?" said the man.

"Don't you know that it is unmanly and vulgar to fish for trout in that way? I would as soon eat carrion as a trout caught with a hook baited with angle-worms," said Fitzhugh.

"Who the deuce are you that goes about telling folks what they must fish with? Maybe you haven't read the Declaration of Independence," said the fisherman.

"I am a gentleman, sir, and you are not. A man can't be a gentleman that fishes for trout with angle-worms.'

"Is it any of your business what a man fishes with? You talk as though you owned all the fish in this country. You don't, though—I've a great mind to throw you into the creek; but you are such an ugly-looking cuss you'd scare all the fish out of it. I should like to thrash my cow-yard with you," said the man in a towering passion.

"Attempt any violence upon me and I'll make live bait of you in a minute. I tell you it is my business what a man fishes with. It is the business of all civilized and Christianized people. Fishing with angle-worms degenerates trout to a common sucker—a crab—it baffles science—it teaches that splendid fish the habits of a common bull-head, that any idiot can catch. Fishing with a fly is fair game between a man and a trout; it gives them both a chance to exercise their skill.

"What odds does it make how you catch a trout if you only get him? I catch fish because I like to eat them," said the man.

"That's because you are nothing but a cannibal. Fishing with a fly is a fair game between the man and a trout; it gives them both a chance to exercise their skill. A trout darting for a fly reminds me of the swoop of an eagle; there is something daring and brilliant in his movements; he charges on his prey like a hero, and if caught he dies gallantly, not sucking a stinking angle-worm like a hungry lubber," said the Judge.

"See here, what's your name? By golly, you talk well. I'd like to hear that over again. Tell a feller your name."

"My name is Fitzhugh—a name I have never disgraced, and never shall, until I am caught in the flunkey business of catching trout with angle-worms."

"Are you Judge Fitzhugh, the man that can catch trout with a buncomb fly on his hook, where there ain't any, just as well as he can where there's plenty of them?"

"They call me Judge Fitzhugh."

"Well, I'd half a mind to thrash you just now, you was so confounded sassy. They say you are the sassiest man in the world, and I believe it. Those shaggy eyebrows and those great black eyes, and that black hair—well, I guess I don't want to get hold of you, so let's be friends. Judge, do you think I could learn to catch trout with a fly?"

"Yes," said the Judge, amused at the man's manner and words. "Go with me and I will give you a lesson." They were soon by the side of one of those beautiful streams in Northern Steuben, that in those days swarmed with the finest trout. Soon Fitzhugh's line went whizzing though the air, the swift-winged fly alighting on the water full thirty feet distant; the next moment a splendid trout lay panting on the grass. The man watched the skillfully-thrown line with its darting insect, now alighting on the edge of a swift-whirling eddy, now skipping over bright ripples, now floating on the smooth current, then gyrating near a shelving rock like a "strong swimmer in his agony," tempting the silly tenants of the brook to spring at the glittering bait, to find himself caught full surely by the fatal snare.

The man lingered until Fitzhugh's basket was nearly filled, then, with admiration glowing on his face, exclaimed: "Judge, that's a big game betwen you and those trout—a pretty one, too—there's science in it. Blame me if you don't get the best of it, though, every time. Mabe they'll be too smart for me at that game; but I've done with angle-worms hereafter. Angle-worms be-hanged, if I never catch another trout. I'll try my hand at the fly next time I fish. Good-by Judge," and the man's form was soon lost in the deep forest.

Some time during the ensuing winter Judge Fitzhugh received two splendid saddles of vension from some person unknown, neatly packed in a box. On removing the cover a paper was discovered, on which was written the following:—

"From the fellow that don't fish with angle-worms any more, but goes it strong on the fly. This meat is for your first lesson with that article."—*L. B. Proctor, in Bench and Bar.*

Fish Culture.

THE McCLOUD RIVER HATCHERY.

THE McCloud River, California, upon which an United States fish hatchery was established in 1873, is a swiftly running stream, nowhere more than 100 yards wide, shallow, pure and cold. It possesses all the requisites desirable for salmon breeding. The Goverment reservation here embraces 280 acres of ground upon which are the residences of Commissioner Stone and Superintendent Myron Green, and the large hatching house. The force employed consists of twelve men, of whom six are Indians. From a letter in the Sacramento *Weekly Appeal*, written by a fishing tourist, we take the subjoined description of the appurtenances and methods of work at this important station:—

Near the residences, at a narrow passage of the river, four stone piers have been built in the stream. Across the river and connected from pier to pier, a fence made of willow poles and resembling a rack, has been sunk to the bottom with end of the poles rising several feet above the water and resting against heavy logs connecting the piers. The poles are so close together that the salmon are prevented from passing up the stream, and when the season for the catch comes on and the fence is placed in position the fish gather below in thousands.

The season for the catch commences about the middle of July and lasts until the close of September. Below the fish dam is a bit of sandy beach, and here the Indians drag the seine ashore and hundreds of fish of all sizes, from the coquettish trout to the heavy salmon leap frantically about in the shallow water and upon the sands.

The salmon with the graceful shaped jaws and broad bodies are the females, "Mahallas," and are carried to and cast into a floating crib near by. The male or "buck," as the Indians term him, has the crooked jaw with narrow and heavy body, and only one in five of those are selected for propagation.

The gathering of the eggs comes first. The order is reversed from that in animal life, and with the salmon the male matures first, which is at the age of two years, while the female never has spawn until the third year. The expert selects the ripe fish at a glance. The female salmon is taken between the hands and gently, but firmly, her eggs are by pressure ejected, and fall into a pan, round, yellow, translucent globules the size of a pea. Now the operator takes a ripe male salmon and by like process presses the milt, milky fluid, from him into the pan with the eggs. The eggs are then stirred up in the milt and allowed to stand forty-five minutes, during which time the milt has thoroughly impregnated the eggs. This is the most important part of the process, for without the fecundating process of the milt the eggs would never develop. The eggs procured are in number about 500 to every pound weight of the yielding salmon. The eggs are now carried to the hatching house, carefully rinsed off with clear water and placed upon a tray. The size of this building is 30x80 feet, and is open at both ends. Upon the bank of the river, some fifty yards distant, is a large undershot wheel, which is slowly moved by the current, and by an arrangement of buckets, dumps 7,000 gallons of water per hour into a flume running to the hatching house. A large reservoir at one end of the building receives the water. Leading from this the entire length of the building, with a gentle declination, are four rows of troughs, just wide enough to admit the trays lengthways. Each trough is divided by partitions into lengths to suit the trays. In each compartment four trays will rest, one on top of the other. The trays are a light framework, one by two feet, and covered with a sheet of wire cloth. We notice the trays, troughs and reservoir are covered with inky black asphaltum, which is to prevent any slime or fungus growth from gathering upon the wood, as this would result in the sure destruction of the eggs. Each of the trays will hold 6,000 eggs, and the various troughs, when full, nearly 8,000,000. The water flowing into the reservoir passes out through various screens of flannel and netting to filter it of all sediment and vegetable matter, and enters the distributing trough in a very pure state, and thence into the hatching troughs. It enters each compartment under a cross partition and makes exit over the next partition. This insures circulation up through and down through the trays and over and about every part of the egg. In about two days after being deposited the centre of the egg becomes opaque and a film extends over the yolk. The opaque spot is the germ or embryo salmon. This is the critical period. Daily and nightly are the trays lifted out and carefully examined. Whenever an egg turns white it is dying or dead. If left in the tray it would throw out a vegetable growth of little arms, *antennæ*, and destroy every egg within reach. For fifteen days the eggs remain in the troughs, when two bright black little spots make their appearance. These are the eyes of the infantile salmon. Now follows the packing. An almost interminal journey of thousands of miles to different States of the Union await the embryo, and it would almost seem infatuation to anticipate their survival. but Mr. Stone has solved this question. The boxes in which they are packed are two feet square and a foot deep. The eggs are packed with first a layer of moss at the bottom of the box, and then a layer of eggs and then another layer of moss and so on to the top. Midway in the centre of each box is a thin wooden partition to break the force of the weight of moss and eggs. About 75,000 are packed in a box and the cover firmly secured with screws, this with another of the same size are placed in a crate several inches larger than the combined bulk of the two, the intervening space being filled with hay to prevent sudden changes of temperature. On the top of the crate is placed a rack of ice. The only suitable moss for packing purposes is obtained seventy miles distant at the headwaters of the Sacramento. Considerable difficulty was experienced in the preparation of large shipments, as the eggs must have all advanced to the same stage of maturity at the time of departure. This has been remedied by Mr. Stone in the following manner: In the large hatchery the temperature of the water is 55 degrees and the time required to properly mature the eggs is about 18 days. Upon the side of the mountain a smaller establishment has been arranged and is fed by a spring at the temperature of 60 degrees; the result is that eggs will become prepared from seven to eight days sooner than by river water, and thus the difficulty is obviated.

TROUT IN AN AQUARIUM—*Hartford, Conn., Aug. 30th.—Editor Forest and Stream:*—I had for several years a large office aquarium supplied with running water and stocked with trout and other varieties of fish. The tank should be cleaned out occasionally, as you say, but a couple of gold fish make excellent scavengers, and they will make "cleaning out" less frequently necessary. Trout, when hungry, are not particularly fastidious, but they appear to waggle their tails as if to express a sort of inward joy when they are supplied with small bait fish in abundance; but they thus get a notion of eating each other, or trying to, and hence it is not best for the harmony of the establishment to thus gratify their appetites. For a trout, after having a "fish" dinner, will get such an exaggerated idea of his own capacity that the first time he gets hungry again he will resolutely try to swallow a fish twice as large as himself—provided the fish don't object. But, being denied a fish diet, trout will soon forget their natural propensities if the occupants of the aquarium are all about the same size, and if supplied with spring water they do not require feeding oftener than once a week. I used to sometimes let them go a month and even two months without other food than what the water supplied them. Of course they will grow faster to be fed more frequently. Angle worms make excellent food for trout and a good deal of work for the digger of the worms, if he has many trout to feed. But I found, after trying various things, that raw beef-steak, cut up with scissors into small bits, makes excellent food for trout, and they like it very much after they once get used to it, and I have seen half a dozen of them jumping out of the water six or eight inches to get bites of the beef which was placed upon the inside of the glass sides of the aquarium. No more should be given them than they will eat, as it fouls the aquarium very quickly.

M. H. R.

MARYLAND.—Fish Commissioner Hughlett has placed 1,615,000 shad fry in the waters of the Eastern Shore this year.

Natural History.

SUSPENDED ANIMATION..

Editor Forest and Stream:—

Some thirty odd years ago the late Col. S. M., of Richmond, Va., a devoted Waltonian, was wont to keep minnows in a tank in his bathing-room that he might be ready for the first warm days in February or March. On the occasion referred to the winter was unusually cold for this region, and the water in his tank, along with his minnows, became a solid mass of ice. After several weeks of intense cold, warm weather gradually returned, the ice thawed and along with it the minnows, who were alive and sprightly, as though they had enjoyed a long and refreshing sleep.

Early in the last month (June) I caught some thirty beautiful minnows (pond dace) and wished to keep them. My box for minnows was just below a spring, and I knew that spring water at 52 degrees would be fatal to them, coming out of pond water at 70 degrees. I therefore sought to accustom them to the change by making the bucket of pond water overflow several times with the spring water. I then put them into the box. But next morning I found them all dead or stiff frozen. Col. M.'s tank occurred to me and I thought they might be frozen instead of dead. I determined to test the fact. I took them to the pond, a few rods distant, and poured the pond water into the bucket of spring water to overflow. Of the thirty only two revived. I am now satisfied that I was too hasty in my operations. If I had taken two hours instead of fifteen minutes in bringing them to the pond temperature the result might have been different. I am led to this conclusion by an interesting article in the London *Nature* by Dr. Richardson, recently republished in *Littell's Living Age* (No. 1,830), and which I have just seen.

Some weeks, or rather months, ago there appeared in the London *Times* an account of a "wonderful discovery" in Australia, by which it was stated that bullocks could, in a state of suspended animation, be transported from Australia to London at ordinary charges of freight. The article provoked much comment in the English press, some of them denouncing it as absurd, repugnant to common sense and in contradiction of the laws of nature. Dr. Richardson, who says he has for the past twenty-five years been making experimental researches on this subject, states that, while knowing nothing of the truth or falsehood of the Australian statement, "some part of it might be true and is certainly within the range of possibility." The Doctor proceeds to give the results of experiments thus far made and the agents by which they were wrought. I give extracts from his communication:

"If an animal perfectly free from disease be subjected to the action of some chemical agents or physical agencies which have the property of reducing to the extremest limit the motor forces of the body, the muscular irritability, and the nervous stimulus to muscular action; and if the suspension of the muscular irritability, and of the nervous excitation be made at once, and equally, the body even of a warm-blooded animal may be brought down to a condition so closely resembling death that the most careful examination may fail to detect any signs of life. I have shown in a Croonian lecture that there are three degrees of muscular irritability, to which I have given the names of efficient, papine efficient, and negative. The first of these is represented in the ordinary living muscle, in which the heart is working at full tension, and all parts of the body are thoroughly supplied with blood, with perfection of consciousness in waking hours, and, in a word, full life. The second of these states is represented in suspended animation, in which the heart is working regularly, but at low tension, supplying the muscles and other parts with sufficient blood to sustain molecular life, but no more. The third of these states is represented when there is no motion whatever of

blood through the body, as in an animal entirely frozen. * * * *

"The time during which an animal body may be capable of reanimation depends altogether on one circumstance, viz., whether the blood, the muscular fluid, and the nervous fluid remain in a condition which I have defined in another essay as the aqueous condition, or whether these fluids have become pectous. If the fluids remain in the aqueous state the period during which life may be restored is left undefined. It may be a very long period, including weeks, and possibly months, granting that decomposition of the tissues is is not established, and even after a limited process of decomposition there may be renewal of life in cold-blooded animals, but if pectous change begins in any one of the structures I have named, it extends like a crystalization quickly through all the structures, and therefore recovery is highly improbable, for the change in one of the parts is sufficient to prevent the restoration of all. * * * * *

"The problem physiologically before us is as follows: Can the second or passive-efficient stage of life be by any artificial methods secured, so that all the vital parts may be held in suspended animation, working at the lowest possible expenditure of vital power?

"Experimental research and experience alike show the certain possibility of temporarily producing this state. Both show there are agents and agencies by which life may be reduced to the low ebb necessary for the suspension of active life, and at the same time the aqueous conditions of the colloidal fluids may be maintained. Cold is the first and the most efficient of these agencies. The blood and the colloidal animal fluids derived from it are all held in the aqueous condition of colloidal matter by exposure to cold at freezing point. At this same point all vital actions, excepting, perhaps, the motion of the heart, may be temporarily arrested in an animal, and then some animals may continue apparently dead for long intervals of time, and may yet return to life under conditions favorable to recovery.

"In one of my lectures on death from cold which I delivered in the winter session of 1867, some fish, which during a hard frost had been frozen in a tank at New Castle-on-Tyne, were sent up to me by rail. They were produced in the completely frozen state at the lecture, and by careful thawing many of them were restored to perfect life. At my Croonian lecture on muscular irritability after systematic death a similar fact was illustrated from frogs.

"There seems in cold-blooded animals so circumstanced to be no recognized limit of time after which they may not recover, but there is much skill required in promoting the recovery. If in thawing them the utmost care be not taken to thaw gradually and at a temperature always below the natural living temperature of the animal the fluids of the animal will pass from the frozen state through the aqueous into pectous so rapidly that death from the pectous change will be produced without perceiving any intermediate or life-stage at all. In warm-blooded animals it is extremely difficult to restore animation after suspension of life by cold, owing to the fact that in their more complexed and differently-shielded organs it is next to impossible to thaw equally and simultaneously all the colloidal fluids. In very young animals it can be done. Young kittens a day or two old that have been drowned in ice-cold water will recover after two hours' immersion almost to a certainty if brought into a dry air at a temperature of 98°F. The gentlest motion of the body will be sufficient to restore respiration, and therewith the life. * * * It is hard to say whether an animal, like a fish, frozen equally through all its structures, is actually dead, in the strict sense of the word, seeing that if it be uniformly and equally thawed it may recover from a perfect glacial state. In like manner it may be doubted whether a healthy, warm-blooded animal suddenly and equally frozen through all its parts is dead, although it is not recoverable, because in the very act of trying to restore it some inequality in the direction is almost sure to determine a fatal issue, owing to the transition of some vital centre into the pectous state of colloidal matter. I do not, consequently, see that cold can be of itself and alone utilized for maintaining suspended animation in the larger warm-blooded animals of full growth."

Dr. Richardson, after mentioning other agencies besides cold for suspending animation, such as mandragora or belladonna, nitrate of amyl, choral hydrate, cyanogen gas and hydrocyanic acid, alcohol and oxygen, and citing interesting illustrations of each, remarks:—

"It is worthy of note that cold, together with the agents named, is antiseptic, as though whatever suspended living action, suspended also by some necessity or correlative influence the process of putrefactive change. Hence, the inference I drew in my lecture at the Society of Arts that it was within the range of experiment to preserve the structures of dead animals in a form of suspended molecular life."

He concludes with the confident expectation of great events from results already secured, for which "the world (he says) should be prepared, without anxiety or amazement." VIRGINIENSIS.

July 16th.

The report of the Australian discovery proved to be a sensational *canard*. The wit of the Australian newspaper man is greater than the genius of the Australian scientist.

DEER AND MOONLIGHT.—*Minturn, Ark., Aug. 23d.—Mr. Editor:*—I have been for over forty years what is called a still hunter of deer in this part of this State. Deer are still plentiful here, and have been all the time; and as I have heard from old hunters that deer would get up with the moon and feed and then lie down when the moon went down, I have taken some pains to notice their habits. I am satisfied they feed most when the moon is up, but as I have frequently found them feeding when it was not, I attribute it all to their not being able on waking to feed of a dark night; and as nature would require, they would feed more in the day, and when the moon is not up in the day time it is up during the night and gives them the better chance to feed. I have always found that deer were more easily found feeding after a very cloudy night when the moon was up all night than if it had been shining. I do not think they are influenced by the moon, except so far as it enables them to feed by night; and this causes them to feed much more in the day when the nights are dark. J. A. LINDSAY.

BABY BEAR TRAITS.

Editor Forest and Stream:—

Whilst engaged, a few days since, with the Society's Dissector, Mr. Chas. Davy, in examining a spleen of a defunct monkey, which was filled with tubercles, he wished to know my experience with black bears, remarking that one of his correspondents in Florida had written up to know if they "didn't lay eggs." As Charley is found of a joke, I made no reply, continued my examination of the tuberculous spleen, and waited for the eggs to hatch. The period of incubation was short, as he immediately began sorting over a pile of correspondence lying on his table, and quickly passed me a letter, duly stamped, etc., making the above enquiry. Perhaps bears in Florida do lay eggs, and to the best of my knowledge it is a popular Cracker belief; still they act so differently in confinement I think I am justified in publishing the actual facts, as they occurred under my own eyes.

About the middle of January last, the female black bear in the Society's collection refused to come out of her den into the open pit and would not allow the male to approach her. She was immediately closed in and furnished with an abundance of hay, with which she busied herself in making a nice warm bed. At 4 P. M. on Jan. 26th, the young ones were born and I did not see them until the third day after, when I was surprised by the keeper informing me that she would allow him to enter the den. On going with him, he unlocked the door, fearlessly walked in, and quickly began feeding her with bits of bread, which he sliced from a loaf held in his hand. By holding the bread just over her head, he finally tempted her to sit up on her haunches, when I obtained a clear view of the two young ones, lying asleep just back of her front paws. From where I stood, about six feet distant, they did not seem to exceed six inches in length, were a dirty whitish color, and appeared entirely bare of hair. In about ten days their coats began to show and were of a greyish tint, which gradually passed through the various shades until they became a brownish black. It was just forty days before the first one's eyes opened and two days after the second followed suit. From that time forward I watched very closely to ascertain the exact time that would elapse before the young ones would leave the nest, and on the seventy-first day after birth, when the mother, as was her habit, came to the grating to be fed, one of the youngsters left the nest and followed her. So, soon as she found it out, she immediately drew it gently back, and on its second attempt, she cuffed it soundly, which put a stop to its wandering propensity. After a few days she allowed them to wander about at will provided no one was immediately in front of the den; but so soon as a visitor put in an appearance, they were driven back into the nest and not allowed to emerge until the strangers were out of sight. For sometime she always suckled them in one position, lying over and completely covering them by stretching flat on her belly with her legs drawn up under her and her head tucked down between her front paws. As they grew older and began to run about she would sit on her haunches, lazily lean back against the wall, take a cub on each fore arm and hold them up to her breast until they were satisfied. They soon became expert climbers, taking advantage of the slightest inequalities of the stone walls and the cracks between the heavy oaken planks to reach the ceiling of the den on three sides, whilst the grating in front served capitally for their skylarking. Occasionally they would have a regular sparring bout, standing erect, feinting, countering and making use of many of the tricks of old votaries of the P. R. These frolics would generally end in a clinch, fall and a regular rough and tumble fight, when the mother would abruptly put a stop to it, by suddenly knocking both of the contestants completely out of time. In fact, as they grew apace, the parental visitations increased so rapidly I began to fear she would put an end to my bear investigations by chastising the lives out of them, but of late she has slackened in her attentions and I am in hopes of following the growth of *ursus americanus* from baby-hood to adolescence. FRANK J. THOMPSON.

Zoological Garden, Cincinnati.

SOUTHERN BIRDS DOWN EAST—*St. Stephen, Aug. 28th.—Editor Forest and Stream:*—We have had a visit from some of your southern birds within a few days. Seven black skimmers (*Rhynchops nigra*—Linnæus) have been shot in this neighborhood, and last week I had a black vulture (*Catharies atratus*—Bartram) sent me, shot at Campobello, near Eastport, Me.

GEO. A. BOARDMAN.

A WHITE BLUEBIRD—*New Haven, Conn., Aug. 26th.*—This morning I killed a white bluebird in this city. The tail feathers and primaries show a slight pearly tint, the rest being pure white. The bird is a male, of this year. Iris normal. R. H. MORRIS.

THAT GAZETTEER.—The undersigned is the only person (?) who dares express his sentiments boldly:—

Fishkill Landing, Aug. 21st.—Mr. Editor:—If you will be so kind as to afford me a small space in your valuable paper I should like to speak a few words in regard to that most excellent work, the "Sportsman's Gazetteer." This book has been highly spoken of and largely recommended by hundreds of eminent sportsmen since its introduction, and perhaps all I can say in praise of it will be only a repetition of what has already been said; however, I can present myself as one who has gained much knowledge and passed many pleasant hours in the perusal of its pages. It is a sportsman's library complete in one volume, and I consider that part of the work treating on the Dog worth the price of the book. Nearly all the questions put to the editor of your paper weekly, such as the proper charge for guns of various weights and gauge; remedies for dogs that are disordered, &c., are annexed in this book. I cannot give the index of the "Gazetteer", but beside its instructions in shooting, fishing, woodcraft, habits of game animals, birds, fishes, &c., it has a thousand useful hints and recipes that it would be well for every sportsman to be familiar with. This book contain more useful knowledge than seven other sporting works which I have. G. F. ALDEN.

—Mr. Frank N. Beebe of Columbus, O., has left his fine collection of coins in the care of the Fine Art and Natural History Society of Cincinnati, to be placed on exhibition at the Exposition. Mr. Beebe is now in Northern Michigan, to remain until some time in October.

The Kennel.

DOGS AND THE CUSTOM-HOUSE.

We are constantly hearing of dogs being seized by the Custom-House authorities on account of the law regarding the importation of live animals not being complied with. Only a few days ago there were seized from the steamer *Strathmore*, from Liverpool or London, two brindled bull bitches, two fox terrier puppies and one fox terrier dog. For the benefit of those who may be intending to import dogs we copy from Hyles' Digest of United States Statutes the law on the subject:—

Sec. 614.—On live animals twenty per cent. ad valorem.

1472.—Animals brought into the United States temporarily and for a period not exceeding six months for the purpose of exhibition or competition for prizes offered by any agricultural or racing association. But a bond shall be first given in accordance with the regulations to be prescribed by the Secretary of the Treasury, with the condition that the full duty to which such animals would otherwise be liable shall be paid in case of their sale in the United States, or if not re-exported within six months.

1473.—Animals alive, specially imported for breeding purposes from beyond the seas, shall be admitted free upon proof thereof satisfactory to the Secretary of the Treasury, and under such regulations as he may prescribe.

But there is one very important point to be noted in connection with the last clause. The regulation prescribed by the Secretary of the Treasury in this respect is, that all animals imported for breeding purposes, in order to be admitted free of duty shall be provided with a certificate from the United States Consul at the port of shipment, in which the shipper makes oath that it is intended for such purpose. Without this certificate the clause is of no avail.

On the occasion of the first dog show in this city some fifteen or more dogs were sent from England for exhibition. They were not permitted to land however until a bond in what was supposed to be their full value was given, to the effect that they should be re-shipped or the duties paid on them, and as a number were sold here duty was paid. But it was at first contended that the Kennel Club did not come under the head of an agricultural or racing association, and it was not until after considerable correspondence had passed between this city and the Treasury Department that the bond was accepted and the dogs landed.

We are in favor of free trade as far as dogs, or indeed animals generally, are concerned, as an encouragement to breeders, and yet hope to see it. A few dealers might be benefitted slightly by the remission of duties, but we fancy that of all the pet and toy dogs brought into the country and sold, but very few have brought much into the general treasury.

LOSS OF LOU.—The Gordon setter bitch, Lou, belonging to Mr. Wm. M. Tileston, of this paper, either strayed or was stolen from the Prospect House, Bayshore, Long Island, on Wednesday of last week. The natural supposition is that she was stolen, as Lou is not only remarkably intelligent, but has recently had a litter of puppies and has been with Mr. Tileston and his family for two summers at Bayshore, and would probably have returned home if not tied. Lou is black and tan without any white; rather poor in flesh just now; coat in good condition and much of it new; her tail has been docked. We shall feel obliged if our Long Island readers will be on the look-out for her, and any information sent to Mr. Tileston at this office, will be thankfully received.

A HINT FOR SPORTSMEN'S WIVES.—If your husband ha a dog, and the dog has a bark-at-night, you may fix him (him is collective here; it includes the husband, the dog, and the bark) by putting him aboard a mud scow, and then taking him off again, thereby disembarking him. This is better than surreptitiously feeding him on patent medicines. Another good way, provided you wish to make your husband a pleasant surprise present of dog-skin mittens next Christmas, is to drown the hound in his own bay and use his bark to tan the hide with.

PERSONAL.—Mr. Justus Von Lengerke, the well-known sportsman and breeder of fine dogs, has joined the Dittmar Powder Co. as salesman, travelling and soliciting agent. Mr. Von Lengerke's great popularity and wide acquaintance and experience should make him a very valuable man to the Powder Co. We wish him every success.

—The question of how much a dog may be worth must be considered not only from the standpoint of the owner, but from that of other parties who may in one way or another derive direct gain from the animal. For instance, a London, the other day, the dog of a beer-house-keeper earned £100 for an omnibus driver by biting the latter while on the back steps of his omnibus.

HAMILTON, ONT.—*Aug. 29th—Editor Forest and Stream:*—As an ardent lover of all dogs used in field sports, I had much pleasure perusing the letter on spaniels from your esteemed correspondent, Ringwood, in your issue of the 21st inst. I am not surprised that so many sportsmen complain that their pointers and setters are wild and unruly when shooting over them in open grounds, after

shooting over them in brush or thick cover. Pointers and setters should not be shot over in brush or cover that will hide or conceal them from the shooter. My experience of pointers and setters in woodcock and ruffed grouse shooting, is that when they are out of sight they will take liberties or be subjected to a very cruel test. I will relate what occured to a gentleman shooting woodcock over a setter bred by me. He lost the dog in some scrub-pine cover where he was shooting, and, after considerable delay, being unable to find the dog, the gentleman went to a piece of woods some distance away. On his return, three hours later, he found the dog standing a bird, the dog's head and tail being both one way. He evidently had been setting the bird for three hours. The bird, which had moved in a half circle round the dog, was flushed and shot behind the dog. Had the gunner been shooting over a cocker spaniel the cock would have been flushed at once, and the shooter would have had timely warning by the clear, ringing bark of the cocker. In a future letter I will give you my opinion of what the cocker spaniel, best adapted for this country, should be.

RANGER.

LONDON (ONTARIO) DOG SHOW.—I wish to inform your readers that James Spooner, Esq., of Toronto, and J. Hammon, Esq., of Clifton, Ont., have consented to act as Judges at our forthcoming Bench Show. Exhibitors may, from the well-known probity and ability of these gentlemen, rest assured that a good sound reliable and impartial judgment on the merits of their dogs will be duly rendered.

I take the opportunity of mentioning that if any of your readers would like to encourage us by offering "Special Prizes," we shall be happy to hear from them before 10th September. W. C. L. GILL, Sec'y.

FOX HUNTING.—TENNESEE—*Nashville, Aug. 14th.—Editor Forest and Stream* :—There have been several spirited chases lately, up in the neighborhoodof Bon Agua Springs. The gentlemen about there have a fair pack of six or seven couples of hounds, and they seldom fail to start and capture Reynard when they go out. There is a fellow up there who has made himself notorious this season, by following the hounds on foot, and getting in ahead always at the death. Col. W. H. Johnson's pack is in fine condition, and now that there is a lull in the racing world I will no doubt have some of their excellent runs to record. J. D. H.

DOGS AT AUCTION.—On Wednesday, Sept. 17th, there will be a large auction sale of dogs by Messrs. Barker & Sons at their establishment, corner of 39th st. and Broadway. The dogs to be sold are from the well-known kennels of Messrs. Lincoln & Hellyar, of Warren, Mass., and comprise red Irish and English setters and pointers, both puppies and broken dogs, all the get of celebrated winners. This will be a rare chance to get good stock cheap.

—Mr. Wm. A. Buckingham, of Norwich, Conn., claims the name Flash for black and white-ticked dog puppy whelped April 23d, 1879, by Howard Kennel Club's champ. Dash III., out of Aubundale Kennel's champ. Daisy Dale.

—Mr. J. B. Goodwin, of Norwich, Conn., claims the name of Prudence for black, white, and tan-ticked bitch puppy whelped February 16th, 1879, by Luther Adam's champ. Drake, out of Gen. Wm. G. Ely's native bitch Sylph.

—Mr. N. Elmore, of Granby, Conn., has bred his English hare beagle, Lucy, to Victor ; will whelp September 29th.

ANOTHER WORD FOR THE SPANIEL.

83 PETER ST., Toronto, *Aug. 23d.*

Editor Forest and Stream :—

I read with a great deal of interest "Ringwood's" article on spaniels last week. My experience of spaniels has been life-long too ; but, as my life has not compassed a great many years, my opinion may not have the weight that "Ringwood's" would have. However, I have studied the breed very closely, and my opinion is entirely in their favor. I think that as companions at home and in the field, they have no equal. A friend of mine has one that I bred, which is the cleverest dog I ever saw. He will do more tricks than any circus dog I have ever seen, and is at the same time a splendid worker. I have generally used one or at most two dogs in the field and have found them plenty to keep myself and a companion busy. My dogs are mute except when they have a partridge "treed." This is rather a misfortune, but they have so many counterbalancing virtues that I put small bells on their collars which does quite as well, if not better, as you can always tell exactly where they are. As to color, mine are all liver-colored or black, some without a white hair ; but the bell gets over the difficulty of seeing them too, and as I only use them for three or four weeks out of the year, counting odd days, I think that I can afford to give up a little utility to beauty. Black is my pet color, or failing that, liver-colored ; and as I keep my dogs for eleven months out of the twelve as pets only, I feel that it is worth while to have them please my eye for eleven months, when the color makes very little difference for the other month. I have been so unfortunate as to loose my favorite bitch "Brownie," the foundation of my kennel. Some scoundrel laid poison in the lane back of my house for cats, and as ill-luck would have it, all the dogs broke out that same morning. They were of course missed at once, and the servant got them in, all except Brownie. I went to look for her and failing to find her, told the servant to be on the look-out and went to the office. A few minutes after I left the house they found her, stiff and cold ; and thus died one of the handsomest and best dogs that ever lived. I will not begin to enumerate her virtues, for if I did I would never stop. Suffice it to say, that I loved her like a child and I mourned her as sincerely and sorrowfully as if she had been a human being. Poor little Brownie! so universally admired, so universally regretted ! I have, luckily, among some very fine pups from her, two liver-colored bitches, without a white hair, and about four months old. These pups, Cora and Flirt, promise very well ; they fetch on land and in water very nicely, and "down-charge" and "come to heel" like little Trojans. I hope with them to keep up the reputation of my kennel. I bought of Mr. Willey his brace of black cockers and was very much disappointed with them. The bitch is very fine, though old and fat, but the dog did not suit me at all. I have sold them both to different parties, and was glad to get out of the "spec" at a loss of about $10. The gentleman who bought the bitch, a great friend of mine, has bred her to Robertson's Rollo, a son of Brownie and sire of Cora and Flirt, and we expect a very fine litter.

It seems to me that I have rather wandered from my subject. I started with the intention of making a few general remarks about cockers, and I have been rattling along about my own dogs ; however, we will return to the general remarks. I would advise every man who is fond of dogs and shooting, but who is closely tied down by business, to get a cocker. Setters require too much work to keep them in training and are too big and impetuous to take into the house as pets, while a little cocker of about twenty-five pounds weight will behave himself well anywhere, is quiet and companionable, is small enough to take on a lounge or chair beside you, or even on your lap, and yet is large enough to follow a carriage for miles, and to take care of himself on all occasions. The ladies love them ; all admire them ; they stand any amount of petting without becoming cheeky, and they are faithful and affectionate to a degree. I could tell dozens of anecdotes illustrative of these last attributes, did I not feel that I have already trespassed too long on your valuable space. Perhaps at some future time I may write you a few, if the present poor attempt finds favor in the eyes of my fellow-sportsmen. One more remark and I have done. Cockers require to be trained from their earliest puppyhood. Otherwise they will at times get so excited as to be quite uncontrollable. If trained young, however, they have no thought but their master's wishes, and are continually watching for a signal or command.

G. D. M.

DISTEMPER—Second Paper.

BY M. VON CULIN.

In distemper, the matter of forcing a dog to do anything should be conducted with the utmost caution. In giving him medicine be careful to observe the directions which I have given (or any other known gentler means), and should the dog struggle too violently in resistance, the stomach-pump or funnel must be resorted to, as any violent exertion only serves to prostrate the dog, wasting the vitality which must be retained to combat the disease. Above all things, remember that perfect rest and quiet are necessary. When the dog is to be moved from one place to another, by no means force him to walk, but gently and carefully lift and carry him. Should it be necessary for any purpose, whether to remove him from a filthy bed, to take him to a better ventilated apartment, or to a place more convenient to his attendent, to take him up or down stairs, let two persons, one at the hind quarters and one at the shoulders, the person best acquainted to take the shoulders, lift him gently, side up, and carry him in as nearly a horizontal position as possible, being careful to make no more pressure than possible upon the bowels, stomach or lungs, as they are generally all in a high state of inflamation. The dog when left to himself will seek a spot most retired from noise or disturbance and from glaring light, and will, from disinclination to move about, lie there and starve. This must not be allowed ; he must be brought out into clean and comfortable quarters. I spoke before of light ; when I say that light is necessary, I say so because in summer when you exclude the light you shut out the air, but when you can obtain a thorough ventilation without a glaring light, do so by all means, as in all cases where the nerves are effected, a glaring light harrasses, the disease by irritating the nervous system. I am a great believer in plenty of daylight as a curative agent in all diseases. Either direct or reflected rays of the sun effect the nervous system, hence my remarks on a glaring light.

In the matter of non-exertion of the dog in this disease, the administration of food figures conspicuously. Two many ingenious methods cannot be suggested and practiced, for a sick dog is as fastidious as a fashionable young lady, and his appetite must be pampered and catered to, and many little stratagems must be practiced. One of the best for administering liquid food to a dog who has lost his appetite, is first to caress the dog and allow him to lick your hand ; then dip your fingers into the liquid and patting him with the other hand let him lick it from your fingers. Continue this two or three times, and then take up some of the liquid in the hollow of your hand, and, by talking to and coaxing him you can get him to lap up a quantity of it. When he has taken four or five handfuls he will turn away and appear satisfied, but in a half minute or so, try him again, and he will eat, but be cautious not to tire him.

An occasional piece of soaked graham cracker or other solid food before mentioned may be smuggled in. Do not force it upon him after he refuses, or it will not be so easy to get him to eat another time ; but give in small quantities frequently. This method will work when every other one fails, except that of force, which should be a last resort.

In administering pills, open the dog's mouth in the manner before described ; pour in a tablespoonful of palatable liquid—beef tea, milk or water ; then, filling the spoon again, place the pill or pills on the point of the spoon and pour all together into his mouth. He will swallow them without knowing it.

The main reason why distemper is so much dreaded is because of our ignorance of the disease. All animals, from the tiger of the Eastern jungles to man, stand most in dread of that which they understand the least.

Ignorance, superstition, idolatry and witchcraft are in the same category ; hand in hand the arch traitors betray us into all manner of absurdities. This much-to-be-deplored state of affairs will of course never be universally remedied until our veterinary schools give the same attention to the dog that they do to the horse. Why have they not done so in the past? Because the money value of the horse has far exceeded that of the dog. Now that it is fast becoming a neck race for supremacy, is it too much to expect that the diseases of dogs will be given the same deep and careful study that has hitherto been allowed only to those of the horse?

Then, and not until then, may we look for prompt relief from veterinary surgeons as a class in the diseases of the dog. There are objectionable features, but not a whit more so than in man or in the horse in furthering our experiments with the dog ; and better and more frequent opportunities with far less expense than with man and horse.

"Rabies ! rabies ! !" cries the nervous physician. "Small-pox ! yellow fever ! ! diphtheria ! ! ! and a host of others in man, and glanders and farcy ! in the horse," cry I. If it were all risk and no reward, the selfishness of man might say, "Flee from them all." Farcy and glanders, as communicated to man from the horse, are as much to be dreaded and as loathsome and fatal diseases as hydrophobia communicated to man from the dog. While here we have two so-much-to-be-dreaded and fatal diseases communicated by the horse, as yet we have but one to be feared from the dog. Distemper, in no case, has ever been known to have been communicated to man.

In the face of so much contradictory evidence the inexperienced will find it hard to decide whether or not distemper is contagious. Mayhew, one of our supposed authorities on canine diseases, most emphatically declares that it is not. In this, as in many other instances, Mayhew, by his advice, has dealt death and destruction to many of the choicest animals from the best kennels of many lands. There may have been something in the climate in which Mayhew practised which rendered the disease non-contagious, but certain it is that in the United States distemper is the most highly contagious of all canine diseases. Mayhew sights as proof of his assertion the case of his little cur bitch which lived for years amidst distemper and did not contract the disease.

This case is no proof whatever, as it is a well-known and conceded fact that few dogs contract the disease a second time, and others appear never to have it at all, though constantly exposed to it in its worst forms. Like other blood-poison fevers, there appears to be a cause in the system which one attack of the disease exhausts, never to be reproduced. In a still larger number of cases the attack is so slight as to appear little worse than a bad cold. Especially are mongrels and dogs of low degree thus lightly visited, as such was his (Mayhew's) cur evidence, rather than of its non-contagion. On the other hand our proofs are so overwhelming as scarcely to need notice, except to post the tyro. It is a well-known fact in pathology that in all animals from the lowest to man, the female may contract, showing all the symptoms of a disease, then becoming pregnant the symptoms disappear rapidly. The pregnancy is the cause of the disappearance of the symptoms. After delivery the symptoms reappear, commencing where they left off and proceed rapidly to a termination of the disease. In man consumption gives a good illustration; in the dog we have a good illustration of it in our subject—distemper. The bitch having contracted the disease in a mild form, becoming pregnant the symptoms disappear as if by magic. From within a few days to several weeks after delivery the disease again makes its appearance, either in the dam or in the whelps, or in both.

In the dam it is often so mild as scarcely to be noticed, but when it appears in the puppies it almost invariably sweeps the entire litter. We ask, is this contagion? Again we send a string of dogs of a ripe age to contract distemper (under twelve months) to a dog show. After the expiration of the proper time required to develop the symptoms the disease makes its appearance in one dog, the ultimatum of which is seven out of nine of the puppies taken to the show die of the disease within three weeks. Several other and older dogs in the kennel, another younger one also, contracted it: part of this lot also dies—an actual money loss of not less than $1,500. We ask, "Is this contagion?" Again, two dogs belonging to different persons are confined in neighboring yards with tight fences between—not even a chance to smell noses. Neither dog is admitted to the other's yard nor into the street. One dog takes the distemper, and in a short time the neighboring dog has it also. The first dog being of low degree (like Mayhew's) recovers, the other, being a blue-blooded Llewellin, dies. Is this contagion?

I could fill pages with just such instances, but I deem the above sufficient.

Game Bag and Gun.

GAME IN SEASON FOR SEPTEMBER.

Moose, *Alce Americana.*
Caribou, *Rangifer caribou.*
Elk or wapiti, *Cervus canadensis.*
Red or Va. deer. *C. virginianus.*
Squirrels, red, black and gray.
Hares, brown and gray.
Reed or rice bird, *Dolichonyx oryzivorus.*
Wild turkey, *Meleagris gallopavo.*
Pinnated grouse or prairie chickens, *Cupidonia cupido.*
Ruffed grouse or pheasant, *Bonasa umbellus.*
Quail or partridge, *Ortyx virginianus.*
Black-bellied plover, ox-eye, *Squatarola helvetica.*
Ring plover, *Ægialitis semipalmatus.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Woodcock, *Philohela minor.*
Red-breasted snipe, or dwitcher, *Macrorhampus griseus.*
Red-backed sandpiper, or oxbird, *Tringa Americana.*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tattler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds.

☞ This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

☞ The seasons for shooting pinnated grouse or prairie chickens and other birds are as follows in the States named herewith :—

States	Pinnated Grouse.	Ruffed Grouse	Quail.	Woodcock.
Ill.....	Aug 15 to Dec 1	Oct 1 to Jan 1	Oct 1 to Jan 1	July 4 to Jan 1
Ind.....	Oct 1 to Feb 1	Nov. 1 to Jan 1	Nov 1 to Jan 1	July 1 to Jan 1
Iowa...	Sep 1 to Dec 1	Oct 1 to Jan 1	Oct 8 to Jan 1	July 10 to Jan 1
Minn...	Aug 14 to Oct 1	Sept 1 to Dec 1	Sep 1 to Dec 1	July 3 to Nov 1
Wis...	Aug 25 to Jan 1	Aug 25 to Jan 1	Aug 25 to Jan 1	Aug 25 to Jan 1
Neb.	Aug 15 to Feb 1	—	Oct 1 to Dec 1	No Restrictions
Kan...	Aug 1 to Feb 1	"	Oct 1 to Jan 1	Forbidden

DON'T.—In connection with the chapter of gunning accidents contributed by "Ego" in another column, we republish the following cautions to sportsmen, old and young, experienced and inexperienced. That the ad-

vice is sound may be inferred from the fact that the item, originally published by ourselves last year, has found its way into hundreds of papers all over this country and abroad:—

Don't point your gun at yourself. Don't point your gun at any one else. Don't carry your gun so that its range includes all your hunting companions. Don't try to find out whether your gun is loaded or not by shutting one eye and looking down the barrel with the other. Don't use your gun for a walking-stick. Don't climb over a fence and pull your gun through muzzle foremost. Don't throw your gun into a boat so that the trigger will catch in the seat, and the charge be deposited in your stomach. Don't use your gun for a sledge-hammer. Don't carry your gun full cocked. Don't carry your gun with the hammer down, Don't be a fool. Don't you forget it.

A Luxurious Summer Camp.—A Milwaukee correspondent who signs himself "L'Eclaire" gives us the following description of certain really luxurious summer quarters, annually enjoyed by a company of gentlemen, near Madison, Wis. They would be the envy of those who have never been accustomed to anything better than a "lean to" :—

For many years past Mr. Arthur C. McKnight, now of wide fame through his fairy opera, "The Naiad Queen," and a few friends have camped out summers, and for the past few years have located their camp at Waukesha during June, July, August and a portion of September. Mr. McKnight has recently purchased the celebrated *Mills Lake Forest Farm*, of 165 acres, lying upon the north shore of the beautiful Lake Monona, one of the chain of four lakes surrounding the beautiful capital of our State, Madison, of which Lake Mendota is the largest and Monona second in size.

These lakes connect directly with Rock River through a stream some two or three miles in length and thence with Lake Koshkonong and the Oconomowoc lakes, thus affording a delightful canoe trip through a country abounding in fin and feather.

The farm is about one-quarter mile from the city of Madison and somewhat less than one and one-half miles from the State Capital building, and of its situation too much cannot well be said. Beautiful beyond comparison is the grove of maple and elm on the banks of the lake as the morning sun rises over the water. The country abounds in fine drives and the roads are rarely in bad condition.

In this beautiful spot Mr. McKnight and his party of notables have pitched their tents for the season of 1879, and probably his summer headquarters will be in this locality for several succeeding seasons, with a possibility of the owners making it his permanent habitation.

The party consists of first Mr. McKnight, the host, Mr. Sam R. Milleur, of Washington, D. C., Business Manager "Fairy Opera Naiad Queen"; Mr. Chas. A. Reade, of New York City, Musical Director "Naiad Queen"; J. Harry Brayton, St. Louis, Mo.; Walter Wellington, St. Louis, Mo.; Charles A. Bowen, St. Louis, Mo.; Edgar E. Thompson, Nashville, Tenn. Besides the above the camp quarters also provided for a competent cook—your correspondent will certify to his efficiency—camp watch, hostler, etc. The camp watch is a feature, and entirely does away with the troublesome custom of pitching a copper to see who is to "stay with the camp." Now a word about the quarters. Six large tents constitute these, the largest 18x26 feet, all floored and absolutely waterproof. Several of the rooms in the larger tents are carpeted, answering for parlor, sleeping, and store rooms. The culinary department is as complete as in the best of kitchens—oil stoves, shelving, every manner of utensil, and every procurable material enable the master of that department to turn out some very savory and toothsome messes. The readers will see that I begin with the most important feature of the establishment.

The dining tent is similar in shape to the others; wall pattern, with walls about six feet in height, containing an extension table capable of seating fourteen, and there are frequently twice that number of visitors at the camp, for Messrs. McK. & Co. are the most hospitable, whole-souled gentlemen it has ever been my good fortune to meet. The table service is of silver and china, exquisite in design; and the linen, after course services, etc., are of the finest, and evince not only a thorough appreciation of good things but a most exquisite taste. The sleeping apartments are furnished with spring beds and monogrammed bed-linen and hammocks, and could not be improved upon in point of comfort. The parlors and music room are perfect. They are handsomely carpeted and contain handsome light furniture, portfolios with sketches and engravings, and a magnificent organ which is a joy forever.

The stable is comfortable and spacious, and contains the following well-known roadsters:—Brooklyn Maid, Mollie, Trojan, Country Queen and Rob Roy, used for driving purposes. An efficient hostler has them in charge, and their sleek coats and buoyant spirits bespeak their delight at the sweet green grass growing so plentifully around them.

Mr. McKnight has also purchased and caused to be brought to the lake the fine yacht *Princess* from Cleveland, Ohio, now called the *Naiad Queen*. There are also five handsome sail and row boats.

I forgot to mention in connection with the kitchen that a good spring and an ice-house well stored were by no means a small feature, especially in warm weather.

The boys have an excellent library and receive all the prominent daily, weekly and monthly publications in shape of papers and magazines. I hope when they receive the number of Forest and Stream containing this description of their beautiful home, they will again accept the thanks of the writer for kind attentions rendered upon the occasion of his visit.

I think I am perfectly safe in saying if any of the Forest and Stream readers desire to visit a luxurious camp they will be cordially welcomed by Mr. McKnight and party at Mills Lake, Forest Farm.

—Brown's improved gun cleaner, advertised elsewhere, is simple, convenient and thoroughly efficient. It is one of these contrivances that cannot help being adopted by every gun and rifle owner who sees it. The cleaner was good before; it has been improved and made still better.

Diana Out West.—The Hot Springs (Wyoming) correspondent of the Chariton (Ia.) *Leader* contributes to that paper an interesting description of a novel elk chase which recently occurred there. The heroine of the occasion was a Miss Maggie Foreman, of Iowa, who was visiting some relatives in the mountains. On the morning in question she had been galloping about the camp on a favorite horse of her host's, and was about to dismount when an enormous black elk came dashing through the camp with a hunter in hot pursuit.

The elk was wounded but yet able to run at great speed. The writer, in sport only, never dreaming she would undertake it, handed Miss Foreman a large army Colt's revolver and told her to go and help catch the enormous animal. Miss Foreman took the weapon and started toward the elk, which was but a short distance away at that moment. And now began an exciting chase. The horse was thoroughly trained for such work by Mr. Adams, and as soon as started upon the trail dashed forward with frightful speed. Adams urged his horse forward in a vain endeavor to overtake her, but the little broncho which he bestrode was no match for his own favorite steed. The elk started for the mouth of a cañon about a mile distant, through which it could reach the higher mountains. We felt greatly alarmed for Miss Foreman's safety, believing that in the excitement of the chase her horse had become unmanageable, until she was seen to fire the revolver at the elk, and then we knew that she was after meat. Two, three, four shots were fired, and yet the speed of the elk was not lessened, but at the fifth shot it was observed to waver, stagger, and in a moment fall heavily to the ground. Then Miss Foreman was seen to halt and fire another shot into the animal as it lay struggling near the horse's feet.

We hitched up a wagon and drove to the scene, where we found Adams sitting upon the body of the fallen monarch of the mountains, while Miss Foreman, flushed and triumphant, stood near. When we praised her daring, Adams said: "These Iowa girls are business every time. I'm from Iowa myself, and I know a few of 'em; but she can't pack off all the praise, for there ain't another horse in the mountains who could have bugged up to that elk like Billy did; eh, old boy?" And he caressed the noble animal in a most affectionate manner. We had no facilities for weighing the animal, but "Jim" says it will crowd 900 or 1,000 pounds very close. A number of Yuma Jack's band of Yute Indians who were camped near and who witnessed the chase crowded around and gazed upon the heroine with stares of amazement, one of them remarking: "White squaw heap brave—ride all same like wind in storm."

Wear of Brass Shells.—*Monroe, N. C., Aug. 26th.—Mr. Editor:* In reference to your statement that brass shells for shot-guns could not be used more than twenty times with safety, I enclose you a letter from Messrs. E. Remington & Sons, in which they seem to differ with you. I myself have fired one brass shell over 200 times, and the shell seemed to be as good as ever. Knowing that your answer to correspondence in reference to the same will be read by many, and that hundreds of brass shells will be thrown away on that account, I trust you will further investigate the subject, and give your readers the benefit thereof, and also that you will publish the Messrs. Remingtons' views on the subject. Here we have the opinion of an editor whose opinion on sporting matters is final, and, on the other hand, we have the opinion of the largest gun manufacturers in America, who have done much to bring the gun to its present state of perfection, entirely disagreeing on a subject which has much importance attached. H. Smith.

Dear Sir—Your letter of 20th is at hand. We think Mr. Hallock must have referred to rifle shells. We never heard any statement like that in regard to shot shells. We have shells in use now that we have fired more than 400 times, and they are good shells yet. We are not good at conundrums, so give it up. Do not know why they are dangerous. Do not think the statement true, if it refers to shot shells. Yours truly, E. Remington & Sons.

Remarks.—Our answer was intended to apply to rifle shells, and our error was due to inadvertence. For rifle shells the Government test is 10 reloads, but we have known a Winchester shell to be reloaded 119 times. Brass shot-gun shells may be reloaded 400 times, or until they split. No danger need be apprehended from a shell splitting.

Which is the Best for General Shooting Purposes?—*Mr. Editor:* From the respective properties of soft and chilled shot are derived respective advantages, hence conflicting assumptions as to their respective best adaptability for general shooting purposes. The opinion of practical sportsmen is solicited in regard to the following inferences:—

1st. By flattening on striking the bird, soft shot increases the area of the blow, the measure of destructive power to animal life, and causes the game to drop instantly; whereas the hard shot will give about one-fifth smaller area of wound, penetrate deeper, and perhaps pass through the animal, yet allow it to escape. When fired at paper pads, if rather less deeply penetrating than hardened lead, soft shot makes larger orifices, and from its superior specific gravity has a greater pellet force; hence it is preferable to chilled shot for long distance shooting.

2d. Owing to its greater hardness, chilled shot passes through the gun barrels with less injury to its spherical form, therefore with less resistance through the air, thus more than compensating for its inferior specific gravity, sustaining its velocity and insuring the accuracy of aim better than the soft shot, which becoming about one-third more misshapen, has also a greater percentage, falling short of 30 yards. This can be tested by shooting at soft paper targets. The pellets can be picked out quite flattened, the weakest being easily detected, as they are more flattened, and consequently possessed of a less penetrative power.

Canada—*Montreal, Aug. 31st.*—The shooting I think will be very good, as I have seen a great number of broods of both ducks (black) and partridges, (*Bonasa umbellus*) and a few spruce partridges (*Tetras Canadas*). I fear the deer shooting in this vicinity is about done. I had a letter from an old friend of mine from Cornwall, Ontario, about sixty miles above this, who usually accompanies me in my fall hunts, and he says we will have to seek new fields for our annual deer hunt, so many sportsmen come over from the opposite side of the St. Lawrence, Fort Covington, N. Y. and vicinity, and drive them with dogs, that the result is the deer are either driven away or all killed. He says, last year while there all he started was one deer, and in former years it was common to start ten and twelve per day, and also he counted over twenty sportsmen watching for that unfortunate deer, all bent on destroying the last survivor. So disgusted was he, he declares against ever putting his feet in the place again. To-morrow is the first day of our open season in this province, so all sportsmen are on the alert.

The Hampton Marshes—*Newburyport, Mass., Aug. 30th.—Editor Forest and Stream:*—I have just read the communication in the last issue of the Forest and Stream dated Hampton Marshes, though the writer evidently lives in Amesbury, Mass., contradicting my reports and consequently placing me in an awkward position. Let me say that, having gunned upon said marshes for the past three weeks and made some very creditable bags, and having seen the birds shot and bagged by a score of resident gunners, I think that my word should be taken at par, especially as I can furnish plenty of witnesses to attest the truthfulness of my statements. Doubtless the gentleman from Amesbury is ignorant of the fact that all communications addressed to the Forest and Stream and signed by William W. Johnson are truthful and not false. William W. Johnson.

New Jersey.—In a match at Point Pleasant, August 30th, M. M. Maltby killed 13 of 15 pigeons at 29 yards; Thomas and Kennedy tied on 12. At Morgan's, in a 100 bird match, D. Dalrymple, Jersey Gun Club, killed 23; P. C. Duffy, L. I. Gun Club, 21. At Plainfield, D. C. Howes won first with 16, and Woods second with 15; 20 balls, Mole's trap, 18 yards. At Bayonne, 50 birds, 30 yards, S. Delong, of Brooklyn killed 25, 18 straight; J. Sanford, of New York, 18, 14 straight.

West Stockbridge, Sept. 1st.—Woodcock and partridge shooting opens to-day. Birds are not very plenty with us this season. Pot-hunters have in previous years snared partridge to such an extent that they have nearly exterminated them; but this year they have been closely watched and I hardly think a bird has been caught by them. This locality always has been one of the best in the State for woodcock, but this spring unusually few came to breed. It has been a common thing for parties at the beginning of the season to bag from ten to twenty-five in a day.

Erie, Aug. 22d.—I bagged 33 "timber doodles" in one and a half day's shooting last week. We are now going to give them a rest until after the moulting season, which has commenced. Snipe.

Tennessee.—*Nashville, Aug. 24th.*—The dove shooting has begun in earnest. The weather the past week has been cooler, and a number of our sportsmen have been out. It is still hard work on account of the green condition of the corn, and it is in these fields where birds are most plenty. Three young gentlemen bagged 86 one afternoon last week. Quail are reported very plentiful, owing to the very dry weather during the hatching season. In the field inside our race course are two large coveys, which fill the air with the plaintive sound of "Bob-white!" every morning and afternoon.

J. D. H.

Florida.—*Titusville, Aug, 14th.*—The young broods of quail are very numerous this season. The beach of Indian river is lined with them now early in the morning, affording an excellent opportunity to shoot them without the fatigue attending locomotion in the scrub. It is too hot for shooting now for pleasure, but the hunters bring in bear and deer in plenty and black duck (*Anas obscura*). Dr. Moore, of Merritt's Island, recently killed eight otters at one shot with a large duck gun. One hunter killed twenty-six deer in six weeks last winter.

AL. I. Gator.

Texas—*Mason, Aug. 21st.*—Our woods are alive with deer and other game, and hunters are happy. We hear of a number of men in this section who are following no other pursuit this year but that of killing dear; the skins, when dressed, bringing a fair price in our town.

Mr. Tom Gamel brought in some twenty odd deer hides last week and sold them to Mr. Lockhart for $1.12½ per pound, the lot aggregating 22 pounds. Mr. Gamel, it is said, has killed over one hundred deer so far this year.

Michigan.—*Ishpeming, Aug. 24th.*—Mr. George A. Newett, local editor of the Ishpeming *Iron Home*, in company with Mr. Jenks, also of this city, have been camping at Helena Switch, about 30 miles from here on the C. & N. W. R. R., and have killed 13 deer. Deer are very abundant here this fall. A. W. S.

Oregon—*Portland, Aug. 21st.*—I have noticed in your valuable paper since the 1st inst., that woodcock are in season in our State. I am very sorry to say that the woodcock is a total stranger to our sportsmen; in fact there never was to my knowledge a single specimen of that "gamest" of birds ever killed either in Oregon or Washington. Quail and grouse are very plentiful, and a number of good bags are reported. Our Sportsmen's Club will be permanently organized in a few days for glass-ball shooting. W. L.

Wyoming.—*Davis' Ranch, Aug, 23d.*—I have been a hunter here in the Rockies for 20 years, and there is no paper gives me so much pleasure as Forest and Stream. If there are any of the many readers of your paper who would like good hunting, send them out here. There are plenty of elk, deer, antelope and bear in this country.

G. O. Latham.

THE FOREST AND STREAM DOES IT.

Office of Bohemian Glass Works,
No. 214 Pearl street, New York, *Sept. 1st.*

Forest and Stream Publishing Co.:—

Gentlemen: You will please put our advertisement into one half the space, from this date, as our orders are larger than we can fill. As soon as necessary, we will increase it as before.

Yours respectfully,
Bohemian Glass Works.

SHOOTING MATCHES.

TORONTO GUN CLUB.—*Toronto, Aug. 23d.*—Third pigeon match for medal; pigeons; wind very fresh. Squad No. 1, 26 yards :—

J. Barrett..........1 1 1 1 1 1 1 1 1 1 1 1—12
J. Taylor..........1 1 1 1 1 1 1 1 1 1 1 1—12
J. James..........1 1 1 1 1 1 0 1 1 1 1 1—11
H. Millar..........1 1 1 1 0 1 1 1 1 1 1 1—11

No. 2 Squad, 24 yards :—

E. Perryman..........1 1 1 1 1 1 1 0 1 1 0 1—10
W. Kennedy..........1 1 1 1 1 1 1 1 1 0 1 1—11
R. Morrison..........1 0 1 1 1 0 0 1 0 w —5
J. Deacon..........1 0 1 1 1 0 1 1 1 1 1 1—10
W. Villiers..........1 1 1 1 1 1 1 1 1 1 1 1—12

No. 3 Squad, 20 yards :—

S. Staneland..........1 1 1 1 1 1 1 1 1 1 1 1—12
Thomas Taylor..........1 1 0 1 1 0 0 1 1 1 1 1—9
J. B. Graham..........0 1 0 1 1 1 0 0 1 1 1 1—8

A friendly shoot at pigeons; 26 yards; wind very fresh :—

T. Winfield..........1 1 1 1 1 1 1 0 1 1 1 1 0 1 1 0 1 1 1 1 0—17
H. Watson..........0 1 1 0 1 1 0 1 1 1 0 0 0 0 1 1 1 1 1 1 1—14
R. Ardagh..........1 1 1 1 1 1 1 1 1 1 w —10
W. Perciva..........1 1 0 1 1 1 0 0 1 w —6
Dr. Smith..........1 1 1 1 w —4

NEW HAMPSHIRE—*Manchester, Aug 29th.*—Regular weekly shoot, Manchester Shooting Club, Aug., 27th; rotary trap; 28 yards rise; record given in scores; 10 balls each; score :—

	Broked.	*Missed.*
Benjamin F. Clark	24	36
N. A. Robinson	13	17
O. Greeley	14	6
J. E. Wilson	20	10
O. Huse	10	10
C. W. Farmer	24	16
H. Tobey	13	7
M. Wadleigh	18	2

JULIUS E. WILSON, Secretary.

MASSACHUSETTS.—*Millford, Aug. 25th.*—At Wilkinson's Grove in this town last Saturday evening, the following were the best scores out of a possible 20, 18 yards rise :—

T. Martin	14	C. Howe	9
C. White	13	W. R. Dennett	8
R. V. Brooks	9	T. Wilkinson	8
C. S. Evans	9	G. W. Whitney	7

Worcester, Aug. 26th.—A glass ball match between the Worcester and Oxford gun clubs was shot to-day on the grounds of the home team, Woodland Range, and resulted in favor of the Oxford Club by seven balls. The clubs each had ten men, and thirty balls were used for each man. Mr. C. B. Holden was the referee. The following is the score :—

OXFORD.		WORCESTER.	
Bowdish	23	Duncan	21
Appleby	23	McAleer	20
Pike	21	Hatch	14
Pope	9	Fuller	20
Ingraham, jr	15	Houghton	20
Joslin	22	Cummings	14
Forrest	21	Fiske	22
Brown	15	Messenger	10
Larned	20	Darling	19
Ingraham	22	Boyd	16
Total	191	Total	184

Millbury, Aug. 25th.—Glass ball shoot by the Goose Club, a membership of 13. The best scores are :—

Brigham	1 1 1 1 1 1 1 1 1 1	Reardon	0 0 0 1 0 0 0 0 1 0
Barnes	0 0 1 0 1 1 1 1 1 1	Howe	0 0 0 0 0 0 0 0 0 0
Paul	1 1 1 1 1 1 1 1 1 1		

GOOSE CLUB.

SCHAFFER'S SCORE.—*Boston, Aug. 10th.—Mr. Editor:*—In your issue of August 7th, I notice a paragraph relative to R. F. Schaffer's score at glass ball shooting, which has caused considerable comment among sportsmen of this vicinity: the majority of them thinking the score was made in three successive entries; which was not the case. Mr. Shaffer taking advantage of its being a re-entry match by shooting about 35 scores, and the three highest scores being selected, viz: 29, 30, 30; total, 89; 30 single, 30 rotary, 30 double-balls, he obtained the prize, which was an elegant one. I consider the shooting of other members of the Raymond Sportsmen's Club far superior to Mr. Schaffer's. For instance, the scores of W. H. Harrison and E. E. Johnson; the former with 10 entries, breaking 82 out of 90, and the latter with 8 entries, breaking 80 out of 90.

If Mr. Schaffer is a lad of 17 summers, his winters must have been very severe. PULL.

RHODE ISLAND—*Newport, Aug. 28th.*—In a match between Mr. Donnell Swann, of Baltimore, and Mr. Travis Van Buren, of New York, imported blue rocks, the former won with a score of 76 to 64.

FOUNTAIN GUN CLUB.—Semi-monthly shoot for the Weaver gun :—

	Yards.	
Hicks	27	1 1 1 1 1 1 1—7
Wingert	31	0 1 1 1 1 1 1—6
Carlin	23	1 1 1 1 1 1 0—6
Pike	25	1 0 1 0 1 1 1—5
Willard	25	0 1 1 1 0 1 1—5
Slane	27	1 1 1 0 0 0 1—4

ONONDAGA SPORTSMEN'S CLUB.—*Syracuse, Aug. 28th.*—Match for club medal; pigeons; plunge traps; three double birds, 18 yards rise, and five single birds, 21 yards rise :—

T. Kimber	00 00 00 1 0 1 1 1— 3	G. C. Luther	11 10 11 1 0 1 1 1— 9
E. Crouch	00 11 10 1 1 1 1 1— 8	E.P.Dennison	11 01 10 1 1 1 1 1— 9
R. S. Pretty	00 00 10 1 0 1 1 1— 5	R. B. Strong	10 11 11 1 1 1 0 1— 9
Ed. Hudson	10 00 11 1 1 1 0 1— 7	Wm. Fage	11 10 11 1 1 1 1 1—10

Sweepstakes at ten birds, 21 yards rise :—

Ed. Hudson..........1 0 1 1 0 1 1 1 1 1— 8
G. C. Luther..........1 0 1 0 1 0 1 1 1 1— 7
E. P. Dennison..........0 1 1 0 1 1 1 1 1 1— 9
Ed. Crouch..........1 1 1 1 1 1 1 1 1 1—10
C. F. Morse..........1 1 1 1 0 1 1 0 1 1— 8
H. Gale..........0 1 1 1 1 1 1 1 1 1— 9
H. Drury..........1 0 0 1 1 0 1 1 1 1— 7
F. A. Johnson..........0 1 1 0 1 1 1 1 1 1— 8
W. Cruttenden..........1 1 1 0 1 1 0 0 1 1— 7
W. Fage..........1 1 1 1 1 0 1 1 1 1— 9
R. B. Strong..........1 1 1 1 1 1 1 1 1 0— 9
D. Lefevre..........1 1 0 1 1 1 1 0 1 0— 7
R. Pretty..........1 1 1 0 0 1 0 1 1 1— 7

Strong won ties of nine, killing five straight at 26 yards; Morse and Johnson divided ties of eight on same score; Cruttenden won a ten-bird sweep; Frenchy Johnson, of Auburn, and H. Drury, of Syracuse, divided second money; and C. Parker, of Syracuse, took third money.

PENNSYLVANIA.—*Titusville, Aug. 25th.*—Card's revolving trap and Boughton's improved smoke target balls. This makes the third match we have had to test these balls without a referee, and the universal expression is—they are simply perfection. Eighteen yards :—

C. V. Boughton..........1 1 1 1 1 1 1 0 1 1—9
Major Shuttuck..........1 1 0 0 1 1 1 1 1 1—7
R. H. Boughton, jr..........1 1 1 1 0 0 1 1 1 1—8
J. J. McCrum..........0 0 0 0 0 0 1 0 1 1—3
J. J. Wheelock..........1 0 1 1 1 1 1 1 1 1—9
E. W. Watson..........1 0 1 1 0 0 1 0 1 0—5
C. Hardenburg..........0 0 0 1 1 0 0 1 1 0—4
L. Shattuck..........0 0 0 1 0 0 0 0 0 1—2

KENO.

Erie, Aug. 22d.—Fifth regular shoot for the Rathskeller Cup, presented to the Erie Gun Club by Louis Schumacher :—

Henry Richards..........1 1 1 1 1 1 1 1 1 1 1 1 1 0 1—14
W. W. Derby..........1 1 1 1 1 1 1 1 1 0 1 0 1 1 1—13
C. K. Gregor..........1 0 1 0 1 1 1 1 1 0 1 1 0 1 1—11
Louis Schumacher..........0 1 0 1 1 1 0 1 1 0 1 1 1 1 1—10
T. W. Jarecki..........1 0 0 1 0 0 1 1 1 1 1 0 1 1 1—10
Jake Graham..........0 1 0 1 0 1 0 1 1 1 0 1 1 1 1—10
John E. Graham..........1 0 0 1 0 0 1 1 1 1 1 1 1 0 1—10
William Tracy..........1 0 1 1 1 0 1 0 0 0 1 1 0 1 1— 9
Charles Hays..........1 1 1 1 0 0 1 1 1 0 1 0 0 1 0— 9
P. Diffenbach..........1 1 0 0 0 0 0 0 1 1 0 0 1 1 1— 7
Jack Tuttle..........0 0 0 1 0 0 1 1 0 1 0 0 1 1 1— 7

Erie, Aug. 30th.—Score of the sixth shoot for Rathskeller Cup. Mole revolving trap; same rules :—

Louis Schumacher..........0 1 0 1 1 1 1 1 1 1 1 1 1 1 1—13
Jack Love..........0 1 0 1 0 1 1 1 1 1 1 1 1 1 1—12
Chas Hays..........1 1 1 1 1 1 0 1 1 0 1 1 1 0 1—12
Harry Richards..........1 1 1 0 0 0 0 1 1 1 1 1 1 1 1..11
W.W. Derby..........1 0 1 0 1 1 1 1 0 0 1 1 1 0 1—10
L. W. Jarecki..........0 0 1 0 1 1 1 0 1 0 0 0 1 1 1— 8
Harry Van..........0 0 1 0 0 0 1 1 1 0 1 1 0 0 0— 6

In the pigeon matches at the fair grounds Mr. S. A. Tucker, the holder of the Rochester "FOREST AND STREAM Badge," participated. Score of first match, 21 yards rise, 80 yards boundary :—

Riddle	3	Hays	4
Tucker	4	Richards	4
Meister	4	Love	2
Saulsbury	3	Schumacher	2
Jarecki	2	Derby	4

In the shoot off Derby and Tucker divided first money, Saulsbury and Riddle second, Schumacher and Jarecki third.

Second shoot, same rules :—

Riddle	2	Hays	3
Tucker	4	Richards	4
Meister	5	Love	2
Saulsbury	4	Derby	1

Third shoot, English rules, ground traps, 25 yards rise, 80 yards boundary :—

Riddle	3	Hays	4
Tucker	5	Richards	4
Meister	4	Derby	5
Saulsbury	4	Schumacher	0

Derby and Tucker divide first money, Meister second, Riddle third.

Fourth shoot, same rules :—

Riddle	3	Hays	3
Tucker	5	Richards	4
Meister	5	Love	2
Saulsbury	4	Derby	3

Meister and Tucker divide first money, Saulsbury and Derby second, Riddle third.

Towanda, Aug. 22d.—The Towanda R. and G. Club had their first match at glass balls to-day. Card traps; 23 balls each; 21 yards rise :—

E. F. Smith	19	H. C. Porter	5
W. A. Chamberlin	11	W. H. Dodge	7
W. G. Tracy	19	C. Abbott	6
George Dayton	15		

Second match; same conditions; 30 balls each; Aug. 28th :—

E. F. Smith	23	W. G. Tracy	13
E. W. Larnerd	18	C. L. Tracy	12
W. A. Chamberlin	9	J. S. Hamaker	6
P. E. Alden	15	George Dayton	15
H. C. Porter	6		

Officers of club are :—W. A. Chamberlin, President; C. L. Tracy, Vice-President; H. C. Porter, Treasurer; E. F. Smith, Secretary. The address is Powell, Pa.

WASHINGTON, D. C.—*Aug. 27th.*—A large party of sportsmen came over from Baltimore to witness and participate in the shooting. Messrs. Kell, Engle, Todd and Wertsner, are regarded as the crack shots of Baltimore, but they found our boys competent to afford them very interesting amusement. Mr. Mills was the only shooter who used a twelve gauge gun, but his new "Nichols & Leferer" fully justified his confidence in it, as will be seen by his score :—

First match; 25 birds, 31 yards rise; $50 a side.

Kell..........1 1 1 0 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 0 1 1 0 0—20
Wagner..........0 1 1 1 1 1 1 1 1 0 0 1 1 1 0 1 1 1 1 1 0 1 1 1 1—20

Decided to draw the money and shoot the match over again in Baltimore next Wednesday.

Second match; 3 birds; $3 entrance; 26 yards rise :—

Mills	1 1 1—3	Engle	1 1 1—3
Kell	1 1 1—3	Wertsner	1 1 1—3
Wagner	1 1 1—3		

Ties on 31 yards :—

Mills	1 1 1 1 1—5	Engle	1 1 0 —2
Kell	0 —0	Wertsner	1 1 1 1 0—4
Wagner	1 1 0 —2		

Third match; 3 pair double birds; Barker, 21 yards, and Mills 24 yards rise :—

Mills	11 11 11—6	Barker	00 11 11—4

Fourth match, same as above; Mills, 27 yards rise, and Barker, 21 :—

Mills	11 11 11—6	Barker	11 11 11—6

Tie :—

Mills	1 1—2	Barker	0 1—1

Fifth match; same as above :—

Mills	11 11 01—5	Barker	00 11 11—4

Sixth match; 26 yards :—

Mills	1 1 1 1 1—5	Wertsner	1 1 1 1 1—5
Barker	1 1 1 1 1—5		

Ties 31 yards :—

Mills	1 1 1 1 1 0—5	Wertsner	1 1 1 1 1 1—6
Barker	1 1 0 —2		

Seventh match; 5 birds; 21 yards rise :—

Wagner	1 1 1 1 1—5	Wertsner	1 1 1 1 1—5
Kell	0 1 1 1 1—4	Barker	0 1 0 1 1—3
Engle	1 1 0 1 1—4	Todd	1 1 1 1 1—5

Won by Wagner on shoot off.

Eighth match; exhibition glass balls; Card's rotating trap; 50 balls each :—

Wagner ..1 1 0 1 0 1 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 0 1 1 1 1 1 1—43
Mills..........1 1 1 0 1 1 1 1 0 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 0 1 0 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1 1 1 1 1—42

Mills and Wagner are our best shots, and the above score is far below their average; attributable, doutbless, to their being too much fatigued from previous shooting.

H. F. J.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.

Trout, *Salmo fontinalis.*	Grayling, *Thymallus tricolor.*
Salmon, *Salmo Salar.*	Muskalonge, *Esox nobilior.*
Salmon Trout, *Salmo confinis.*	Pike or Pickerel, *Esox lucius.*
Land-locked Salmon, *Salmo gloveri.*	Yellow Perch, *Perca flavescens.*

Black Bass, *Micropterus salmoides; M. nigricans.*

SALT WATER.

Sea Bass, *Sciænops ocellatus.*	Bluefish, *Pomatomus saltatrix.*
Sheepshead, *Archosargus probatocephalus.*	Spanish Mackerel, *Cybium maculatum.*
Striped Bass, *Roccus lineatus.*	Cero, *Cybium regale.*
White Perch, *Morone americana.*	Bonito, *Sarda pelamys.*
Weakfish, *Cynoscion regalis.*	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES FOR SEPTEMBER.

GRAY COFLIN, NO. 10 AND 11.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's herl; wings and setæ, hyaline.

BROWN COFLIN, NO. 10 AND 11.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's herl; wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wings.

The white moth for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season.

At this season use the small fles for day fishing and the large flies for evening and night.

—C. A. Lewis, 310 Washington Market, had on his stand yesterday a pompano weighing twenty-three pounds, the largest fish of the kind of which we have any record of.

THE INTERNATIONAL FISHERY EXHIBITION.—We have received blanks for applications for space at the coming International Fishery Exhibition, to be held at Berlin in April, 1880. These applications must be sent in by Jan. 1. We shall be happy to supply them to intending exhibitors.

NEW YORK.—Greenwood Lake bass-fishing is said to be excellent just now.

Cohoes, Aug. 21st.—The only fish we have are black bass and pike. In the spring we catch some good baskets of pike. I use a fly made of turkey feathers, red body and about twice the size of bass fly, which they take readily. About the first of July bass take the fly good, but it is hard fishing. You have to wade up to your neck, with the water running like a mill-race. You hardly ever get one that weighs over two pounds, but the pike run larger. I heard of one being taken last Saturday that weighed eight pounds. Was interested in reading your Godbout sketches; would like to hear more. You said you used double hooks for salmon. I have used them for years, and find them just the thing for fishing where the water is swift. I will close by saying that I think FOREST AND STREAM is the best paper printed, and I welcome it as I welcome the birds and flowers in May. H. MILLS.

STATEN ISLAND FISHING TROUBLES.—For a long time back the seine fishermen of Staten Island, in defiance of an act recently passed by the Board of Supervisors, have done much to injure the sport of many sportsmen who run down to the island in the season to take fish with the line. Abram Cole, an old fisherman, was arrested two or three weeks ago, and taken before Justice Vaughn for trial, for violation of the act. His counsel contended that as the Legislature had passed a law relative to fishing in the waters of Richmond County, the Supervisors' act was inoperative. Counsel for the prosecution held that the local law in this case did not conflict with the State law. The jury were unable to agree, and were discharged. The case was again before Justice Vaughn on Saturday. Cole pleaded guilty, and the Court imposed a fine of $15, defendant promising to obey the law in the future. The jury was made up of residents of Vanderbilt's Landing, the feeling of the Gifford Station people being too strong against the seine fishermen to warrant an impartial verdict. If Cole had not pleaded guilty, the Justice would have imposed the full fine, $50, as called for by the act.

MASSACHUSETTS—*West Stockbridge, Sept 1st.*—We have had a splendid season for trout; think there has been more caught, and large ones too, than any year since my remembrance. Last Sunday a loaded freight car stood on a bridge near the State Line station and sometime during the day a tank of muriatic acid burst in the car, running down in the stream; and the result was, it killed every fish for a mile below. In some places you could pick up bushels of trout, eels, suckers, etc. Last Monday it was a sight to behold; not a live fish could be seen for a long way below the bridge.

MOVEMENTS OF THE FISHING FLEET.—The fish receipts at this port the past week have been quite liberal, a number of the vessels landing very good fares for the season. The whole number of fishing arrivals reported for the week has been 104, as follows: Twenty-one from the Banks, 8 with 640,000 pounds codfish and 13 with 463,000 pounds halibut; 49 from Georges, with 1,029,000 pounds codfish and 44,000 pounds halibut; 1 from the off-shore grounds, with 20,000 pounds codfish; 6 from the Bay St. Lawrence, with 2,000 pounds mackerel; 25 from Shore mackerel trips, of which 6 are following the market fishery, selling their fares fresh, and 19 landed 5,020 barrels,

Schooner *Eva May* arrived at Lanesville, Friday, from Block Island grounds, with 40 barrels bloater mackerel.

The Bay St. Lawrence mackerel fishery offers no inducements to make a second trip, and the vessels would have done much better off our own coast. But few vessels will remain in the Bay, and these with the hope of finding large mackerel later in the season.—*Cape Ann Advertiser, Aug. 24th.*

MARYLAND—*Baltimore, Aug. 30th.*—I have just returned from Hancock on the Potomac, about 40 miles west of Harper's Ferry. I spent two days fishing for black bass; the water was rather too "cloudy" for fly, but I had some luck, catching about 32, varying from 1 to 2 lbs. Quite a number were taken with small live toads in the still, deep water. The river below Hancock has been muddy for a long time, entirely precluding any attempt at fishing. Hancock is a quiet little town of about 900 people, situated on the slope of the Blue Ridge in Washington County, Md. The scenery in the neighborhood is very grand, and the people are very obliging. Mr. Willis keeps the "Light House Hotel." His table is all that one could desire, and his rates to sportsmen very low, $1 per day. September is the best month for bass in the Potomac. G. T. B.

TENNESSEE—*Nashville, Aug. 25th—Editor Forest and Stream:*—There has never been as dull a season among our anglers as the present. During themonths when ordinarily, good sport can be had in any of our streams the weather was so hot and dry that the fish would not bite. Now the season is nearly over, Reelfoot Lake, and the Cumberland being seined and fished with trot lines, furnish a fair supply for the markets, but our people do not eat fish much at this season. A friend of mine and a person whom I know to be perfectly reliable, told me the following fish story,which if it proves nothing, is quite interesting:—

He had been fishing in Bayou Mason, Arkansas, a stream noted for its immense quantities of bass and perch, and where the takes of them occasionally are really marvelous. On this occasion, however, the water was not in condition, or for some unknown cause the fish would scarcely notice the tempting baits offered them; the earth worm, which ordinarily is their favorite food, failed to attract a single one, then a grasshopper was substituted with no better result, at last he improvised a fly from a bright plumaged bird which he shot. After fishing assiduously for some time he succeeded in catching a small perch; this he used for bait with a hope of better luck; he allowed his line to drift gently down the stream, paying but little attention to it, when all of a sudden, his reel began revolving at a terrific rate, and the line was fast approaching its end by the time he had gained his feet to manipulate to best advantage. He could see nothing at first, but in a few seconds he heard a tremendouos splashing in the water, and he felt certain he had hooked an alligator gar, so common in these waters. He was mistaken however, for instead of that he had on his hook a full-grown king fisher. He worked hard, and the job proved a very difficult one. As the bayou passes through a forest of tall gum and cypress trees, it was almost impossible to keep his tackle clear; at one moment the bird would dart straight up in the air, then being checked would turn, dive down, and skim along the surface of the water making the line fairly whiz. It took nearly one hour to tire down the game. J. D. H.

THE WHALE FISHERIES.

Apropos of the expected arrival at San Francisco of the Arctic trader *General Harney*, despatched from the Golden Gate in May last with stores to the twenty whalers cruising in the northern waters and to bring back their season's catch of oil and bone, the *Boston Daily Advertiser* has some statistical information regarding the American whale fisheries. It says:—

Seventeen of the fleet are New Bedford vessels; the other three are from San Francisco; so that the *General Harney's* arrival has something of a local interest. Just now there are fifteen whalers at the wharves in New Bedford, and should the news from the Arctic be that a small catch had been taken, these idle whalers will probably all be dismantled and be laid up until early next spring, when, if the markets improve, they will be fitted for the usual three years' cruise. There are at present 186 vessels all told engaged in whale fishery against 668 in 1854. New Bedford continues to lead in the business. Counting the ten Scotch steam whalers now at work in Baffin's bay, not more than twenty-five are from seaports outside of New Bedford. It may be interesting to recall that when the business was at its height in 1854, New Bedford fitted out 419, Nantucket, 47, Provincetown, 27, Fairhaven, 49 and New London, 55. The previous year the receipts of bone were 5,652,300 pounds, against 207,259 in 1878, the prices ranging in 1853 from 34 to 40 cents, against $2 50 to $3 the present season. The receipts of oil were in 1854 208,000 barrels, against 40,000 in 1878. In this year of heavy receipts there were 552 vessels in the Arctic fisheries. There is very little change in the whaling grounds outside of the Artic seas. The whales run down early in the summer into the southern latitudes to "calve," but in returning they keep very much closer to the ice, and in the Arctic, run under and alongside the fields and bergs. For twenty years the whalers had not followed the fish west of Point Barrows, but in 1875 the fleet went as far as Camden Bay, and four of the vessels were abandoned, since which time not a vestige of these vessels has been met with. The fleet has never been so far west since, Harrison's Bay being considered well to the westward. But as New Bedford parties are building a steam Arctic whaler at Bath, Me., the first of this class ever sent from the United States, there may be a great change in the Arctic fishing grounds, and a more economic method of following the schools discovered. This steamer will fit away in September. It will go direct to and cruise along both coasts of Patagonia, where the whaling this season has been unusually fine; thence it will run up along the off shore and the line grounds, touching in at San Francisco, after cruising through the Society and Sandwich Islands, discharging the catch; and by June next it will steam directly into the Arctic seas.

The Indian Ocean fleet and the two vessels of the New Zealand coast have been fairly successful, but the sperm season of the west coast of New Holland, in Australia, and the catch in the vicinity of the Desolation Islands, southeast of Africa, at last accounts were poor. It is in the last named locality, and also in the Indian Ocean, that the whalers look in each catch for that knot of diseased intestines known as ambergris, which weighs from forty to two hundred pounds, and is usually more valuable than the whole cargo of oil and bone. The last lot brought into New Bedford was on the Caroline Gibbs, 125 pounds. The whale was taken off the Tristan Islands, in the South Atlantic, and the lot was sold for $25,000 to a Boston druggist. It may be interesting to know that this most disagreeable stuff is used in the manufacture of perfumes. New Bedford outfitters claim that unless a vessel can take 2,500 barrels of sperm oil in three years oil fishing will not pay. As few have reached this quantitity in the voyages ending the past year, more attention is being given to catching the right whale in the Arctic, in which the bone is more valuable. The consumption of sperm oil has been abridged principally by the introduction of lard oil. Nothing would so rejoice the sordid heart of a whaleman as a hog cholera at the West. The failure of the menhaden season this summer is a bit of encouragement to holders of humpback and similar classes of whale oil. This is a thick oil that does not strain clear, and is largely used by tanners and curriers. The oils taken in the South seas are somewhat similar, but the Arctic oils are clear and limpid, and are used both for burning and lubricating purposes. Sperm oil is used almost exclusively as a spindle lubricant, the English spinners taking from us about 20,000 barrels a year. Last fall, when the catch was large and the market dull, prices fell off to eighty-five cents. This seemed so very low that Englishmen came over and bought on speculation out of New Bedford about 15,000 barrels at eighty-two cents. But the market has since receded to seventy-five cents, with a stock of about 50,000 barrels on hand, and the spinners at Oldham and other large English manufacturing centres idle on account of a strike. The sale of whalebone is very large in Paris and Berlin, where the leading *modistes* make women's costumes an art. Since the long trains have been fashionable the sales of bone that will cut ten feet lengths have commanded extra prices. Whalebone runs from four to ten feet long and is now worth $2 50 per pound. A substitute has been attempted in the horn from Australian oxen. The greatest length of these run to seventeen inches and they sell at $1 a pound, but this horn, notwithstanding the care in its preparation, on being used gives out a disagreeable odor.

The results of this season's whaling will be known between the 1st and 15th of November, but whether there will be anything to favor an advance or a further decline is not even speculated upon by New Bedford outfitters. One of the last voyages settled up at New Bedford did not yield a dollar of cash to the crew, and their advance and modest purchases during the cruise actually brought them in debt to the owners. It seems very hard that over three years' severe work should not yield eleven men more than a modest fare and cheap wearing apparel. Whaling is done on the co-operative plan. The owners furnish the vessel, fit out and food for two-thirds, and the officers and crew do the work for one-third, and settlement is made on the return at the current market price for oil and bone when lauded at the wharf. Among the ship's officers and men the division is on the value of the whole cargo, as follows:—The captain has one-sixteenth; first mate, a twenty-fourth; second mate, thirty-fifth; third mate, one fiftieth; boat steerers, one eightieth to one ninetieth; ordinary seamen, one one-hundred and sixtieth to one one-hundred and seventieth, and green hands, one one-hundred and ninetieth to one two hundred and tenth. The advance at the outset of the voyages are:—First mate, $200; second mate, $175; third mate, $150; seamen, $125, and green hands, $100. A chest containing clothing and tobacco, &c., is put on board, ont of which the men replace their worn out or lost clothing at an advance of about fifty per cent on the cost. For instance, a coat costing $6 is sold out of the chest for $9. Notwithstanding the dangers of the business and its very poor returns, there are large numbers of men now hanging about New Bedford waiting for the expected Arctic news, in the hope of a chance to ship on the cruises that may possibly be made into the South Atlantic and Pacific.

Answers to Correspondents.

H. S., Rosendale, N. Y.—C. G. Gunther & Co., Union Square, New York, deal in furs.

W. P., Travers City, Mich.—For wild rice send to R. Valentine, Janesville, Wis.

F. M. B., Boston.—We make no charge for inserting names claimed in our Kennel columns.

A. J. W., Boston, Mass.—Is there anything I can give my setter bitch to hurry her period of heat? Ans. No.

ROLAND DEMING.—Where can I get a Von Culin spike dog collar? Ans. Address M. Von Culin, Delaware City, Del.

W. E. A., Hardington.—Will you be kind enough to let me know where I can get a thoroughbred greyhound? Aus. From E. H. Van Velzer, Oneida, N. Y.

S. N., Norwalk, Conn.—Are there any works published in English or French language treating on frog culture? if so, where can I get the books? Ans. Address Seth Green, Rochester, N. Y.

RANDOLPH, Mass.—The address of Jonathan Darling is East Lowell, Me. You will find deer shooting in the forests about St. George, Charlotte county, New Brunswick. Go by steamer from St. John.

R. T. C. S., Cardwell, Pa.—Please inform me where to go for bear and deer hunting in Pennsylvania? Ans. Pike county is probably the best ground in the State. Your best headquarters would probably be Dingman's Ferry.

C. H. S., Chelsea, Mass.—Where in Virginia can I find good quail, snipe and duck shooting? Also the name of some person I can communicate with to accommodate sportsmen? Ans. Address J. R. Baylor, Greenwood Depot, Albemarle county Va.

INQUIRER, Buffalo, N. Y.—Will a hound that has been put out after small game a good deal be spoiled for deer, or be apt to leave deer scent for such game? Ans. Not if he is a well-bred dog and the deer scent is a fresh one. He might leave an old scent.

W. H. H., Brattleboro.—I have a Newfoundland pup 4½ months old; he is all covered with a white scurf or scabs, and his hair is coming out and he has no appetite. Ans. Rub his skin lightly with crude petroleum and give him a tablespoonful of codliver oil twice a day.

J. B. K., Dalton, Mass.—Will you please send me the address of parties who make birch bark canoes? Ans. Address David Dresser, Princetown, Maine; Chas. Lovett, Chester, Nova Scotia; Fritz Cochran, Halifax, Nova Scotia; Chas. Stevenson, Quebec, Canada. Either will refer you to some Indian who will sell or make you a birch.

S. F. Hollidaysburg, Pa.—My dog has a wart on one of his ears. The same is on the edge of the ear, the size of a bean, and very fleshy, of rapid growth, has attained its present size within three weeks. Ans. The wart must be removed by excision and afterwards apply a thin layer of oxide of mercury mixed with sulphuric acid.

G. H., Fulton, Stark County, O.—Please let me know what a choke-bore and modified choke-bore are, and which is the best, choke or modified choke, for my use. Our game is duck, pheasant, quail, woodcock, snipe, etc. Ans. A choke-bore gun is one so bored at or near the muzzle as to cause it to shoot closer. A modified choke would be the best for you.

KEYSTONE, Harrisburg, Pa.—I had a setter bitch lined Aug. 17th and on Aug. 21st was apparently over her heat; but to-day, Aug. 29th, she is bleeding and looks as if she was going into heat again. Could she bleed from any other cause than the above? Ans. The case is peculiar, as the bleeding should have ceased. The best thing you can do is to keep her carefully shut up and watch her.

I. N. B., Stanford, N.Y.—Where can I obtain Green & Roosevelt's work on "Fish Hatching and Fish Catching," and what will be the cost by mail post paid? Do you know of any better work on fish culture? Ans. Address Hon. R. B. Roosevelt, 74 Chambers street, New York. We know of no better work on general fish culture, excepting the Goverment Reports of the United States Fishery Commission. Green's book, $1.50.

H. C. S., Bloomfield, N. J.—1. The hair on my red setter is falling out rapidly, can take a handful at a time; there seems to be an irritation on the rump. Please tell me how to cure him? Has a good appetite, plenty of exercise. 2. Is distember among dogs malignant? Ans. Two capsules of tar a day for two or three days. Wash the dog with Spratt's soap, to be had from H. C. Squires, No. 1 Cortlandt street, this city. 3. Yes, at times very.

A. W. S., Lang's Prairie, Minn.—1. Is there a breed of setters known as Prussian setters? 2. My setter has something which I have pronounced distemper, though the symptoms are different from those I have noticed in other cases of distemper. She will throw up everything she eats and sometimes there is hair mixed with it. Her appetite is good some days and very poor others? Ans. 1. No. 2. Distemper appears in many forms, but your dog has probably eaten something that does not agree with her. A good dose of castor oil would relieve her.

J., Baltimore.—My bitch has puppies (pug) ten days old. One of them sneezes and has a running at the nose. What shall I do for it? The mother has a patch of mange on each fore leg. Can she be washed? Also are the puppies likely to take it from her? Will it hurt pups to apply petroleum for mange on mother? Ans. At present age of puppies it would be unsafe to administer any medicines or apply petroleum. When they are a little older the bitch can be taken away for a few days, washed with Spratt's dog soap and returned after being thoroughly dried. At present keep the kennel clean and dry.

J. K. M., Bathlehem, Pa.—There are in Freemansburg, Pa., a cat and three kittens that are entirely devoid of tails, not so much as the smallest stump being visible. This, to me, curious condition, is not the result of a vicious boy's surgery, for both mother and little ones came into the world with no more tail than they now possess. I have never before seen a cat of this sort, nor have I ever heard or read of any such. Have you or any of your readers? Is this kind of cat so great a curiosity as it seems to me, or is it well known? Ans. Probably a Manx cat. All the cats on the Isle of Man are stump-tailed.

E. J. H., Sauk Centre, Ind.—My pointer dog two months ago jumped into a glass show-case and cut off about a square inch of the heel pad of his hind foot. Since the accident the wound has been raw and in a bleeding condition. How shall I cure it? Ans. Touch the edges lightly with a stick of caustic (nitrate of silver) every other day for a week or ten days. If this fails to make the sore contract you can then try painting the surface with collodion. Considering the seat of the injury, it is probable the foot when healed will always be tender, and liable to crack, and thus be a source of constant annoyance both to the dog and its owner. Write as to the result.

G. H. C., Albany.—1st. At what points along our coast from Nantucket to Barnegat Inlet, can one get the best fishing during the last two weeks of September. Ans. Any of the outlying islands on Buzzards Bay, Block Island or Barnegat Bay. Fish move southerly in the fall. 2d. Give addresses of landlords at points you recommend. Ans. Smith at Forked River, New Jersey; Parker House, New Bedford, Massachusetts. 3d. What tackle and bait are considered the best for sea bass. Ans. Sea bass are a bottom fish, and will take most any bait. Use either hand line or rod. 4th. Can suitable tackle always be found at these places, or is it desirable to take along an outfit? Ans. Boatmen will supply tackle.

SENEX, Fairfield, Conn.—I wish you would diagnose the case of my dog, a pointer, two and a half years old, naturally stout, hearty and a large feeder. Four days ago he seemed, for the first time, to be ailing, with loss of appetite, constipation, stools scant and very dark, urinating frequently, naturally. In the morning of each day he seems to be bright and well enough, but at noon he droops, and as evening advances he is uneasy; fever comes on, nose dry, and eyes dull and lacking expression (no catarrhal symptoms). I have given him cathartics—castor oil last night; operated well this morning; but with the advance of day the unpleasant symptoms intervene. Can he be suffering from surfeit? Please prescribe, and oblige. Ans. We should try a change of diet and give quinine and iron—say five grains a day.

ANTIDOTE, New Haven.—For information on antidotes read "Horsely on Poisons." A useful receipe is given in the *Medical Brief* as follows:—If a person swallow any poison whatever, or has fallen into convulsions from having overloaded the stomach, has fallen into convulsions from having overloaded the stomach, an instaneous remedy, most efficient and applicable in a large number of cases, is a heaping teaspoonful of common salt, and as much ground mustard, stirred rapidly in a teacupful of water, warm or cold, and swallowed instantly. It is scarcely down before it begins to come up, bringing with it the remaining contents of the stomach; and lest there be any remnant of the poison, however small, let the white of an egg or a teaspoonful of strong coffee be swallowed as soon as the stomach is quiet, because these very common articles nullify a large number of virulent poisons.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, SEPTEMBER 4, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remited to us is lost.

☞ Trade supplied by American News Company.

CUSTER'S STATUE.—The bronze statue of General Geo. A. Custer was unveiled with fitting ceremonies at West Point, last Saturday, in the presence of three thousand people, among whom were many notable personages gathered to do honor to the gallant soldier. The presentation speech was made in behalf of the Statue Fund Committee by Mr. Algernon S. Sullivan, to which General Schofield, as the Superintendent and representative of the United States Military Academy, responded. The oration, delivered by General N. P. Banks, was a fitting tribute to the life and death of the hero thus commemorated.

The monument is in the best vein of the sculptor, Mr. Wilson MacDonald, and is a statuesque portrait of Custer as he may have appeared charging in his last fight. It is noteworthy as a bold innovation upon the art of to-day. The artist has revived the Greek ideal by personifying the subject in the moment of supreme action. In other words, a soul has been infused into the inert material, and the soldier and hero of bronze speaks to us something as the attitude of the real soldier and hero would speak. The intrinsic excellence of the statue is very happily complemented by the singularly appropriate and commanding site chosen for it on the academy grounds. We join with the thousands of friends and admirers of the lamented hero of the Little Big Horn in their satisfaction at seeing the erection of a monument an accomplished fact; nor should we forget to add that the principal part of the funds for its erection were raised by the *New York Herald*; Clara Morris, Judge Hilton, Lawrence Barrett, John T. Raymond, Louisa Kellogg and the Volkes family being among the principal subscribers, they having subscribed more than one-half of the whole amount raised by the *Herald*.

HOW TO WIN A FORTUNE.—There is money in athletics in these times. One man wins a small fortune by training himself to walk, walk, walk. Another does it by paddling through the briny deep. A third pummels his antagonist more than his antagonist pummels him. The athlete need not however, confine himself to any particular branch of the business. Simple practice on the horizontal bar if persisted in faithfully for a course of years will achieve the desired end—provided the muscular young man has an uncle. Here was Professor William Miller. It took him several years of persevering endeavor in many varied athletic pursuits, but finally he came out at the top. His uncle over in England died and left him $15,000. The athletic profession pays.

—One of our friends who wishes a circular, asks us to send him "asurkler."

A HINT TO SOUTHERN PLANTATION OWNERS.

THERE are in many of our States, noticeably in Virginia, North and South Carolinas, and others adjacent, scores of large estates upon which the very best of shooting is to be had. There are certain portions of every large plantation where at certain seasons the sportsman will meet assured success with the birds. In this abundance of game the land proprietors possess an unappreciated and undeveloped source of revenue. At present, with the exception of affording entertainment for friends and an unlimited supply of "sport" to our colored hero of the dollar shot gun, this possible game harvest is neglected. Meanwhile on the other hand, in our cities and towns are scores of sportsmen who are ever seeking new and profitable fields to conquer. They either expend a large amount of money in car fare to go to the far West without any very definite information of just what they will find when they get there, or, debarred by the difficulty of reaching available sporting grounds and the uncertainty of a successful quest, they forego their cherished plans and the gun is left in the rack.

Southern land owners have here an excellent opportunity of supplementing their yearly cash receipts, as English proprietors have long done. Let the proprietor of a game-abounding estate announce such possession in the advertising columns of the FOREST AND STREAM, insuring to his gentlemen visitors abundance of game. Then let him forego in these instances the practice of the proverbial and long time-honored Southern hospitality, and charge a certain fee for each gun per day, week, month, or season. Hundreds of gentlemen who read this journal would eagerly embrace such an opportunity; they would willingly pay for the privilege offered. If salmon fishermen are content to travel long distances and lease streams at high prices, surely the devotees of the gun will do no less.

There would be many very pleasant attendant features of such visits of Northern sportsmen to their brothers in the South. Our pages have, time and time again, contained pleasant letters from correspondents who have fared well at the South. All such social interchange is to be encouraged. Its results are happy.

Again, the revenue thus derived from really good game lands would warrant some attention and expense devoted to better protection of the game. The dollar shot gun hunter of colored complexion would doubtless have his enjoyment somewhat marred and his privileges curtailed. But the proprietor who employs efficient game wardens will find ample reason to congratulate himself upon the new order of things.

To set the ball rolling and to afford a precedent, Dr. J. R. Baylor, of Greenwood Depot, Albemarle County, Va., offers to sportsmen such privileges as we have spoken of upon his estate of over 1,600 acres. The land abounds in game, being one of the finest quail grounds in Virginia. Dr. Baylor prefers to lease the shooting privilege for the season, but he will, if desired, lease *per diem* or otherwise. The details of accommodations, trains, etc., will be arranged by correspondence. For fall shooting Virginia offers very decided attractions. Our readers are familiar with the beauty of the scenery, the hospitality of the people, and the abundance of the game, for all this has been repeatedly written of in our columns.

GLASS BALLS AND GAME PROTECTION.

WE do not know that any naturalist, carrying his investigations into the very verge of humanity, has yet discovered a race of beings who did not possess, in some rude degree at least, a form of sport. Mr. E. B. Tylor, an ingenious and hard-working English student of the early history of mankind, has shown that the approved sports of our boyhood were common among races which were long ago blotted off from the face of the earth. The savage child in the dawn of human development finds amusement in substantially the plays which satisfy the civilized infant, and the mature man of to-day mimics in his sports the toil of his ancestors. The significance of modern games is suggestive. The struggle of Church and State, noble and people, upon the chess-board is only the bloodless and meaningless picturing of conflicts which once cost blood and treasure. The boys who play "prisoners' base" on the green are submitting to capture which once meant death. The archery tournament at Chicago the other day was a striking contrast to the tournament of bow and arrow which might have been beheld there fifty years ago.

An outline sketch of the development of national amusements would make an entertaining volume, of which not the least instructive feature would be the study of mechanical ingenuity devoted to supplying by artificial contrivances the place of natural agencies of sport. Parlor-rowing machines take the place of boat and oars, and the man who has never sniffed salt water may develop his biceps by paddling his own canoe. As the gun is the most universal sporting implement, we would naturally look for the greatest effort devoted to compensate the destruction of game. And accordingly, when the guns and shooters outnumbered the birds, Bogardus came to the rescue with his glass-ball substitute. To enable sportsmen to see the tangible success of their skill Paine added the feathers, and now there is little difference between grassing a "driver" and making the feathers fly from one of these trap-thrown balls. There has been an incalculable amount of glass-ball shooting during the past few years; yet it seems likely to end in smoke after all, provided the Target Ball Company can supply the demand for their smoke balls. The direct influence of the substitution of glass, feathers, and smoke for birds has been very remarkable. Thousands of men have been induced to purchase guns and to acquire skill with them in ball practice, who, without such inexpensive and easily obtained targets, would have known only in a general way the muzzle from the breech. It is possible that had the glass ball not been invented Rhode Island, Massachusetts, and New Hampshire would have had no need at this day to prohibit bird shooting. There would now be no birds to shoot.

The game-protective merits of the glass ball have never been duly recognized. To secure a shot or a number of shots is the object of long tramps with gun and dog. If a man, instead of a weary and possibly disappointing trudge, can go out into his back yard (provided it is big enough) and be sure of a hundred difficult shots at swift glass balls, the chances are largely in favor of his preferring that to the field excursion. If game protective associations, which have hitherto been at great expense to obtain wild pigeons from a distance, and have more than once been subjected by the scarcity of the birds to postpone their meetings, would only substitute the most approved balls and the most approved traps instead of the birds, and then put the difference of cash expended into paying for prosecution of game law violations, the tournaments would prove fully as entertaining and the real interests of game protection would be vastly furthered. We are glad to see this consummation gradually approaching. The encouragement of ball-trap shooting means the encouragement of game protection.

It is not altogether fanciful to anticipate a time when the bird trap shall have become obsolete, and bird trap-shooting only another of the old sportsman's reminiscences. In this the history of trap-shooting would be following, in its way, the development of all games and sports.

"R!" THE months with an "r" have come again, and with them the advent of the oyster. However humble the bivalve may be individually, collectively he is a power in the land. No living thing in the waters under the firmanent has so much notice bestowed upon him in the way of annual newspaper eulogium as this denizen of the two shells. With the universal exaltation of man's spirit which comes with the first of May, is mingled the poignant regret at the cutting off of the oyster; and the melancholy which attends the days of fall-time, is ever in a measure mitigated by the return to our tables of this same tried fried.

Oyster dealers and other interested parties, we see, put forth their views in the newspapers, attempting to ridicule the well-founded prejudice against eating oysters during a part of the year, which has been factitiously limited to the months without the magic "r." As a matter of course it is impossible to set the limits in such an instance so definitely that we can say, to-day you may eat, to-morrow you may not eat. But that there is a season in the natural life of the oyster, when its use as an article of food should be abstained from, common sense as well as science abundantly demonstrates.

For the proper protection of the bivalves also, and to give them an opportunity to rest from the drain upon them, such an interval of rest is highly necessary.

TURTLE STEAK.—Country editors are always receiving good things; their desks are the only approved depository for overgrown pumpkins, elongated corn stalks, and precocious spring chickens, and their sanctums resemble an agricultural fair. In lands where the creatures of the earth bring forth each after its kind, beasts, reptiles, and fishes, marvelous to behold, the happy knight of the ink is overwhelmed with the contributions of emulous subscribers; the sanctum becomes a menagerie, the composing room is turned into a museum. We have been in newspaper offices, before now, where the editor habitually clothed himself in sheet-iron before opening his morning mail. Florida editors are peculiarly favored in this way. That is one reason why the imagination of Florida editors has such an exalted reputation all over the world. Here is a case in point. Some one sent the editor of the Palatka *Eastern Herald* a turtle the other day. Bestriding the back of the reptile, like the Delphic priestess perched upon her mystic tripod, the editor saw visions, and under the influence of the spell wrote, in strange symbols afterwards deciphered by the editorial staff, the following:—

We received a turtle a few days ago on whose back was marked the date 1700, and also the Spanish coat-of-arms, indicating that this old resident was in existence one hundred and seventy-nine years ago. What changes this old fellow of the deep has seen! The rise and fall of empires, and the continent on which he partly lived, emerged from the thraldom of despotism, with the rise of

a republic that has become the great conservator of freedom, the advancement of civilization, and the glory of the world. A few words in Spanish on the shell were translated, which says: "Caught in 1700 by Hernando Gomez, in the *St. Sebastian*, and was carried to Matanzas by Indians; from there to Great Wekiva" (which is now the St. John's River). On Tuesday, the 17th of June, the turtle was turned adrift in the St. John's River at Palatka, with the inscription on its back: "*Eastern Herald*, Palatka, Florida, 1879." It may be supposed that by this time the old fellow has scented salt water, and gone over the bar at high tide, and probably a few generations hence may take him up at a Spanish port on the other side.

ZOOLOGICAL GARDENS AS SCHOOLS OF NATURAL HISTORY.—Zoological Gardens are generally looked upon as expensive luxuries, which cost, upon the whole, rather more than they return. They are a species of pleasure resort, where the curious can beguile an hour in watching the grotesque movements of their occupants. It is supposed that a few naturalists succeed in obtaining some information of practical value in the pursuit of their studies; but aside from this inconsiderable service, the *quid pro quo* is in small returns for the investment made in zoological gardens. The fact is, that in order to observe the habits of animals and profit by a study thereof, the utmost patience and self-denial is required: and the student must not only be willing to apply himself closely, but he must devote his time continuously to his chosen pursuit. Of course no one but the keepers or persons connected with these establishments have the opportunities required; and of these, few are competent by natural tact or education to impart to the scientific world the information they gather from their daily observations. Fortunately at New York, Philadelphia and Cincinnati, the gentlemen in charge are not only efficient in their individual capacity, but they are scholarly men, and well qualified to put in writing the data which they gather from time to time. To Conklin of Central Park, Brown of Philadelphia, and Thompson of Cincinnati, the readers of these columns have been constantly indebted for years past for information on natural history subjects which would otherwise probably not have been available. Faithfully, week after week, have these gentlemen sent us the record of arrivals at their respective gardens, and jotted down for our instruction little matters and occurrences worthy of mention.

We have been led to make these acknowledgements at this time by the incidental receipt of a paper from Frank J. Thompson, of the Cincinnati Zoological Garden, which we publish in our Natural History department this week, giving the first account that we have ever read, of the babyhood of bears. This paper is the result of improved opportunities, seldom, if ever, offered to, or enjoyed by, the backwoods hunter: and we have no doubt that among the foremost to avail themselves of the information given, will be those old hunters themselves.

THE CLIMATE OF TEXAS.—A resident of New York who is prospecting for a cattle range in Texas, sends us the following lines respecting the protracted drought in that part of the State where he has been travelling. No doubt he has learned by this time from the old residents, that droughts are intermittent in Texas, and that they seldom occur twice in the same part of the State in many years. The area of drought changes annually. He has struck a dry spot. If he had happened in the vicinity of Houston last fall he would have found a very wet place indeed:—

San Antonio, Texas, July 30th.—Mr. Editor:—I have traveled something less than nine hundred miles on horseback since I arrived, visiting sheep and cattle ranches, as I came down here with some idea of embarking in the stock business. My impressions of the State drawn from what I heard and read at the North have not been verified. The scarcity of water and grass, owing to the extremely dry weather last winter and spring, has made the stock business this year an exceedingly unprofitable one. In conversation with the ranchmen from Atascosa County to-day, they told me that they had not had, with the exception of two light showers, any rain on their land since a year ago last June—thirteen months. They were moving what stock they had left, north, in search of water. Everyone is praying for rain. I hope it will come soon as the ground is like powder, and wells and cisterns are going "plumb dry" as they say down here. J. O.

—We have received from J. Palmer O'Neil & Co., Pittsburgh, Pa., a beautifully bound copy of their illustrated catalogue, which, among other features, contains a synopsis of the Pennsylvania game laws.

—The Sportsmen's Association of Western Pennsylvania has its headquarters at Pittsburgh, No. 75 Fifth avenue. The rooms are fitted up in model style.

—In another column will be found the advertisement of the Pooler & Jones' cartridge holders and belts, which possess certain decided advantages over other styles.

—The report of the Game and Inland Fishery Protection Society of Nova Scotia, may be obtained of the Secretary, A. E. Harrington, Esq., Halifax, N. S.

—Why is the donkey whom Captain Webb kicked down stairs the other day like a pelican? Because he is web-footed.

GAME PROTECTION.

ANOTHER STEP AHEAD.—In response to the communication of "Lewiston," published August 21st, calling for a Maine State Sportsmen's Association, a correspondent who signs himself "Maine," writes:—

The practical results of the little already done, as shown by the return this year in larger numbers than before, of the fish placed in our rivers, is awakening the public to the practical value of enforcing our excellent laws and carrying on the work of propagation and protection systematically and to a greater extent than heretofore. The fish and game of Maine may be made a source of great revenue to the State, and it will prove a matter of political economy for her to adopt without delay the means employed to so much advantage elsewhere.

"Let every individual interested enough in these matters to acquire a knowledge of their value, use his personal influence, and we shall soon have means provided for accomplishing the desired results. Until wardens can be paid, what service can one expect them to render? Much can be done by an association, if there are a few active members in it who will be as much in earnest as was Mr. John Fottler, jr., in his recent successful prosecution of the proprietors of a leading Boston hotel for selling game out of season. Mr. Fottler deserves the praise and thanks of all true sportsmen for the example that he has set for them. Let others go and do likewise, and our fish and game associations must act as officers to enforce the laws, until appropriations are made by the State for that purpose.

It affords us much pleasure to note the re-awakening of interest in game protection in Maine. The State, as long ago as 1873, had an association, of which Manassah Smith, Esq., was the active president. But after his removal to another residence, the organization was allowed to gradually die out. "Lewiston" has struck the key note of the feeling of many intelligent conservators of the game in his State, who are fully alive to the importance of nourishing the natural supply of food indigenous to the woods and waters.

State associations are for several reasons the best forms of game protective bodies. As individual town associations prove themselves effective in their limited field of action, State organizations have also been found most efficient and powerful in doing such work as cannot be accomplished save by united action. They carry with them the *eclat* of a State body. The names found upon their rolls are such as the people of the whole State have been accustomed to honor. No sectional jealousy attaches to their actions; representing the whole people they must command the consideration of the whole people. They can secure from the Legislatures greater power, and their demands are recognized by the law-makers as worthy of attention; and from the press, whose influence is incalculable. Besides all this is the strength which always belongs to united concerted action, and ample finances. The Virginia Fish and Game Protective Association, to which we have more than once referred in high terms, has found this combination of what were before scattered and powerless forces, the secret of success in Virginia game protection. We trust that our Vermont readers will promptly respond to this call, and adopt the course of proceedure which has proved itself the best.

MURDERING SONG BIRDS.—*New York, Aug. 22d.—Editor Forest and Stream:*—One of our clerks, a most responsible and trustworthy person, has just returned from Cutchogue, L. I. and reports the most indiscriminate and general slaughter of song and insectiverous birds, mostly robins, (he estimates 500 of the latter were shot there during his stay) by "summer boarders;" not a remonstrance or objection being raised by the residents. The game constable has had his attention called to this wanton and cruel destruction, but refuses to carry out the provisions of the law. I beg you will give these people who do so much to bring the term sportsmen into disrepute, a blast that will not only break up their nefarious practices but also serve as a warning to all their kindred. L. G. BILLINGS.

We hardly know what remedy to suggest to protect the Long Island song birds when the law and officials appointed to enforce the law are inefficient. This statute prohibiting the destruction of birds is not at all sentimental in its origin. Long experience has demonstrated to intelligent farmers and gardeners the great value of insectiverous birds as destroyers of worms, bugs and insects injurious to the crops. The birds are too valuable allies to be ruthlessly sacrificed to the slaughter-craving propensities of thoughtless boys and mischievous country boarders. Among intelligent communities the public appreciation of the services of the birds would be sufficient to insure the strongest enforcement of the wise law designed for their protection. That the good people of Cutchogue look complacently upon the slaughter may be accepted as pretty conclusive evidence that the said good people are not one of those intelligent communities. Nature is very quick to punish violations of her laws. Longfellow's poem of the "Killing of the Birds" is not only poetry, it is as well a metrical statement of hard scientific facts.

BACK NUMBERS ESTEEMED.—We have received an enclosure this week of fifteen cents in Japanese coins from a subscriber in Hiogo, who desires a copy of FOREST AND STREAM of July, 1878, to complete his files of the paper.

—The New York *Sun* is famous for its snake stories. Snakes are fond of lying in the sun.

A TRIP TO NORTH PARK.

[FROM OUR STAFF CORRESPONDENT.]

THAT Americans, as a people, devote too much time to their work and too little to their recreation, is a proposition that needs no demonstration. We have seen a statement from an eminent jurist to the effect, that the speaker could do a year's work in ten months, but not in twelve. The remark is a profound one, and deserves careful pondering by the mass of our readers. The need of rest and relief from the ordinary cares of work has long been recognized by our old country cousins, and we believe that our own people are much more given to pleasure seeking of an innocent and wholesome kind than they were some years ago. If this is so, it is well, and is what we have for years urged upon our readers. This is the view taken of the subject by one of those quaint old English writers in whom we all delight. He says: "For . . . I herd myselfe a good husbande at his boke ones saye, that to omit studie some time of the daye and some time of the yere, made as muche for the encrease of learning as to let the lande lye sometime fallow maketh for the better encrease of corne. This we se, yfe the lande be plowed everye yere, the corne commeth thinner up, the care is short, the grayne is smalle, and when brought into the barne and threshed it giveth very evil faul. So those which never leave poring on their bokes have oftentimes as thinne invention as other poore men have, and as small wit and wight in it as in other mens." What is said here is as applicable to the man of business as it is to the scholar, and the man who takes the needed recreation will find himself at the end of the year in better condition both physically and financially than if he had devoted the whole twelve months to business.

Of course the tastes of each individual will govern the choice of the method and locality in which the period of rest and recreation is to be spent. For one who is fond of out-door life, and especially for one who is a resident of the Eastern States, the country west of the Missouri River presents great attractions. In the Rocky Mountains one may find, in some favored localities whose solitudes have not yet been invaded by the farmer or the cattle man, a great abundance of the finest game and fish, and at the same time some of the most enchanting scenery that the world can offer. It is scarcely necessary to refer to the surpassing wonders of the Yellowstone Park, or the scarcely less beautiful country through which the traveler in South Park, Colorado, is constantly passing, for these are regions on which much has been written, and through the medium of newspapers and magazines they have become more or less well known to almost every one.

Of the vast extent of the mountain system of the West, the dweller in the East can have no adequate conception; and even one who has crossed the country from ocean to ocean knows but little of it. It is true that the Western bound traveler knows that for three days after leaving Cheyenne he is never out of the mountains, but the vastness of the distance traversed does not impress itself on one who is living on the cars and thinking only of the importance of speedily arriving at his journey's end. Westward from Cheyenne for over a thousand miles, and to the north and south they stretch, away far beyond the boundaries of the United States, an almost illimitable region with scarcely a settlement, save in Montana and along the railroad, scratched here and there by the indefatigable prospector, and in a few spots denuded of their timber by the lumberman or tie-chopper, but as a whole scarcely bearing greater evidences of the advance of civilization to their borders than they did in the ante-railroad days. High up in the snowy range the elk, the mule-deer and the big-horn still graze in goodly numbers; streams still abound in glorious fish which hardly know what a hook may mean; the ruffed and dusky grouse wander securely through the dense pine forests which clothe the mountain sides, and far up above the timber, just on the borders of eternal snows, are found the gentle and unsuspicious white-tailed ptarmigan. To such a region as this I am going, and I invite your readers to be with me, in spirit at least, to share my hardships and trials, and to rejoice with me in my triumphs of the chase.

An uninterrupted journey of four days is apt to seem very long before it is completed, and it therefore behooves the tourist to make a careful selection of the roads over which his journey leads him. With myself the Pennsylvania Railroad has always been a favorite one. Its advantages may be briefly summed up in the statement that it brings you to Chicago on time; it rides very easily; has little or no dust, and is provided with all the most recent comforts. The sleeping cars are very fine, and are besides, hotel cars, so that one's meals are served to him in his seat—well cooked and well served meals, mark you; and after entering the sleeping car all one's anxieties are over until he reaches Chicago. Besides all these recommendations, or if these are not enough the beautiful scenery of the Alleghany Mountains may be mentioned, an inducement which would lead many to travel over this road even were the accommodations less complete than they are.

We were unfortunate in one particular on our trip over this road this year. Immediately after breakfast pipes

and cigars having been lighted we seated ourselves in the comfortable observation car at the end of the train prepared to enjoy to the full the beauties of the mountains and the pleasures of the ascent. We had hardly left Altoona, however, when a dense mist settled down on the hillsides and effectually concealed the more distant scenery from view. As we ascended the fog became heavier and heavier, until before long it changed into a pelting rain, which fell with a violence rarely witnessed in these latitudes. Great damage was done by the storm in the section through which we passed. We could see roaring torrents tearing their way down the hillsides through fields of corn which but an hour or two before had been dry and parched. On one hillside near which we passed was a small house standing directly in the way of one of these furious streams, the water entering by the back door and coming out by the front. The Yonghiogheny River had overflowed its banks and then burst a dam, and all sorts of *flotsam* and *jetsom* were being hurried down its muddy current. A lumber yard seemed to have been in its way, and hundreds of bundles of shingles mingled with loose boards were dancing unconcernedly along on the waves.

The road from Pittsburg to Chicago was made in good time and with great comfort. At Chicago we took the Chicago and Northwestern Road for Omaha. This is not only one of the best equipped and most comfortable roads in the country, but is also, I think, the longest—*i. e.*, it operates and controls more miles of track than any other. It is solidly built, equipped throughout with steel rails, and amply fulfills the promise implied in its motto, which is "Speed, safety and comfort." Its admirably furnished and served dining cars, on which one can secure a most excellent and ample meal for seventy-five cents, are unsurpassed. This road has always been a favorite one with us. A pleasant day and night on the road brings us to Council Bluffs, the terminus of the Northwestern road, and now a flourishing city. Here we cross the Missouri River, and here for the time I must leave you. YO.

Laramie, Wyoming.

The Rifle.

RIFLES FOR LARGE GAME.

Editor Forest and Stream:—

If my letter on the Sporting Rifle had been published all at once in the form of an essay, instead of appearing at irregular intervals during a period of three or four months, there would have been less risk of misapprehension, and the saving clauses, which I inserted expressly to avert such criticisms as I have been subjected to, would probably not have been overlooked.

Your correspondent P. devoted considerable space some time since to the exposure of my errors, and finished with the assurance that it would be difficult to convince the hunters of the Rocky Mountains that a 6 lb. rifle of 40 calibre and a charge of 40 grains of powder was enough for their service; and now Mr. Van Dyke is down upon me with a similar opinion.

I stated distinctly that for large and dangerous game I should prefer a larger calibre than 40, and preached a little sermon on the stunning effect of a broad striking surface as contrasted with the comparatively "dagger-like thrust" of a small bore bullet. I even limited the locality in which I conceived such a weapon as I described would suffice, by saying that for any game ordinarily found east of the Missouri nothing larger was needed. This as you perceive would exclude grizzly bears and buffalos. Yet I have known both shoulders of a buffalo bull to be broken by a hardened bullet shot from a 40 calibre rifle with 40 grains of powder, and a friend of mine who for years has used the same style of rifle in very rough service in South America, told me in reply to my suggestion that a larger calibre would be more efficient, that he wanted nothing better.

The gist of all I had to say may be comprised in these few statements:—

1. A gun which can be relied on for an eight inch bull's-eye at 200 yards is sufficiently accurate for any ordinary sporting service, provided—2.—that its penetration at 30 yards is at least eight inches of pine with a soft bullet—that degree of penetration being in itself a proof of such velocity as is synonymous with a very flat trajectory. 3. Both the above conditions are fulfilled in the weapon I described, and I know of no other one which in addition to these qualities, combines such simplicity of construction and facility of transportation and manipulation.

I have seen no attempt to controvert these positions, and the issues that have been raised are on points which I expressly disclaimed. H. W. S. CLEVELAND.

The protest entered by our esteemed correspondent is most just. We wonder at his equanimity under the disadvantage of position in which he has been placed, from the causes which he names. Nevertheless, our readers all profit by the triangular discussion carried on by veteran experts like him and his fellow-disputants.—[ED. F. AND S.

SCHUETZEN NOTES.—The New York City Schuetzen Corps, Capt. John F. Gerdes, had a fall shooting at West Brighton Beach last Thursday, and a better day could not have been selected. At 10 o'clock A.M. the steamer *Sylvan Stream* took the party on board and brought them down to the hotel, which was gay with flags. After a well-served lunch the shooting began. During the afternoon and evening crowds of friends of the corps poured in, and at the time when the distribution of prizes took place 6,000 people were present. Mr. Jos. Lurch made 51 rings out of a possible 54 and was rewarded with $60; J. Dillenburg, with 48, received $50; F. R. Grohmann, with 45 rings, took $25.

Practice shoot of the Independent New York Schuetzen Corps, the 28th inst., at Hartung's Park—200 yards, 10 shots to each, ring targets. The meeting was unusually well attended, the Arion Sharpshooters also taken part in it:—

First class—W. P. Grieselberg, 172 rings; Louis Berndt, 166 rings.
Second class—Jac. Sauer, 162 rings; H. R. Hoenack, 117 rings.
Third class—Ad. Huepfel, 142 rings; Geo. Reisser, 109 rings.
Fourth class—John Koerber, 60 rings; Chs. E. Runck, 31 rings.

The corps will have its King and its fall shooting on the 11th of September at the above-named place. Next year it goes to San Francisco, Cal.

—The team of the Manhattan Rifle Club, Major George Acry commanding, held their second shooting for the Ballard Rifle, presented by Messrs. Shoverling, Daly & Gales, on the 22d of August, at Schuetzen Park, Union Hill. Shooting was excellent, each man having 10 shots at ring targets, 200 yards distance:—

Major Geo. Acry	23	18	23	17	23	16	19	21	17	17—194
L. Vogel	16	19	15	19	15	21	20	19	20	19 183
C. G. Zettler	24	21	17	17	22	17	17	16	24	21—196
Wm. Klein	23	17	23	22	14	24	21	18	21	23—205
Wm. Hayes	20	23	20	16	20	18	18	22	24	16—197

Mr. L. Vogel and Wm. Klein had each won previously.

—Mr. J. S. Conlin announces that the fourth annual competition for marksmen's badges, commenced Monday evening, September 1st. There will be a series of ten (10) weekly contests to take place on Monday evenings. The competitor making the highest score in each competition to win a badge, and the competitor who makes during the ten (10) contests the highest aggregate score of ten targets (70 shots) to win the champion marksman's badge. The matches are open to all comers. Each competitor has the privilege of entering three (3) times; entrance fee, 50 cents; number of shots, 7; rifle, any 22-100 calibre; trigger, three (3) pound, pull; position, off-hand; target, 300 yards Creedmoor reduced for the range; rules of the N. R. A. to govern except in case of a tie on total scores, when the target having the wildest shot will lose. All matters not herein provided for to be decided by a reference. In case of disputes, each disputant to appoint a referee, who will select a third party. Their decision to be final.

—At the first contest for the marksman's badge at Conlin's Gallery, on Monday evening, last, F. H. Holton won with a score of 4 5 5 4 5 4 5—32 at 300 yards, target reduced for range.

—The Board of Directors of the Sixth Division Rifle Association decided to have a two days' shoot on the range this fall, Sept. 11th and 12th. This will afford all the marksmen in the Division who intend to go to Creedmoor opportunity for profitable practice the week preceeding the Creedmoor meeting. Prizes to the amount of $500 will be offered besides the medals now in contest.

—Capt. Mohrmann's Ringgold Horse Guards in Brooklyn, shoot for their 32d annual target-hitting and general jollification to-day. With plenty of good music the German lads are bound to have a good time.

MASSACHUSETTS—*Hopkinton, Aug. 25th.*—The sportsmen's club held a glass ball shoot last Saturday at their grounds on the Woodville road. Several members of the Natick and Westborough clubs were present. Following are some of the best scores:—

C. W. Hall, Natick	41	of a	possible	50
D. Dorchester, jr., Hopkinton	43	"	"	50
O. L. Brown, Hopkinton	38	"	"	50
C. W. Gill, Natick	34	"	"	50
J. H. Wright, Natick	29	"	"	50
W. W. Clark, Natick	32	"	"	45
J. Braithwait, Hopkinton	32	"	"	40
W. G. Stone, Hopkinton	28	"	"	35
Fred. Wood, Hopkinton	25	"	"	35
C. E. Robbins, Hopkinton	16	"	"	35
G. N. Smalley, Westborough	23	"	"	25
C. H. Gates, Westborough	21	"	"	25
G. B. Clark, Westborough	20	"	"	25
F. W. Forbes, Westborough	19	"	"	25
S. O. Staples, Westborough	11	"	"	25
F. E. Tucker, Hopkinton	10	"	"	20
S. A. Smith, Hopkinton	11	"	"	15

The Hopkinton Rifle Club held a match at their range at Claflin's grove last Saturday afternoon. The club shot for the first time on their 1000 yard range; their previous shooting has been at and under 500 yards. The day was one that taxed the patience of the marksmen, being at the commencement strong, fish-tail, puffy winds from 10 to 12 o'clock, with considerable mirage. The clouds at one time threatened to drive to cover the shooters to avoid the coming storm, but later partially clearning away gave a better chance at the bull's eye. The conditions were ten rounds at 1000 yards. The best scores are given in the following summary:—

Dr. O. C. White	5	3	4	5	3	5	5	3	5	4—42
C. A. Sumner	5	5	0	5	4	4	4	4	2	2—35
N. H. Jewell	3	5	4	5	0	5	4	0	4	5—35

Mr. Jewell's shooting was done with Sharps mid-range rifle.

Boston, Aug. 29th.—At the 18th annual contest for the long range badge on the Walnut Hill range Aug. 20th, the scores ran very high, the leading 8 securing a total of 1669. The wind was from 9 to 10 o'clock, good light and clear atmosphere. The record stood:—

	800.	900	1000	Total.
W. H. J. Jackson	72	72	71	215
J. F. Brown	72	70	71	213
J. S. Summer	71	68	71	212
H. I. Lee	71	69	71	211
Salem Wilder	69	71	68	208
W. Howard	70	71	66	207
N. Washburn	70	70	63	203
W. N. Ward	67	69	64	200

MAMMOTH RIFLE GALLERY—*Boston, Sept. 1st.*—The regular monthly prize shoot for August at the Mammoth Rifle Gallery has ended, very fine work having been done therein by local as well as out-of-town riflemen, Mr. E. Whittier, of the Massachusetts Rifle Association, heading the list with three scores of 39 each, and he takes the first prize. The month's record stands—150 feet; rounds, 8; possible 40:—

E. Whittier	5	5	5	5	5	4	5	5—39
E. Whittier, re-entry	5	5	5	5	5	5	4	5—39
E. Whittier, re-entry	5	5	5	5	5	5	5	4—39
U. A. Pollard	5	5	5	4	4	5	5	5—38
H. A. Pickering	5	5	5	4	5	4	5	5 38
W. H. Harrison	4	5	5	5	5	5	4	5—38
E. F. Richardson	5	4	5	5	5	5	4	5 38
Geo. Estes	4	4	4	5	5	5	5	5 37
D. Sturtevant	4	4	4	5	5	5	5	5—37
A. B. Archer	5	5	4	4	4	5	5	5—37
M. O. Johnson	5	5	4	4	4	5	5	5—37
D. F. Little	4	4	5	5	5	4	5	5—37
Geo. M. Smith	5	5	5	5	4	5	4	4—37

Boston, Aug. 27th.—Quite a number of members of the Massachusetts Rifle Association met at Walnut Hill range to-day, the occasion being the nineteenth competition in the *Spirit of the Times* match. During the early part of the day the weather conditions were extremely favorable, but when the riflemen had about half completed their scores at the 800-yards range a heavy shower commenced. It lasted about half an hour, but did not prevent the marksmen completing their scores. Appended are the five best scores made to-day:—

	J. S. SUMNER.														
800	4	5	5	3	5	5	5	5	5	5	5	5	5	5	4—71 }

Medford, Aug. 27th.—The Medford Amateur Rifle Association held its regular meeting at Bellevue range this afternoon for renewed competition in the Sharps rifle match, there being a fair attendance. The weather conditions were not very favorable. A disagreeable wind blew from the northeast, which caused constant regulating of the wind gauge. The conditions were: Distance, 200 yards; rounds, 10. There were 41 re-entries. The following are the best scores:—

A. B. Archer	4	4	5	5	3	5	4	5	4	5—44
R. Whittier	5	4	4	4	4	5	4	5	4	4—43
A. B. Archer	4	4	5	5	4	4	5	4	4	4—43
F. Hollis	4	5	5	5	5	5	5	2	5	2—43
E. Whittier	4	3	4	5	4	4	5	4	4	5—42
J. Barker	5	4	4	4	4	4	4	4	3	5—41
R. Abbott	3	4	4	5	4	4	4	4	4	4—40
A. G. Greene	4	4	3	3	3	3	4	4	5	4—37

Medford, Aug. 29th.—The usual weekly meeting of the Raymond Sportsman's club occurred at Bellevue range to-day, there being quite a number of gentlemen present. In the glass ball shoot Mr. W. B. Witherell was the best man, scoring 29 balls out of a possible 30. The following is the result:—

	Single Trap.	Double Trap.	Rotary Trap.	Total.
W. B. Witherell	9	10	10	29
O. F. Belcher	10	8	10	28
L. E. Johnson	9	8	10	27
O. Dearborn	10	8	9	27
J. R. Teele	8	8	9	25
D. Kirkwood	9	8	7	24
B. J. Fisk	7	7	9	23
H. S. Harris	6	7	8	21
W. Morris	5	8	4	17
J. R. Smith	7	4	4	15

A rifle match followed at 200 yards, open to all comers; off-hand rifle; Mr. Kirkwood heads the list with a score of 46 out of a possible 50:—

D. Kirkwood	4	4	4	5	5	4	5	5	5	5—46
J. S. Bennett	5	4	4	4	4	4	3	5	4	5—42
E. Bennett	3	4	4	5	5	4	4	5	4	4—42
H. S. Harris	4	3	4	4	5	3	5	5	4	4—41
J. R. Howe	3	4	4	3	4	3	5	4	4	4—38
J. E. Nason	5	3	4	4	5	3	3	4	3	3—37
W. B. Witherell	5	4	3	4	3	2	4	4	4	3—36
G. B. Blanchard	4	3	3	3	3	4	3	2	4	3—32

The next meeting of this association occurs at Bellevue range Friday.

Walnut Hill, Aug. 30th.—The attendance of members of the Massachusetts Rifle Association and their friends to-day, was large and the shooting excellent. The weather, too, was of the first order. In the afternoon the firing was very brisk, and sounded more like volleys from a large force of troops than like marksmen practicing at a target. The following are the best scores:—

Silver-ware match, 200 yards:—

J. O. Mattoon	5	5	5	5	5	5	5—35
C. U. Meiggs	4	4	4	5	5	5	5—32
J. Borden	4	5	5	5	4	5	4—32
W. Charles	5	4	5	5	5	3	5—32
H. Tyler	4	4	5	5	4	4	5—31
E. B. Souther	4	4	4	4	4	5	5—30
J. Nichols	4	4	4	4	4	5	4—29
W. E. Guerier	5	4	4	4	4	4	4—29
N. Chase	3	4	4	4	4	4	4—27

Amateur series, 200 yards off-hand:—

J. O. Matton	5	5	3	5	5	4	5	5	5	5—47
E. F. Richardson	5	5	4	4	4	4	4	4	5	4—43

500 off-hand match:—

W. Charles	5	4	5	5	5	5	5—34
E. F. Richardson	2	2	5	5	4	5	3—26
B. Edwards	4	4	3	4	5	4	2—26
J. Nichols	3	2	5	5	2	4	3—24

NEW JERSEY—*Brinton, Aug, 30th.*—Sharp's match for military rifles; thirteenth competition:—

A. E. Long	3	4	4	4	4	4	4	5	5	5—41
H. Fisher	4	4	4	3	4	4	5	4	5	4—41
W. A. Robinson	4	4	4	5	4	3	4	5	4	4—41
P. Bonnett	4	4	4	4	4	4	4	4	4	4—40
Col. G. E. P. Howard	4	4	4	5	4	5	4	4	4	2—40
F. H. Holton	4	4	5	3	4	4	3	3	5	3—38

Same; association match No. 2; seventh competition:—

T. Fitz	4	4	4	5	5	5	4	5	4	5—45
F. H. Holton	5	4	4	4	5	5	4	5	4	5—45
J. W. Todd	5	5	4	5	4	4	5	5	4	4—45
C. P. Bonnett	4	4	4	4	4	4	3	4	3	5—39

Wakefield, Aug. 30th.—The Wakefield Amateur Rifle Association members closed their August series this afternoon, the condition being position off-hand; 200 yards; possible 105:—

FIRST CLASS.

W. B. Daniel	5 4 4 4 5 4 5 4 5 4 4 4 5 4 4 4 5 4 4—94
D. H. Walker	4 4 4 4 5 4 5 5 4 5 5 4 4 4 4 4 5 4 5 4 5—92
J. Shepard	4 4 5 5 5 4 4 5 5 4 4 4 4 5 5 4 4 4 5 4 4—92

SECOND CLASS.

S. B. Dearborn	4 4 4 4 4 5 4 4 5 4 5 4 4 5 4 5 4 4 4 4 4—89
W. L. Coon	4 4 4 5 5 4 3 4 5 4 4 4 4 5 4 4 4 4 5 4 5—89

FINE MID-RANGE WORK—*Columbia Range, N. J., Sept. 1st.*—Some extra fine work, at 500 yards, was done today in the Sharps match. The conditions were 500 yards, any rifle, 10 shots. On the first round Mr. A. G. Holcombe and Dr. S. T. G. Dudley tied on a score of 50 out of a possible 50. Mr. Holcombe and Dr. Dudley went to the targets to shoot off the tie, both men again making ten consecutive bull's-eyes. A third time these remarkable marksmen went to the targets and again both made the remarkable run of 50 out of a possible 50. Both men cleaned their rifles, and for a fourth time proceeded to shoot off the tie. Dudley started off with a bull, Hol-

combe following with the same luck, and, on his second shot, Dr. Dudley scored a centre, and Holcombe caught a bull. Both men strung four more bulls, when Dudley again made a centre. The total score now stood: Holcombe, 180 out of a possible 180, and Dr. Dudley, 178 out of possible 180. Holcombe, on the thirty-seventh shot, his seventh of the final tie, again scored a bull's-eye. On his eighth he got a centre, closing his score with two bull's-eyes, making in the match 199 out of a possible 200. His run of thirty-seven consecutive bull's-eyes has never been equalled, and it stands the best score on record.

PENNSYLVANIA—*Clearfield Aug. 26th.*—The Rifle Club shows good work on the old range, and to-day at 200 yards the score stood:—

A. M. Row	4	5	5	4	3	4	4	4	5	4	—43
S. L. Snyder	3	4	4	3	4	5	4	4	4	4	—39
Fred. Sacket	3	4	4	4	3	4	5	3	3	4	—37
E. M. Burchfield	5	3	5	4	4	3	3	4	2	3	—36
Samuel Bell	2	3	4	3	5	3	3	4	4	4	—35
A. W. Lee	2	4	4	3	4	4	4	3	4	3	—35
D. McGaughey	4	3	2	3	2	3	3	3	4	3	—30

—The proposed match between Messrs. Sumner and Toner, of the Keystone (Pa.) Club, and Messrs. Taylor and Kennard, of the West Chester Club, and Messrs. A. and S. Parker, of the Norristown Club, takes place to-day.

MARYLAND—*Baltimore.*—The Fest of the Baltimore Schuetzen Association has been a grand success. On the 27th a large attendance was present. About fifty members of the Washington Schuetzen Verein, Simon Wolf, president, with the Marine Band, were on the grounds. Among them were Messrs. Abner, schuetzen king of Washington. They were received by President E. Gronau and a committee of the Baltimore association.

Prizes at the ring target, off-hand shooting, were decided as follows: Frederick Hasselhorst, score 112; T. Schmidt, 110; H. Oehl, jr. and C. Zettler, of New York, each 109; G. Schilling, 108; W. Schwartz, 107; G. Schalk, 106; J. Blumenberg, 105; J. Norris 99, and F. Gibson 97. The first bull's-eye, off-hand, in the morning was made by C. Zettler, of New York, and the last by F. Gibson; first in the afternoon by G. Schilling, and last by O. Fisher. First at the rest target, forenoon, by F. Hasselhorst, and last by G. Schalk, of Washington; afternoon, first by F. Hasselhorst, and last by Z. Jeanneret.

Crowning the king shooter took place at six o'clock, on the porch of the main hall of the association. There were present Mayor F. C. Latrobe and other invited guests. After a brief address by President Gronau, the chain of medals was handed over by Christian Hesse, last year's king, to the new shooting king, Frederick Kramer, who was also presented with a silver medal and goblet.

After the crowning a banquet was spread in the large hall of the building. The officers of the society, Mayor Latrobe, visitors and invited guests occupied the head of the central table, and about two hundred persons sat in the hall. The Marine Band played a number of airs during the dinner. Toasts were proposed as follows: "The Festival we are Celebrating," responded to by F. Gardner; "The City of Baltimore," by Mayor Latrobe. "Our Guests" was responded to by President Simon Wolf, of the Washington Verien; "The Press," by Carl Ahrendt, and "The Ladies," by Capt. George Acry, of New York.

OHIO—*Tiffin.*—The Tiffin Rifle Club will hold a series of shooting matches on the 9th, 10th and 11th instants, at their grounds. Open to all comers. Club Rules to Govern. Creedmoor count. Bulls's-eye, 1 inch. Globe sights in all matches. Distance 40 rods. All regular matches to be divided in 3 prizes. Matches to fill or pro rata. All matches to be shot shoulder and muzzle rests.

The matches are:—

1st day: 1st match, purse, $35; 2d match, purse, $50; 3d match, purse, $50.

2d day: 1st match, purse, $50; 2d match, gold badge; 3d match (off-hand), purse $75; 4th match, purse, $100.

3d day: 1st match, purse, $50; 2d match (off-hand), purse, $75; 3d match, purse, $50; 4th match, purse, $50.

A special prize of $40 in gold will be given for the two best strings of ten shots each, made during the tournament. 1st prize, $25; 2d prize, $15.

LOUISIANA—*New Orleans, Aug.* 23.—The riflemen turned out in numbers to-day, taking advantage of the unusually fine weather, and thronged to Frogmoor, where the popular Lilienthal Cup match was again contested. The atmosphere was rather warm, but very pure, and the wind light and regular. The shooting consequently was exceptionally good all around, especially at the 200 yards.

The leading score, made by Renaud, stands two points ahead of the winning score of the last contest, and more than the average in all nine of the contests. The highest at 200 yards was made by Bercegeay, and the highest at 500 by Renaud.

The record stands: New Lilienthal Cup, ninth competition, between individuals, under military rules; 200 and 500 yards, five shots at each, and two sighting shots; three winnings to entitle to possession of the prize. The first contest was won by Bercegeay—score, 41; the second by Weiss—score, 39; the third by Arms—score, 41; the fourth by Gowland—score, 40; the fifth by Arms—score, 41; the sixth by Bercegeay—score 43; the seventh by Renaud—score 44, and the eighth by Selph—score, 41:—

	200 *Yards.*	*Yards.*	*Total.*
Renaud	21	22	43
Charlton	21	21	42
Bercegeay	22	19	41

Bradford	19	12	31
Selph	19	9	28
Durel	18	9	27
Franklin	16	—	16

—A small, but very complete work on rifle firing, prepared by Col. T. T. S. Laidley, has been received. It will be more fully noticed in our next issue.

HIGH LINE.—The Cochran (Ga.) *Enterprise* is ahead this season with its story of a Cochran man "who went regularly to bed one night and dreamed he was sitting on a rock fishing, and, when he woke up, there he was actually sitting on the rock, and had caught two fish."

Yachting and Boating.

BUFFALO YACHT CLUB.

The Union regatta sailed August 26th, under the auspices of this club, proved a most successful affair, and too much praise cannot be awarded to the enterprising committee having the matter in charge, as well as the generous support the races received from the public. Only two foreign yachts put in an appearance, it is true; but this is a fair beginning, and we doubt not that the success of the matches will do much to induce many craft from other ports on the Lakes to show their fighting flags upon a similar occasion next year. The arrangements were in the hands of the Committee, Messrs. Thos. Kean, A. W. Austin, C. M. Cordell, Secretary B. Y. C.; W. E. Riggs, Treasurer B. Y. C.; C. L. Bryant, Ed. E. Benedict, J. I. Williams, and E. D. Berry; and the steamers *Pearl* and *R. G. Stewart* were tendered for the use of the referee and judges. Race open to all yachts; two classes; first, from 35 to 65 feet length; second, from 25 to 35 feet. Entrance fee, $10 and $5 respectively. Two prizes in first class, $150 and $50; and three in second class, $100, $50, and $25. Shifting ballast not allowed under any circumstances. A champion pennant was also awarded to first yacht of first class, the holder subject to a challenge therefor from any first-class yacth upon payment of $25, race to be sailed inside of thirty days. Not more than three challenges in a year need be accepted by the holder; season from May 1st to September 1st. Same rules to hold good as for the Union regatta. In the races of August 26th a novel feature was adopted, the yachts being started separately at the blast of a whistle at intervals equal to their time allowance. This method we can hardly commend, as it must interfere much with the interest of the race and does not give all hands the same wind and tide. A flying start we think preferable, and more imposing and attractive to the general public. The course was for first class: Starting from Government breakwater, thirteen and one-half miles west-southwest to a stakeboat, and return to place of starting. Distance, 27 miles. Time of race six hours. For second class: Starting from same line as first-class yachts, six and one-half miles west by south to stake boat, and thence southeast by east seven miles to second stake boat. Distance, 20 miles. Time of race five hours.

Time allowance, according to rules of Buffalo Y. C., based on area in first class and on mean length in second, 1½m. to the foot. The wind was rather light and variable from N. W., and a little more of the needful would have contributed to a more exciting match. It is needless to say that the fleet of excursion steamers which accompanied the races was crowded to its utmost with the best citizens of the good city of Buffalo. Entries in first class:

Name.	*Owner.*	*Rig.*	*Port.*	*Length.* FT. IN.
Hattie	A. R. Chilcott	Schooner	Buffalo	40 00
Ives	E. H. Ives	Schooner	Detroit	— —
Gannet	P. Gilroy	Sloop	Buffalo	— —
Cygnet	C. L. Bryant	Sloop	Buffalo	— —

Hattie was sent away first in her class, being the smallest of the lot, at 2.18, *Gannet* followed at 2.25.48, *Cygnet* at 2.29.54, and the visitor from Detroit one minute later. All carried gaff-topsails, but there was hardly wind enough for the *Ives*, but with a good streak of it at the the start she began to walk up on the home craft in a way which showed that in a breeze she would be a formidable competitor. She rapidly dropped *Cygnet* and was hot after *Hattie*, while *Gannet*, "the police boat," lead the circus. But *Ives* got away with *Hattie* and was running *Gannet* close. A luffing match ensued, but the Buffalo "peace-makers," being up to snuff, would not let the Detroiter take their wind, but edged him up under the lee of the land; then putting helm up, were off again, with the *Ives* left in a flat calm under shore. Score one for the gallant Capt. Gilroy. Meanwhile the rest of the fleet had a chance to close up near the turn. On the wind *Gannet* did not show a good luff, *Cygnet* doing better. The wind fell light and the race was devoid of further interest, the finish being made as follows, *Hattie's* time not taken:

Cygnet, 4h. 42m. 47s.; *Ives*, 4h. 51m. 52s., and *Gannet*, 4h. 57m. 49s. A protest has been lodged by *Gannet*, claiming not to have received correct time allowance. Until decided the prizes will not be awarded.

The entries in the second class were:

Name.	*Owner.*	*Rig.*	*Port.*	*Mean Length.* FT. IN.
Dawn				
Flora				
Arrow	G. G. Smith	Sloop	Buffalo	25 00
Fleetwing	M. A. Robinson	Schooner	Buffalo	28 02
Curlew	J. F. Ellsworth	Sloop	Buffalo	28 06
Chiquita	G. F. Metcalf	Schooner	Erie	
Corsair	P. G. Cook	Schooner	Buffalo	30 02
Petrel	H. B. Doyle	Schooner	Buffalo	34 02

Dawn and *Flora* failed to come to the line. The rest were sent away in the order named above at intervals equal to their time allowances. A good start was effected by all hands, with a fairly brisk, northerly wind. This class was sent away before the larger ones, and followed their special course. *Corsair* was not kept as close as the rest, and went into third position. *Arrow* unfortunately made a wrong turn of the first mark and got under the lee of the judges' boat, losing a minute; *Fleetwing* rounded next, then *Corsair*, with *Chiquita* and *Petrel* sailing stem and stem for a while, the latter finally getting away from her rival. *Arrow* held her lead, *Fleetwing* was smartly handled, and *Corsair* suffered from poorly setting sails. The wind became variable, and fluking came into play. *Arrow* fetched the second mark, making a wide hit of it. *Fleetwing* followed half a mile in her wake and a quarter-mile ahead of *Corsair*. At the mark *Curlew* cut the latter out and went into third place. *Petrel* and *Chiquita* were sailing a stern race, but the latter improved on the beat in and saved herself being last. The start and finish were as under:

	Start. H. M. S.	*Finish.* H. M. S.		*Start.* H. M. S.	*Finish.* H. M. S.
Arrow	2 07 00	5 11 40	Corsair	2 14 25	5 40 24
Fleetwing	2 11 30	5 26 05	Chiquita	2 12 45	5 50 10
Curlew	2 12 00	5 21 07	Petrel	2 17 15	5 55 21

Arrow, *Fleetwing* and *Curlew* take the purses. A banquet was given by the Buffalo Y. C. in the evening, at which the bright future of yachting on Lake Erie formed one chief topic of discourse, and toasts were drank to the visiting yachtsmen. During the race *Chiquita* carried away her topmast and lost her topsail, which must be taken into account when considering her performance.

CHARLOTTE (N. Y.) REGATTA.—*Charlotte, N. Y., Aug. 21st.—Editor Forest and Steam;*—The regatta here which commenced yesterday, drew together a very large assemblage of people, probably 10,000 witnessing the first day's sport. The published programme was departed from, somewhat, and the following order was observed. The yacht race was sailed first; open to first class yachts of nine tons and over; course, 12 miles; prizes; 1st, $65; 2d, $45; 3d, $20. Judges: J. T. Graham, J. G. Crane and P. Keon. Time-keeper: P. McAuliffe. The contestants, *Ella*, of Oswego and *Ida*, of Charlotte, started at 3:36:30 and 3:37 respectively. They kept well together over the entire course and passed the home buoy in 6h. 14m. and 6h. 14m. 18½s.; the *Ida* winning by 11½ seconds on time, besides having an allowance of 1 minute and 30 seconds for tonnage. Then followed the amateur scull race; course, 2 miles with one turn. Entrees: Burt Brown, Geneva, George Adell and John Crouse, of Auburn. Brown took the lead and won easily in 15m. 30s.; Adell coming in 15m. 38s. and Crouse 16m. 1s. Next the professional scull race: course, 3 miles with a turn. Entries: Charles E. Courtney and Frenchy Johnson. The latter took the lead by a short distance, pulling 34 strokes to a minute followed by Courtney at his clock-work pull of 28 strokes. When nearing the end, Johnson made quite a spurt, but Courtney increased his speed with very little outward exertion and passed the flag in 21m. 05s.; Johnson, 21m. 05½s. Rather slow time.

The second day was again started with a yacht race open to yachts under nine tons; course, 12 miles; prizes, $40, $20 and $10. Judges, same as previous day. Time-keeper: W. A. Stace. Referee: Capt. C. J. Hubbell. The *Florence*, of Sodus; *Mystery*, of Kingston, Ont.; *Fionia*, of Whitby, Ont.; *Phœnix*, of Rochester; and *Rosalie*, Charlotte, started. A very light wind made an exceedingly slow and uninteresting sail. The *Florence* took first money in 3h. 52m., followed by *Mystery* and *Fionia*. Then followed the amateur single scull row, for the championship of the Genesee. Richard Gallagher, of Rochester and John Sexton, of Charlotte entered, but the former refusing to row, Sexton accompanied by John Crouse, of Auburn, rowed over the course, one mile and return. Time: Sexton, 17m. 20s.; Crouse, 17m. 23s.

The canoe race, an interesting feature, was over a half mile and return. Prize: badge. Four crews, composed of A. E. Dumble and Wahashkia, an Indian, B. S. Abrams and J. F. Teibel, J. Delaney and George Stevenson, R. M. Moore and S. Moore, entered and made the following time respectively: 10m. 07s., 10m. 10s., 10m. 22s. and 10m. 49s.

The exhibition row between Courtney, Johnson and Brown over one mile and return, resulted in a dead heat. Time: 16m. 38s. A race for four-oared boats finished the day. Course: one mile and return. The Ontarios, of Charlotte, and Genesees of Rochester, entered, but the latter declining to row, the Ontarios went over the course alone in 16m. 10½s. AMPHION.

ALBANY YACHT CLUB.—The fall regatta of this club will be sailed Sept. 8th. Three classes; over 23 ft. length, 18 to 23 ft., and under 18 ft.; entries to be made to Mr. John Hourigan, Secretary. Open to all legitimate yachts. Two prizes in each class; also pennant presented by M. G. Stoneman & Son. Time allowance 1 m. to the foot. Regatta Committee: Com., Mason F. Cogswell, W. W. Grey, R. D. Evans and W. T. Mayer.

ROYAL NOVA SCOTIA YACHT SQUADRON.

Saturday, Aug. 23d, was calm and foggy. By mid day a strong breeze sprang up, and when the preparatory signal was made at 1.15 P. M., it was blowing a hard breeze of wind from the southwest, with a heavy breaking sea. The course was from the Lumber Yard round Mar's Rock and Thrum Cap buoys and back, leaving the buoys to port. The first yacht in saving her time to take the Mayor's Prize; second yacht saving her time to take prize in her class, and third and fourth yachts of different classes to take third and fourth prizes. *Seafoam* was made a hot favorite for first place. The crack *Hebe* was to show what she could do in hard weather, and the contest between her and the *Petrel* was watched with attention. *Hebe* sailed a splendid race with *Seafoam*. *Petrel* was unable to make the first mark, and could not look at the wind or sea, hauling down her racing flag, and running home from Mar's Rock. *Psyche* sailed a game race, and but for the mistake of setting a flying jib on the run home, would have finished close to the leaders. *Seafoam* had her day at last, and won the Mayor's Prize handsomely. The sea was particularly nasty and heavy, and *Hebe* found it necessary to close reef off York, and off the Rock missed stays, being caught each time by big seas and foul puffs. The little three-ton centreboard *Armona* made a game attempt to sail the race, but was worsted, and had to give up, as also did *Edith*, their skippers exhibiting therein much wisdom. *Mita* started, and beat

and cia to near the Cove, but it was too wild a day for her, cond she had to up helm and run back to escape founder- ing, the seas washing clean over and into her.

ENTRIES.

Name.	Rig.	Tons.	Owner.
1. Psyche	Sloop	7	W. H. Brookfield.
2. Ina	Sloop	8	F. S. West.
3. Hebe	Sloop	8	J. E. Butler.
4. Petrel	Sloop	8	A. C. Edwards.
5. Kate	Sloop	8	W. B. MacSweeney.
6. Muta	Sloop	5	Lieut. H. L. M. Dunlop, R.A.
7. Arnona	Sloop	3	Rev. H. Morrison.
8. Edith	Sloop	5	W. Atkinson.
9. Seafoam	Schooner	37	Lieut. C. G. Carter, R. E.
10. Isabel	Sloop	6	Capt. W. E. Welch.
11. Lily	Sloop	5	Dr. W. H. Weeks.

Isabel could not start, not having a member of the squadron on board. *Lily* and *Kate* did not like the look of things, and went back. *Hebe* made a beautiful start, and went off with the lead under single reefed mainsail and jib. *Petrel*, similarly canvassed, was below the line when the gun fired, and with *Psyche*, losing time in consequence. *Seafoam* carried whole jib, foresail and mainsail. *Muta* and *Arnona*, both close reefed, made a fair start. The start was effected at 1.45 P. M., and the yachts were timed across the line :—

	H. M. S.		H. M. S.
Hebe	1 45 50	Psyche	1 50 05
Muta	1 47 58	Seafoam	1 54 55
Petrel	1 48 35	Edith	1 54 15
Arnona	1 49 05		

Seafoam settled down to her work at once, and slashed along in great style, her high freeboard keeping her dry. Off York she lowered foresail, just as that useful portion of her equipment had split from clew to second reef cringle. She sailed under mainsail and jib from here, and *Hebe* also close reefed, while *Psyche* was going along dry and comfortable. *Petrel* gave up, having had enough of going head and shoulders into the green seas which boarded her with frequency. The reach across to Thrum Cap buoy was quickly effected by the schooner, but after vainly trying to tack around the mark, she was wore round, the foresail being run up close reefed as she passed the Beach light, and her flying jib set. She drew away rapidly now from *Hebe*, which had been all along hanging on in the most marvelous fashion, though her crew was all the time under water. *Hebe* and *Psyche* had a very rough time of it crossing to Thrum, where the sea was frightful, and the way these two small sloops were handled reflects the highest credit on Butler and Brookfield, their skippers. *Hebe*, nevertheless, had to lower mainsail during the latter part of the reach, and *Psyche* also had to lower away when it came to a jibe round the buoy, after which she shook out the reef from her jib. The run home was only varied by the carrying away of *Psyche's* flying jib, which lost her five minutes. *Seafoam* got the first gun at the end of the race, and *Hebe* second, the time of arrival being :—

	H. M. S.		H. M. S.
Seafoam	3 51 33	Psyche	4 03 40
Hebe	3 55 30		

Seafoam was declared winner of the Mayor's Prize by 2m. 26s., and *Hebe* winner of second prize. The prizes in first and third classes were not awarded, none of the yachts in the latter having gone round, and *Seafoam* taking first prize, which barred her from securing the class prize. The race was a splendid one, and will be long remembered by all who shared in or saw it.

Ina and *Arnona* are new centreboard sloops, but the model is not a favorite one here, as the centreboards can't look at the rough water and strong wind by the side of the deep-keel, lead-balasted yachts.

The squadron has refused to accept Vice-Commodore Hussey's resignation, on the ground that it is better to grant so excellent an officer extended leave of absence than to lose his services altogether.

ROYAL CANADIAN YACHT CLUB.—Concerning this club the Belleville *Intelligencer* has the following, and it is needless to say that, in view of the weak plea the R. C. Y. C. has put forward in extenuation of its recent backsliding, permitting shifting ballast, the *Intelligencer* is none too forcible in its remarks. It remains to be seen how long the club will retain its royal title, and how long before it will have to hoist the red ensign in place of the Admiralty grant, which should be rescinded :—

"Many will agree with us that a club which is so imbecile that it cannot enforce its own rules is a standing disgrace to yachting, and that the yachtsmen of Toronto ought, in justice to themselves, to replace this effete organization, which has evidently outlived its usefulness, by another more in keeping with the spirit of the age, the tendency of which is strongly toward the abolition of shifting ballast."

EASTERN YACHT CLUB.—The handicap race of Aug. 20th was not sailed within the prescribed time, and will be sailed at same time as the fall regatta of the club. *Foam, Rebecca, Enterprise, Madcap, Fearles, Latona, Romance* and *Halcyon* started, but though it is claimed the latter made the race within the time, the judges' boat had steamed for home. In the smaller class *Sylph, Effie, Ariadne, Loiterer* and *Dream* started, but they failed to make a race.

NEWPORT YACHT CLUB.—The third race of the season for ex-Commodore Pratt's prize was sailed in Newport harbor Aug. 21st. High wind permitted no more than two yachts coming to the line—the *Baby*, H. K. Norman, of Newport, and the *Leonie*, S. J. Calford, of New York. Course from Long Wharf to Bishop's buoy, thence to the Dumplings, and back to start. *Leonie* took the lead, but *Baby* overhauled her on the wind, and came in winner in 44m. 49s., against *Leonie's* 53m. 7s.

DORCHESTER YACHT CLUB.—The third championship race was sailed off Commercial Point Aug. 23d. Open only to third and fourth classes, the first and second having already finished their series. No fourth class yachts put in an appearance, however. Wind light from southwest, freshening during the race. Course, No. 3, seven miles. Judges : Messrs. D. A. Warren and H. Davenport. The championship prize was taken by *Hoiden*, as below :—

Name.	Owner.	Length. Ft. In.	Actual time. H. M. S.	Corrected time. H. M. S.
Hoiden	S. W. Burgess	21 02	1 24 00	1 03 11
Dream	C. Barnard	19 00	1 09 00	1 09 04
Stella	C. M. Warren	20 02	1 36 45	1 14 12

RACING ON THE DELAWARE—*Monday, Aug. 11th.*—Four races were sailed on the Delaware at Philadelphia. For the sweepstakes regatta the following were the entries:—Southwark Club—*Thomas W. Sparks, Chris. Kleinz, Hugh Boyle, George T. Campbell, Thomas Ledyard, William S. Douglass*, and the first class double-ender *Jas. S. Mitchell.*

Philadelphia Club—*Harry Moore, William Disston, Alexander Crawford, David H. Schuyler, Joseph H. Allen, Harry Bickley, David H. Ristine, Alfred J. Rusk, David Allen* and *James Smith.*

Each boat paid $5 entrance fee; the winner to take the purse. The course sailed was from Tasker street wharf to Chester buoy and return.

Breeze fresh from southwest. Off Greenwich Point the *Ristine* gave up. Below the Block House the wind light, ened up and some of the crews had to take a swim to lighten up the boats. The lower buoy was rounded by the *Moore* in the lead, followed by *Schuyler, Boyle, Rusk* and the rest. The *Smith* and *Allen* gave up before rounding. There was more or less fluking on the run home, the finish being made as follows :—

	H. M.		H. M.
Moore	3 45	Ledyard	3 50
Schuyler	3 46	Douglass	3 50½
Boyle	3 48	Crawford	3 52
Disston	3 48½	Mitchell	3 58
Rusk	3 49		

The *Mitchell* also had a private match with the *Maid* at the same time for the champion flag of their class. Won by the *Mitchell.*

The *Hagan* and *Morgan*, second class double-enders, Southwark Yacht Club, likewise sailed for the champion pennant of their class. The *Hagan* won.

The fourth race was between the *Bullet* and *Sallie*, of Bridesburg. Course, Kensington Water Works to Chester buoy and return. Prize, $100. *Bullet* won easily.

Thursday, Aug. 14th.—A race for $100 was sailed between the *Curran, Gilbert, Mulvihill* and *Martin* from Richmond to Delanco buoy and return. Wind fresh from northwest. The *Mulvihill* capsized off Plum Point and *Gilbert* snapped her head stay. The *Martin* capsized off Holmesburg, whereupon the *Curran* had things her own way, for the *Gilbert*, too, went the way of all frying-pans and spilt her crew without any fuss. *Curran* took the purse. The yacht *Chas. Cohill* has challenged any boat 16 to 18 feet in the Coopers Point Yacht Club or in the South Camden Yacht Club to sail a match for $50 to $100. Race to take place in September.

TO AMERICAN YACHTSMEN.—For complete records of all yacht races in England, as well as for a great variety of other matter of interest, such as cruises and yachting tales, read *Hunt's Yachting Magazine*, established 1852. Can be had of booksellers generally, or direct from Hunt & Co., 119 Church Street, Edgware road, London, E. C., England. Published monthly, one shilling sterling per number.—[*Adv.*

BEVERLY YACHT CLUB.

The fiftieth regatta of the B. Y. C., being the seventh of the season, was sailed at Swampscott, Aug. 23d. The race was open to all yachts not over 40 feet water-line, and was for prizes given by the gentlemen of Swampscott and Nahant. The race was the largest and finest ever sailed in New England, and we have yet to hear of any race south of "the Cape" with so large a number of starters; 143 yachts entered, 94 started and 82 completed the course.

The day opened clear and pleasant with a brisk S. W. breeze, which gradually shifted to S. W. by W. at the time of the start and increased rapidly in force, so that at noon it was blowing hard enough to prevent the light weather boats from starting and compel most of the others to house topmasts and reef lower sails. The Judges—Messrs. Samuel Hammond, James H. Blake, Geo. P. Gardner, J. S. Coolidge, 3d, and W. Lloyd Jeffries—were stationed aboard the *Halcyon*, of the E. Y. C., which was kindly loaned them by Charles J. Paine, Esq. She was moored off Phillips Point, and the start, a flying one, was made across a line drawn from her to a stake-boat in-shore.

Long before the start the bay was white with the sails of the racing yachts as well as others which were present as spectators, among the latter being the *Alice, Foam, Phantom, Rebecca, Lorelei, Hermes, Brenda* and *Fearless*, of the E. Y. C.; the *Clochette*, of the N. Y. Y. C., and the *Viva*, of the Portland Y. C.; the revenue cutter *Gallatin* and the steamer *Minnehaha*, were also on hand.

The entries included yachts from almost every club from Provincetown to Portland, and the race went off without the slightest hitch of any kind.

The time fixed for the preparatory gun was 12 M., and the signal was fired punctually to a second. The gun for the first and schooner classes was fired at 12.5, and the others for the second, third and fourth classes at 12.10, 12.16.30 and 12.22, it being impossible for all the second class boats to cross the line in five minutes.

The courses for all classes were: First, rounding a stake-boat off Little Nahant, this stretch being close-hauled on the starboard tack; thence down before the wind to a stake-boat off Carey's Point, Nahant. Here they separated, the first, second and schooner classes running round Nahant Point to and around the Whistling buoy off the Graves, having the wind on the quarter. From the Graves they ran, with a beam wind, to a stake-boat off the S. W. Breaker off the Pigs, and from there had a dead beat to the judges' boat. The third and fourth classes went direct from Carey's Point round the S. W. Breaker stake-boat and thence to starting point—courses being 14 and 13¼ nautical miles respectively.

The first boat over the line was the *Shadow*, closely followed by the *Alarm*, of Norfolk, Va., and the *Siren*, of the Dux. Y. C. The rest of the first class and the whole of the schooner class lost more or less time by starting after the second class gun was fired; their time was taken as 12.10.

From 12.10 to 12.27 the yachts were crossing the line in a steady stream, giving the judges all they could do to take their numbers and time. This, however, was done accurately and successfully, though six boats, three in second class and three in third class, showed their numbers so indistinctly that they could not be clearly made out. Their times were, however, taken, but as they were in the ruck and did not cross the line at the first it was not of much importance.

Many boats were started after their time was up; all such lost time by so doing, and in four cases yachts lost prizes by this carelessness of their skippers. They were as follows: Schooner *Cycla* would have taken second prize in place of *Loiterer; Empress* would have taken second prize in place of *Dictator; Wave Crest* would have taken fourth prize in place of *Fancy*, and *Frolic*, which now gets third prize, would have taken first.

Following is the summary. The six boats mentioned above started. The abbreviations are as follows: B. Y. C., Beverly Yacht Club; Bn. Y. C., Boston Y. C.; E. Y. C., Eastern Y. C.; Dux. Y. C., Duxbury Y. C.; Q. Y. C., Quincy Y. C.; S. B. Y. C., South Boston Y. C.; E. B. Y. C., East Boston Y. C.; J. C., Jeffries Club; S. B. M. F., South Boston Mosquito Fleet; Prov. Y. C., Provincetown Y. C.; L. Y. C., Lynn Y. C.; N. Y. C., Nahasset Y. C.:—

Prizes were taken as follows, all being in gold coin :—

First Class, 1st Prize, $25	Siren	Dux. Y. C.
First Class, 2d Prize, $15	Shadow	B. Y. C.
Second Class, c. b., 1st Prize, $25	Fanchon	B. Y. C.
Second Class, c. b., 2d Prize, $15	Allie	Q. Y. C.
Second Class, c. b. 3d Prize, $10	Manic	Dux. Y. C.
Second Class, c. b., 4th Prize, $5	Eva	Navy Yard
Second Class, k., 1st Prize, $25	Veronica	S. B. Y. C.
Second Class, k., 2d Prize, $15	Dictator	S. B. Y. C.
Schooner Class, 1st Prize, $25	Bessie	B. Y. C.
Schooner Class, 2d Prize, $15	Loiterer	E. Y. C.
Third Class, 1st Prize, $25	Thisbe	Q. Y. C.
Third Class, 2d Prize, $15	Hoiden	B. Y. C.
Third Class, 3d Prize, $10	Peri	B. Y. C.
Third Class, 4th Prize, $5	Fancy	B. Y. C.
Fourth Class, 1st Prize, $25	Dolly Varden	Q. Y. C.
Fourth Class, 2d Prize, $15	Nora	B. Y. C.
Fourth Class, 3d Prize, $10	Frolic	B. Y. C.
Fourth Class, 4th Prize, $5	Josephine	N. Y. C.

The race, as a whole, was a grand success. Not a single protest was made, and although the wind was very heavy no serious accidents occurred. *Josie* sprung her mast, *Dictator* carried away the jaws of her gaff, *Fancy* parted fore stay, and two or three sloops lost their topmasts. This speaks well for the management of the yachts. Large numbers of spectators viewed the race from the shore, and the sight was well worth seeing, over two hundred sail of yachts being counted at one time. The third championship race of the B. Y. C., the eighth of the season, will be sailed at Nahant Sept. 6th. The owner of the *Josephine*, fourth class, claims that he is only 16.03. His messenger who entered his boat entered her as 16.08. The *Josephine* will have to be remeasured. If he is correct she takes 2d prize, and *Nora* and *Frolic* take 3d and 4th prizes.

DETROIT YACHT CLUB.—*Detroit, Aug. 23d.—Editor Forest and Stream* :—The Detroit Yacht Club will sail its second regatta on the 8th of September. Prizes as follows: First class—First prize, the club challenge flag, now held by the yacht *Ives*, and $10; second prize, $10. Second class—First prize, $10; second prize, $5. Third class—First prize, $5; second prize, a silver cup. Special class for yachts 19 feet and under—A sweepstake prize consisting of the entrance money. Entrance fee in first class, $3; second class, $2; third class, $1; special class, $1. Course same as sailed July 4th. The club has procured a set of excellent buoys with which to mark out the course. You will notice our prizes are all small; we do not get up our regattas to make money out of them, but to give our members a chance to get practical experience in handling their boats under all conditions and circumstances, and to keep up the interest of the club and general public in the noble sport. The yacht *Amy*, of our fleet, has been on a week's cruise in Lake St. Clair and St. Clair River, going as far as Port Huron, the crew consisting of Saml. Cowan, C. F. Hull, T. H. Chilvers, C. D. James, and your honorable servant. Had a delightful sail, and only regretted that the cruise could not have been a more extended one. The schooner *Ives* left for Buffalo yesterday morning. She was entered for the Union Regatta.

ED. H. WILLIAMS,
Secretary Detroit Yacht Club.

SAN FRANCISCO YACHT CLUB.—The tenth annual regatta was sailed Saturday, Aug. 9th, and was interesting especially among the larger yachts, the appearance of the new schooner *Anheuser*, Mr. Gutte, creating much comment. She had already beaten the *Consuelo* once before, and it remained to be seen whether her performance could be repeated or not. She was in the hands of Captain Turner, while Stofen sailed the old favorite with a jib-headed or Bermuda mainsail. As *Anheuser* (about sixty feet long) again landed the prize, both owners have decided to swap mainsails and try again, so as to set at rest the question of how much was owing to their differently cut mainsails. This kind of racing spirit—sailing to learn something about the yachts' qualities—is decidedly to be commended. Among the other craft, *Pearl* split her centreboard, and did not drop the lower half, so that she was decidedly in a pickle. *Fawn* carried away topmast, but did not forget to beat *Frolic* by 30s., after all, and *Lively* did some fine work in her class. Course, 30 miles, as usual, from Long Bridge around stakeboats off Hunter's Point, Oakland bar and Fort Point, and return home same way, smaller classes sailing home direct. Wind, fresh; tide, flood. Prizes: A flag to yacht making best time, irrespective of class; silver pitcher to first, and marine glass to second class; barometer to third, and silver plate to fourth class; a fruit stand to fifth and butterdish to sixth class. Regatta Committee: Commodore C. H. Harrison, Messrs. J. Gutte, E. O. Wicner, H. B. Underhill, jr.; J. M. Shotwell, and J. C. Uhler. The summary is appended :—

FIRST CLASS.

	Length. Ft. In.	Actual Time. H. M. S.	Time allowance deducted. H. M. S.
Anheuser	60 00	3 24 00¼	3 25 48

Mist	00 00	4 20 49	4 13 39

JERSEY CITY CANOE CLUB.—The first annual open regatta of this club was held Aug. 28th, off the Idle Hour, Pamrapo, N. J. Weather and wind were all that could be desired, and much interest was manifested in the comparative performance of the canvas and cedar canoes. The courses from the Idle Hour Club-house could be seen to perfection, and all the arrangements were carried out with much care under the supervision of Com. Chase and his aids. The classification of the canoes was especially commendable, a line being drawn between "paddleable sailing canoes" and "sailable paddling canoes," to adopt some new but appropriate terms devised we believe by Mr. Baden Powell, of England. To the former class are assigned the more seagoing cruising canoes, such as the *Shadow*, *Nautilus* and their varieties, to the latter belong the *Rob Roys*, *Rushtons*, and all without sheer and special sailing qualities, but speedy under paddle. Two races were proposed for each class, one under sail, the other paddle. This classification renders something like satisfactory results possible, for it is manifestly as loose a method to compel a heavy *Shadow* to paddle with a light racing *Rob Roy* as it is to make the latter sail in lumpy water with the former. The Jersey City Canoe Club has therefore taken a step in the right direction, and can always count on ample entries for its events. In the paddling race for sailing canoes, the entries were, Messrs. E. H. Ransome, in the *Ted*; E. J. Wilkin, in the *Saskatchewan*, and Com. Chas. E. Chase in his *Bubble*. Course one mile scant. Won by *Ted* in 5 m. 5 s.; *Saskatchewan* second. The second race was a paddling race for paddling canoes. Entries: I. F. West, in canoes *Qui Vive* of the Passaic Canoe Club, and Mr. Tatum, in the *Dart*. Won by *Qui Vive* in 5 m. 29 s. The sailing course for canoes was over a triangular course of 2¼ miles, sail over twice. At the start, the *Clochette*, a fine *Shadow* model of Mr. Wm. Whitlock made her appearance, her owner having paddled her down from Great Neck, a distance of 17 miles. Mr. Whitlock, hoisted sail and started with the rest, the *Bubble*, Com. Chase; *Mate*, Carl Bergman; *Onondaga*, a new canvas, Mr. M. Higgenbotham, and *Ted*, Mr. Ransome. *Clochette* and *Buddle* had mainsail and dandy, the rest a jib in addition. It was close hauled to the first stake, the two *Shadows* outpointing the rest and holding a better luff. With free sheets running for the second mark, the *Mate* overhauled *Buddle* and *Clochette*, but lost her chances by making a mistake as to the course. *Clochettee* increased her lead and won by 3 m. in 1 h. 8 m. 15 s., with *Mate* second and *Ted* third. The *Buddle* withdrew. For the saling race for paddling canoes the *Qui Vive* was the only entry and had a walk over. A large number of spectators were on hand, and the sport of canoeing has received another impetus which is certain to be productive of excellent results with the advent of another year.

CINCINNATI CANOE CLUB.—A new canoe club has been formed in Cincinnati, Ohio. Among the prominent members are Thos. Ambrose, Clerk U. S. C. Court; Judge Longworth, of the Supreme Court; Mr. Wulsin and others. They have a commodious club house on the Ohio and hold many races, the peculiar feature of which is, that the winner becomes commodore every time; hence ex-commodores are a common occurrence in the club.

MISSISSIPPI AMATEUR CHAMPIONSHIP.—The annual race for the Mississippi championship brought three crews to the start from the Mississippi, Western and Modoc clubs. Course three miles down stream. After a close struggle the Mississippi crew won in 16m. 30s. The Modocs entered a protest against the winners, on the ground that some of them were professionals.

—The *American Ship* is the title of a new trade journal now in its second half-year. It is devoted to our export trade in grain, marine insurance, and kindred interests, and will find a place in that portion of the community identified with our exports and carrying trade, both of which promise a large increase in the near future.

—A new ferry line has been established between Pine street and Hunter's Point, which very materially facilitates travel between Wall street and points on the Long Island Railroad, Rockaway, Brighton, etc.

Rational Pastimes.

THE GAME OF CRICKET.

FIXTURES.

Sept. 5—Orange, N. J.—Newark vs. Young America (2d).
Sept. 6—Staten Island.—Young America (2d) vs. Staten Island (2d).
Sept. 10-11—Toronto.—Daft's English eleven vs. 22 Canadians.
Sept. 12-13—Toronto.—Daft's English eleven vs. 22 English.
Sept. 15-16—Toronto.—Daft's English eleven vs. 22 Canadians and English.
Sept. 16-17—Hoboken, N. J.—Marsh's Irish Team vs. St. George's fifteen.
Sept. 17-18—Nicetown.—Old Haverfordians vs. Pennsylvania University.
Sept. 18-19—Montreal.—Daft's English eleven vs. 22 of Montreal.
Sept. 18-19—Staten Island.—Marsh's Irish Team vs. Staten Island fifteen.
Sept. 22-23—Hoboken, N. J.—Marsh's Irish Team vs. Eleven All New York.
Sept. 23—Staten Island.—St. George's vs. Staten Island.
Sept. 25-26-27—Nicetown.—Marsh's Irish Team vs. Philadelphia eleven.
Sept. 25-26-27—Detroit.—Daft's English eleven vs. Detroit.
Sept. 30-Oct. 1—Syracuse—Daft's English eleven vs. 22 Central New York.
Oct. 3-4—Montreal.—Marsh's Irish Team vs. Montreal.
Oct. 7-8—Ottawa.—Marsh's Irish Team vs. Ottawa.
Oct. 13-14—Hamilton.—Marsh's Irish Team vs. Hamilton.

THE INTERNATIONAL CRICKET MATCH—UNITED STATES VS. CANADA.—This match, which had been looked forward to with much interest for some weeks, came off on the beautiful grounds attached to the Government House, Ottawa, on Tuesday and Wednesday, the 19th and 20th insts., and resulted in a decided victory for the United States. It is not our intention to give a detailed account of the match, but rather to notice the more prominent features of the playing. At the outset we may remark that the team sent out by the Cricketers Association of the United States contained many elements of strength, and while some may contend that it was the strongest available, it certainly was far from being the strongest possible. After playing a practice game against a fifteen at Montreal on the 16th, and resting a day there, the eleven proceeded to Ottawa on the 18th, arriving there at 2 P.M. and visiting the Rideau Hall Ground for practice at 4 P.M. The party put up at the Russell House, and in their honor a band played a choice selection on the Government Square, near at hand, that evening. Next morning the visitors were on the ground by 10 A.M., but it was 11 before the game began, as the Canadians had to elect their captain. It will thus be seen that the Canucks are more republican in these matters than we are. Whether they are more wise may well be questioned. Without going the length of calling their team a weak one, it was disappointing to our representatives (who expected to meet *all* Canada) to find their opponents chosen from the Province of Ontario, while only a single club, and that by no means the strongest in Canada, supplied six of the eleven players. However, the recently elected general began well by winning the toss, and elected to bat, sending Rev. T. D. Phillips and Ray, of Whitby, to face the bowling of C. Newhall and Soutter. Twenty-two runs were scored before the first wicket (Ray's) fell, and this was the best stand made by the side. Armstrong and Brunel likewise got double figures, the batting of the latter being really good. The eleven retired for 70 runs off the bat at 1 P.M., Dan Newhall, with slows, having taken Soutter's place. Without delay Calvert and Moore went in. The former ran himself out very foolishly. Moore next succumbed, the victim of catch at point. With 29 on and two wickets down, an adjournment was had at 2 P.M. for lunch. The commodious lunch-room deserves more than a passing notice. The decorations were elegant and of a character to please the visitors, while the repast itself was creditable to the skill of the caterer. On resuming the game Brewster and Clay made things very lively, though it is but fair to add that the latter was indebted for his 35 to the softness of the Canadian palm—*vide* Fitzgerald's "Wickets in the West"—for three catches were badly missed. Brophy (medium round-arm) and Hall (slow) had now superseded Brodie and Brunel, the latter being out of condition. The two bowlers were very effective, notably Brophy, who clean-bowled Capt. Dan and Bailey on two successive balls. In spite of their other misfortunes the Canadians certainly had the luck on their side, and in explanation of their cutting down so strong a team for 108 it must be borne in mind that three of the ten wickets were cases of suicide. The Canadian fielding, with one or two notable exceptions, was fair. With 23 to the bad they resumed their innings at 4¼ P.M., and by 6 P.M., when the stumps were drawn, they had lost nine wickets for 78—being a somewhat better record in this respect, that they scored more off the bat. The batting of Armstrong, Orillia, Hall, Port Hope, and Smith, Ottawa, alone redeemed the side. The 29 of the first named was obtained by decidedly the best hitting of the match, and included two sixes. The Newhalls bowled throughout. A large number of spectators, about 1,000, witnessed the afternoon's play, thus enlivening a scene which was in other respects rendered attractive by being dotted here and there with marques, scoring-tents, flags, &c. But irrespective of these artistic adornments, the natural picturesqueness of the place is very inviting. The music of the band of the Governor-General's Foot Guards was by no means the most trivial attraction of the afternoon. In the evening a pleasant three hours was spent on the Ottawa, the local committee having chartered the splendid steamer *Peerless* for a complimentary excursion to Buckingham and back. On the programme were dancing, music and refreshments.

Wednesday opened auspiciously. It was a day even more suited to cricket than the preceding. The Canadian not-outs were disposed of in four balls for as many runs, obtained by a leg hit. The Americans had now to make 60 to win, and it was expected that the captain, whose generalship throughout was excellent, would endeavor to get these with the loss of as few wickets as possible. But he seems to have acted on the principle of sending in those men who had not scored in the first innings; or it may have been, as suggested by a contemporary, that he wished to let his opponents down easily. At any rate, five wickets fell before Moore made the winning hit of 3, and by 1 P.M. the United States had scored another victory over Canada, or rather over one Province of the Dominion. Messrs. Green, of Philadelphia, and Benjamin, of Ottawa, gave satisfaction with their decisions as umpires.

On the whole the Canadians bore their defeat philosophically, consoling themselves with the reflection that had they not been disappointed in their expectation of men from Hamilton, Toronto, Montreal and Halifax they would have given a still better account of themselves. They are to be commended for the courage and even pluck with which they played a manifestly up-hill game. Most of the visiting Americans returned via Q., M., O. & O. Railway (by which they had gone to Ottawa) through Montreal. They seem to have enjoyed the trip, and to have shown our northern neighbors how much strength may be evolved from harmony and good management—elements in which, by all accounts, the visited are somewhat deficient. The following is the full score :—

OSWEGO FALLS MANUFACTURING COMPANY VS. OSWEGO CITY.—These clubs played their first game Saturday, August 9th, on the grounds of the former—Oswego Falls Fair Grounds—resulting in the defeat of the visitors by

two wickets. Oswego winning the toss, decided to go to the bat first, and ran up the respectable total 70 in their first inning, against their opponent's 47, leaving the home club 23 runs behind. However, in Oswego's second inning they only compiled 20. With little over an hour to play, the Falls got to work and managed to rub off the score with two wickets to spare. Below is the full score:—

—The Hamilton Club returned home on Monday last after a most successful cricketing tour. The Hamilton players are not only adepts in the game, but a rare lot of jolly good fellows, and we trust to have the pleasure of seeing them again. Scores in our next issue.

ERIN GO UNUM, E PLURIBUS BRAGH.—The following players have been selected by the Philadelphia committee to play against Marsh's team of Irish gentlemen:—George, Charles, Robert and Daniel Newhall, Large and Clark, of the Young America; Law and Thayer, of the Merion; Brewster, Caldwell and T. Hargreave, of the Germantown. The choice is most excellent.

ARCHERY.

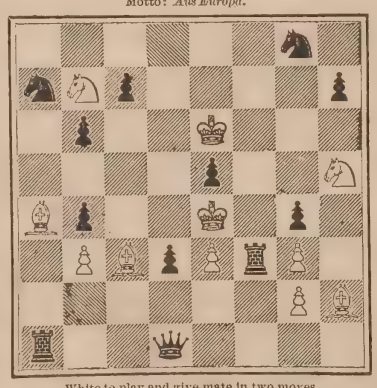
AMERICAN BOWS vs. ENGLISH BOWS.

NEW YORK, *Aug.* 23*d.*

Editor Forest and Stream:—

I noticed in your last week's issue that "Archer" say that the best bows are made in this country. I am not in the archery business, nor connected with any house as an advertizing agent, but have used the bow for over twenty years and have worked very hard to introduce it to this country. I have visited every meeting of account in this country. I was at the Chicago Tournament, and was very much pleased with the progress made, and I think by next season when we have another tournament it will be represented by clubs from all parts of the States and Canadas. As an out-door amusement it yields to none in its direct tendencies to promote and invigorate the health of its votaries; and to those who wish to become acquainted with this excellent pastime a few words may not be unacceptable. The bows and arrows are the main part of the outfit. I am in favor of bows of one piece, let it be a yew or a lancewood. The yew is the best, on account of the lightness of the wood and its elasticity. My first bow was a lancewood, made by Thomas Aldred of London, a gentleman of world-wide reputation as a manufacturer of archery goods, which I used for three years. The bow's pulling strength was 40 lbs. Then I purchased from the same maker an English yew, 48 lbs.; then a Spanish yew, 52 lbs., and have been using the Spanish yew ever since; and in consequence of using the yew bow so much I cannot use the lancewood. There seems to be a softer pull to the yew, which cannot be had with the lancewood. I asked Mr. Aldred a few points in regard to bow-making, and he took me through his shop and showed me the process. He does not work any wood that has not been in his shop for five years. His experience has taught him that if the wood is not thoroughly seasoned, a bow that pulls 40 lbs. this season will pull 50 lbs. next season. His yew bows are shaped with a drawn knife so as to have the straight grain. My objections to two or three-pieced bows are that if you break a tip, or a string, they are liable to split up; and another objection is the unevenness of the woods. I saw an American snakewood bow backed with hickory—the snakewood broke short across. Mr. Aldred showed me the medals he had received from the Emperor of France, of Brazil, of the King of Denmark, of the Prince of Wales, at the Exhibition of London, 1851 and '63, New York, 1853, Dublin, 1865, Paris, 1867. The prizes were all for archery. The bow taking the prize at Paris was a Spanish yew, valued at thirty-five guineas. J. B. Crook & Co., well-known fishing tackle manufacturers, stopped making bows themselves and took the agency of Aldred, and seeing their advertisement in your valuable paper I stopped in to inspect their stock, which, without any exaggeration, is the finest of English and Spanish yew I have ever seen displayed in any store in this country or Europe. Mr. Crook showed me a Spanish yew valued at $75, which I do not think can be duplicated in the world. You can talk of your American bows, but it is preposterous to put them against such a maker as Thomas Aldred, who has been making archery since the year 1813. You cannot get a carpenter to make a first-class fly-rod, nor can you get novices to make first-class bows. Experience makes perfect; and if experience will make a man a first-class bow maker, then you have it in Thomas Aldred; and I say there is no maker in this country that is prepared to-day with stock ahead to make bows that will answer the requirements. There have been a great many American bows sold this season, ranging in price from $1.50 to $5, and a great many have been broken just because the wood was not seasoned. I asked Messrs. Crook & Co. how the Aldred bows were liked, and they say they have sold over 500 bows, ranging in price from $7.50 to $75, and never had one returned or anybody dissatisfied, which I thought was a very good recommendation. They are receiving orders from all parts of the country for the yew bows, and have had six shipments this season. Mr. Carver, Secretary of the National Association, has an Aldred Spanish yew that he paid $125 for.

TOXOPHILITE.



AN OHIO ASSOCIATION.—Archery has received a new impulse from the Chicago Tournament. Ohio clubs propose to combine into a State Association, and to that end a meeting of all archery clubs was held at Cincinnati, September 1st, and another meeting is appointed for September 9. The gentlemen signing the call were Mr. Chas. Weeker, 137 West 4th street, Cincinnati, and Messrs. C. J. Strong, Sagittarian A. Club; H. C. Healy, Waverly A. Club; E. K. Foote, Ivanhoe A. Club; Chas. Miller and Alan Sanders, Westwood A. Club; C. A. Le Boutillier, M.D., Sagittarian A. Club; James N. Gamble, Westwood A. Club; F. M. Coppock, Sagittarian A. Club; Adam Gray, College Hill A. Club; A. J. Proctor, Westwood A. Club. The meeting will be held at the Gibson House.

—Brownell's Complete Archery Score Book has been adopted by the Eastern Association. It is adapted for single rounds, single and double Columbia, American and York rounds. The book is advertised in another column.

White to play and mate in four moves.

A MILK-WHITE THOROUGHBRED.—A true white horse, born white and thoroughbred, is understood to be so great a rarity in Europe, unless it be an importation from the East, where it is common enough, that the birth of such an animal has been thought worthy of special announcement in *Le Sport*, which prints a letter to the following effect: "A thoroughbred mare, Perseverance, of English blood, by Watergage and a Faugh-a-Ballagh mare, has lately thrown a colt foal (the sire being Bagdad) the description of which is as follows: White, perfectly snow-white, with a few red hairs on the ears, all the hair very short, eyelids and nostrils rose-color, hoofs white * * * The colt is large, lively and well shaped." It may be mentioned that Perseverance, now belonging, it appears, to the brothers Lange, was bred in France by the late Baron de Nexon in 1858, and Bagdad, sire of the white colt, bears a name which seems to point to an Arab parentage, but no information is given on that point, and there is or was a French sire named Bagdad, foaled in 1862, by West Australian, out of Young Lady, by Inonian. However, all the Bagdads to be found in the French Stud Book are described as bay, gray or chestnut, and Perseverance herself is described as bay. So that the color of the white colt has no immediate hereditary justification.

A PRETTY BIRD STORY.—As a contribution to the fund of graceful things told of the storks, we clip the following from our German contemporary, the *Thierfreund*, the organ of the Vienna Society for the Protection of Animals. That paper publishes the story as having been received from a perfectly trustworthy source: Year after year a pair of storks built their nest on the roof of a Hungarian landowner's residence, arriving regularly in the early spring and taking their departure, with a young brood, towards the end of summer. One year the owner of the house caused one of the storks to be caught, and fastened round its neck an iron collar, on which was the inscription, "*Ex Hungaria colonia N.N.* The following season the birds came back as usual, and round the neck of one of them was seen some glittering object, which aroused the curiosity of their host. On capturing the bird he found to his astonishment in place of the iron collar which he had affixed the year before a golden necklet bearing the words, *Ex India colonia mitto donum cum ciconia.*

—Chamois hunting and deer stalking are the chief outdoor amusements of the Austrian court at Ischl. The beaters start long before dawn, and the game is driven past the Emperor and his party, stationed at given spots in the woods. The courtiers, courtier-like, always yield his Majesty the *pas*, and leave him the first shot, which may have something to do with the numerous trophies of the chase which adorn the Kaiser villa. With a good glass the chamois can be often seen clambering up on the rocky patches among the pine-covered mountains round Ischl.

—That famous sporting association, the Jockey Club of England, dates from the latter half of the reign of George the Second, and the first mention of a Jockey Club plate at Newmarket occurs in the "Racing Calendar" of 1753. The club, as the name indicates, was at it outset a body of noblemen and gentlemen who rode their own horses, which they did down to 1753, when the services of professional riders were substituted for that of amateurs. Still, for some years after it was the fashion for members of the club to appear in the saddle; and the story is often now told at Newmarket of how the Duke of Queensbury frustrated the evil designs of some conspirators, who were tampering with his jockey in a great match by taken bets up to the eleventh hour, and at the last moment throwing off his coat, riding his horse himself, and steering him in the victor of many thousands.

RAT AND MICE EXTERMINATOR.—A German newspaper gives the following simple method of exterminating rats and mice, which it states has been successfully tried by one Baron Von Backhofen and others for some time past: "A mixture of two parts of well-bruised common squills and three parts of finely-chopped bacon is made into a stiff mass, with as much meal as may be required, and then baked into small cakes, which are put around for the rats to eat." Several correspondents of the paper write to confirm the experience of the noble baron and his neighbors in the extirpation of rats and mice by this remedy.

FERGUSON'S IMPROVED

RUST PREVENTER,

For Fire Arms, Surgical Instruments, Cutlery, Tools, exposed parts of machinery, etc.

Also Spratt's Dog Soap, and direct orders taken for Spratt's Medicines.

Neversink Lodge Kennels.

The following celebrated Dogs are for sale.

DOGS:

St Bernard dog "Marco"; rough coated, two years old; a magnificent animal—Rev. J. Cumming Macdona's stock—second prizes Hanover Show and Rochester.

New Foundland dog "Keeper"; four years old; first prize Westminster Kennel Show, 1879.

Pointer dog, "Croxteth,"; liver and white; one and a half year old; son of Lord Sefton's renowned stock—one of the handsomest pointers in the United States. Second prize in the Hanover International Show. Broken.

Blue Belton setter, "Decimal Dash," eighteen months old; sired by Llewellyn's celebrated "Dash"—a magnificent stud dog—never exhibited.

Irish setter, "Rover II"; pure red; son of Macdonn's champion "Rover." Never exhibited; thoroughly broken.

English setter, "Ranger II"; a pure bred Laverack, son of Macdonn's celebrated "Ranger". His get won first at Hanover and Paris shows.

English setter "Ranger Rival," a half brother to Ranger II., never exhibited.

Any of these dogs will serve approved bitches at $25.00.

Bitches.

St. Bernard "Braunfels," rough coated, out of Prince Solm's celebrated stock; a magnificent bitch, in whelp to "Marco," 1st prizes in Hanover and Rochester show.

Pointer "Queen," liver and white. 1st Westminster Kennel Show 1878, in whelp to champion "Sensation."

Gordon setter "Beauty," 1st Boston Show 1878, 2nd New York Show 1878.

Pointer "Dora"—liver and white, out of "Queen" and "Sancho," in whelp to Croxteth.

Blue Belton setter "Silk," in whelp to Ranger I.

Irish Setter "Moya," out of Col. Hilliard's "Palmerston;" will be bred to Rover I.

English Setter "Donna," white and lemon, in whelp to Ranger II.

Pups out of all the above first-class bitches can be secured by an early application. Besides I offer for sale pointers, setters of minor quality, but of good thoroughbred stock; full pedigrees. Particulars will be furnished on application to

POOLER & JONES'
Patent Boss
CARTRIDGE HOLDERS AND BELTS.

This Holder is for carrying Paper Shells, crimped or end turned down.

This Holder is for carrying Brass or Paper Shells without being crimped. Has side cut away, showing Wad Supporter.

The only practical cartridge holder in use. Will carry brass cartridges, and positively prevent wads from starting on shot. Suitable for either paper or brass shells. These cartridge holders can be easily attached to any hunting vest or coat front. It is impossible to lose any cartridges from the Holders. Splendid Water-Proof Patent Vests, with 40 Cartridge Holders attached to front, $6.00. The belts can be perfectly adjusted to fit either a slim or large man. Will deliver to any address, and prepay postage on belts or any number of loose holders on receipt of the following prices: Spring brass cartridge holders, per dozen, $1.25; adjustable belts with 30 spring brass holders, complete, $4. Elegant nickel-plated holders and buckles, the gayest and nicest belt in use, $5. We are now manufacturing a Superior Brass Rifle Cartridge Holder and Belt. The Belt has 50 to 60 Holders attached, and will carry any sized Rifle Cartridge from 40 to 45 calibre. Adjustable Russett Leather Belts, with 50 Rifle Holders attached, complete, $4. Loose Rifle Cartridge Holders, per dozen, $1. We solicit correspondence from dealers. All our belts are made of the finest Russet leather. Cash must accompany orders. Send money by registered letter on Serena, Ill., or P. O. money order on Ottawa, Ill. Send 10 cents stamp for sample holder.

Address all orders to POOLER & JONES, SERENA, LASALLE CO., ILL.

PAINE'S
Feather Filled Glass Ball.

THE ONLY SUBSTITUTE EVER INVENTED FOR A LIVING BIRD.

Ask your gunmaker for the FEATHER FILLED AND TAKE NO OTHER. SPECIAL NOTICE TO DEALERS.—Owing to the great demand for the FEATHER FILLED BALL, we will from this date pay strict attention to our factory and the careful production of the ball only, and have appointed the well-known house of HAGERTY BROS. & CO., 10 Platt Street, New York, as our authorized agents, to whom all orders and communications may be addressed.

ALSO MANUFACTURERS OF THE BEST PLAIN BALL IN THE MARKET.

Attention, Sportsmen!

Kay's Improved and Perfected Ball for 1879.

[PATENTED OCTOBER 13, 1877.]

A SUBSTITUTE FOR GLASS.

HAVING succeeded in producing a Ball for professional and amateur use at the trap, we offer the same with the following recommendations, viz: In breakage, the equal and superior to any glass; Uniformity, being of an exact uniform thickness of 1-20th of an inch, is superior to any blown material; Durability, is not affected by their solubility; Residuum, can be used anywhere, and on finest lawns, leaving neither injurious or unsightly refuse. Packed in barrels by a device peculiar to us, we guarantee against breakage in shipment. For particulars see circulars. Price, $2 per 100. All orders addressed to dealers, or A. B. KAY & CO., Newark, N. J., Manufacturers of Buck and Heavy Drop Shot, Cartridges for Long-Range, viz.: Deer, Duck, and Geese, $3 50 per 100 also, the Chip or Expansive Concentrator, $1 25 per 100. A box of 50 sent on receipt of 75 cents by mail

THE CARVER TARGET BALL.

[CAVEAT FILED.]

GREENVILLE, PA., May 26, 1879.

DEAR SIR:—We take pleasure in notifying all admirers of Target and Ball Shooting that we have introduced a COMPOSITION TARGET BALL for Trap Shooting that is perfect in every particular. It has been thoroughly tested by many of the leading Sportsmen, and pronounced by all as the only perfect and unobjectionable Target Ball in existence. This Ball is very uniform in weight and standard size, and when broken leaves no *debris*, but will EVAPORATE in five days and acts as a FERTILIZER. They can be used on Lawns, Gardens, Fields or Parks, thereby doing away with the danger and annoyance consequent in using Glass Balls. We are now prepared to fill orders. Drafts or P. O. Order must accompany all orders. Organized clubs are invited to send for Sample Box, (25 balls) and Circular free.

J. H. WAUGH, Inventor

PRICE LIST—Per thousand, $12. No charge for packages. Address

CARVER TARGET BALL CO., Greenville, Mercer Co., Pa.

O. F. WOODWARD & CO.,

MANUFACTURERS OF

BRITTLE TRAP BALLS, WOODWARD'S MEDICATED NEST EGG,
And Woodward's Medicated Bird Swings.

ASK YOUR DEALER or GUN-SMITH for WOODWARD'S SOLUBLE COMPOSITION TRAP BALL, pronounced by professionals and amateurs superior to all others. No more trouble and danger from sharp and insoluble fragments, which cause so many to object to the use of glass balls, except in fields and galleries specially set apart for trap-shooting. WOODWARD'S SOLUBLE COMPOSITION BALL possesses great firmness, always breaks when hit, and owing to the quick dissolution of the fragments can be used wherever convenience may dictate. Write to your dealer for circulars and terms, or address O. F. WOODWARD & CO.,
Le Roy, N. Y., Manuf'rs and Sole Propr's.

MEDICATED NEST EGGS, sure death to hen lice, $5.00 per gross, 60 cents per dozen. Medicated Bird Swings and Perches, for Bird Cages, keep them free from vermin. Address as above.

Laws' Patent
Corrugated

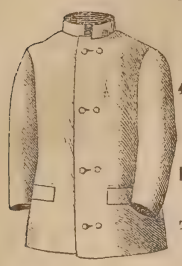
Maynard Creedmoor Rifle

THE MAYNARD AHEAD!

The following Targets were made by Prof. OTIS E. DEWITT, of Wheeling, West Va., at Rocky Ridge, Ohio, and 15th, 1876, with a *Maynard Long Range Rifle*, and are the MARKABLE OF RECORD. The great total of 49 in a possible 50—50 shots at the 800 and 1000 yards—has been equaled by any rifle in the world.

These scores were made in competition for a belt won at the Allentown, Penn. fair (1875) with the same rifle, and were done before the rules of the N. R. A., Full Creedmoor rules of close distance. These scores were all witnessed and sworn to by JAMES FOX, Secretary *Maynard Rifle Club*, Wheeling, West Va.



THE MAYNARD shots are the most perfect in workmanship as well as accuracy, of any shots ever made, presenting unbroken holes prior to the five shooting as well as the mechanical qualities of the rifle.

Ammunition.

Laflin & Rand Powder Co.,

No. 26 Murray Street, N. Y.,
Sole Proprietors and Manufacturers of

ORANGE LIGHTNING POWDER.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers are specially recommended for breech-loading guns.

ORANGE DUCKING POWDER.

For water-fowl, strong and clean. No. 1 to 5, in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

ORANGE RIFLE POWDER.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. BOGARDUS, the "Champion Wing Shot of the World."

Blasting Powder and Electrical Blasting Apparatus.

Military Powder
of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood-cut, sent free on application to the above address.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 50 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 8 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,

88 WALL STREET, NEW YORK.

A GOOD PLAN

The most profitable way of dealing in stocks is by combining many orders and co-operating them as a whole, dividing profits *pro rata* among shareholders, according to the market, monthly. Each customer thus secures all the advantages of immense capital and experienced skill, and can use any amount, from $10 to $10,000, or more, with equal proportionate success. "New York Stock Reporter" and new circular mailed free. Full information for any one to opperate successfully. Lawrence & Co., 57 Exchange Place, N. Y.

MOLLER'S NORWEGIAN COD-LIVER OIL

Is perfectly pure. Pronounced the best by the highest medical authorities in the world. Given highest award at 12 World's Expositions, and at Paris, 1878. Sold by Druggists. W. H. Schieffelin & Co., N.Y.

DITTMAR POWDER.

BOX 836, P. O.

OFFICE 24 PARK PLACE,

NEW YORK.

PURE TIN-COATED AND BURNISHED
DROP AND BUCK SHOT.

American Standard--Eagle Brand.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM:— NEW YORK, Jan. 13, 1879.

HAVING been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD MANUFACTURING COMPANY, NEW YORK.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of $1.00.

Agents Apply to **L. Lum Smith,** Patentee
717 SANSOM ST., PHILADELPHIA, Pa. { Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald:*

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

The Largest, Spiciest, and only
REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

by over 200 responsible advertisers in this month's issue of the *Agents' Herald.* Grand outfit, including circulars, terms, and a beautiful 10x14 engraving of the *Smithograph*, sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's *Agents' Herald*, all for 10 cents. Yearly Subscription, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste,

Original.

SOME DAY!

SOME day when seated by the white shining sand,
I shall have looked my last upon the sea,
And death beside me looking, too, will stand;
Though I shall know not he is close to me.
I shall not feel his touch so cold and chill—
I shall not hear his footsteps creeping still
And silent on the hard, wave-beaten beach.

Some day the woods I love so well will fade
Out from mine eyes forever. I shall hear
No more the birds sing in the sylvan shade,
Where woodland fountains sparkle bright and clear.
I will not know it—but the golden sun
My raptured eyes no more shall gaze upon—
No more its rays my upturned forehead reach.

Some day my wandering feet will slowly tread
For the last time the winding mountain way;
For the last time will watch the clouds o'erhead
Upon the slopes in changeful shadows play.
The trees will wave in leafy splendor there—
But I with bird and bee thenceforth will share
Those quiet hours of peace in life no more.

Some day for the last time my eyes will close
To all that can annoy or lead astray;
The lids will drop alike to friends and foes.
To open on a brighter, fairer day;
Shall droop to grief, to sorrow and to pain—
To weary rack of body, heart and brain—
To slanderer's breath and disappointment sore.

And then with heart at peace within my breast
And folded hands, my friends shall gaze on me—
Shall even envy as I lie at rest,
What all on earth must come at length to be—
A sinless shell. But pray, sigh not nor weep,
God lent me life; He now that life will keep
Safe in His fold as shepherds keep their sheep.

Sept., 1879. FRANKLIN W. FISH.

Bear Hunting Round Georgian Bay.

"HAUL in your slack! Belay!" (Creak! crack! creak?) And the steamer *Silver Spray* ground her chafed timbers against the log jetty at She-ba-wa-nah-ning, blew off her steam noisily for a moment, and then her throttle closing suddenly, let into our ears a strange Indian and French *patois* from the motley, lantern-lit group flocking about the gang-plank. It was 11 o'clock at night, dark and wet.

My fellow-voyager, Mr. Arthur Kilburn, jr., and myself had come down from Sault Ste. Marie, leaving this latter place on the 17th of September. It was our first hunting and fishing tour into Georgian Bay.

"What place is this, Captain?" asked my comrade.

"She-ba-wa-nah-ning, sir. Stop about ten minutes, just long enough to run up with the mail-bag and take on six barrels of whitefish. Come, come! Hurrah, boys! Hurrah, boys! (this latter exhortation to the deck-hands, rolling on the whitefish).

We stood and looked at the half-savage crowd. Fog was driving in. The steamer's red lights aloft showed like dingy garnets.

"*Bon soir*, Sue," called the second mate to one of the red-jacketed young women on the jetty. "Seen anything more of that bear?"

"'Deed, yes sir," replied the girl cheerily. "It's coom round twice sence you's here. Killed two more coos and a hoog, and coom just the nighest gettin' Molly-meg's two pappoos out blueberryin'."

"What's that about bears?" we demanded.

Rather reluctantly the second mate turned his attention from the girl on the wharf. "Oh, it's jest a big black bear," said he, "that's got after them here. Take's hogs, cows, pappooses, anything. Big's an ox, they say."

"Why don't they shoot the brute?" Arth asked, incredulously.

"Well, that's it," laughed the mate.

"What say?" said my comrade, turning to me. "Here's a bear spoiling to be hunted. Shall we go for that bear?"

"That's what we're up here for, hunting," was my reply.

"Go it is, then," exclaimed my adventurous friend.

To run to our state-rooms, seize our valises, ulsters and rifles was the work of a moment, and we jumped from the rail to the pier just as they cast off the line.

"Now then," says Arth, addressing himself to the crowd generally, "fetch on your bear."

But the aborigines did not take the joke worth a cent. The squat, dark-skinned group regarded us in distrustful silence. Indeed, that to land in the night at one of these remote, outlandish little hamlets of half-breeds, Indians and French Canadians, where the English language is a rarity, is not a nice thing to do, we came near finding out to our cost. The people, whom we had landed to deliver from the bear, were very slow to receive us. Hotel there was none, and so far as we could learn nobody ever put up anybody, nor wanted to, for love or money. It began to rain hard, too. At length we heard of a man who once put up a government inspector. He lived about a half-mile off. His name was Thomas Methot. An Indian showed us his light, and we steered for it over log fences, stumps and the wrecks of old canoes. Luckily Methot was indoors, and, after some parley, let us in, too. His house was built of squared timber. There were two rooms. His wife, Dollie, was a "monster," with a back as broad as a bale of hay, and there were two little Methots, pale, "peeked" and dirty-nosed.

They gave us the spare room. One end of the old stove stuck through the partition into it. There was a bed, or rather a bunk, consisting of a mass of old blankets and coverlets, with tow and linen sheets, spread on creaking boards laid across two "horses." The pillows were of swingle tow in wads.

Yet we could have stood these little eccentricities very well if the bunk had been all right. But we found it full of, heaven only knows what sort of savage beasts, that attacked us with the ferocity of Bashi Bazouks. After a terrible contest of about half an hour we re-dressed, pitched the bed into one corner and lay down on the bare boards. It was not quite so bad after this, and about midnight we both fell asleep.

In the morning the fat woman gave us for breakfast a fried whitefish and a small loaf of something which up in that section managed to pass itself off for bread. We had just sat down to it when the Methodist minister came in to breakfast. We had to divide with him; and short division it was, at least our individual quotients were short enough. However, the good man asked a blessing upon it, which, as Arth remarked, helped fill up a little.

We then went out to hunt the bear, taking Methot along with us as guide; and the minister went too, though he had no gun.

It is a fearful country all about She-ba-wa-nah-ning. Up to the north and northeast there is a long rocky mountain, covered with thin shrub, which but half conceals the weathered ledges. The whole country looks remarkably desolate, and the blackened stumps of the trees, where fires have destroyed the forests, heightened the aspect of desolation.

Over ledgy mountains and bushy hills, through tangled tamarack swamp and rocky blueberry fells, we hunted bear for six or seven hours assiduously, Methot leading the way. We visited the scene of the Molly-meg calamity and the spot where a cow and several sheep had been devoured. Everything hereabouts was very quiet now. Not a sign nor token of the bear was anywhere discernable.

Toward night we returned to Methot's much fatigued. During this whole day we had seen absolutely nothing in the way of game, save one red squirrel.

It would be five days, possibly six or seven, before another steamer would touch at this point: a fact we had not taken into consideration on landing. We had got hunting enough, such as it was, the first day. But Methot now suggested a bear trap, intimating his belief that the bear was, for the most part, nocturnal in his habits. The sort of trap which our friend Thomas suggested was a pit-fall delusively covered over with leaves and dry sticks and earth, the same to be baited with the carcass of a sheep—Thomas to furnish the sheep at four dollars, a price we afterwards learned to be a somewhat exalted one in that region. It was a very poor old scab of a sheep, but as Thomas remarked, it would probably be just as good for the bear, as one of his best ones; and the man had but nine in all.

We employed two half-breeds, named Doc and Ebe Molosse, and set them to dig a pit, a mile distant in the woods. They sank it to the depth of six feet about ten feet square at the bottom and set with stakes, sharpened at their upper ends and about three feet high. These were to impale the bear when he fell into the pit. The hole was then covered with slender poles, fir boughs and a light coating of dirt and leaves. To a maple branch which projected out over the pit, was suspended the carcass of the sheep.

This job consumed nearly a whole day.

Early next morning we walked out to the site of the trap pit, rifle in hand.

"We've got him!" Arth exclaimed on coming in sight, for the sheep was gone and the pit broken into.

We ran up. But the bear was not in it; some of the sharp stakes were upset, however, and there were what looked to be his tracks about the place. How he could have fallen on those stakes without injury was rather remarkable, we thought, to say the least.

That day we deepened the pit two feet, reset the stakes more firmly and bought another sheep of Thomas, for bait. We were determined to have that bear if possible.

Next morning the bait was gone again, lots of the stakes jammed down and lots of black hair, too, on several of the points. This was rather exciting; we bought another sheep and put in numbers of other sharp stakes.

Just at nightfall, we went out to the pit once more, only to find the bear had not only taken this third bait, but had upset more than half the stakes in his struggle out of the pit.

Evidently this bear's hide was proof against sharpened stakes. It was simply ridiculous to go on furnishing him sheep on these conditions.

Thomas now recommended a log-trap. The Molosses were set to work with axes; and a small log house thirteen feet by eleven, and six feet high, was built of fir-timber, near the site of the pit-fall. This structure was roofed over with heavy logs and a drop-door, with a spindle attachment, rigged for it. Another sheep had to be bought of Thomas to bait it.

But this laborious contrivance fared no better than the pit-fall. We found the bait gone and the drop-door torn down next morning. In short the whole structure was grievously maltreated and bore marks of dreadfully rough usage.

"Altogether too much bear for the trap!" my friend remarked.

But there were several little circumstances about the matter which made us very uncomfortable, not to say suspicious. We both agreed that to buy more sheep would be folly. In fact, we were not a little disgusted with the whole business. To crown all, bad weather kept the next steamer from putting into the narrow difficult channel and harbor of Shebawanahning. We were still cooped up at Methot's and fed on white fish and French-Canadian bread. Fishing for trout in a stream four or five miles back to the northeast of the landing was now our only vestige of sport. The fishing was good. The stream was full of trout, now confined to the deep holes on account of the drouth. It was no difficult matter to catch all we could both carry home; and these formed a very agreeable change from the white fish.

On either the third or fourth day we fished there, we followed the brook farther up among the mountains than on the previous days, to where the channel was very rocky and broken into falls by ledges. Here were some enormous boulders under which the water worked its way, often completely hidden by heaps of drift-bush and logs.

We were fishing lazily out of a pool, a little below a considerable bend of the stream, sitting on a projecting rock, when we heard a noise as of some animal splashing in the water above; some large creature, too, it seemed from the sound. We sat listening a moment.

"It may be an otter," Kilburn said.

We had brought only one gun along with us, and that I had left nearly two miles below under a log beside the brook; for it was a great bother to carry it while fishing. We had never seen anything there worth shooting as yet. But Arthur had his loaded revolver with him, a good, serviceable weapon, bought by him in London, having a bore of .42—almost half an inch.

Eager to get a sight of the game, if nothing more, we jumped up and ran through the intervening bushes along the bank. Working through a thicket of little firs, we came out plump upon a high ledge, overhanging a deep hole in which the stream lay enclosed by the rocks.

"For Moses' sake!" muttered Arther, "what is that?"

At second glance I saw it was a bear, and a big one.

"It's our friend!" I exclaimed; "or an own brother to him! And he's up here fishing, too!"

For at that instant I saw the bear seize and chew up something. The hole was full of trout.

"No gun!" Kilburn groaned. "Here's my pistol, though!" he exclaimed, and pulling it out of its sheath in his belt and reaching down over the rocks, fired. The crack of the pistol was the bear's first warning of our presence. When that slug-bullet struck him he gave a leap to one side, whirled round with a terrible roar, and, all dripping, glared up at us.

Kilburn let another ball go into him; at which the bear made a savage bound to get up out of the pool; then another, and another, its great claws scratching on the rocks, and he uttering some of the most terrific roars I ever heard. But the place betwixt the boulders where the water ran into the pool, on the upper side, was not more than a foot and a half wide; and the lower end of the hole was filled up with a vast heap of drift stuff beneath which the water worked out. A large hemlock log had fallen over the rocks into the pool a little below where we stood. The bear, seeing the fish, had scrambled down the trunk of this hemlock into the water; so at

least we judged from the marks on the log. Finding that he could not leap out of the hole, the animal next assayed to climb up the hemlock trunk.

"For mercy's sake don't let him climb up here!" shouted Kilburn, who was trying to take aim for another shot. The huge brute had already got foothold on the log, growling like seven lions. The case was urgent. Seizing a great stone, which would have weighed twenty or thirty pounds, I hurled it down on him, and my friend fired again at almost the same moment. This bullet hit the creature in the neck. The ball and the stone together caused it to loose its footing, and it blundered back into the water. With this it seemed to lose its courage. Instead of trying to get to us, it now ran to shelter beneath the overhanging rocks. Kilburn kept shooting. At every shot, for a dozen times, the beast would splash from one side of the pool to the other, which was already reddened with gouts of its blood. At length, reaching down, my friend fired a shot into its head, near the left ear, which seemed to kill it almost instantly. Altogether he had fired near thirty bullets into the bear; but for the advantage of its being in a place from which it could not easily get out, we should hardly have mastered it. I do not believe that so big a bear was ever killed with a revolver before. Kilburn and I could no more get it up out of the pool, alone, than if it had been a mountain. It took Methot and both the Molosses with us, tugging hard, to haul it up.

Methot took the hide off for us. How much the bear would have weighed, we could only estimate, there being no scales nor steelyards in Shebawanahing that would have weighed it. My friend set its weight at eight hundred, and I should say somewhere from seven to eight.

It was an enormously bony brute, and was in pretty good flesh. Nearly every halfbreed in the place came and got a piece of the meat to eat—as much as each could comfortably carry home. And there seemed enough for all.

Whether this was indeed the same bear which had menaced the pappooses and eaten our sheep bait so freely, I am able only to guess. To tell the truth, I now have my doubts about any bear ever coming near our pitfall, or our trap, and deem it more than probable that Methot or his *confreres* took the mutton bait after pocketing the price for the sheep—and sprung the trap to conceal the trick. Ah, these halfbreeds are a bad lot: not very intellectual certainly, but depravely cunning and tricky.

REEL FOOT LAKE.

IT was the good fortune of this writer, in the year 18—, to accompany a party of gentlemen in an exploration of the lakes of the lower Mississippi. On the 3d day of November, our two skiffs were lowered from the deck of the good steamer, *Dictator*, just opposite Madrid Bend. Our party consisted of six persons. Two stalwart individuals of the African persuasion, who acted during the trip in a variety of useful and ornamental occupations, viz: cooking, rowing, cleaning game, fish and stuffing specimens; playing the banjo, dancing and whooping; four gentlemen, one savant from Paree; the other three good shots, good anglers and good fellows generally. We had four muzzle-loading shot guns, best make, and two Hudson's rifles, small calibre, fishing rods, ammunition, camp equipage and full outfit.

Reel Foot Lake was the initial point of our voyage. Seeing an agriculturist on the bank who was evidently admiring our whole proceedings, and doubtless thinking that we were all slightly cracked, we saluted him in our suavest manner, whereupon the following conversation ensued:—

Native:—"Whar in thunder you gwine with them skiffs an' niggers? gwine to fish, or going to duck it? powerful sight of ducks over on Reel Foot, now, an'—but say now, hev you got a drink?"

Voyager:—"Sir, it is our intention to kill every duck in Reel Foot Lake, catch every fish, and then moving on to New Orleans, clean out the Gulf of Mexico of its finny inhabitants."

Native:—Thar, now, you talk like a book and you look like one; but I say now, hev you got a drink? I'm powerful dry."

Having satisfied his curiosity on this point, in fact duplicating the required drink, the cockles of his heart were so warmed with the generous liquor that he volunteered to transport us, bag and baggage to the Lake. He was faithful to his promise.

Scarcely had the rosy fingers of the blushing Aurora been entwined in old Sol's head in order to awaken him from his final nap, or in plain English, scarcely was it dawn when we launched our skiffs upon Reel Foot Lake, State of Tennessee. I had shot ducks on all the streams of southern Kentucky; I had killed them by hundreds on the prairies of Southern Illinois and Missouri. I thought that I had seen ducks plentiful and in galore, but I had never dreamed of seeing them in such countless numbers as I saw them on Reel Foot Lake. They were flying high from some cause, but the Eley's wire cartridge did the work most effectually, and by nine o'clock we had had our fill of sport, having brought to bag, seventy-five birds.

We were gentlemen, and did not propose to slaughter the thousands of birds around us, merely from the brute instinct of slaying. And yet it was hard self-denial; for it is with a keen sense of personal triumph that you knock over, right and left, two swift flying mallards, and see the sudden, helpless closing of the wings and the heavy, headlong thud into the water, which tells that your aim has been good and that your gun is of the right stamp. Ducking is certainly thrilling sport, and one that taxes the eye and hand more than any other in the whole category of field sports. In the North, you submit to all kinds of discomfort on a good ducking day; here you can shoot all day with a light suit of waterproof duck and be perfectly comfortable.

Near the centre of Reel Foot Lake is the home, by prescriptive right, of the cormorant. This settlement is called "Water Turkey Town." Here the cormorants collect and build their nests by thousands in the branches of the tall, dead cypress trees. Millions of blue catfish, some of them in weight as much as a hundred pounds, collect under these trees to eat the pieces of the fish dropped by the old birds while feeding their young ones. Although the season of nesting was over we determined to visit the place. Sam and Dick, our sable friends, had each of them out a cane on the banks of the lake the evening before, which rods would have horrified a "complete angler." They were about twenty feet long, about the size of one's lower arm at the butt, and strong as steel. If there is anything on the earth that can delight the soul of a negro, it is fishing for catfish. In a stream swarming with fine perch, you will fine at intervals on Saturday, an old darky seated comfortably over a deep hole with his rod stuck in the bank fishing for "cats." Let not the Northern reader suppose that they are like his own catfish. No, they are long, trimly built, with a forked tail, and having as much game and dash about them as any bass. Indeed, I think that a five pound channel cat, *ceteris paribus*, will give more trouble in its capture than the same weight bass. I know this, that at forty yards, I have had them snap a braided silk line for me, malgre fine rod and Milam reel.

Anchoring the skiffs near the middle of "Turkey town," we told the sable anglers to pitch in and distinguish themselves while we ate our lunch and smoked the pipe of peace. Quickly disemboweling one of the ducks, the entrails of which make an excellent bait for catfish, they dropped a line of invitation to their finny friends. Catfish after catfish, weighing from ten to twenty pounds, amid the uproarous shouts of the negroes was lifted into the boat, until Sam having hooked one more than twice as large as any that had been caught, finding that the fish would pull him out of the boat if he maintained his hold of the cane, coolly let it go and sprang after it. After a most exciting chase, and many winding dowlings and sudden turnings Sam got hold of the rod, and bracing himself on a log, succeeded in taking the enemy prisoner. We rescued him from the log, and threatening to box his ears if he did another trick, the fishing was resumed. Now, Dick who could not swim like Sam, after witnessing that worthy's capers, bethought him of a bright plan to capture a "big um," should he bite. He tied a piece of strong cord round his wrist, and then secured it firmly to the butt of his rod. Not ten minutes after he had thus "fixed" himself, a "cat," a veteran of the Reel Foot, an old citizen, seized the hook. Never shall I forget the look of horror that overspred the dusky countenance of that sable fisherman. We were much astonished when, with a loud yell, Dick, in imitation as we thought of Sam, plunged headforemost into the lake. Amid the loud cries of the negroes we could distinguish the words, "Tied to my arm." Gradually the true state of things dawned upon us, and as we could not spare Dick it was incumbent upon us to rescue him from his perilous condition. This was very quickly accomplished by cutting the line, but not until the fish had dragged Dick many times under the water. Dick never tied another rod to his wrist. Fabulous tales were in circulation in our neighborhood among the negroes about that fish after our return; Dick swearing most solemnly that he weighed a thousand pounds, while Sam would back it by saying that he was as "big as a horse." As we had had an entertainment, better than "H. M. S. Pinafore," and had laughed until our sides were sore over the mishap of Dick, we made them quit fishing, and wended our way back to camp. On our way we took a dozen or two trout and a fine lot of speckled perch, the best pan fish in these or any other waters.

We spent a week on Reel Foot—a most enjoyable week. We killed ducks, squirrels, quail and a few snipe. We lived like kings, and nowhere in the world can the sportsman have that acme of his wishes—plenty of sport and freedom from annoying insects—in such perfection. The golden haze of the Indian summer, the sweet stillness of the scene, all combine to render this the sportsman's paradise. Putting our traps on board a passing steamer, our next point for exploration was a chain of lakes below Vicksburg, Miss., which we were told reached to Baton Rouge, La. We found this to be true, for our portages in no case exceeded more than five miles. We found the lakes, all of them, swarming with fish, which to take required the merest novice in angling. As a striking illustration of this fact we were one day exploring a large lake, shooting sometimes a duck and lazily enjoying the perfect weather. All at once we came upon a "school" of the speckled perch, millions, no doubt, in number. We had no bait, having expended our last worms the day before. I suggested a fly of the white duck feathers. After long and patient manipulation I succeeded in catching one perch. Cutting this into very thin strips like a minnow, we took in less than an hour fifty or more, and could have caught barrels of them with the same bait. These were the very largest perch that we saw on the trip, many of them being eighteen inches in length and weighing from two to three pounds. With a delicate line, a pliant rod, and no sinker, they are very game, and give the angler his full share of trouble in capturing them. These perch are very voracious, but when they cease biting it is an evidence that the "school" has moved to some other locality.

ST. CLAIR.

Bartow, Ga., June 21st.

Fish Culture.

THE LUSCIOUS OYSTER.—Thousands of men are afforded employment by the oyster business in Maryland and Virginia waters, besides those employed in the immense packing-houses in Baltimore. Fleets of schooners and sloops cruise in every bay and inlet, gathering in their harvest, to be distributed all over the country. A schooner generally carries from 2,000 to 2,500 bushels, and a sloop from 200 to 600. The latter rarely make long trips, but the schooners go into any waters where the harvest is good, as they are more fitted for the rough usage to be encountered on an open sea. Planting grounds range from one acre upward in size, and are bought and sold just as other real estate. The grounds rent for from $35 to $150 per acre, and sell for from $100 to $500. There is, however, an immense natural growth of oysters extending from Pool's Island to Cape Henry, which may be considered almost inexhaustible. A good ground consists of three requisites for the successful growth of the spawn planted, viz.: Moderately shallow water, so that they can be easily dredged, a free tide to afford them sustenance, and a fairly firm bottom to prevent smothering. If an oyster is dropped in water which is perfectly still, it may live, but will never grow fat.

The amount of seed usually sown to the acre is 400 bushels, and is done by shoveling them from boats, which are pushed slowly through the water. This amount must, however, be regulated by the time they will be allowed to lie. Any man has the privilege of staking out and planting ground not already occupied, and there is no place which affords so good a field for energy and enterprise in this line as the Chesapeake Bay and its surroundings.

The best grounds in Maryland waters are Tangier Sound, Pocomoke Sound, Patuxent, Little and Great Choptank, Weir, Miles and South rivers.

Millions of dollars are invested in the wholesale business, and expended in schooners, sloops, scows, offices, implements and beds. An ordinary capital ranges from $25,000 to $50,000, though there are many men in Baltimore to-day with a flourishing and profitable business who can go back to the time when they had only a small sloop and one or two dredges. All these men generally commenced their business by dredging for natural oysters, which they kept up until they had acquired a sufficient sum to rent or purchase a bed of their own. The oyster-packing business is, however, a special feature of Baltimore enterprise, planting occupying the chief position in Virginia and other States.

Some of the largest firms in Baltimore have a capital which will probably exceed several millions.

Besides the immense quantities of oysters canned for internal and foreign shipment, they are also shipped to Western cities in tin boxes, packed in ice, and sell there for a handsome profit. Cans of Baltimore cove oysters have been shipped to Cairo, Egypt, and enjoyed there as a most delicious *bonne-bouche*. European oysters are well known as being decidedly inferior to American. They are almost universally put into tanks of stagnant water, where they acquire a greenish hue, and come upon the table small, shriveled and lean, without substance or flavor. But within recent years a party of English capitalists, appreciating the superiority of the fresh American oyster, have formed a company for transporting them to English waters, where they are planted, just as is done here.

The spawn is taken over heaped in the hold of vessels, and although it is estimated only about one-half ever survive, yet it has been found that the profit from the business is considerable, and they are rapidly becoming more popular there with the public. The spawn is obtained from the beds in Tangier Sound.—*Baltimore Gazette.*

VIRGINIA'S OYSTER TRADE.—The president of the Norfolk Oyster Packing Association says that 3,000,000 bushels of oysters will be taken from Virginia waters this year, and more than one-third of these will be handled by the packers of Norfolk and Portsmouth. The average value of oysters is 35 cents a bushel, making the oyster trade of Norfolk something like $350,000 a year. The business has been built up since the war, and is steadily increasing.

HOW SETH GREEN BEGAN.—If old St. Anthony, instead of preaching to the fishes, had studied their domestic habits and started fish culture, he would have been a great deal more sensible saint than he was. What St. Anthony did not do, Seth Green did. A correspondent of the *Cincinnati Inquirer*, has this bit of gossip about him:—

Among the interesting men of Rochester is Seth Green, the patron of fish culture in America. He is a broad-shouldered man, a square, seaman-like face, reddened by the sun and good living. He has a fine white beard flowing over his chest, and he generally wears a sort of brown velvet sacque and drives a good horse. He is worth about $55,000, accumulated as a fisherman. I said to him, in a few minutes conversation we had: "Mr. Green, what put you in the notion of hatching fish and restocking our streams?" "I fished Lake Ontario," he said, "for about one generation. I had 100 miles of net and 100 hands before I was done. I kept a fish market in Rochester, and supplied whitefish, salmon, trout, pickerel, etc., all over the country. I was a good line fisherman, and went up the streams leading into the lake to get brook trout, salmon and other game fish. One day when up the stream, I saw a fine female salmon, weighing about six pounds, come up, attended by her mate and three or four other fish. I had to jump behind a tree and take an observation, and there I saw the salmon begin to scoop out a place in the bottom of the brook with her tail. After scooping a while she would go off coquettishly, and then come back, and the other fish seemed to help her. It occurred to me that she was putting her spawn down there, beyond the reach of the other kinds of fish. There is nothing in the world so delightful to brook trout as to devour salmon spawn. You know how salmon multiply. Put the spawn out of sight and it will multiply into little salmon; let it lie in the water and the trout will eat it. I became so interested in that incident that I got up in the tree next day and made myself a kind of seat there among the boughs, where I could look down in the clear water at the operations of those fish to protect their spawn. I made up my mind then if I ever got a little more money than would keep me I would go at fish culture. It had been begun in England, and I began to read on it. As soon as I had $1,200 a year more income than my necessities, I went at this fish business, and took a brook near Rochester, where I had five miles to myself, invented my hatching boxes and started in. The only money I have made in this business was by the sale of the brook. I have made $11,000 on it. However, the work has been started in various parts of the country, and we shall not leave the generation to succeed us without fish and sport.

ONE.—Of the 180,000 shad deposited in the Detroit river, Mich., some years ago, one was caught the other day. If one from 180,000 appears a very small harvest for a very big sowing, we may remind our Michigan friends that the first had to be caught some time, and that first could not be more than a single one unless by some freak of nature. Stewart was worth some millions of dollars when he died, but Stewart had to make his first one dollar before he made his millions. One is a good point to start from.

—An Englishman is to try the experiment this fall of transplanting 200 American catfish to British waters.

WHO CAN EXPLAIN THIS?—The following account is taken from the San Francisco *Chronicle*, and was given to a reporter of that journal by Mr. B. B. Redding, a San Francisco naturalist, a member of the Academy of Sciences, one of the State Fish Commissioners and otherwise well known to our readers by his contributions to the FOREST AND STREAM. The easiest way to explain it is to say that it is gammon. The authorship of the story precludes such a disposal of it. We give it to our natural history students and fishermen to ponder over:

In Siskiyou county there is a caravansary kept by George Campbell, and known as the Upper Soda Springs Hotel, which is situated on a semi-circle of land formed by a bend in the Sacramento river. Wishing to have a supply of fresh trout close at hand, Mr. Campbell had a supply of water conducted through a board flume from the river to a natural depression in the ground, thereby creating an excellent fish pond of about half an acre in extent, which he supplied with full-grown trout caught in the river. The supply flume is, for some distance, raised about four feet above the ground. About 400 feet from the pond a small rivulet, which is an outlet for irrigating water, flows under the flume, crossing it at right angles and about four feet below it, and empties into the river.

The fall of water from the end of the flume to the surface of the pond is two feet, the water in the flume flowing with a velocity of three miles an hour. The pond has an outlet, which is screened to prevent the escape of the trout. Shortly after the pond was established, the discovery was made that numbers of fish were missing from it. Mr. Campbell instituted an investigation, which resulted in discovering that the fish, dissatisfied with their new quarters, had leaped through the waterfall two feet into the flume, and swimming against the strong current until they reached where the stream crosses under the flume, they had leaped out of the latter to the stream four feet beneath. Upon discovering the method of flight adopted by his finny acrobats, Mr. Campbell prevented further escape by placing a screen at the mouth of the flume. Up to last accounts the dissatisfied fish had discovered no other method of getting into their favorite Sacramento. The questions immediately suggest themselves: How could the fish know that a stream flowed under the flume, the sides of which were considerably above the surface of the water, and if they possessed that knowledge how were they to know that they were immediately over it? Mr. Redding examined the ground carefully along the flume, and could not discover a single instance of a trout having jumped out at any other place.

PONDS WORKING—Some of our readers have asked what was meant by a "pond working," or what process of nature is in progress at the time. At our request, Mr. Seth Green has answered the inquiry in a very intelligent manner, and thereby contributed information which is known to but few. Last year we saw Lake Winnebago, in Wisconsin, work. The water which is ordinarily very clear, was so cloudy that it looked like sea water. A microscopic examination of a glassfull showed the vegetable seeds plainly. The hints as to the proper time to fish will no doubt be acted upon hereafter by all who read this letter of Mr. Green's:—

ROCHESTER, N. Y., *Sept.* 23.

Nearly all lakes and ponds, "work," or what is generally called, "blossom," some waters once, and some twice during the summer months. It is a vegetable substance that grows on the bottom, and at some time during the summer the seed or bloom breaks loose from the bottom and floats in the water. The leaves of the blossoms are of the same weight as the water, so that some kinds do not come to the top and float but float about in the water, giving the water a thick or oily appearance.

You can catch but few fish when the water is in blossom. But as soon as the water is done blossoming the fish will bite. Irondequoit Bay went in blossom this year on July 1st and cleared up August 20th; and during that time there were but few fish taken. But since August 20th a market basketful could be taken in a short time. All pleasure seekers, I mean parties going on fishing tours, should find out if the water they intend to visit is in blossom, and if it is, do not go until it clears up. Get there as soon as it clears, and you will have good fishing. SETH GREEN.

TROUT PARASITES—*Yaphank, L. I.*—I send you a notice of a new fish parasite from a Western paper. Something like this has been found on the fish in the ponds of the South Side Club and has been sent to Mr. Perkins for identification. We quote: "Seth Perkins has found a new fish parasite which preys upon brook trout and suckers, eating holes in their sides. It looks like a bat-shaped drop of jelly and would naturally be taken for a little swelling under the skin." R. WINSLOW.

REMARKS.—Your parasite is not new. See Livingston Stone's "Domesticated Trout," pages 183-4. The only remedy he recommends is to take out the affected ones and throw them away. Then change all the others to a new place where you can depend on the water (water not liable to contamination by the parasites floating down from other waters connecting therewith), and lose no time in doing so.—[ED.

NEW YORK.—The State Fish Commissioners have placed in the Hudson this season more than 6,500,000 shad fry. Other work of the Commission has been with lake and brook trout, salmon, black bass, perch, and whitefish.

—Carp are now said to be rather numerous in the Shenandoah, Va. An old Philadelphia angler who annually visits this stream on account of the fine black bass fishing to be enjoyed there, tells us that he has taken the carp on many occasions weighing from four to five pounds each. He found the interior of the fish lined with fat and considers it one of the most palatable species he has ever eaten. Years ago, it is asserted, a few specimens were put in this river, hence the present supply.

VIRGINIA PROGRESS IN FISH CULTURE.—W. F. Page, Esq., of the Virginia Fish Commission, is now putting up a trout hatchery at Wytheville, to have a capacity of 1,250,000 salmon. He has 2,000 gallons of water delivered at 45 feet elevation, 53° F.

Natural History.

DRUMMING OF SPRUCE PARTRIDGE.—The Canada grouse is commonly known in Canada as the "spruce partridge." It is a beautiful bird, especially the cock, and is naturally quite tame and easily domesticated. It is altogether different in this last respect from the ruffed grouse, or "birch partridge." The drumming of the ruffed grouse has at various times served as a subject of animated discussion in these columns, but we do not remember to have seen the drumming of the Canadian grouse referred to, except on one occasion by our correspondent, "Penobscot." One of our New Brunswick correspondents who is a professional trapper, says the sound is produced by the cock bird flying almost perpendicularly in the air against some spruce bush. He says: "I have often heard and seen them, though the noise can hardly be called drumming. It is thus the sound is produced which calls the bird of the other sex."

RACCOONS ALSO.—We find the folowing paragraph adrift without any credit. It is interesting, if true:—

Some time last winter a gentleman in the northern part of Smith County, Texas, on the Sabine River, was riding a pony, and as he was approaching the river a raccoon ran out and bit the horse on the leg. The raccoon repeated or continued its attack until the gentleman put the pony into a gallop and ran off. A few days ago the gentleman was leading the pony out of a pasture. While he was letting down the fence the pony suddenly commenced biting the rails furiously, had a fit, fell down, and in a few moments was dead.

A FIELD FOR NATURALISTS.—*Corpus Christi, Texas.—Mr. Editor:*—This is a good game country. If I knew the correct names of the fish and game to be found here I would make out a list, but I only know the local names, and they are generally incorrect. Roseate spoonbills are called flamingoes; avocets are called tilters; cormorants are water turkeys; coots are poule d'eaus, etc., etc. In the winter there are myriads of water fowl from the north, ranging from teal duck to swan in size, and from the jack snipe to the trumpeter crane. We have no end to the varieties of fish, of which I know the names of only the common kinds, such as red fish, sheepshead, flounder, pompano, trout (weak fish), spanish mackerel, perch, drums, grand ecaille, jew fish (for which I would like to know the proper name), string ray, croaker, sharks, gars, saw fish, porpoises, etc.

We have a new fish for these waters called a pike. It is similar in shape and appearance to the alligator gar, but has soft scales and the under jaw projects beyond the upper at least half an inch. It grows to about four feet long and looks very similar to the pickerel of the western rivers. I would think it of the same species, but it is a salt water fish entirely. I never before heard of a salt water pike.

If you could get one of your scientific correspondents to visit this section of the country, I would be glad to assist him in procuring curiosities. SAM. M. JOHNSON.

A FEW QUESTIONS DISCUSSED.

ARE robins topers? Are crows thieves, or our benefactors? When do deer feed?

I have been much interested, Mr. Editor, by the articles in your issue of August 14th signed "N. A. T." and "Forked Deer" upon these subjects respectively, I do not remember "St. Clair's" letter, published May 1, and cannot lay my hands upon the back numbers containing it; but, writing for this latitude and longitude, neither of your contributors would be correct, if judged by the light of my experience. As a sportsman, my observation has been entirely confined to South Carolina, and chiefly to one of the Sea Islands near Charleston. True, I have shot a good deal in several counties of both Up and Low Country; and let me tell you, the partridge shooting (folks your way call them quail) in the middle and upper counties is not to be despised. The birds are perhaps as numerous in the Low Country, but dense thickets and swamps here render their escape from the gun far easier than in the comparatively open country above. In York, I myself, a very ordinary and unsteady shot, have in a morning bagged forty-five birds to my own gun, and with one dog only, though she *was* a good one; and I *know* as a fact, well authenticated by a competent witness, of Mr. A. B. killing in Sumter County in one day's shoot seventy partridges in seventy-two shots. He, however, is accounted one of the "Cracks of the State," uses all the best means and appliances, and besides hunts his game on horseback, and has a servant along mounted, too, to pull and replace the fences in his route, which, thus with ease to himself, may cover twenty miles in the day.

But this is all digression. "Let us return to our mutton." Do robins get drunk? No! Do they sometimes fall from the tree to the ground *apparently* drunk? Yes! As a boy I was familiar with the negro theories well dwelt upon by "N. A. T." Many a time I have watched robins feeding upon, not only the China berries, but those of the wild orange; and these last they seem greatly to prefer; and more than once I have seen them fall and picked them up, not *drunk*, but choked by a berry of unusual size. The removal of it from the gullet left them as well and lively as ever. No; our cheerful little friend is no toper; but like, alas! too many of us, he sometimes takes more than is good for him. Query. Are the gourmand and the glutton less guilty than the drunkard?

Are crows thieves or benefactors? In *my* experience both. In April no more persistent foe to our Indian corn crop exists than Mr. "Corvus." We tar the seed, and this helps; but, despite the precaution, "Corn Minders" and "Scare Crows" as well are employed, and even these often prove unavailing in abridging his ravages. Upon the whole, however, he is a friend rather than an enemy to our farmers. I am quite convinced that his destruction of bugs and worms, hurtful to our crops, far more than compensates for his inroads upon our planted grain in one month of the year. Formulated, according to my way of thinking, the good he does is to the evil wrought by him as 11 to 1.

When *do* deer feed? When they are hungry, as a matter of course. But when are they hungry? Just when the conformation of their eyes fit them best to find the food they like best. When does the woodcock feed? At twilight, morn, and eve, and at night sometimes when the moon gives a light approximating to twilight. Occasionally, but not often, I have seen a woodcock boring in broad day when clouds were dark and skies were lowering. Ordinarily with us they lie closely in dense coverts at that time, and are only found by the sportsman stumbling upon them, or by the unerring nose of our faithful pointers and setters. Cockers are, I believe, practically unknown here. Deer are hunted in our locality, and, I think, generally in the Low Country, almost exclusively with dogs. I cannot, and do not, boast of a large experience in this direction, for my avocations since our civil war have consigned me to a very sedentary life. But I am not without the opportunities of annual observation. I have hunted *Cariacus virginianus* again and again, and have been at him, for my chances, quite a successful shot; and have to see or hear of his feeding by day proper. Let the scaffolds standing in our pea fields with their beacons aloft to "shine their eyes," and the darkey with his musket speak. Let the experienced hunters of our Southern land say what they know! What influence the rising of the moon by *day* may have upon the habits of deer in California, or elsewhere, I know not, but I never heard of such a theory here.

I have owned and bred both pointers and setters, and *in our climate* will back the former against the latter every time for general usefulness and average healthfulness. I think they have a higher order of brain, too; but this may be fancy; though I could quote "Stonehenge," than whom there truly is no higher authority in my favor. For endurance and persistent, never-flagging, all ambitious work, whether it be in thorny thickets or retrieving by land or water, commend me to the pointers I have hunted, against the setters I have owned and seen shot over by others.

But don't be alarmed! I never proposed when I commenced to write to go into this vexed question of pointer *versus* setter, and I don't mean to do so, at further length, either now or henceforth. It never can be settled; so let me suggest this possible solution: I have seen and hunted over a half dozen good pointers to one really good setter, and make up my judgment accordingly. Mr. "Jones" experience teaches him just the reverse. May not both be right? W. B.

Charleston, S. C., Aug. 25th.

—The great importance which ostrich farming has acquired in Southern Africa may be seen from an ostrich auction recently held at Middleburg, Cape Land. The lowest price paid for one pair of these birds was £180, and several pairs fetched £285. A few years ago ostriches were obtained by hunting only, and at that time a good bird could be bought for a menagerie or a zoological garden at a moderate price. But since their domestication and the development of ostrich farming as an industry their price has risen enormously. At present the Zoological Garden in London owns not one living ostrich. From the Cape of Good Hope 2,297 pounds of ostrich feathers were exported in 1860 at a value £19,261. but in 1873 the exportation had risen to 31,581 pounds at a value of £159,679, and recently a bunch of picked bloods were sold at Port Elizabeth for £67 15s. a pound, that is about 15s. a feather.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR THE WEEK ENDING SEPTEMBER 6TH.—One elk, *Cervus canadensis*; born in the menagerie; one rail, *Porzana carolina*; presented by Mr. Patrick McAleer; flew in the house through an open window during a storm; two jackals, *Canis aureus*; Hab India; one brown coati, *Nasua nasica*; fourteen painted terrapins, *Clemmys picta*; presented by Master J. Levy, New York City; one mocking bird, *Mimus polyglottus*; presented by Mrs. S. L. Paton, New York City; one common boa, *Boa constrictor*; one scarlet ibis, *Ibis rubra*; and two naked-throat bill birds, *Chasmorhynchus nudicollis*; all presented by Master Mario de Mendonca, New York City. The bill bird is a native of Brazil, and is called the blacksmith bird by the natives, because its note resembles the sound of an anvil struck by a hammer. W. A. CONKLIN, Director.

WILD RICE.—A West Stockbridge, Mass., correspondent writes:—The wild rice I got of our Wisconsin friend last spring does not flourish very well here. Either the seed was not good or I did not sow it properly. I can't find more than twenty stalks that have come from the seed. I should like to hear from some of your correspondents about growing wild rice here in the East; whether they think it will call duck here and get them into a habit of stopping and breeding here in the spring. I should like to hear from the parties who shipped quite a quantity of wild rice up to Brown's Tract, N. Y., a few years ago; I think the rice was shipped via Boonville to Forge House to be sown on the chain of lakes. G. N. B.

—Peter Johnson, of Rochester, left his wife without firewood, and so she took an axe and started for the woodpile to get a supply for herself. Selecting a proper piece of wood, she struck at it several times without hitting it, and at last cleft it partly in two. Thinking she could easily part it with her hands, she inserted her fingers in the crack and tried to spread it apart. Out dropped the axe, which unto this time had remained in the wood, and the stick springing together, imprisoned her fingers as in a vise. After struggling awhile she picked up the axe with her free hand, but in striking at the cleft the blow missed and cut off one of her fingers. She then gave it up, and, with her fingers still held in the stick, she managed to go to a neighbor's house, where she received assistance.

The Kennel.

OPENING OF THE FOX HUNTING SEASON.

Editor Forest and Stream:—

The red fox hunting season was on yesterday, Aug. 23d, opened by me. By previous arrangements with two other huntsmen (Hardy and Sherron), who reside on the south side of the Roanoke, we were to meet just after sun rise at the Sturgeon Hole, opposite my plantation and move up the river on their side to Curl's Hill. I was up by early dawn and in saddle. Moving in half speed to my landing, with Logan and Van in chain to prevent an accidental strike of my old red, Monitor, Bett, Red Bird and old Cornet suddenly raised their heads and dashed off. They had scented the old red. I directed my servant who was leading the chained hounds to go on while I would try to draw them off. I attempted it only. No human power that a huntsmen on such occasions exerts could do so. I was, therefore, under the necessity of disappointing the company or deserting a great part of my pack. I determined to do the latter. I hastened to my landing, collected such young dogs as were not too eager to be managed, took the boat and when half over the Roanoke discovered that the huntsmen were not up to time, and concluded to anchor midway in the stream. In a few minutes however I head the cow's horn of Hardy in the distance, and then pulled for shore. Monitor, Bett and others could be heard on their trail moving up on the north side of the Roanoke with increasing cry which soon died away in the distance. I landed and mounted a Lord Elgin colt that had been sent to me for the chase. As soon as striking the shore, Van, Logan and Mischief flew off on a red's trail, and in a few minutes roused two reds and drove them furiously up the Roanoke in direction of Curl's Hill, and right into Sherron's pack. Sherron had been delayed and being much behind time concluded to change his movements and cut off half of the ground by heading my pack. In ten minutes the united packs put the two reds into holes from which they could not be dug. We had ordered a sentinel to be at that hole, but like us he was too slow, and he had the mortification to see both foxes take the same refuge of safety. We did not attempt to unearth them. It was a hole in a bluff we had often sounded, and which we always close when regularly hunting these reds. Moving back down the Roanoke we heard Brodnax's old Mischief, the full sister of the peerless variety, now ten years old, on a dull trail. Mischief had been loaned to Hardy by her owner to raise a litter of puppies from Duke's Lad, a dog famed for dash, speed and pluck, and was then nursing them. Our re-inforcement swelled the cry to grand proportions, and we soon ran upon an old red who, for one, gave us a tough and doubtful race. We finally put him to earth. A runner was instantly dispatched for spade and hoe, and the old male was artistically secured by bag in Sherron's hands and safely brought across the Roanoke, and is now in my custody with chain solid and strong fastened to stake in a cellar. I have written to Brodnax who was at my house on the 22d, the day before the hunt, of my success, and to hurry and come without the delay he had fixed. The first week of September he was to come down and we were, by arrangement, to hunt my reds, and my old male, who is every inch a red fox. T. G. T.

Aug. 25th, 1879.

THE TRIALS AND TRIBULATIONS OF A SPORTSMAN'S WIFE.

SINCE one lady has safely invaded the "forbidden grounds," perhaps another may presume to venture also. I too am a sportsman's wife. Of this I was uncomfortably made aware the day after the marriage ceremony had been performed. It was Christmas ; and my husband's brother gave a reception in honor of the occasion. While the festivities were at their height we were suddenly interrupted by the sound of many guns. On looking out we perceived a number of gentlemen and boys surrounding a sort of box, which opened at intervals to permit the escape of a dear little pigeon. When it had flown a short distance one or more of them would shoot at it; sometimes bringing it fluttering to the ground, at others, to my joy, missing it entirely, when it would mount high in air and sail off to its old home in a great barn not far distant. What cruel sport! I thought, and wondered how those men could engage in it with such enthusiasm. "Hurrah! they are having a shooting match!" exclaims my husband ; "I must go down and husband did his best to break me of this, and so far succeeded that one morning I consented to fire at a target. He held the gun for me and I closed my eyes (though my ee the fun." A moment more and he was rushing over he fields and scaling fences in frantic haste to join the crowd, the other gentlemen of the party in close pursuit. Deserted so unceremoniously, we ladies were at a loss to know what to turn to for amusement. I sat down and gazed out of a window in the direction of the "scene of action," hoping and believing that my John would soon return. Presently I saw him coming. Ah! I thought, he cannot tear himself long away from me on this first day of our wedded life, and is returning to seek my side. But alas! he had returned merely to "seek" a shot-gun, and, having found it, hastened back with all possible speed, and I was again left "sitting by the window," musing upon the inauspicious opening of our career. The day was far spent when he returned; he "had had a glorious time," brought down more birds straight than any fellow there, and seemed happier than I had ever known him to be before.

The wedding trip over, we decided to make our home in the charming village of C—. The fact that there are many ardent sportsmen residing in this place has probably influenced my husband to remain in it to the present time. Just now glass ball shooting is the order of each evening, and old and young engage in it. But I digress. This village is situated on the western shore of the Little Iowa, and the scenery in its vicinity, comprising forest, stream and prairie, rocky hills, deep ravines, sunny slopes and broad green meadows, is varied and beautiful. I discovered very soon that my husband loved most ardently to visit these same haunts, but it was with gun in hand and setter dog for companion, and not with me. How I envied that dog, and how long the bright days seemed in their absence!

The monotony of my existence was at last interrupted by the arrival of a sister and her husband, who came from a distance to visit us. Now, I thought, since—fortunately for my sister—her husband is not a sportsman, John will be obliged to give up gunning for a season and entertain our guests. What nice times we will have, and what delightful drives we'll take over this beautiful country. But think of my dismay when my husband began picturing to him in glowing colors the delights of shooting ducks, hunting prairie chickens, etc.; and he so worked upon his imagination that my brother in-law was soon almost as eager to go as himself, and early the next morning they drove off for an all-day's hunt; not satisfied with this, they must go again the next day. How long this would have continued I cannot say, had not my sister, being alarmed lest the malady might be contagious and her husband become permanently affected, induced him to return home.

My husband cared little for society, excepting that of sportsmen. If we went to a picnic, Fourth of July celebration or anything of the kind, there was certain to be a shooting match in the near vicinity to which he would immediately repair, leaving me to wander aimlessly among the people with few of whom I had any acquaintance whatever. To illustrate the way in which I was forced to relinquish society during the shooting season I will give an instance. One day we received a delicately tinted note requesting the "pleasure of our presence" at a reception. I was delighted. Of course we must go ; it would not do to give offence, besides we had not been out for some time, and I was yearning for society. "John," I said," you will go with me to this, will you not? You will not go away gunning and disappoint me, will you?" "Why, do you wish very much to go?" "I do indeed." (John is really very kind, and during the close season—would that it extended through the year—a more exemplary husband would be hard to find). "Well, since you desire it so much I will try and go, though these fashionable parties have no attraction for me."

Thus assured, I made the necessary preparations. But the day before the event was to take place, he announced his intention of visiting his favorite hunting grounds, some twelve miles distant, promising to return if possible in time for the reception. In the afternoon of the following day he returned, hungry and loaded with game. Supper over it was late to prepare for the reception, besides here was this game, a part of which ought to be dressed at once, as the weather was still warm, so I gave up going and settled myself for an evening at home, picking ducks, etc. My husband sat watching me, happier in recounting how each individual bird had been brought to bag, than he would have been in the society of kings.

Finally it occurred to me that I might become a "sportswoman." To this end I diligently studied the columns of my husband's sporting journal, the FOREST AND STREAM. I had many difficulties to contend with, perhaps the greatest of these was, I was "gun-shy." If a gun were fired off near the house, in spite of my better judgment I could not refrain from running in and closing the door and holding my ears tightly till it was over. My husband thought I was taking sight) and fired. Caring little to know whether the ball struck the target or not, I turned and ran to the house, for fear he might want me to try it again. I presume I made a very bad shot ; at all events my husband did not compliment my skill.

One morning my husband informed me that he was going to hunt up some quails that he had learned were in an old field not a great way off. I decided at once to accompany him. Donning my hat and cloak—it was in late autumn or early winter—we set out joyfully enough, How fast John walked! I kept up with him for a while, but soon grew weary of wandering around among the cornstalks, which, by the way, is neither romantic nor pleasant. But that husband of mine was in his element. With gun firmly clasped and eyes flashing, he stalked on, regardless of cornstalks or my panting existence. He saw only the dog, which was running about and sniffing the air in all directions—in fact we were following the dog. Presently we came to the willows on the river's bank. Here Queen paused ; but at the master's command she again proceeded, slowly creeping. Presently there was a loud whirring sound, and a great number of quail rose among the trees. My husband fired, but without success ; the bevy divided and flew in different directions. My husband searched for them a little but did not find them again. By this time I was completely exhausted, and sank half fainting at the foot of a tree. After resting for some time I was able to go home, but I had lost all desire to become a "sportswoman."

Time passed by, and a sweet son blessed our union. We welcomed him with joy. "I shall not be so lonely now," I thought. A few years hence and my boy will be old enough to be company for me while his father is gunning." But alas! hearing an unusual commotion in the sitting room one day, I went to ascertain the cause, and beheld that infant—he could not yet walk—seated on the floor, his arm out stretched, and in his hand a broken pistol, which he pointed at various objects, screaming, "Bang! bang! bang!" His father was beside him, convulsed with laughter. "Ah!" he said to me, "if this child lives he will see more fun in his boyhood than ever his father did. He must have a gun as soon as he is able to carry it, and I will take him hunting with me." My heart sank within me, and thus ended my bright anticipations.

My experience with dogs—or a dog, rather—began when Queen was brought home from a neighboring city, a mere puppy in my husband's arms ,and deposited for the night in an old barrel back of the house. It required just about five minutes for her to tear the staves apart and make her way into the house ; and she has been a privileged inmate of it ever since—not that I wished her to be at all, but because my husband desired to have her treated very much as a member of his family. When I suggested to him that the dogs I had known and loved in my childhood were not permitted to enter the house except upon special invitation, he informed me that those dogs were ignorant and uneducated, and but mongrels of low degree ; while his was of royal parentage, and the blue blood of old England and Ireland coursed grandly though her veins. She must be treated with deference, and given the liberty of the house. I submitted without further expostulation.

O the annoyance that I have suffered from that blue-blooded dog! She would leave her footprints, exquisitely modeled in mud, all over my clean kitchen floor ; she gnawed the toe off one of my nice new shoes, and bit holes in the carpet. If a visitor was coming she knew it the minute the gate latch rattled, and would rush to the front door and bark loudly, in spite of my best efforts to control her. Finally, when I saw any one coming, I would call her into a back room and close the door between. But she soon began to see through my little game, and then I could not possibly induce her to come out, and would be obliged to take hold of her collar and drag her. This was not an easy thing to do, as she made all the resistance possible, and I generally met my visitor with a very red face. When I went to my husband for sympathy he would smile blandly and ejaculate, "Smart dog! very intelligent animal!" If I left her at home when I went down town she would howl dismally till I returned. She was extremely fond of barking at people. I have known her to chase a half-grown boy up on a fence and keep him clinging to the topmost board, while she would stand off a short distance and bark in intense delight till I came to the rescue. She was not vicious, however, and would never bite any one ; and if a small stick was thrown at her she would run to me in great fright. She was of no manner of use to me, unless it was to frighten away the tramps. She would not even drive the chickens out of the garden. I have repeatedly sent her after them, and she would start off willingly enough, but when she got within a short distance of them she would stand still and hold up one foot and look at them. My husband called this "pointing," and admired it exceedingly.

My husband has a way of preventing his dog from barking nights, which he thinks is excellent. I myself have never become reconciled to the method ; though there is

no "top gearing to dust overhead," yet, there is a "live thing under the bed," and this "live thing" is simply his dog. He considers this the only proper preventive, and recommends it to all sportsmen who are annoyed in this manner. But lest some one might be led into trying it, and in duty to the wives of sportsmen, I will write what I know regarding this method.

In the first place I have discovered that the aroma of a dog is not at all times as desirable for a bed-room as that of roses. And it is also slightly annoying to those with weak nerves to be awakened a number of times in the night by a fearful scrabbling and knocking under the bed, when the dog is making desperate efforts to scratch its ear under the low bedstead, or endeavoring to turn around the usual number of times before lying down. These things, my husband will admit, though they do not trouble him in the least, are perhaps a little unpleasant for me, owing to my peculiar temperament; but then, "isn't the dog prevented from barking? And you know, my love, 'tis said 'there's no rose without a thorn.'" But I cannot help feeling that it is all "thorn" and no "rose" when I spring lightly from my coach some pleasant autumn morning, only to fall back again with a cry of pain, as my feet come in contact with some half dozen sand-burrs which her "royal highness" has gathered in yesterday's hunt and deposited on my bed-room floor. But then what is this?—what are all these things when compared to the occasional bark of a dog out in the back-yard at night! Verily, in my husband's eyes, they are as nothing.

I wonder that more sportsmen's wives do not give their experiences to the FOREST AND STREAM. Possibly it might, by opening the eyes of the gentlemen to see the "error of their ways," result in a reformation. It might, at least, be of value to some young lady contemplating marriage. To all such let me say: Ascertain at once if your lover is a sportsman. If you learn that he is, go to the wives of those in your vicinity, and have them give you their experience. If, having learned it, you tremble at the awful consequence of uniting yourself to one for life, do not fear that it may break his heart to reject him. This is impossible. It was long since divided up among his dogs and guns promiscuously. If it affects him at all it will only be to induce him to purchase a few more, and with these he can easily forget your presence in a very short time indeed, as he certainly will do if you become his wife.

But after all, even we sportsmen's wives have a few things to be thankful for. For instance: Substantial dinners of duck, stewed grouse, broiled woodcock and quail, which wonderfully aid us to bear up under our trials. And then our husbands are invariably in the best of humor and spirits, and we also have the pleasing reflection that when our husbands are "gunning" they are not engaged in any worse mischief. ZENA.

ST. LOUIS DOG SHOW.—Intending exhibitors are reminded that entries for the St. Louis Dog Show close on the 20th inst. Mr. Lincoln writes that everything looks promising for an excellent show.

ST. LOUIS DOG SHOW—*St. Louis, Aug. 30th*:—Entries are already coming in, and the prospects are very encouraging for a good show. We hope to see a good representation of Eastern dogs here. The club have made very satisfactory arrangements for dogs that may be sent from a distance by express; they will be cared for if sent for a few days before the show. I enclose you a copy of the arrangements made by the Secretary of the Fair Association with the railroad companies. In addition to those mentioned, the Penna. Central, Erie, Great Western of Canada, Canada Southern, and Atlantic and Great Western, will all carry dogs free, when accompanied by their owners or attendants. Entries close 20th September. CHAS. LINCOLN, Supt.

LOU FOUND.—Mr. Tileston's Gordon setter bitch Lou, a notice of whose loss was printed last week, was found the day after the paper was printed. She was evidently on the way home, the place where she was seen being only four miles from the house. As she had on a different collar from the one she wore when lost, the inference is that some one had tried to detain her.

AN UNUSUAL FOSTER-MOTHER.—A correspondent of the *Fanciers' Gazette* states the following curious incident:—

On the 11th of April my fox-terrier bitch Ida, by Buffer, out of Nellie, whelped eight pups to stud dog champion Gnat. On the 12th she overlaid one, leaving seven. I thought this too many for her to bring up, and they were all so nicely marked I could not make up my mind which to do away with; so I began to hunt about for a foster-mother in the neighborhood, but without success. I also have in my possession a retriever bitch—a kind motherly old lady—which could not be induced to keep away from the kennel where the pups were, although she was often chased away by the terrier. I noticed the retriever dodging about, so I gave her one of the pups beside her in the kitchen; and, to my astonishment she got it to suck. Now, she had not had any pups for upwards of eighteen months, and had never to my knowledge been near a dog the whole time she was in use. I examined her, and found she had a quantity of milk; so I gave her other two pups, and they seemed to be doing well until the following Tuesday, when I thought the milk was going off her, so I returned the best pup to the terrier. Next morning I found she had more milk than ever, so I gave her another pup. Since that they have been doing quite as well as the others, and she thinks as much of them as if they had been her own. I have never heard of a similar case, nor do I know of any one who has, and I think it a most singular affair. GEO. W. COLLINSON.

Glebe Cleft Villas, Sunderland.

FOX HUNTING IN NEWPORT.—An exciting fox hunt took place at Newport on Sept. 5th. Seventy persons joined in the run, making the largest field ever seen in this country. The fox was killed an hour and a half after the start, after a run of eight or ten miles, and the brush was again awarded to Miss Coates of Providence. Seven ladies started, three of whom were in at the death.

VALET DE GAME BAG.—An old correspondent of FOREST AND STREAM, whom we would like to favor, sends the following:—

N. Cohasset, Mass., Aug. 6th.—If you know any persons, clubs or any body of gentlemen who want a man to row, fish, shoot, care for dogs, &c., this winter, anywhere from Maryland to Texas, speak a word for me. I don't want any salary, only expenses all paid, and if I shoot for them gun to be furnished. I have had experience in all kinds of sport, and know I can hold with any man on duck shooting. So if you know any good gentlemen going to Currituck who want a man who will be square and shoot the best he can for them, let me know.

S. KNEELAND, JR.

Norwich, Conn., Sept. 3d.—Prof. Wm. Hutchinson, of Norwich, Conn., claims the name "Argos" for black, white and tan ticked dog puppy, whelped Feb. 16th, 1879, by Luther Adams' Champ. Drake, out of Gen. Wm. G. Ely's native Sylph.

CORRECTION.—The dog for which the name of Flash was claimed in our last issue is by Harvard Kennel Club's Dash III., not "Howard," as printed.

St. Thomas, Ont.—Mr. Geo. R. Murray claims the name "Eden" for his black and tan Gordon setter gyp puppy, whelped May 27th, 1879, bred by I. S. Neven, M. D., London, Ont., by Grouse, 5,097, E. K. C. S. B., out of Moll, 7,250, E. K. C. S. B.

Sept 22—Quaker City Y C Fall Regatta.
Sept 23—Quaker City Y C Closing Cruise.
Oct 15—Seawanhaka Y C Ocean Match, Center Cup.

THE POPULARITY OF YACHTING.

In the recent open races of the Beverly Yacht Club there were in round numbers 140 entries, 90 starters, and 80 yachts actually finished the race. Such a number of sail has never before been gathered at any match either in England or our own waters, and must be looked upon as a sign of the times, showing how rapidly the love for this sport is spreading and what a great future we may expect for yachting in America with the return of prosperous times. The enormous fleet which crossed the line with racing numbers on their mainsails included many cabin yachts in the larger classes, among them well-known flyers like *Shadow, Violet* and *Hector, Napoleon, Sunbeam* and *Gael*, while the sloops and cats of the small fry numbered many of the best known, ablest and fastest of their kind. There were *Posey, Fanchon, Muriel, Fancy, Hoiden, Josie, Bluebell* and a fleet of others too numerous to mention—all of them craft of a much superior mould to the sailing machines with shifting ballast known to New York waters. Many of the racers, to be sure, were small, but their tonnage must not be taken as a measure of their owners' interest in the sport. On the contrary, these little fellows are sailed and worked with as much zeal and spirit—and more, too—than many a bigger "swell" affair, and when the season is over their records in FOREST AND STREAM will be scanned as closely as those of their more stately sisters.

Allowing say an average crew of six to each yacht entered, we have no less than 840 men actually engaged to sail the yachts that were to meet in this great match of the Beverly Yacht Club. Add a couple more—builder and sailmaker, as persons closely identified with the day's results—and the figure reaches over 1,000 persons directly interested in only this one particular day's racing! Indirectly this number will be swelled by "outsiders" in the way of acquaintances, more or less in sympathy with the different craft, and spectators to twice that many. Surely here we have evidence of the most encouraging kind that a fondness for the sea is not with us a lost trait, that our yachting class has not suffered or gone under with the decay that has overtaken the commercial marine.

If we are asked to account for the marvellous list of entries we are now considering—a list almost incredible to New York yachtsmen—our answer will be that the success of the sport in the East is owing to three things. Able officers and public spirit, in the first place, contribute much towards the popularity of the sport. Union regattas or open matches bring vast fleets to the line, in the second place, and encourage rivalry and competition in a liberal way, the reverse of the shrinkage and dry-rot inevitably following the New York plan of close corporation and mutual admiration races. And, finally, the sailing rules of the leading junior clubs of the East do not countenance shifting ballast, allowing therefore a fair test of model and seamanship at a moderate outlay and encouraging the building of yachts which will afford to their owners satisfaction in other directions as well as in racing.

That New York, with a "near-by" population as great as that of the entire State of Massachusetts, finds it not only impossible to institute a general open match with numerous entries, but has even to witness the almost entire disappearance from her waters of racing worthy the name, whether among yachts of ample tonnage or among the smooth-water denizens, should be forcible argument enough in favor of the modification of existing customs we here suggest. Throw open all principal matches to all yachts of recognized clubs or of clubs in good standing, and abolish once and for all the baneful habit of shifting ballast aboard the smaller fry. If clubs must needs have consolation races for their members, in which slow tubs can exclusively assert their claims to speed, add a prize especially for their benefit, even if it be but a leather medal.

As it is, the yachting centre of America is to be found in Boston waters and not in New York. There is but one way to effect the reforms that will banish from metropolitan yachting the dry-rot from which it is now suffering. Organize a Yacht Racing Association, let it take the whole matter in hand, and a new state of things would be rapidly inaugurated.

GLOUCESTER REGATTA.—The Gloucester open regatta was sailed August 25th in a light wind from southeast. Course, 15 miles. Two classes, one for keels, the other for centre-boards; two prizes in each class. The race was very successful, 22 yachts coming to the start. Summary:—

KEELS.

Name.	Owner.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Hard Times	Elwell	3 06 59	2 06 25
Banneret of Boston		3 08 12	2 15 12
Exit	Wheeler	3 45 12	2 41 12
Kulinda	Marsh	3 30 40	2 44 41
Wilful		3 30 48	2 47 45
Emeline	Adams	3 46 12	2 54 37

CENTRE BOARDS.

Name.	Owner.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Judith	Pigeon	3 07 25	2 15 06
Cora	French	3 17 00	2 15 52
Adele	Haskell	3 40 13	2 16 16
Zip	McKenzie	3 29 22	2 27 37
Clytie		3 28 49	2 29 29
Julia	Spring	3 27 05	2 33 36
Bohemian	Brown	3 27 35	2 39 03
Ferry	Douglass	3 36 46	2 42 17
Kate Donnell	Friend	3 50 12	2 50 35
Planchette	Crossier	3 46 47	2 51 48
Lizzie Warren	Titcomb	3 42 7	2 53 35

Effie, Everett, Delle, Mischief, and *Rust* not timed.

First money, $25, therefore goes to *Hard Times* and *Judith*, second money, $15, to *Banneret* and *Cora*. The open race for yachts under 17 feet water line, took place in Ipswich bay, same day, with the following result:—

Name.	Owner.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Sassaccus	B. Griffin	2 42 05	2 07 28
Araka	D. Stanwood	2 56 25	2 19 11
Trouble	C. Tucker	3 07 00	2 28 07
Hattie G.	F. H. Gaffney	3 09 00	2 37 00
Pinafore	C. Sawyer	3 08 16	2 32 51
Eva	G. Wheeler	3 17 08	2 39 16
Mist	O. Babson	3 20 57	2 46 19
Ripple	E. Norwood	3 35 17	3 00 27
Mary	J. B. Lloyd	Time not taken.	

Sassaccus takes first money and *Araka* second.

QUINCY YACHT CLUB.—The "sail-off" between *Elf, Wildfire* and *Thisbe* to decide title to the season's club championship, took place off Quincy Great Hill, August 22d in a stormy sou'-wester. *Thisbe*, 21 feet, 1 inch, Mr. W. H. Litchfield, won in 1h. 6m. 12s.; *Elf* second, *Wildfire* disabled. Special regatta of the club will be sailed September 6th.

SALEM YACHT CLUB.—The third regatta of this club was sailed off Salem Neck, Sept. 3d, in a strong wind from S. E.; a fog set in during the latter part of the race, and *Aurora* ran high and dry on the Agua Vita. Start from an anchor; three classes, independent of rig. The catamaran *Dolphin*, led out to the Misery, but was collared by *Leona* and by *Mignon* in turn, but finally again went to the fore. Summary:—

FIRST CLASS.

Name.	Owner.	Length.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Dolphin, k	Mansfield	30 0	2 21 50	1 51 44
Leona, c. b	Dr. White	27.0	2 25 06	1 55 06
Mignon, c. b	Wallace	25.5	2 40 45	2 00 08
Crest, k	Parker	35.5	3 04 32	2 10 02
Coming, k	Rock Bros.	29.0	Not taken.	

SECOND CLASS.

Name.	Owner.	Length.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Coquette, c. b	F. Brown	19.5	1 48 00	1 16 24
Flash, c. b	A. Brown	19.0	1 49 45	1 18 38
Oma, sch	A. Liebson	22.0	2 23 48	1 55 17
Aurora, k	J. Brown	21.0	Not taken.	

The *Tulip*, c. b., Seavey, length, 16 ft. 5 in., had a walk over in third class. *Dolphin* takes prize for first class keels and also prize for winning twice in succession. *Leona* takes prize in first class centre boards, *Oma* first class keels, and *Coquette* in second class centre boards. Judges: Messrs C. A. Benjamin, C. W. Richardson and D. H. Rice.

NEWBURYPORT YACHT CLUB.—The last regatta of this season was sailed August 30th off Ipswich Bluffs; course 11 miles; wind very light. Summary:—

FIRST CLASS.

Boat.	Rig.	Owner.	Actual Time.
Dauntless	Cat	T. H. Boardman	1 27 33
America	Sloop	Pearl Fillmore	2 05 41

SECOND CLASS.

Clytie	Cat	W. C. Thompson	1 17 27
Carrie	Sloop	E. A. Williams	2 02 09
Blanche	Cat	Lewis Horton	2 03 10

THIRD CLASS.

Keturah	Cat	B. C. Davis	2 11 50
Gem	Cat	J. H. Wortman	2 12 11
Nell	Cat	C. W. Cooke	3 09 52

NEWPORT YACHT CLUB.—In the race for Mr. Sidney Jones Colford's prize, sailed Sept. 1st over a course from Long Wharf to Bishop's buoy, thence to the Dumplings and return, 8 miles, *Lottie* won, beating her only competitor, *Lemie*, on time allowance.

THE BLANCHE.—This sloop, which lost her mast not long ago while beating out of New London harbor during a gale, has had a new spar stepped with double wire shrouds. Her owner, Mr. Charles H. Grundy, S. Y. C., lives aboard his craft during the season, and is therefore a Corinthian in high standing among the many Corinthians to be found in the Seawanhaka Yacht Club.

SAILING AT NEWPORT.—For a prize offered by Mr. H. K. Norman, of New York, and a pennant by Mr. J. S. Homans, a race was sailed in Newport harbor Sept. 5th. Entries: *Dick*, R. Youmans, of Newport; *Baby*, H. K. Norman, of Boston; *Verona*, W. V. Olyphant, of Brooklyn; *Avis*, W. Warren, of New York; *Sylph*, H. S. Eustis, and *Lilian*, S. C. Powell, of New Haven. Course, from Long Wharf around Brenton's Reef lightship and return, 11 miles. Wind fresh from N. E. *Dick* won in 1h. 2m. 30s., and *Baby* second in 1h. 5m. 22s.

SHARPIE REGATTA.—The regatta on the Quinnipiac, Aug. 19th, drew many people to witness the sailing matches between some of the fastest sharpies ever built. Entries: *Merila*, 34 ft., John Stirrup; *Banshee*, 35 ft., Thos. Hempstock; *Berlin*, 35 ft., Jas. Bishop, Jr.; *Carrie V.*, 35 ft., Lester Rowe. Only the *Carrie V.* and *Banshee* started. Course 6 miles. *Carrie* was allowed only one sail of 54 yds., against the two of *Banshee* containing 65 yds. *Carrie V.* took the lead at the start and increased it to a mile at the finish. In full racing rig *Carrie V.* sports no less than 265 yds. of canvas. But then planks are rigged out and ballast sent out to windward. In second class sharpies, *Little Ned*, J. S. Bradley, had a walk over, and in third class *Go Softly*, Scott Talmadge, won, beating *Can't Keep It*, *Snail*, *Little May*, *Sylvan Terror*, and *Bertie 2d*.

NEW YACHTS.—The coming winter promises to be one of the most active yacht builders have ever experienced. Two large schooners are to be built for New York owners: a number of cutters, a sea-going steam yacht, and a racing sloop by Piepgrass, of Greenpoint. Boston builders are having many inquiries and will have their hands full, and much activity is manifested South and in the West along the lake shores. Mr. David Kirby, of Rye, has sent us another handsome model for a racing sloop, about sixty feet long, which he expects soon to build; and T. Desmond has got us out a model for a Corinthian cruiser of the medium type. Everything points to a very active time for yacht builders and sailmakers.

DID NOT SAIL.—We have been informed that *Dare Devil* did not sail at Tompkinsville Sept. 3d, as reported, some other craft having been mistaken for her. This accounts, to some extent, for the victory of *Parole*, as Mr. Dilworth would have made her a closer match. It is noteworthy that among the "open yachts" Mr. Driscoll's flyers have achieved much success this year, the *Martha Munn* and *O'Brien* both maintaining his reputation as a builder of fast ones. They both took first prizes in the Empire regatta, and the former sailed a good race at Tompkinsville during the blow Sept. 3d. We may here add that Driscoll has excellent facilities for building large or small at his shop and yard at Pottery Beach, Greenpoint, L. I., and will furnish estimates to inquirers.

RECENT BUFFALO UNION REGATTA.—The case of the *Arrow* having been laid before us for consideration, we have come to the following decision:—*Arrow* is not entitled to any prize. She turned one of the marks from the wrong side, leaving it on starboard instead of port hand, as rule XIII. of the printed sailing directions demands. Her claim that she was compelled so to do or take imminent risk of capsizing, is not valid: for she could have kept to windward of the mark, thereby leaving it to port, then gone about, if afraid to jibe, or she could have lowered mainsail and jibed under jib. Sailing regulations are made to be observed, not broken at the option of any skipper. If, therefore, any yacht sailing against *Arrow* lodges a protest, the judges or the regatta committee have no choice in the matter, but must debar her from any prize, always providing such authority has been reserved to the judges or committee by the rules under which the races were sailed. If no special clause to this effect has been inserted in the sailing rules the judges may consider whether turning the mark as *Arrow* did was or was not conducive to her winning. If imaterial, the protest may be set aside, but if material to the result of the race, it should be entertained. As a rule, all sailing directions should contain a clause specifying the loss of claim to any prize if protested successfully against on account of infraction of sailing rules. Most directions we have seen are wanting in this respect, and tiresome controversy is the consequence.,

SHREWSBURY REGATTA.—The eleventh annual regatta on the Shrewsbury River was sailed at Fair Haven, N. J., Aug. 9th. Course, 20 miles. Two classes for jib and mainsails, and two for cat boats. Prizes, two in each class. Wind, light from S. W. but freshened. The winners were as follows: First class, jib-and-mainsail, *Florence*, Capt. J. C. Fisher, 4 h. 12 m. 25 s.; second, *Breeze*, *Ideal*, 4 h. 39 m. 10 s. As to cat-rigged boats the time was taken of but two, the *E. K.* and *Olivia*, the other two claiming a foul.

A SPECIMEN REGATTA.—A bit of a breeze frightened away half the entries from the races sailed Sept. 3d off Tompkinsville, Staten Island. The races were opened to all craft. Course from off the "Good Anchorage," round Fort Diamond, thence to Owl's Head buoy, thence to buoy 17 and home, turning the marks either side. Many famous sand-bag machines were at the start, and the manner in which they were capsized shows a thorough lack of the first principles of seamanship or an entire disregard for them, and it is a fitting comment upon the worthlessness of our smaller yachts for anything at all—a condition of affairs induced, it need hardly be said, through the custom of shifting ballast. To watch the sailing of such over-weighted, over-sparred mantraps as *Parole* and her ilk, is to conceive a contempt for such machines, and as for the crews which reduce seamanship to a mere matter of athletics and jugglery, and in spite of sand-bags cannot keep their craft bottom up, the least said about them as sailors or yachtsmen the better. *Parole* started with whole sail, the rest reefed down. No sooner had they fairly got under way than the capsizing began. *Carrie Taylor* led off by dumping her crew, and a fine spectacle they presented, sprawling in the water. Soon after the *Reeves* followed suit, going over with a flap. *Parole* beat *Dare Devil* by 17m. in the first class and *Martha Munn* and *The Brothers* won in second and third classes, their competitors having been dumped overboard. *Lizzie V.*, the smallest of the lot, beat *Katie M.* by more than half an hour in the fourth class, and therefore takes the purse.

OCONOMOWOC (WIS.) YACHT CLUB.—The second regatta of this club was sailed on Lac la Belle August 12th in fresh southwest wind; course 11 miles. *Nautilus*, C. T. Sutton, won, beating *Magic*, W. L. Peck; *Sortie*, G. Schufeldt; *Pearl*, H. Beckwith; *Mystic*, C. Johnson; *Buda*, F. W. Peck; *Florida* and *Blackbird*, C. Linger. The third regatta was sailed August 22d over same course; wind fresh from northeast; *Buda* won, beating *Mystic*, *Magic*, *Nautilus*, *Sortie*, *Blackbird* and *Florida*.

NEENAH YACHT CLUB.—The regular annual regatta was sailed August 21st on Winnebago Lake; course 7 miles; wind fresh from northeast. *Myra Bell* won, beating *Albatross*, *Mermaid*, *Carrie Morgan*, *S. M. Hoy* and *Niobe*.

GENEVA LAKE (WIS.) REGATTA.—The first race of the year was sailed August 2d in a stiff blow over a 10-mile course. Won by *Fearless*, J. C. Water, beating *Lotus*, A. C. Ducat; *Magnolia*, J. H. Simmonds; *Fleetwing*, W. Knox; *Mischief*, G. Van Slyke; *Zuave*, C. Crane; *Dauntless*, C. Whiting, and *Lucy*, C. Bosworth. *Mischief* capsized and *Lucy* did not finish. The second race was sailed August 16th in a fresh wind from northeast. Won by *Geneva*, W. Wood, beating *Whisper*, N. K. Fairbanks; *Zuave*, B. Crane; *Fearless*, C. J. Walters, and *Magnolia*, D. T. Whiting.

SAILING ON WHITE BEAR LAKE, MINN.—The *Juniata* and *Nellie Illsley* sailed a match on White Bear Lake for $100, August 20th. Former won by 6m. 30s. In the race for cat-rigs, *Nautilus*, *Lizzie Pratt*, *Theresa* and *Stormy Petrel* started. The *Pratt* took first prize, $40; *Nautilus*, second, $25; and *Petrel* third, $10. Rowing races under auspices of the Minnesota Boat Club followed.

SOUTHERN YACHT CLUB.—The annual cruise of this club was sailed August 23d, across Lake Pontchartrain. Starters: *Zoe*, Com. O'Brien; *Gov. Claiborne*, Mr. Claiborne; *Edith*, Mr. McNeil, and *Cydnus*, Mr. Harris. Bad weather prevented others from coming to the line. *Edith* made the best start, followed by *Claiborne*, *Cydnus* and *Zoe*, all with two reefs tied down. *Zoe* ran through the lot and shook out reefs, a manœuvre soon followed by the rest. *Cydnus* hauled up for Tchefuncta river. At 8:2, *Zoe* lead the way into Mandeville, making the run in 2h. 40m. with *Claiborne* 11m. later. A heavy sea and lee shore were found which did not make things comfortable, and capsized several yawls, landing the crews. The fleet was again joined next morning by the *Cydnus*. *Edith* having lost her rudder, passed her crew into the other craft, and at noon all hands got under weigh for home. *Cydnus* got the best of the turn to windward in the light wind blowing and *Zoe* could not hold her in spite of light duds. The fleet dropped anchor off the club house with *Cydnus* leading, *Claiborne* next, and *Zoe* third, after a very enjoyable cruise.

COMPLIMENT DECLINED.—Some persons have done us the honor, *more Hibernico*, of associating our name with the spasmodic efforts of a correspondent "K" in a minor contemporary. Thanks, but on the whole we do not care to father all the K's in this world. We write with visor up.

ON THE CARDS.—It is said that a match between the schooners *Enchantress* and *Cetonia* for $5,000 from Cowes around the Nab Light is among the possibilities in English waters. With plenty of reaching the "big American" will have it all her own way, but in a twist to windward and short sea *Cetonia* has a pretty sure thing of it.

SNUG RIGS.—Nothing like having a due relation between spars and the hull. The schooner *Brenda*, E. Y. C., has been sailing well this season since her spars were cut down, and though in light drifting matches her speed may have suffered slightly, her owner congratulates himself upon the change for all other purposes.

SAN FRANCISCO MODEL YACHT CLUB.—Races sailed on Oakland Creek. Out of a large number of entries *Consuelo*, *Tormentor* and *America* came in first in first class, *Nellie* and *Lotus* in second class.

FOLDING BOATS.—Mr. Coughtry has reduced the prices of his canvas folding boats, and has adopted "tanned" canvas for the siding of sporting boats, so as to be less visible to game.

TO AMERICAN YACHTSMEN.—For complete records of all yacht races in England, as well as for a great variety of other matter of interest, such as cruises and yachting tales, read *Hunt's Yachting Magazine*, established 1852. Can be had of booksellers generally, or direct from Hunt & Co., 119 Church Street, Edgware road, London, E. C., England. Published monthly, one shilling sterling per number.—[*Adv.*

MR. BERGH SPEAKS.—We have always contended that long-distance go-as-you-please exhibitions come within the scope of the S. F. P. C. A.'s field. If that organization should attempt to deal with these things, its attitude toward them may be inferred from the following card of Mr. Bergh, addressed to one of the New York daily papers:

It having been announced in the newspapers the other day that the undersigned was one of a committee which went down the bay to meet Weston, the pedestrian, on his return to New York, and again last night his name appearing as one of the "Reception Committee" at Madison Square Garden; will you do me the favor to state that the use of my name in any such connection was not authorized by me, nor have I any sympathy with such exhibitions. HENRY BERGH.

—Jessamine, Ky., has produced a ninty-pound watermelon—*Exchange.*

We don't savez any ninety pounds, but we've seen a picaninny paddling about Savannah River at Augusta, Ga., in a dug-out canoe made of a half of a watermelon rind.

The Coney Island electric lights striking the diamond pins of the bartenders make it confusing for incoming pilots.—*Telegram.*

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.

Trout, *Salmo fontinalis.*	Grayling, *Thymallus tricolor.*
Salmon, *Salmo Salar.*	Muskalonge, *Esox nobilior.*
Salmon Trout, *Salmo confinis.*	Pike or Pickerel, *Esox lucius.*
Land-locked Salmon, *Salmo gloveri.*	Yellow Perch, *Perca flavescens.*

Black Bass, *Micropterus salmoides*; *M. nigricans.*

SALT WATER.

Sea Bass, *Serranus ocellatus.*	Bluefish, *Pomatomus saltatrix.*
Sheepshead, *Archosargus probatocephalus.*	Spanish Mackerel, *Cybium maculatum.*
Striped Bass, *Roccus lineatus.*	Cero, *Cybium regale.*
White Perch, *Morone americana.*	Bonito, *Sarda pelamys.*
Weakfish, *Cynoscion regalis.*	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES FOR SEPTEMBER.

GRAY COFLIN, NO. 10 AND 11.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's herl; wings and setæ, hyaline.

BROWN COFLIN, NO. 10 AND 11.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's herl; wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wings.

The white moth for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season.

At this season use the small flies for day fishing and the large flies for evening and night.

THE LAKES OF THE LOWER MISSISSIPPI.—To most Northern sportsmen the lakes of the Lower Mississippi are a *terra incognita*, truly an unknown land. Beginning about seventy-five miles above the mouth of the Ohio River, and ending at New Orleans, we shall find an almost unbroken chain of lakes. Frequently the wild dash of the impetuous water against a bluff cuts its way through, and thus the old channel of the stream is converted into a lake, sometimes fifty miles long by one and a half broad. On the subsidence of the spring floods, the water, once as turbid and yellow as the parent stream, becomes as clear as crystal, and it is the chosen home of millions of perch, trout (*M. salmoides*), buffalo, catfish, and in some lakes small striped bass. As the lakes can never be seined, the supply is inexhaustible.

There are many varieties of perch in these lakes which cannot be found elsewhere in the United States. Notably, a perch called the "raccoon perch," from the black bars running around its body; the white bream, a fish of about one pound in weight, with a black spot on each side of its gills; the spotted trout, rarely caught, and then only when fishing about twenty feet deep; the bar fish, as game as a mountain trout, and far more plentiful. Watch these varieties swarm about the hook, and labor under the pleasing delusion that worms were made exclusively for fish to eat.

MAINE.—Messrs. Steele and Morley of Hartford, Conn., who have recently returned home from a 200 mile canoe trip on Churchill and Telos lakes, Telos river, Webster brook, etc., report the trout fishing excellent.

MAINE—*Camp Kennebago, Indian Rock, Aug. 30th.*—Our party, consisting of N. A. Roberts, Frank Stevenson, jr., Frank S. Fay and the writer, have just returned from a ten days' trip to Parmechenee. We came in via Bryant's Pond and Andover to Arm of the Lake, thence to Middle Dam and across Five-and-half-mile Carry to Arm of Umbagog Lake (near landing), thence up lake to Brown's Farms on the Megalloway. From Brown's Farms to Fred. Flint's camp, at the head of Ariscoo's Falls, is seven miles, where we found good accommodations. At this point we took boats at 6.30 A.M., and at 4 P.M. reached foot of carry to Parmechenee, thirty-three miles. A carry of four miles, just south of Flint's camp, took us to south shore of Parmechenee, and one and a half miles further took us to J. S. Danforth's camp upon a small island up lake. We spent five days here and took more trout than we could eat, but returned all we did not need at camp. The late rains have seriously interfered with early fall fishing, but trout are beginning to rise to the fly now. The largest we have captured thus far are about two pounds each. Small trout are very plentiful about Parmechenee at all times, and early and late fishing give larger fish. Those weighing over five pounds were taken here last June. Danforth's Camp is a very pleasant affair, about which I shall say more anon. Deer are also very plentiful here usually, but the late rains have driven them back into the woods.

From P. we made a seven-mile carry across to Cupsuptic River (a very good carry by the way) and poled down stream eight miles. Then a carry of one-half mile takes you below the Rips and into deeper water, where we found boats in waiting, and in two hours reached Indian Rock—thus making the entire trip easily in one day. We reached Indian Rock before the members of the O. A. Association had migrated hither, and had the grounds almost to ourselves. I say almost; there were three others besides our party to dispute the honors of success with us; and last evening one of them captured a 2½-pound trout. A very large one took my fly, but having out too much line when I struck I presume I did not send the hook home, for he was off in a moment. We caught in addition a few small ones, and the indications are that with fair weather good sport may be expected this week, for there is every indication that they have commenced running up.

Marshall Whitney, of Upton, Me., guide and tyer of flies, captured three at Upper Dam this week with a fly, weighing respectively 6¼, 5½ and 3 pounds, as I can vouch for, as I saw them myself.

The weather is just comfortably cool without during the day, while in the evening we toast our shins before a white birch fire upon the brick hearth-stone in the new camp. The *cuisine* at Camp K. is most excellent and reflects great credit on C. T. Richardson, the amiable and genial, jolly, grey-whiskered Superintendent. There is an air of neatness about the camp and the beds. One feels as though he could lie abed all day; but a 7 o'clock bell announces breakfast. I think that's the worst feature of the whole business, but I see no remedy except to set the camp clock back an hour; but then—alas! but then—it is "Grandfather's Clock." GEO. A. FAY.

TIM POND—*Eustis, Me., Sept. 3d.*—I am just leaving this now famous trouting lakelet. Six in our party occupied one of the two new log cabins Kennedy Smith has built this year. In our number is Col. Hayden, of Cleveland, O., Prof. Hibbard, H. P. Strong and myself from New Britain, Conn., and Dr. Hill of Biddeford, this state, In the other new and larger cabin is C. W. Smith, of Worcester, Mass., with his four sons and three invited guests, Ex-Gov. Kellogg, of La., is among the fortunate ones; for Mr. Smith is intertaining his friends in a princely manner. I mean as princes do in the forest. The Gov. who has been a fisher for voters, expressed himself as highly pleased with the scenery, the abundance of the trout and their flavor, and that of the partridges. The number of fish caught is greater than last year; indeed we are told they have been more plenty all the season. In a few words, none of the oldest sportsmen present had ever seen so good sized trout so plenty. We are all more than satisfied with our trip. The improvements of the last year in the path of five miles to the pond, the cabins, the cook stoves, and other utensiles; four more boats, with the assistants the landlord has called around him, leave little to be desired. The trout law is not on till Oct. 1st; the partridge law was off, Sept. 1st; and so the sport of casting the fly for the speckled beauties, the crack of the breech-loader that brings down of the grouse, and the savory odors from "Ken's" viands will continue about a month longer this year, unless some bruin, which Ken. Smith is trapping, shall pull him in and thus cause him to pull in his cabin latch strings earlier, and of this there is little danger to one of his experience. J. W.

MASSACHUSETTS—*New Bedford, Sept. 3d.*—Our market which during the past three weeks has been bare of fish, is again full to overflowing with bass, blue fish, tautog, scup and bonita—one dealer receiving over one ton of blue fish to-day. Good bass fishing this week at Westport harbor, the fish averaging twenty-five pounds each.
— CONCHA.

MOVEMENTS OF THE FISHING FLEET.—The shoal mackerel fleet have met with moderate success of late off Monhegan, Seguin and Boon Island, but the catch is falling off and the season will soon come to a close. The number of arrivals since our last report has been 22, of which 3 follow the fresh fishery, and the other 19 have landed 3,960 bbls.

But few vessels remain in the Bay St. Lawrence, and the news from that quarter is not encouraging. No American vessels have been seen at Tignish for over a fortnight and the boats there and at Rustico and Charlottetown are doing little in mackerel, with no stock on the market. Only one arrival from the Bay has been reported at this port the past week, bringing 300 bbls.

Codfish have been in fair receipt, and good request at the recent advances in prices. The number of arrivals the past week has been 4 from the Banks with 300,000 lbs., one from the Bay St. Lawrence, with 40,000 fish and 18 from Georges, with 328,000 lbs.

The number of Grand Bank arrivals has been 6, bringing 140,000 lbs. halibut. Receipt of Georges halibut for the week, 10,200 lbs. One arrival has been reported in the New Foundland squid fishery. Total number of fishing arrivals for the week, 57.

LONG ISLAND—*Sayville, Sept. 9th.*—The bluefish which have been out of the bay for several weeks have returned, and grand success is met by fishermen.

Hornellsville, Sept. 7th.—About twenty members of the Canisleo Valley Sportsmen's Association are camping out at Silver Lake. This is their fourteenth year, and so far has been very successful. Up to Wednesday night the party had caught 300 lbs. of fish. P. P. Winn caught a pickerel weighing 13½ lbs.; it was sent to R. B. Cable with compliments of the camp. Bert Elliott caught in one hour six pickerel whose combined weight was 30 lbs. Their habitation is styled "Camp Delight." They live in three tents, have five dogs to hunt game with, and two cooks to prepare it for the table. That they may all live to camp out for a hundred years, is the wish of
JOHN.

Hornellsville, Sept. 7th.—The ruffed grouse season did not open as well as was expected. The birds have all scattered from their breeding places—after berries, I suppose, as most have been shot in the blackberry patches.
J. O. F.

NEW JERSEY—*Red Bank. Sept. 2d.*—Fishing in the river good. Bass and weakfish the length of a yard stick.
C. H. W.

PENNSYLVANIA.—Perch fishing is reported good at the Port Penn piers and off the Augustine Marsh.

SOUTH CAROLINA.—The editor of the Conwayboro', S. C., *Telephone* has been fishing at Pauley Island, on the coast, and he reports the fishing for sheepshead, black fish, croakers, sailor's choice, &c., most excellent. The island is the summer home of some fourteen families, who go there from the interior. Crabs and oysters abound, and sport is to be had all the year around.

THE BARBLESS HOOKS.—*Corpus Christi, Texas.*—I have been trying some of those patent hooks you advertised some time since, Edgar's patent barbless hooks, and I find but one trouble with them, they rust too easily. If they were painted or varnished properly they would be splendid. I have never had one break and have never had a fish get off, when hooked, without parting the line. They are a little troublesome to get out of a fish's throat, but so is any hook. I have not been able to get any large ones suitable for tarpum, sharks or jew-fish, so I cannot tell how they will work on these monsters. TEXAS.

SPINNING FOR PORPOISES.—A NEW SPORT.—I have understood that porpoises commit great havoc among the salmon at the mouths of rivers where these fish congregate for the purpose of ascending to the spawning bed, and that attempts to shoot them with rifles have not been so successful as could be desired. I would suggest that owners of private yachts might find very exciting sport in spinning for these creatures—any experienced pike fisherman would know how to do it. Tin or cloth baits the size of a grilse; a Cholmondely Pennell flight on a large scale; a small windlass to hold 300 yards of strong cord, and which should be fitted with a ratchet wheel and brake, so as to be able to play the fish, and should be made to unship when not in use, would be all the necessary gear. I am inclined to think that a porpoise with a flying triangle or two about his nose would quickly be brought to a position when the rifle would be effective, and if so the sport would certainly be worthy of the trouble.—C. C. *in Land and Water.*

"CHEAP FLIES AN ABOMINATION"—*Mr. Editor:*—I have been fishing, and enjoyed myself to my heart's content. Though I love fly-fishing I never had such an opportunity to enjoy it as I did this summer. One afternoon while bass-fishing I was trying some scarlet "Ibis" flies along the edge of a lily-pad, when something rose and broke for my fly. I cast again near the same place. The fish rose again; did so several times, until one jumped clear out of the water. To my surprise it was a trout. I was all the time thinking they were shiners and thought I could use them for bass baits. I at once changed my fly to a "Montreal." They would rise every cast, but would not take it. Changed to a "Professor," then to a "Yellow May," then a "Pale Dun." I waded into the mouth of the creek where it empties into Pine Lake, and noticed a brown fly floating along down the stream. I stopped casting and watched that fly. In a moment there was a commotion; it seemed as though a dozen trout broke water at once. I soon had a "Brown Hackle" on my leader and dropped it just about the place where the fly disappeared. Then the fun began; but I had hooked the trout firmly, and soon had a beauty in my creel nearly twelve inches long. Another cast brought in another to basket. I cast again and struck a fighter; brought him up close to my feet, and was about to lift him in when, swish came my line—parted the gut just above the hook. Well, that's one of the expectations of trout-fishing. I put on another hackle, and was having fine sport, when one fellow didn't want to come in. He fought hard, and snapped the snood in just the same place. Thus I broke five hackles, losing trout each time. I then tried a "Stone fly;" was having good sport with them, but they snapped in just the same place. I had lost ten trout, more than a dozen hooks, besides what I whipped off when retrieving my line. Then I began to investigate. Bah! they were some cheap flies I bought in the East. I turned to my stock of Orvis flies and put on a "Coachman." Then came royal sport. No more trout lost, and my creel began to fill up. Of course I whipped off some flies when I got a little excited; but Orvis, "Coachman," "White Miller" and "Grasshopper" brought them every time, until I had forty as nice trout as any fisherman wants to put in his creel.

To say I was mad when I found out where I bought these flies from, was no name for it. During this trip I broke three dozen hooks under circumstances where snoods ought to have stood a little test of endurance. I have found out where you can buy flies that you can rely on, and in future Orvis will make up any flies that I want. His flies and leaders wear better than any I have ever used. I would would rather pay his price for them than any catch-penny flies sometimes advertised in some of the sporting papers. "Cheap flies are a fraud, a delusion and a snare." NORMAN,
Sept. 1st, 1879.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

D. T. W., Buffalo., N. Y.—Bogardus shoots with both eyes open.

W. H. C.—Write to advertisers of sporting goods for messchest.

F. F., Columbus, O.—The diving decoys we believe to be satisfactory.

F. F., Augusta, Ga.—An application of whale oil will remove the lice from your puppies.

G. C. E., Jackson, Miss.—We have referred to the subject of sportsmen and liquor. See our issue of Dec. 12th, 1878.

W. D. Bishop, Bridgeport, Conn.—You will find leggings at any of the dealers in sportsmens goods advertised elsewhere.

DOG AND GUN, Fall River, Mass.—You may order glass balls from the firms advertised in our columns. Experience will tell you which kind you prefer.

C. W., Minnesota Junction.—The rifles are good for the money. We cannot answer for their accuracy. Higher priced weapons will give greater satisfaction in the end.

W. W. T., Athens, Ga.—Is the Daly gun made either wholly or partially in the United States? Please state where it is made. Ans. Made in Suhl, Prussia, by Schoverling, Daly & Gales.

J. L.—You will find duck shooting in Lake Champlain in the vicinity of Ferrisburgh, Vt. Ruffed grouse, woodcock and quail are also to be had there, as well as pike, pickerel and bass fishing.

W. F. P., Wytheville, Va.—Will you be so kind as to let me know the title of Jordan's new book on fish, the price and where it can be obtained? Ans. "Manual of Vertebrates," price $4.50, published by Jansen, McClerg & Co., Chicago.

B. Y. C.—On the whole we cannot sustain the referee of recent Buffalo Union Regatta in his decision in favor of *Arrow*, but think that for infraction of sailing rules she should have been disqualified. The precedent established by his ruling is a bad one.

A. A. O. M., Fort Johnston.—We have laid out the sail plan of your 30-foot boat according to the figures sent, but find it of peculiar cut. The mast should be stepped 9 feet from the bow, the tack of the jib being set up at the stem head.

C. C. Y., East Saginaw, Mich.—1. Will you have the kindness to inform me if there is a law prohibiting the shooting of eagles in our State? 2. What is the highest score made at 200 yards off-hand, and by whom? Ans. 1. Eagles not barred. 2. Capt. Jackson of Boston has a record of 72 in possible 75.

D., Taunton, Mass.—What is the best way to packsmall game so as to ensure its being fresh after a two days' journey by express in early October? Ans. First draw your birds, and then insert a a lump of charcoal into the cavity. You can pack in ice, but do not let the ice come near the bodies of the birds.

F. G. C., Goshen, Conn.—When will be the best time for a two weeks' hunt in Northwestern Iowa for wild fowl and general shooting, Sept. 25th, Oct. 15th, or Nov. 1st? Ans. About Sept. 25th. Flight birds move early in that section, including snipe, mallard, teal and other ducks, etc., and the prairie fowl are young and tender.

RAW HIDE, Calvert, Texas.—Where can I get the best lamp for deer shooting? Want one light, neat and good. Ans. The Ferguson lamp advertised in our columns at Conroy, Bissett & Malleson, 64 Fulton street, New York, is a good lamp and the lightest we know of. The White Manufacturing Company, of Bridgeport, Conn., make capital Jack lamps.

S. B., Brooklyn.—S. B. and P. agree to shoot a pigeon match at ten birds each, S. to give P. four dead birds and B. to give P. three dead birds; old Long Island rules; twenty-one yards' rise; eighty yards' boundary. How many birds does P. shoot at? Ans. P. shoots at ten birds, four of his missed birds being credited to him as killed in his bet with S. and three in his bet with B.

SLIDING GUNTER.—We are not over partial to this rig; the gunter is apt to leave you in the lurch by not coming down. Such a sail is furled either by hauling up the boom to the yard and furling up and down, or by unshipping the yard from the travelling iron. In small boats, by simply casting off head of sail from head of yard, this being the only point of attachment.

F. W. J., City.—Please advise me what kind of revolver to buy. I want one that will not kick and will not be too heavy to be convenient? Ans. Possibly the .38 calibre would suit you. The .22 makes the best pocket weapon. The most serviceable arm is the Smith & Wesson pistol with the Schofield patent and the automatic extractor, which throws out all the dead shells at once. Better call on a gunsmith.

S. D.—Concerning Lyman's bow-facing rowing gear, a correspondent writes: "I have had it in use since May last, on a rather heavy 12-foot by 44 fishing boat, 8½ foot spoon oars, with the greatest satisfaction. The ladies of my family row with it with the greatest ease. I have tested it pretty well in short, choppy waters and against strong head winds and tide, and prefer it to the old style. It is well to have a boat-hook in the boat with you, as you can't use the oars to shove off."

H. W. D. L., Dansville, N. Y.—My setter, Rip, ever since his recovery from the distemper last May, has been troubled with a rough corrugated nose, which, in spite of treatment, remains dry and hard. We killed six grouse over him yesterday, which shows that his scent cannot be materially affected. Nevertheless, it looks bad; and, in view of that fact, can you suggest a remedy? His condition, otherwise, is perfect. Ans. His nose will probably come right in time. A little salad oil on it occasionally might help it.

A. H. H., Norwich, Maine.—I would like to spend about two weeks hunting in Maine, where I could use a broken setter to advantage. I would also like to get some duck shooting, if possible. Please let me know through the column devoted to correspondents, who to address for full particulars and the Game Laws of that State. Ans. Write to Ed. A. Cushman, Sherman Mills, Me. He will give you ruffed grouse, duck, and other shooting. For the Game Laws of Maine, address E. M. Stotwell, State Fish Commissioner, Bangor, Me.

JOB LOT, Peekskill.—Do snakes have gills like an eel, or breathe in the same way? How do they breathe when swallowing? Ans. Snakes have no gills, but breathe by means of lungs. Only one of the lungs of a snake is available for general use, the other being aborted. The available lung is very long and sacular and so constructed as to hold a large supply of air. The ordinary process of swallowing a large animal would not materially interfere with breathing, the blood being oxygenated from the air already stored up in the lung sac. The permanent presence of a large plug in the throat might result in suffocation.

T. J. M. Holyoke, Mass.—1. What kind of a place is Lake Memphremagog for camping, and what game would I be apt to find there? Ans. 1. Excellent place. You will find lake trout, bass, and pickerel, in the lake, and ruffed grouse and woodcock on the shore. Trout lakes and a few deer in the neighborhood. 2. I have a S. & W. revolver, calibre .38, that recoils so much when I fire it as to spoil the aim. I use a central fire cartridge; don't you think I could do better shooting if I should put less powder in the shell? Ans. 2. You might use a shorter cartridge; or, make allowances for the pull-up and aim lower. The Smith & Wesson pistols are good for a very long range, and are accurate at 100 yards.

AIX SPONSA, Rushville, Ill.—1. Please let me know as soon as possible if you know of any diseases common to ducks? I have quite a number of tame ducks and nine wild ones. A few days ago one young mallard just beginning to feather, became weak in the legs and could hardly walk; it soon died. Holding it up a foot or more from the ear, the beating of its heart could be very plainly heard. I am afraid I shall lose all of my wild specimens. 2. Also can you give me the address of any Natural History Society in the State of Illinois? Ans. 1. We can't tell just what to prescribe for your ducks. Separate the sick from the well and ask some medical friend to look at them. L. F. Tate, Oneida, Illinois, is good authority. 2. There is a Natural History Society in Chicago, but we have forgotten its name.

ARECA NUT, Lewiston.—I have a pointer pup five and a half months old that is in a very thin condition. For the past week she has lain around listlessly, trembles or quivers as though cold. Last night commenced moaning and occasionally seemed to have violent pain, as she would bark and howl lustily. Attribute it to worms, and to-day commenced giving prescription No. 2 and 8 a, "Hallock's Sportsmen's Gazeteer," making nine powders, and three-quarter tablespoonsful No. 8. To-night she appears quiet, but weak and listless. Shall continue the doctoring for three days. Is my surmise and method of administering correct? Ans. Most probably the dog has worms. The treatment is correct if you have proportioned the doses according to the age of the dog. Watch the effects of the aperient and if she continues weak give a tablespoonful of codliver oil twice a day.

S., Hartford, Conn.—At what places on Saginaw Bay, Mich., is there good duck shooting? Is there good duck shooting on Georgian Bay or at Lake Simcoe, in Canada? If yes, at what places, and can guides and decoys be procured? Ans. Saginaw Bay is good snipe ground, but not excellent for ducks. At Georgian Bay there is little feed, and travellers don't stop long. The islands are stony, and the bottom sand and gravel, though there are portions of its 120 miles which afford good duck shooting. Simcoe is better, but it is close by a big city, and steamboats on the lake don't attract ducks. Lake Couchiching is better; you can get guides at the Indian village. Rice Lake, 18 miles from Cobourg, near Lake Ontario, is still better; but those parts of the St. Lawrence River known as Lakes St. Peter and St. Francis are famous for geese and ducks. The birds will come now in a few days. Near Monroe, Michigan, not far from the Canada line, is good ground. Guides easily obtained at any of these places.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY,

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

***Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, SEPTEMBER 11, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

PATRONAGE OF SUMMER HOTELS.—It is an agreeable coincidence and pleasant to relate, that all the summer resorts, at the South as well as at the North, have enjoyed a most successful season the present year. All have made money. One reason assigned is the very material reduction everywhere in rates. A Cape May Hotel was the first to close (Sept. 1st), but the great majority will keep open until the first of October. Those resorts which are located near hunting grounds will receive a liberal patronage throughout the fall from a class of sportsmen who have postponed their vacation until the shooting season; and the number of gunners is legion. Several of these are mentioned in our advertising columns. There are many lines of railway also reaching to these resorts, which are designated in our columns. The Old Dominon line of steamers gives access to some of the best snipe, woodcock, quail and ducking localities in Maryland and Virginia. As for Coney Island and the beaches, they are being patronized by hundreds and thousands who have been spending the summer in the mountains, and now finish up the season near home. This is demonstrated by the fact that while warm days continue there is little apparent diminution in the number of visitors at these attractive seaside resorts. All this is new and welcome experience to the landlords of hotels who have hitherto been accustomed to close their doors on the first of September, and regard the season at an end.

PURE AIR.—Weston, the pedestrian, has requested that there shall be no tobacco smoke allowed in the building at the coming walk. This will rob the match of one of its charms, but it is a good temperance point. We read much of the wonderful endurance of the Greek athletes, but had an Olympic games winner been confined in the atmosphere of Gilmore's Garden at one of the last winter walks, he would have perished as suddenly and as miserably as a mouse in an air pump. It has taken four centuries to evolve the tobacco smoke inhaling, man, woman and child of to-day. In this, at least, we are ahead of Greece.

—William Wertenbaker, Librarian of the University of Virginia and Secretary to its Faculty, is an octogenarian. Mr. Wertenbaker is the only person now alive who had the privilege of meeting Mr. Jefferson, and he holds his office by direct appointment from Jefferson himself, who at its date was acting as Rector of the Board of Visitors to the University of which he was the founder.

—Gen. Grant is expected on the steamship City of Tokio, which will arrive at San Francisco about the 21st inst. The vessel sailed from Yokohama the 3d inst.

RESULTS OF THE NATIONAL ARCHERY MEETING.

IT is always difficult to foretell the effect of a great public meeting, but the anticipations of the originators of the first Grand National of American Archers have been fully realized. Our archers were timid; they needed to meet each other in public contest before they could realize the fact that all were starting upon the same plane of low scoring, one having very little advantage over another. Since the scores published by several clubs were generally their best, chosen from many poor ones, the archers reading them imagined that they were ordinary averages, and came to the conclusion that shooters were extraordinary bowmen. The national meeting swept away many of these erroneous ideas, and any archer who scored 300 points at this meeting upon the Double York Round may easily attain to 600 points by the next meeting. Many will make a far greater advance in the coming year.

Another thing has been very satisfactorily taught us by this meeting, and that is that it is one thing to make a good score in private practice, and another thing to get a similar score at a public meeting, where the natural embarrassment of exhibiting one's skill is added to the nervousness attendant upon anxiety, and where all the surroundings are strange. Almost every archer fell thirty per cent. below his average score, and many even more.

A very important thing was demonstrated to the executive committee, which was that their arrangement of the prize list was very faulty. When the list was prepared, it was thought by the committee and all the archers to whom it was submitted that it was as nearly perfect as it was possible to get it, every one supposing that where prizes were offered for most golds, reds, blues blacks and whites, that the best shots would get most golds and reds, the poorer ones most blues and blacks, and the poorest most whites, but the result showed that the best shots got most hits in all colors. A different system will be devised for the next meeting so that the poorer shots will share in the prizes. Some object to this system upon the ground that it is setting a premium upon unskillfulness, but we do not think so. The desire to appear high in the score-list will be sufficient to incite the archer to careful practice, and surely the pleasure of a meeting will be greater where every one who contends will hope for a prize. Much cunning will be required to originate a system in which the most skillful will not bear off the greater part of the prizes.

The most valuable result, however, has been the wonderful increase of interest manifested in archery throughout the entire country. Everywhere new clubs are springing into life, old clubs are increasing their membership, matches are being shot between clubs by telegraph, fairs and agricultural associations are offering prizes to induce archers to exhibit their skill upon their grounds, and people talk archery who before did not know a bow from a fishing rod. What is needed now is systematic, thoughtful practice by our archers, the study of archery from a scientific standpoint, and ere another August comes round we will publish scores of 600 to 900 points at the Double York Round for gentlemen, and 600 to 800 at the Double Columbia for ladies. That a large number of our archers will reach such proficiency we do not doubt.

THE NORTHWEST PASSAGE FOUND AND NAVIGATED.

Professor Nordenskjold has the satisfaction of being the first navigator to make the long talked of voyage through the Northeast passage. He has successfully threaded his way along the northern shores of Europe and Asia, passed from the North Sea to the Arctic Ocean, and thence through Behring Strait into the North Pacific, and returned in safety to Yokohoma, where his arrival was reported a few days since. When he has returned to Sweden, *via.* the Suez Canal, he will have completed the circumnavigation of the two continents, which is a feat unparalleled. The existence, therefore, of a long suspected Northwest Passage is satisfactorily demonstrated. The question now arises: What material service to the world, or what profit to the explorer or the merchant, will result. The Professor claims that he has found a practicable summer route between America and Siberia, the northern portion of which, hitherto shut out from the Western coast of this Continent, is now accessible through Behring Strait; but less sanguine men declare that the Northwest Passage is practically useless, since there is no commercial necessity for it.

Pure science has undoubtedly gained much from the Professor's observations. He has, he says, fully accomplished the object of the expedition. He has studied the bottom of the sea by means of dredging; has discovered new marine animals, and found quantities of fossil remains; has charted and calculated for the benefit of mariners, the location, breadth, velocity and approximate volume of the Artic and Pacific Polar currents, and thus obtained precise and definite information of an unknown region.

HIE TO THE WOODS!—The glorious sport! Ye delvers after the ore of gold, hidden, as it seems to be, in boxes of silk or bales of cotton, in bits of paper or leaves of ledgers; ye weary crawlers through the streets of mammon, who think the world is bounded by the four walls of your ambition; ye who have been brought up to work as though work were the aim of life, instead of the means of its improvement; ye who have laid up a few hundred for some pet dissipation, a visit to Saratoga, or a fight with the tiger (that man-eater!); and ye who must watch every day over your accumulated millions, lest a penny slip into a cranny and be lost, go to the woods, where you will be surrounded by the sombre trees, where the rocks will be your companions, and the wind whisper, and the streams prattle to you.

There you will learn how little it takes to render man comfortable and happy; how, but for his reckless passions and extravagant desires, all might be satisfied, and plenty crown the human race.

There, where Nature speaks to you in her beauty, in her grandeur, and occasionally in her stupendous power; where wonders of the universe by day and night are ever present, like old friends; where there is naught but the thin air between the Maker and His beings, you may learn what will be more valuable some day than any treasure of gold or silver.

Breathe the pure air; shake off every ill that flesh is heir to; add to your life, if you love it so well, a week for each day, and that a day of never-wearying enjoyment.

Take rod and gun; aspire to cast the line far, and straight, and light; feel the struggle of patience, perseverence, skill, resolution, with brute strength and cunning; know the pleasurable anxiety of the chase, the alternated hope and fear, and the final glory of success; learn the woodsman's art, the "gentle craft of venerie," and wonder at the resources of the wilderness; and on your return thank me not, if you can.

ROBERT B. ROOSEVELT.

RAILROAD TIME.—The *Sun* has been taking testimony from railroad experts and engineers relative to the speed of railroad trains. To settle the dispute as to whether trains go at the rate of one mile per minute, one correspondent took his place on the engine of one of the fast Pennsylvania Railroad trains from West Philadelphia to Jersey City. He had provided himself with a stop watch which recorded seconds and quarter seconds. The distances and time recorded by mile-posts and watch were: Five miles, 4m. 55½s.; three miles, 2m. 36s. Of these last three, the first was made in 54s., second, 52s., third, 50s. This was the regular daily speed of the train. Many other trains on American railroads make equal records. According to the London (Eng.) *English Mechanic*, engines of the Bristol and Exeter Railroad have attained a speed of 80 miles per hour. In one instance the rate was 81.1 miles per hour.

"OLD JUDGE."—When Goodwin's smoking tobacco is on trial the "Old Judge" always renders a verdict in its favor. So do the jury. So say all the witnesses. Heretofore the adage has been, "May the best win." Now it is, "May the Good-win." Ha! ha! That gives common folks a chance. Not to say that the "Old Judge" tobacco s common, by any means; but if its popularity continues to extend among the masses of smokers as it has done during the past two years it will soon be common enough. Ha! ha! again, and how do you like it? If you don't like it, try it. If you wish to try it, send to 207 Water street, this city, and order a sample. Put it in your pipe and smoke it.

—The Commissioners of Parks of New York City have been waking up to the fact that the numberless cats and dogs which nightly infest Central Park have been destroying great quantities of game. A game-keeper has been appointed to shoot the felines and canines. He bags half a dozen every night.

—It is stated that Professor Mayer, of Boston, recently put a soft-shelled potato bug larva into carbolic acid for three days, and then boxed it up and sent it to Europe for a zoological specimen. Nothing daunted by the fifteen day's journey under such discouraging circumstances, when it reached the old country the bug was found able to eat potato vines as cheerfully as ever. What would a hard-shell bug not have done?

—It is proposed by the citizens of Baltimore to erect in Druid Hill Park of that city a monument to Lafayette. We are glad to see monuments erected. They are effective means of awakening regard for the manly virtues of the great men they commemorate.

PUSILLANIMOUS.—The man who is mean enough to say one word against the dumb, defenceless oyster is not only an arrant coward, but his liver is out of order. Don't you forget it. Poor little oyster; can't fight, can't do nothing. Never opens his shell.

—It used to be target companies: now it is chowder parties.

A TRIP TO NORTH PARK.

(SECOND PAPER.)

[FROM OUR STAFF CORRESPONDENT.]

WITHIN the past year a change has been made in the depot arrangements at Council Bluffs and Omaha, which adds greatly to the comfort of travelers. Ever since the completion of the bridge over the Missouri River it has been the custom to oblige westward-bound travelers to change at the Bluffs from the eastern train to a bridge train which carried them to Omaha, where they changed again to the Union Pacific train. Last year, however, the Chicago and Northwestern and the other railroads which meet at Council Bluffs erected there a handsome depot, at which is made the only change of cars between Chicago and Ogden. The Union Pacific train which carries passengers to the West now backs over the bridge to the Bluffs, the luggage is rechecked there, and for the next thousand miles the traveller remains undisturbed in his section.

The Union Pacific Railroad is the great highway to the finest mining, farming and hunting region of the continent, and besides this it carries the pleasure seeker to some of the grandest scenery of the Rocky Mountains, and to those natural wonders, unequalled in any land, the Thermal Springs and Geysers of the Yellowstone Park. These, with the accompanying attractions of the Yellowstone Lake, the great falls, and the stupendous cañon, far exceed the power of language adequately to depict. There is really nothing to which they can be compared, and no just conception of the beauties of the Park can be gained without a personal visit to the region. By means of a narrow gauge road, which is partially completed, the Yellowstone Park will soon be open to the whole world, and even now those who are willing to endure the fatigues of a short journey by stage-coach can reach it with but slight inconvenience. I know, having myself visited the Park, how surpassingly beautiful the scenery is, and how amply the tourist will feel repaid for any trifling fatigues he may have endured. To enumerate all the delightful localities to which the Union Pacific road conducts the seeker after pleasure or health would be tedious, for their name truly is legion. The parks of Colorado are, perhaps, the most noted among many notable spots of beauty. In South and Middle Parks are to be found excellent hunting, with splendid trout and grayling fishing. North Park, which has up to within a short time been very little known, is said to abound in large game of all kinds found in the West, save only the moose and the white goat, the ranges of these animals not extending so far south.

In speaking of the foregoing regions reference has been made only to such as present attractions to men of means, but it must not be inferred from this that the trans-Missouri States and Territories offer no inducements to people whose circumstances are limited. This is indeed the poor man's country, and it offers to the settler wealth just in proportion to his industry and honesty. Land costs almost nothing. The Union Pacific R.R. Company has still thousands of acres of the very finest wheat land, which it sells at prices which are merely nominal. This land is situated in the great Nebraska wheat belt, and the grain grown upon it has already given a world-wide reputation to Nebraska flour. Or if the intending settler prefers the somewhat more stirring life of a cattle man to that of a farmer, Western Nebraska, Wyoming and Montana offer tens of thousands of acres, on which grow the richest grasses, and on which cattle will live, thrive and grow fat in the winter, without other food or shelter than that provided by nature. A man with a very small capital purchasing a few cows, yearlings and two-year-olds, will, with ordinary care, find himself in a few years in a position of independence, if not of wealth.

I marvel that, during the hard times which have prevailed for the last six years in the Eastern States, so few have had the foresight and courage to seize the golden opportunities which offer themselves to men of energy and industry here in the West.

Of the mineral resources of the Rocky Mountains but little need be said. All know, by report at least, of the wealth of the Black Hills of Dakota; and a visit to this region is extremely interesting. Comfortable stage coaches connect with the Union Pacific trains at Sydney and Cheyenne, and the trip is well worth taking. It is said that very rich deposits of galena with silver and of carbonate of silver have recently been discovered in North Park, and in consequence of these reports a "stampede" has taken place to the scene of the discoveries, and numerous mines have been located. At present the excitement has somewhat died away, but there is no doubt that vast amounts of the precious metals are hidden away in the ragged and snow-covered mountains which surround the Park. Time and capital are required to develop this wealth, of which I shall, perhaps, have more to say hereafter.

It is safe to state that in its appointments the Union Pacific R. R. is equal to that of any in the country. A very pleasant feature of travel on this road is the uniform courtesy of its officials, and their constant willingness to be of use to the traveller. They are often required to answer the most trivial and silly questions about the West, its inhabitants, fauna, flora, Indians, road agents, and so on *ad infinitum*, but I have yet to see one that lost his temper at the childish queries of his interlocutor, or replied other than pleasantly.

At Omaha, where I stopped for a short time, I had the pleasure of meeting once more Mr. Thos. L. Kimball, the genial friend of all sportsmen and the Gen'l Ticket Agent of the U. P. road, to whom now as in the past, I desire to express my obligations for many courtesies. By Mr. Kimball I was introduced to Mr. Rob't E. Strahorn, editor and proprietor of the *New West*, from whom I received valuable information as to the best route by which to reach my destination. Mr. Strahorn is, as everyone who has travelled extensively through it must be, an enthusiast with regard to the West and its future, and, by means of his interesting and valuable writings, notably "The Rocky Mountains and Beyond," "Wyoming and Montana," "The Resources of Montana," etc., has done much to open up the country to settlers. Eastern men who are thinking of settling along the line of the Union Pacific should not fail to obtain a copy of the *New West* before starting from home. They will find it replete with information of value. Such copies can be obtained by addressing the editor at Omaha, Nebraska. Mr. Strahorn advised me to fit out at Laramie and was good enough to give me a letter to Dr. Hayford, the editor of the Laramie *Sentinel*.

The ride from Omaha to Laramie has been often described and I need not dwell upon it here. All along the railroad were to be seen evidences of prosperity and thrift. From Omaha to Grand Island, where night closed in upon us, the country was one vast farm, with far-reaching fields of corn, oats and wheat succeeding each other as mile after mile was passed over. We were traversing the great grain belt of the Platte. From Sydney, where we breakfasted, to Cheyenne and beyond, the prairie was pasture land, and herds of cattle, sheep and horses were constantly in sight. Formerly these plains were occupied only by the buffalo and the antelope, but these have been forced to give way to the hords of the stockmen. While one cannot but lament the driving away, and, in the case of the buffalo, the virtual extermination of these splendid game animals, it is satisfactory to see that the plains are not the desolate wastes that we feared they might have become, but abound in material evidences of our country's prosperity.

Of the superb views which present themselves to the traveller as he approaches Sherman I have not space here to speak, and besides, are they not all written of in the transcontinental guide books? One who enjoys to the full, grand mountain scenery, will do well to spend the whole of the afternoon occupied in the ascent of the mountan on the platform of the cars.

We reached Laramie at five o'clock, and on alighting from the train were greeted at once by Mr. Reed, whom some of our readers may remember as having accompanied us on our last years' hunt in the Freeze Out Mountains. The sight of his cheery, reliable face was a wholesome one, and we felt sure that in him we had at least one friend at hand on whom we could depend. My sensations of satisfaction were somewhat moderated, however, when I learned that it was impossible for Reed to accompany me on the trip, for business of a most pressing nature detained him. He had, however, made arrangements for starting at once, and there remained for me to attend to only some matters of detail. A team and three saddle animals were hired, a mess kit and provisions secured, and the following morning we were ready to start. Yo.

Laramie, Wyoming.

The Rifle.

SMALL CALIBRE AGAIN—A PRACTICAL ILLUSTRATION.—The following may serve as an appropriate postscript to the letter I sent you last week, and I hope may reach you in time to be published with it:—

A friend called upon me last evening who had just returned from a sporting trip in Michigan and told me that he was fishing from the bow of a boat when his guide, who was in the stern, called to him: "There's a bear." He looked up and saw the bear's head about ten yards back from the river bank and twenty-five yards from the boat. The bear had struck an attitude and stood still looking at him. He picked up his rifle, took a quick aim and fired. The guide exclaimed: "You've fixed him," and on going ashore they found him stone-dead, the bullet having struck him between the eyes, ranged lengthwise through the skull, passed through the first and smashed the second vertabræ of the neck and lodged in the skin of the nape. The bear was an old male, measuring five feet seven inches from tip of nose to root of tail; and such old hunters as those who have criticised me will not need to be told that a bullet that would pierce an old bear's skull at such an angle must "mean business." My friend, who is a naturalist, told me he had cleaned and preserved the skull, and I have this morning been to examine it and found that the bullet entered between the eyes, farther to the left than to the right, and ranged lengthwise through the skull to the neck, cracking the skull on each side clear back, so that the top came off when cleaned. The rifle which did this was a 40-calibre Maynard, with a charge of forty grains of powder, same as that with which Gonaday killed the tiger.

Perhaps Mr. Van Dyke will think this does not prove anything. If that bear had lived long enough to form an opinion I think he would have agreed with me that such a weapon will do for any game found east of the Missouri. The gun that will inflict such a wound upon a bear, that will smash both shoulders of a buffalo, that will pierce seventeen inches of green cedar, has certainly force enough for any game—and that I know can be done with the weapon I have described. Yet for large or dangerous game I should prefer a larger calibre than a 40, though I see no earthly necessity for a heavier gun.

Chicago, Sept. 2d. H. W. S. CLEVELAND.

TEXAS—*Corpus Christi, Aug. 30th.*—This spring I bought a new forty-four calibre Ballard rifle, Pacific octagon barrel, etc., together with all the extras, as bullet moulds, patches, ball-seaters, and fifty everlasting shells, which are represented as lasting for years. These last I ordered and got already loaded so I could examine the method of loading.

The rifle I find shoots excellently well and fills the bill precisely, with the exception only that the extractor frequently fails to eject the shell after firing, necessitating the use of the clearing rod, which takes nearly as much time as would be required to load a muzzle loader.

This, however, is perhaps not the fault of the gun but of the everlasting shells which expand each time they are shot. This expansion is so great that in no single instance was I able to insert one of the empty ones in the ball-seater to re-load it.

And, furthermore, I found in many instances that the shell after firing would not re-enter the chamber at the breech without dressing down with emery. Upon the second discharge of a shell this was invariably the case, and I forsee plainly that in a short time these everlasting shells, for which I paid nine cents each, will be all dressed off to nothing.

The bullet moulds which cost three dollars, make a bullet too large to enter the shell after patching, and I have had to carefully dress off each one before loading. There was no brush and swab furnished with the rifle, although I paid full catalogue price, forty dollars.

So much for my new rifle. My Nichols shot gun does better, but the Howard paper shells that the agent I ordered the gun through recommended to me, are not fitted for moist climates, as they swell so that it is impossible to use them in damp weather. If loaded when perfectly dry they do very well to shoot once, provided you do not attempt to use a No. 9 wad in a 10 shell. If you do it forms a ridge which will not allow the cartridge to enter the chamber. I shall try my next lot out of some Union Metallic Cartridge Company's shells I have on hand, and if they will not do I will try Eley's best, although I hate to use a foreign article if I can get a good one at home.

If my rifle were chambered for any other than the everlasting shell, I would never use another, but as it is I must wait patiently until a good shell of this shape is made, and I hope you may be able through you columns to help me to find such a one. Is there a nickle or tempered steel shell of forty-four calibre, seventy grains of powder that will fit the Ballard rifle bored for everlasting shells? If so, please let me know, and I will try them forthwith. And is there a paper shell for shotguns that is not affected by moisture. BEXAR.

It certainly is a fact, our correspondent's experience to the contrary notwithstanding, that the Ballard rifle shells are capable of a very extended use. At Creedmoor, we have seen the same shell loaded and fired scores of times. There may be some details of this practice mentioned by our Texan friend, which would explain away the trouble. As it is, his experience is the exception to a general rule.

MASSACHUSETTS—*Worcester, Sept. 3d.*—A few local riflemen were out for practice to-day and scored at 10 shots:—

	400 *Yards.*	500 *Yards.*	200 *Yards.*	*Total.*
M. G. Fuller	50	50	41	141
E. A. Bartlett	48	48	43	139
S. Clark	49	48	40	137
C. Jenkins	47	45	31	123

Medford, Sept. 3d.—The Medford Amateur Rifle Association held their weekly meeting at Bellevue range this afternoon. 200 yards; rounds, 10; off-hand firing; open to all comers. The following are the scores:

H. H. D. Cushing, 46; E. Whittier, 43; H. Withington, 42; E. S. Pipeo, 42; A. B. Archer, 42; J. Grady, 40.

Boston, Sept. 6th—Mammoth Rifle Gallery.—The first week of the regular monthly prize shoot opened well. The score to date stood—150 feet; rounds 8; possible 40:—

C. A. Pollard	5 4 4 4 5 5 5 5—37	Geo. Estes	5 5 5 4 5 4 4 4—36
E. Whittier	5 5 4 4 5 4 5 5—37	M. O. Johnson	4 4 4 4 5 5 5—35
W. H. Harrison	4 4 4 4 5 5 5 5—36	Geo. M. Smith	5 5 4 4 4 4 4 5—35
Henry Lowell	5 5 4 4 4 5 4 5—36		

Boston.—At Walnut Hill Range, on the the 29 ult., in the 500 yards off-hand match, W. Charles, total 98, receives the first prize, the bronze medal of the National Rifle Association; O. M. Jewell, total 98, the second prize, cash $10; W. H. Jackson, total 97, third prize, cash $5, and the fourth prize, $2 cash, goes to L. L. Hubbard, whose total score was 92.

Boston, Sept. 3d.—There was a good attendance at today's meet of the members of the Massachusetts Rifle Club at Walnut Hill range. The occasion was the concluding meet in the *Spirit of the Times*, or long-range class match, and the weather conditions were propitious, the wind blowing a steady and moderate breeze from two o'clock, and the clouds which covered the sun afforded just shade enough to make the aim of the marksmen perfect. The scores will speak for themselves, but the record of Mr. J. S. Sumner is entitled to special mention. The score shows that he has again made a total equal to, and according to the rule even a better one than, his famous record at Creedmoor, and which has never yet been excelled or even equalled; but, when he stepped to the firing-stand to make his twelfth shot at 1,000 yards, the excitement among the marksmen was very great, and it was thought, by the way he had been shooting, that he was going to beat his own record, but by an unfortunate "4," he spoiled his chance, although by the three following

"bull's-eyes" had succeeded in tying his own record. The score stood :—

J. S. SUMNER.

800	5 5 5 5 5 5 5 5 5 5 5 5 5 5 5—75		
900	5 5 5 5 5 5 5 5 5 5 5 5 4 5 5—74	221

E. W. LAW.

800	5 4 5 4 5 4 5 5 4 5 5 4 5 5 4—69	
900	5 3 5 5 5 5 5 5 5 4 4 3 5 5 4—68	205
1,000	4 5 5 5 5 5 5 5 5 5 3 3 5 4 4 68	

The conclusion of the match permitted the making up of the prize list as follows :—In the first class, J. S. Sumner, total 1,299, average 216½, gold medal, valued at $60. William Gerrish, total 1,295, average 215 5-6, takes the Winchester rifle, valued at $50. J. F. Brown, total 1,285, average 214 1-6, the carbine valued at $25. W. H. Jackson, total 1,283, average 213 5-6, Snider 22-calibre rifle, valued at $18. The fifth prize goes to Mr. N. Washburn and the sixth to H. Tyler. In the second class, Salem Wilder, with a total of 1,244, and an average of 207⅓, takes the first prize, a Sharps hunting rifle, valued at $30. The second prize, a Ballard 22-calibre rifle, valued at $30, and the third, a United States Springfield rifle, valued a. $20, were won by L. L. Hubbard and Lewis Saunders, respectively. The first prize in the third class, a gold medal, worth $25, was awarded to W. M. Ward. E. W. Law secured the second prize, a Western 22-calibre rifle, valued at $25, and the third prize in this class, a Remington rifle, worth $20, falls to J. N. Fyre.

Boston, Sept. 6th.—A large number of spectators were at Walnut Hill this afternoon and witnessed some fine shooting in the third contest in the silverware match, at 500 yards range. The wind was steady from the eastward, and registered from 2 to 3 o'clock, while the light was excellent. The result of the shooting was :—

J. H. Williams	4 5 4 4 4 5 4—30
C. U. Meiggs	5 4 4 5 4 4 4—30
J. Borden	4 4 4 4 4 4 5—29
J. Nichols	4 4 4 4 4 4 5—29
H. Tyler	4 4 4 4 4 3 4—27

Wakefield.—A series of competitions have been opened by the Wakefield Rifle Association, open to all comers, to be held at their range each Saturday afternoon during this month ; distance, 200 yards ; position, off-hand ; rounds, 7. The first of the competitions was held on the 6th, and was well attended, Mr. Roger Howard making a remarkably fine score with a 33, 32, 31 and two 30's out of a possible 35 each.

Medford, Sept. 5th.—The attendance of members of the Raymond sportsman's club and their friends, at Bellevue range to-day, was fair. The weather conditions were excellent. The handicap rifle match, at 200 yards, off-hand, ten rounds, open to all comers, had 36 re-entries:—

D. Kirkwood	4 4 5 5 5 5 5 5 4 5—47
W. Charles	5 5 4 4 4 5 4 5 5 5—46
J. R. Teele	5 5 5 4 4 4 4 4 4 5—44
W. B. Witherell	4 5 3 5 4 5 4 5 5 4—44
G. B. Blanchard	4 5 3 5 4 5 4 5 5 4—44
J. S. Bennett	4 4 4 4 4 5 5 4 4 5—43
R. Abbott	4 4 4 4 5 4 4 5 4 4—42
C. D. Harrison	4 5 5 4 4 4 4 4 4 4—42

Milford, Sept. 5th.—Ground on the Medway road has been secured for the rifle range of Company M, Sixth Regiment, M. V. M. A team will immediately commence practice for the State match, Oct. 14th, at South Framingham.

VERMONT.—The National Rifle Club held its twenty-second annual meeting at South Vernon on Sept. 2d and 3d ; the prizes were as follows :—

P. A. Reinhard, first prize, 10 5-16 inches; D. S. Priest, second prize, 10 11-16 inches ; H. J. Huntoon, third prize, 11⅞ inches. Second string : H. W. Smith, 11 13-16 inches; D. A. Brown, 12 3-16 inches ; N. S. Brakeway, 12 7-16 inches. Third string : H. W. Martin, 11 1-16 inches ; D. A. Brown, 12 9-16 inches ; H. J. Huntoon, 13 5-9 inshes. Mr. Hiram W. Smith, of Boston, making the shortest thirty shots wins the club medal.

CONNECTICUT—*Collinsville, Sept. 3d.*—Canton Rod and Gun Club, Riverside range; practice meeting at 200 yards; off-hand ; 3 pounds pull; 10 shots :—

		Mass.	Creed.
O. B. Hall	11 8 10 11 9 10 10 12 10 11	—102	44
Laubenstein	9 11 9 12 11 12 6 7 10 10	— 97	43
Moore	11 11 11 10 9 9 12 8 10 10	—101	44
Andrews	7 8 8 12 7 11 10 10 9 9	91	42
Bidwell	8 10 7 6 12 11 9 8 11 9	91	42

On Thursday, the 4th, three members at practice made the following good scores, Mr. Hull's score of 111, I think, not having been excelled. Mr. Hull shot with extended left arm; off-hand, as usual :—

Andrews	11 11 9 10 7 11 10 7 9 12	— 97	44
Moore	11 12 8 11 11 11 10 11 11 9	—105	47
O. B. Hull	12 12 11 11 11 10 11 10 12 11	—111	48

B.

Bridgeport, Sept. 4th.—Scores of a match between teams from the Emmet Club and Robinson Independent Zouaves, the Zouaves using the old 50 cal. Springfield and the Emmets the 45 Borchardt Sharps.

ROBINSON ZOUAVES.		EMMET CLUB.

S. H. HUBBARD.

STEADY OFF-HAND WORK—*Bridgeport, Sept. 6th.*—Below please find scores, two of which, are common enough, but the big score is one which I think has never been equalled under similar circumstances. Harry Nichols and myself were out practicing and started to shoot a string of 10 shots. The result of the string was an exact tie on 4 5 4 5 4 4 5 5 5 4 4—45. Nichols was shooting a Peabody regulation military rifle ; and I, a Sharp's mid range. On shooting off the tie, Nichols made the enormous score of 5 5 5 5 5 5 5 4 5 5—49, possible 50. My score on the tie was 5 5 4 5 4 5 5 5 4 4—46, a good score, but one which sinks into insignificance besides 49 with a military. The shooting was strictly off-hand.

SHERMAN H. HUBBARD.

NEW YORK—*Conlin's Gallery, Sept. 8th.*—The second of the series of ten weekly contests for Marksmen's Badges took place this evening. Throughout the entire competition there was a very interesting "closeness" among the leading competitors' scores. Finally Mr. Sibley proved the most proficient with the score of 34, he winning a Marksman's Badge and making a very good showing for the Champion's Badge, which is won by the best aggregate score made in the ten contests.

The following are the names and scores of the leading competitors—possible, 35 ; 300 yards ; Creedmoor reduced target :—

S. W. Sibley	34	*Wilson MacDonald	29
D. A. Davis	32	N. O'Donnall	28
W. H. Dunlap	32	E. T. Davis	28
G. J. Seabury	31	H. W. Gourley	28
W. H. Caldwell	31	S. A. Abecasis	27
D. S. Banks	30	W. O. Wetherbee	25
*F. J. Donaldson	29	C. E. Overbaugh	25
J. B. Stanton	25		

* F. J. Donaldson used open sights.
† Mr. MacDonald shoots at the word of command.

Brinton, Sept. 4th.—Association long-range match ; eighth competition; won by Homer Fisher, Messrs. Graham, Dart, and Rathbone, making higher scores but being subject to handicap, which gave the competition to Mr. Fisher :—

	800 *Yards.*	900 *Yards.*	1,000 *Yards.*	*Total.*
M. J. Graham	72	69	70	211
Dr. J. M. Dart	70	71	68	209
R. Rathbone	70	72	67	209
Homer Fisher	71	63	70	204
A. McInnes	69	65	61	195
A. G. Holcombe	67	57	69	193

Same Range—*Sept. 6th.*—Association match No. 2, 200 yards ; eighth competition ; 22 entries, the following being the best scores :—

F. H. Holton	47	D. T. Davids	43
T. Fitz	46	Col. G. E. P. Howard	43
J. W. Todd	45	C. P. Bonnett	42
E. W. Squier	44	J. R. Boyd	41

ILLINOIS—*Chicago.*—At the Soldiers' Re-Union at Aurora, Ill., on the 19th, 20th and 21st ult. the Thomas Post Rifle Club organized a shoot for teams from all military or rifle organizations present. There were teams enough on hand, but with the exception of one solitary Maynard, belonging to the Batavia Rifle Club, there were no rifles on the ground save those belonging to the Thomas Post. The day was fearfully hot, likewise the guns, as you will readily understand from the fact that two, and in some cases three men, were using the same weapon. The immense crowd—about 40,000—closed in on us to witness the shooting, giving us a living lane about fifteen feet wide and 200 yards long for a range, and occasionally this width would be abridged by a bucolic idiot craning forward to see the bullet leave the gun. Under the circumstances the shooting was creditable, two ticing on 43 out of a possible 50. The cups were both won by Thomas Club men. On the 30th the third competition for the Giles Brothers' silver cup occurred among the members of the Thomas Club. This cup is to be shot for on the last Saturday of each month until it is won three times by one member; 200 yards; off-hand; 15 shots; the score was as follows :—

Austin	5 4 5 5 5 4 3 4 4 4 5 5 4 4 4—65
Tyrrell	5 5 4 4 4 4 4 5 4 5 4 4 5 4 4—65
Hobbs	4 4 5 4 4 4 4 4 4 5 4 4 4 4 4—62
Freeman	4 4 4 5 4 5 4 4 3 4 5 4 4 4 4—62
Chenoweth	5 3 5 4 4 4 4 3 4 4 3 4 4 4 5—60
Borcherdt	4 3 4 4 5 4 4 5 3 4 3 3 3 5 4—58

DRURY.

WISCONSIN—*Milwaukee, Aug. 29th.*—At 900 yards, this afternoon, the members of the Milwaukee Rifle Club enjoyed a good match, though the scores did not run very high. The record stood :—

Johnston	4 4 5 4 3 5 5 5 5 5 4 5 5 4 4—67
Yale	5 3 3 5 3 3 5 5 5 5 5 5 5 5 3—67
Markham	3 4 5 4 5 4 5 5 4 3 4 3 4 4 5—62
Drake	4 4 5 4 5 0 3 5 5 5 0 5 5 4 4 -58
Hill	3 4 5 5 5 5 4 4 4 0 5 5 5 4 0—58
Bangs	4 0 5 5 5 5 3 4 5 5 4 4 0 5 0—56

HAMILTON, OHIO, MAY 2, 1879.—Mr. Carl Dittmar, Binghampton, N. Y. Dear Sir : As there is much discussion being had lately through the press in regard to the use of the Dittmar powder, and its effect upon game when used, I thought it not improper to inform you of the test and experience I have had with it for the past few years. During the past three years, I have done a large amount of shooting, both duck and quail, and I have during that time used a large quantity of the Dittmar powder. I shoot a Francoate gun, No. 10, which weighs about eight pounds. When shooting duck I use from 4½ to 5 drachms of powder and 1¼ oz. of shot. For quail I use much less powder. During all my experience and use of the powder, I have found it perfectly safe, and it certainly fouls a gun much less than any powder I have ever used, and when properly loaded the power of penetration is equal to the very strongest black powder, and as there is but little smoke from the use of it, it to me is much preferable for field shooting.

I spent nearly three months last winter shooting in Georgia, with Dr. Metcalfe of New York, and Judge Hopkins of Georgia, neither of whom had ever used the Dittmar powder. I had them try it, and for field shooting, which was the only shooting we did, they much prefered this powder, and pronounced it perfectly safe. I see another objection urged against it, which is this : If your shells are loaded for some time before being used, they will miss fire, as the powder makes and contracts dampness. This certainly is incorrect. While in Georgia last winter I used shell which had been loaded with Dittmar powder for nearly three years, and out of nearly one hundred of these shells I never had one to miss fire. I use nothing but the Dittmar powder when I can get it, either for field or trap shooting, and I am clearly satisfied that it is fully as safe, and will do al good execution as any black powder, and is much preferable both on account of cleanliness and absence of smoke.

Yours respectfully, J. C. MCKEMY.

P. S.—The greatest objection agains it here has been the expense, on account of the high price.

Game Bag and Gun.

GAME IN SEASON FOR SEPTEMBER.

Moose, *Alce Americana.*
Caribou, *Rangifer caribou.*
Elk or wapiti, *Cervus canadensis.*
Red or Va. deer. *C. virginianus.*
Squirrels, red; black and gray.
Hares, brown and gray.
Reed or rice bird, *Dolichonyx oryzivorous.*
Wild turkey, *Meleagris gallopavo.*
Pinnated grouse or prairie chickens, *Cupidonia cupido.*
Ruffed grouse or pheasant, *Bonasa umbellus.*
Quail or partridge, *Ortyx virginianus.*
Black-bellied plover, ox-eye, *Squatarola helvetica.*
Ring plover, *Ægialitis semipalmatus.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Woodcock, *Philohela minor.*
Red-breasted snipe, or dwitcher, *Macrorhampus griseus.*
Red-backed sandpiper, or ox-bird, *Tringa Americana.*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tattler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limacolæ* or Shore Birds.

☞ This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

☞ The seasons for shooting pinnated grouse or prairie chickens and other birds are as follows in the States named herewith :—

States	Pinnated Grouse.	Ruffed Grouse	Quail.	Woodcock.
Ill.	Aug 15 to Dec 1	Oct 1 to Jan 1	Oct 1 to Jan 1	July 4 to Jan 1
Ind.	Oct 1 to Feb 1	Nov. 1 to Jan 1	Nov 1 to Jan 1	July 1 to Jan 1
Iowa.	Sep 1 to Dec 1	Oct 1 to Jan 1	Oct 8 to Jan 1	July 10 to Jan 1
Minn.	Aug 14 to Oct 1	Sept 1 to Dec 1	Sep 1 to Dec 1	July 3 to Nov 1
Wis.	Aug 25 to Jan 1	Aug 25 to Jan 1	Aug 25 to Jan 1	Aug 25 to Jan 1
Neb.	Aug 15 to Feb 1	—	Oct 1 to Dec 1	No Restrictions
Kan.	Aug 1 to Feb 1	"	Oct 1 to Jan 1	Forbidden

MAINE.—The Maine State tournament will be held Sept. 24th, 25th and 26th.

MASSACHUSETTS—*Plymouth Co., Sept. 2d.*—Bay birds have not been plenty this week, with the exception of the 22d, which was a good day on the North River, good shots getting from twenty to thirty big birds. One party killed thirteen uplands on the Fourth Cliff at two shots. Coot shooting during easterly weather of four days last week was unusually good for so early, and one bag of twenty was taken at Black Rock by one of our best gunners. Too hot to tramp ; few woodcock ; only three being killed that I have heard from. S. K. Jr.

HAMPTON MARSHES—*Amesbury, Mass, Sept. 6th.*—In regard to the Hampton marshes I would say that your correspondent "W. W. J." thinks my communication referred to the Hampton marshes only. I would say that I wrote from Amesbury, Mass., and spoke in particular in regard to the Salisbury marshes, which adjoin Hampton marshes at a distance of about two miles, and on the same line. The birds, which were reported to be so plenty at one place, failed to put in an appearance at the other. If your correspondent resides in N. P., and if he could have read my communication in full, he would agree with me, that although there may be shooting on Hampton marshes, it is very seldom we get any shooting on Salisbury marshes. G. F. G.

Medford, Sept. 5th.—The following is the result of the glass-ball match ; 30 balls in all :—

	Single Trap.	*Double Trap.*	*Rotary Trap.*	*Total.*
G. B. Blanchard	9	10	8	27
J. B. Teele	8	8	7	23
W. B. Witherell	9	8	5	22
D. Kirkwood	7	7	6	20
W. Charles	8	7	5	20

Brookfield, Sept. 2d.—A sportsman's club has been organized here, and officers elected as follows :—H. L. Butterworth, Pres.; H. Mathewson, Vice-Pres.; H. P. Gerald, Clerk ; J. P. Crosby, Treas.; Samuel Moulton, A. Sheppard and C. H. Giffin, Executive Committee. This afternoon the club were out for a shoot, eleven members of the club participating. H. Mathewson came out ahead, with 9 out of a possible 10 balls ; C. H. Giffin next, with 8 ; S. Moulton, 7 ; A. Sheppard, G. Fiske and H. Richards, each 6 ; H. E. Capen and H. Heredean, each 5 ; H. L. Butterworth went back a little on his former score, breaking only 4.

NEW HAVEN GOSSIP.—*New Haven, Sept. 1st.*—A few members of the New Haven Gun Club have been spending their time as follows :—Leet has been educating a pair of squabs for the first pigeon flight. Beere and Hanson have been camping out with their families at the seashore. Josey, Penn and Thompson have been exercising their dogs for Oct. 1st, to have them in hunting trim for the migratory quail. Sanford has been on the salt meadows after wild pigeons. E. A. Holsom has started for Massachusetts with three hundred loaded shell and his dog. He promises a game supper to the boys on his return.

Bryan Brothers are making twelve new duck boats, and their hotel near the Thimble Islands will be opened for duck shooting in September and October. Bronsen, Haward and Culvin are practicing on balls in private grounds, and no doubt will surprise some of the team at the next medal shoot. Morris has just returned from New York State, and reports woodcock shooting very poor. Porter, Ingersoll, Smith and Mervin are rail shooting. Dickerman, with his 16-gauge, has spent some time shooting at swallows. Waterhouse has just succeeded in drawing his boat off from the potatoe field where he was left by the last storm. He reports no damage.

Armstrong is busy watching for ducks from the wharf, and reports that a large number have arrived during the past few days. Next week, no doubt, about all the duck boats will receive a coat of paint, and old lines be replaced by new ones. Most of the other members are on vacation, and have not returned. I. LUTE.

NEW YORK—*Cazenovia, Sept. 2d.*—The opening day for grouse shooting was taken advantage of by a number of sportsmen yesterday, but owing to the absence of rain for the past two weeks the birds were hard to find. Tillotson and Atwell, bagged six grouse ; Caril and Coon,

seven grouse; Smith and Cruttenden three grouse and ten woodcock. All unite in saying that they never put up so few birds. HAMMERLESS.

NEW YORK GUN CLUB.—*Bergen Point, N. J., Sept. 6th.*—In a match at 25 birds, 20 yards rise, 5 traps five yards apart, Dr. Fellner and Col. Armstrong tied on 22 each, the former winning the shoot off.

Stamford, Sept. 6th.—Ruffed grouse will be exceedingly plenty this fall, and bears have shown up near the settlements on several occasions, much to the annoyance of berry-picking damsels. NED,

LONG ISLAND.—Match shot by Wm. King, of the Long Island Club, 25 double birds at 21 yards, against Cornell Ditmer, of Flatlands, 50 single birds at 24 yards rise. Shot at Parkville, L. I., Aug. 29th. The score was:—King, 40; Ditmer, 37.

AN OLD VETERAN ON MOONLIGHT.—*Stamford, N. Y., Sept. 5th.*—There is more honest sense in the brief but decisive language of your correspondent, J. A. Lindsay, from Arkansas, in your last, regarding deer feeding by moonlight, than in columns from my pen and those of all others in your paper on that subject published hitherto. His experience should be enough to satisfy all moonshiners on the subject.

I wish he had written a word or two on the sporting rifle controversy. I hold that my Sharp, 45 calibre, 2¾ shell, 500 grains lead and 100 grains powder, is as good as the best, and needs no *expressage* on large game.

NED BUNTLINE.

REMARKS.—The matter of fact of the whole business is, that deer feed when they can see best. If the nights are dark they feed by day; but they prefer to feed at night, because they are less apt to be disturbed then.—ED. F. & S.

NEW JERSEY.—*Red Bank, Sept. 2d.*—Prospect for quail in this country good. G. H. W.

—The gunning season was opened in Pennsylvania on the 1st, and never before were so many sportsmen out after rail and reed birds. The reports of the success of the reed shooting are very encouraging to sportsmen.

Pottsville, Sept. 5th.—On Tuesday evening, this week, the Pottsville Game Protection Association had a meeting at the Merchant's Hotel, and a committee appointed to make arrangements for the opening day shuffle and spread, the advent of the occasion being the 15th inst. Usually our sportsmen and their former friends look forward to these occasions with enthusiastic anticipations. But information comes to us that the partridge crop will be very short this season on account of the extended firefiend of our mountains. The mower and reaper machines annihilate the propagation of the birds in uncovered grounds; this seems to be confirmed by leading opinions. Whether this will apply to other winged game of the field and forest I have no authority to say at present. Rabbits are well distributed and plentiful, and yet, here, right under the nose of the association they are dogged to death long before frost removes the inevitable worm.

DON PEDRO.

PENNSYLVANIA WILD TURKEYS—*Blain, Sept. 3d.—Editor Forest and Stream:*—Dr. McCoy, a gentleman of sporting proclivities, drove me to the adjoining mountains and "turned me loose" on the fox squirrels that abound near town. Having shot all we could conveniently carry through the woods, returned to the carriage. On the way off the mountains we flushed any quantities of wild turkeys, but as they cannot be shot until October 15th, we had to keep hands off. I intend to visit this pleasant town of Blain after the 15th of October to renew my acquaintance with the Doctor and give the turkeys a whack. I wish some of my sporting friends would try and make it suit to be on hand at that time, as I intend camping in one of the many "shanties" on the mountain, and have a promise from the Doctor to spend as much time with me as possible. The woodsmen report more turkeys this year than there for years. SALESMAN.

Philadelphia, Sept. 2d.—Myself and friend went out on to the Delaware marshes yesterday and killed forty-eight reed birds, of which we lost more than half, however, having no retriever with us. We also bagged several dowitcher snipe. The pot-hunters were out in full force; some in order to get the start came down Sunday, but were prevented from shooting by the police. The reed birds were numerous but flew high; they are not in good condition, being very small and lean. DUPONT.

DELAWARE.—Rail and reed bird shooting is now in full progress. Scores of birds are bagged daily, and, as usual, the favorite marsh shooting grounds are overcrowded with gunners.

DELAWARE AS A SHOOTING GROUND—*Mr. Editor:*—Dover is a small town of about 3,000 inhabitants, situated about a quarter of a mile from Jones' Creek, eight miles from Delaware Bay by what is called the Bay road and five miles by a straight line. The mouth of the creek is ten miles distant by the road, but more than thirty miles by the creek, which is the crookedest stream you ever saw. In the channel it is pretty deep, but on both sides it is very shallow and grown up with spatter docks. It seems to me very strange that in a country like this, so very sandy, the bed of this creek and of all others is all mud, soft and slimy, though you wouldn't think so to look at the water, which is very clear. Another peculiarity is that on one side of the creek is a steep bank from ten to twenty feet high, and on the other there is a swamp. Sometimes the swamp is on one side and sometimes on the other. Running from the creek into these marshes are small inlets five to ten feet wide, but deep enough to float a light skiff.

The most serviceable boat here is a light skiff. Mine is thirteen feet long, top measure, narrow and low, and painted a very dark lead color, so that fifty yards off you can scarcely see it. It will easily carry two persons, but no more. In going long distances I use a pair of very light oars, six feet long. I do a great deal of shooting, and shoot a great many small birds for their skins and wings, for we have some beautiful birds here.

A peculiarity about the birds here is that when scared up they start straight away, but in a few moments they return and fly past you so close that often you can get a better shot at the smaller birds when they return. It is very tantalizing, after you have fired at one as soon as it started and missed it, to see it return and fly past within ten yards of you before you have time to slip in a new shell. This would not happen if a double gun were used, but the best gun for general shooting here is a light single barrel, as most of the shooting is snap shooting, and the gun must be handled very quickly if you want to bag anything. I use a single-barrel Remington shot gun (not rifle), which works on exactly the same plan as the Remington rifle, and is in my opinion the most convenient gun for loading that ever was made. The barrel is slightly choke-bore, thirty-two inches long, sixteen-bore, and the weight of the whole gun is only six pounds, so that one can carry it a long distance without tiring, and it can be handled very quickly. When I showed it to an old sportsman here he said he would rather have one like it with a laminated steel barrel than any double-barrel gun he ever saw. That is saying a great deal, as he used a double-barrel gun which cost $300.

We have here woodcock, snipe, frail-birds, reed-birds, partridges, and ducks. The principal kinds of ducks are the wood or summer duck, and the crow or black duck, with a few canvas-backs and teal, and occasionally a straggler of another species from another place.

C. D. G.

MINNESOTA.—Spring Valley, eight miles west of La Crosse, is a good place to start out for pinnated grouse shooting. There are several well-trained dogs at Spring Valley, among them Prof. M. F. Varney's Kaiser and Mr. E. W. Allard's Kaiser, jr.

Windom, Aug. 31st.—Am having good grousing here. —W. A. W., of Memphis.

NEVADA.—The Sierra Valley Shooting Club, of Virginia City, are organizing a great bear hunt to begin Sept. 15th, and last six days. The hunters will shoot any bear coming in their way, but the particular object of their pursuit is "Old Bruin," a monster which has been known and dreaded for over twenty years.

CANADA.—*St. Thomas, Sept. 4th.*—Woodcock have been very scarce around here this last month (August), several of the sportsmen bagging as few as one and two, after a good deal of walking and sweating. There is a good show of quail and partridge, however, and a few wild pigeons, which will have to be bagged next month. G. R.

PRACTICAL PENETRATION—*Editor Forest and Stream:*—My gun is a Parker, plain twist, 30 inch, 10 lbs. weight, and shoots 10 A shell, ¾ inch long. The gun is evidently choked-bored, but whether full or modified I do not know. I poled myself through the wild rice, dropping the pole and snatching up the gun and shooting when I flushed a duck. The average of ducks rose at 30 yards; the longest shot was 11 or 12 rods; the nearest 6 rods. Every shot that hit, but two, brought the bird down dead. These two fell dead 20 to 25 rods away. One shot at five mallards, at 11 or 12 rods, brought down two dead and wounded a third badly. Wood duck fell at 7 and 8 rods as dead as if wilted by lightning. These birds if wounded will, four out of six times, get away by diving and hiding; hence you see how important it is to kill them at once.

At 8 rods the shot is, with this load in this gun, not only carried close but distributed in a circle as evenly as if the holes had been punctured for a large pepper-box. Repeated trials prove this. The gun certainly shoots astonishingly well. I missed twice; those mysterious misses sportsmen cannot account for except by bad aiming. There were 14 ducks killed out of 16 shots that hit, one shot killing two. The load was 5 drs. powder, 1 pink edge No. 8 wad, 1¼ oz. No. 6 shot, and 1 No. 8 pink edge wad, shells metallic, powder not very coarse. VERITAS.

Oconto, Wis., Aug. 25th.

AMERICAN GUNS.—*Messrs. Parker Bros.:* I order this gun against the opinion of the great majority of sportsmen here who have strong prejudice towards the American guns, giving invariably the preference to English ones, which they consider the very best; in which opinion I do not join, thinking that under the Stars and Stripes as good a gun can be made, if not better, than anywhere else, and only hope that Messrs. Parker Bros., will send me such a gun as will teach them a good lesson, and make them change their minds. Let the gun serve as a sample of what the Americans can do. JOSEPH F. ULMO, Matanzas, Island of Cuba.—[*Adv.*]

—The gun cleaning implements advertised by T. Yardley Brown, of Reading, Pa., are well worth the cost, and anyone investing a dollar and a half will not regret it, if all are furnished like the sample sent us.

—W. S. Macey, Esq., and a son of Rev. Dr. Van Dyke left this city last Tuesday for Northwestern Minnesota and Manitoba, where they will work with pen and pencil in the interest of *Harper's Magazine.* They will prepare two illustrated articles, one on the resources, immigration, and internal improvements of that section, and the other a purely sporting sketch, giving some account of the game of that region and the various methods of taking it. While in Minnesota they will make their headquarters at the town of Hallock, the county seat of Kittson county, and occupy the shooting box of John Swainson, Esq., which is located in the timber, in the moose and elk country twenty miles up the river. They will be gone six weeks.

A SYRACUSE EXPERT.—Mr. O. G. Jones, of Syracuse, has recently come into prominence among the sportsmen of that city as an expert shot. The other day, using one of the Baker & Co.'s three-barreled guns, Mr. Jones accomplished several times in succession the difficult feat of breaking three glass balls thrown into the air at once, twenty feet apart, using both of the shot barrels and the rifle barrel.

TRAP SHOOTING.

FOUNTAIN GUN CLUB—*Brooklyn, Sept. 3d.*—Fifth contest for club prizes. Mr. Wingert took the first prize killing 13 straight at 25 yards: Mr. Haas the second, kill ing 12 out of 13 at 25 yards, and Mr. Selover third, killing 10 out of 11 at 25 yards. There were 11 shooters.

FOUNTAIN GUN CLUB—*Brooklyn Driving Park, L. I., Sept. 2d.*—Regular monthly shoot for the Club badge. Weather cloudy and rainy:—

Hopkinton, Sept. 5th.—At the closing glass ball shoot of the season at Wilkinson's grounds last week, C. S. Evans won the first prize, a silver cup. The following are the best scores of a possible 20:—

C. S. Evans	14	C. White	9
C. Howe	13	C. Taft	9
T. Martin	13	W. R. Dennett	8
L. H. Barrows	13	R. V. Brooks	8
F. Taft	13	T. Wilkinson	7
A. H. Harrison	10	J. H. Hunter	7

The ties for the bag of shot, second prize, were shot off with 5 balls, and L. H. Barrows won.

PENNSYLVANIA—*Catawissa, Sept. 2d.—Editor Forest and Stream:*—Enclosed please find score of a glass-ball shoot by the Catawissa F. and G. P. Club; Card's rotary trap; 18 yards' rise; 10 balls each. A prize of a very handsome and valuable trout rod was offered by President H. B. Aldrich to the best score, and winning it himself he has offered it again:—

"Goose eggs" were largely attributable to the light loads many were shooting, and some used No. 9 and 10 shot which the old birds succeeded in carrying out of bounds very often. AARON AROUND.

Rational Pastimes.

THE GAME OF CRICKET.

FIXTURES.

Sept. 12—Staten Island.—Chester Hill vs. Staten Island.
Sept. 13-13—Toronto.—Daft's English eleven vs. 22 English.
Sept. 12-13—Hoboken, N. J.—Gentlemen of Ireland vs. fifteen St. George's Cricket Club.
Sept. 15-16—Toronto.—Daft's English eleven vs. 22 Canadians and English.
Sept. 16-17—Syracuse.—Gentlemen of Ireland vs. eighteen of Syracuse.
Sept. 17-18—Nicetown.—Old Haverfordians vs. Pennsylvania University.
Sept. 18-19—Montreal.—Daft's English eleven vs. 22 of Montreal.
Sept. 19-20—Ardmoré.—Gentlemen of Ireland vs. fifteen Merion Cricket Club.
Sept. 22-23—Staten Island.—Gentlemen of Ireland vs. fifteen Staten Island Cricket Club.
Sept. 25-26-27—Nicetown.—Gentlemen of Ireland vs. Philadelphia eleven.
Sept. 25-26-27—Detroit.—Daft's English eleven vs. eighteen Peninsular Cricket Club.
Sept. 30-Oct. 1—Hoboken.—Gentlemen of Ireland vs. New York eleven.
Sept. 30-Oct. 1—Syracuse—Daft's English eleven vs. 22 Central New York.
Oct. 3-4—Staten Island.—Daft's English eleven vs. eighteen of New York.
Oct. 3-4—Montreal.—Gentlemen of Ireland vs. Montreal.
Oct. 7-8—Ottawa.—Gentlemen of Ireland vs. Ottawa.
Oct. 13-14—Hamilton.—Gentlemen of Ireland vs. Hamilton.
Oct. 15-16—Guelph.—Gentlemen of Ireland vs. Guelph.
Oct. 18-20—Coburg.—Gentlemen of Ireland vs. Coburg.
Oct. 22-23—Detroit.—Gentlemen of Ireland vs. Detroit.

—The above are the additional fixtures of Daft's English professional team and the eleven of Gentlemen of Ireland. Arrangements are now being made that both of these foreign teams meet in New York and Philadelphia early in October.

GENTLEMEN OF IRELAND.—N. Hone (captain), Lord Colthurst, L. Hone, R. A. Miller, D. N. Trotter, H. Hamilton, H. Broughan, W. Hones, sr., W. Hone, jr., and A. Exham, with Rylott for professional.

THE HAMILTON CRICKET CLUB'S SUCCESSFUL TOUR.—The week ending August 30th was rendered significant in cricket circles by the two brilliant victories achieved by the Hamilton (Ontario) pilgrims over the Young Americas, of Philadelphia, and the Staten Island, of New York. The Canadian gentlemen left their home on August 22d and reached New York City on the 24th, their first engagement being with the St. Georges. Unfortunately the weather was unpropitious. The visitors, however, put in an appearance betimes on Monday morning, and the match was commenced in the face of an easterly rain storm, but early in the afternoon had to be discontinued. The wet state of the grounds on the succeeding day obliged the two captains to declare the match a draw, although greatly in favor of the visitors. By long odds the Hamilton team is the strongest club organization that has ever honored the Eastern States, for since the visit in 1868 of the Montreal Military Garrison eleven, styled the "Knickerbockers," our cousins the Canucks have only shown up fairly; and their visits, though like those of angels, have been but few and far between. The veteran home club was by no means well represented, J. R. Cross, Moore, and Conover being absent; the more the pity, as occasioning an additional disappointment and damp on the match. Moeran, for the St. Georges, threw life into his innings, which brought out the fine bowling and fielding of his adversaries. The subjoined score will show who did for Canada :—

HAMILTON VS. YOUNG AMERICA.—This, the second match of the series, was commenced on the beautiful new grounds of the home club, at Stenton, Phila., on Wednesday, August 27th, and was the occasion of its inaugural match. In consequence the early train came out from Philadelphia loaded with smiling spectators, but whose hollow groans and raising hands later in the day would have occasioned Mr. Weller to say, had he been present, that "they ha' forgotten to take pepper with the last 'ere cowcumbers they eat." For the fact is, that the Young Americas have been so long "the cock of the walk" that it never entered into the minds of the Philadelphia public that the Canadians could prove their masters, and least of all that an almost one-inning defeat would stare their favorites in the face. The arrangements of the committee were simply perfect, and too high praise cannot be awarded them for their kind hospitality to their guests and the comfortable accommodations provided for the public. The ground was soft and wet, utterly unfit for play, but the sun shone out hot and better was hoped for later on. Kennedy, the Canadian captain, having won the toss, wisely sent the home team to the bat, knowing that a wet wicket would favor Ferrie's fast low deliveries, and that as the ground became harder it would be quicker to score upon. *Surprise number 1 for all* was that the home team should be out for twenty-eight, which by the way is the smallest score they have ever made, Captain George Newhall alone showing any form. (In 1877 they were out for thirty-nine, vs. the St. Georges, when Jones took eight wickets for twenty-two runs on a hard and lively wicket at Hoboken. *Astonishment number 2* was the wretched fielding of the Young Americas in the Canadian's venture. Catches were missed and then missed over again, by the surest hands, until the visitors' score mounted up to seventy-four, A. H. Hope showing by far the best work, his twenty-four being obtained by sound cricket. In Simond's twenty-two there was a grand one to square leg for six. The second inning of the Stentonias did not open badly for them. They all have the credit of being Tyndalls in a small way and playing a good up-hill game. With only forty-six behind and a feeling that in their next fielding inning they would be better "Palmisters," the bell was rung and the curtain rose on the play of *wonder number 3*. Five of Philadelphia's best stars were out for twenty when time was called. On Thursday the game was resumed, with Large and Dan Newhall the two "not outs" at the bat. The former ran up his score to fifteen after giving the wicket-keeper three chances, and the side was out for fifty. Ray, for Canada, obtained the necessary five and the match was over, the Hamiltons achieving a Waterloo by ten wickets. The Young Americas, from first to last, played an unusually stiff game. It has been suggested that the fear of the Canadian wicket-keeper, Waud, had not a little to do with their cramped up and pokey style. Ferrie's wonderful bowling, a treat to see, did, however, a great deal in winning the match. And he has procured a record that will be quoted for years to come. Score :—

HAMILTON VS. STATEN ISLAND.—The Canadians, glowing with victory, were received as the guests of the Pavilion Hotel, S. I., on Thursday evening, and the next morning, August 29th, appeared on the picturesque grounds facing New York Bay. The team looked as fresh as the day itself. Captain Stevens, of the home club, had all his eleven out, and after winning the toss, sent in Moore and Bance to the bowling of Kennedy and young Ferrie. Mylie's 12 was the only double figure of the innings, which total, strange to say, tied with that of the St. Georges, namely, 47. Mylie was "the man for Galway," his defence being excellent, and he played in rare "old style" form. He saw six partners wither and pass away during his stay of an hour and a quarter. The analysis will show the character of the bowling, Kennedy securing 6 wickets for 17 runs. The fielding which supported it—*par excellence*. After luncheon, at the Pavilion, Canada sent in Ray and Hope, opposed to Lane and Sprague, the former's fine left-hand break backs, and the latter's fast "grass-tickers," were too much for large scores, and the innings closed for 66, Simonds and R. K. Hope, alone, contributing doubles. The innings were marked by the excellent judgment of Captain Stevens, and the almost perfect fielding of his team. Sprague made a wonderful catch. As to the bowling, the Canadians, one and all, proclaimed it the best they had met with on their tour. With 19 runs to the bad, the home team again retook the wickets. Moore commenced a splendid innings, and when time was called had placed 19 on the tins. The day's play had been witnessed by the largest number of spectators ever on the Island grounds, among whom was Mr. Bamford of the Peninsulars of Detroit, Mr. Cope of the Young Americas of Philadelphia, a very large delegation from Newark, N. J., and many prominent local and visiting cricketers. A dinner at the Pavilion ended the day's festivities. Saturday dawned superbly; and, after a good sea-bath, the jolly visitors again donned their flannels and surrounded the two home "not outs" of the evening before. Fortune did not smile on those of "The Island of the Sea," and the side was out for 43, Moore's 22 being more than half. With 25 to win, Hamilton sent in Ray and A. H. Hope; Lane quickly got in on the former, and Simonds, who is called the best bat in the Dominion, followed. Sprague shortly after captured Hope's stumps and Waud joined the champion. These two finished batsman contributed the necessary number of runs, and the game was won for their side by 8 wickets. Although Sprague's first eight overs were maidens, and Lane was well on the spot, yet both the Canadian gentlemen were evidently in to stay, and large scores might have been looked for. An excellent luncheon again brought both friends and foes together, and the popular President of the Hamilton Club (who had accompanied the team) and Captain Kennedy both expressed, in most kindly terms, their satisfaction with their reception and the trip. Mr. Haughton, the Island's affable standby, made a neat response, and the week's cricketing was over. In the evening the Staten Island club gave their guests a complimentary hop at the Pavilion, and the Monday following saw the team homeward bound. A more gentlemanly, fine lot of cricketers we never wish to welcome to the States.

DAFT'S TEAM OF ENGLISH PROFESSIONALS.—The following is a correct list of Daft's eleven now in this country As great interest is taken by the public in these cricketers, we submit, in addition to the list, James Lilly White's opinion of each individual player :—

Richard Daft (Captain), Nottingham County, forty-four years old. For neatness of style, unequalled, with magnificent defence, and a most brilliant field at long-leg and mid-off.

William Barnes, Nottingham, twenty-seven years old. Bats in neat style; at times a very successful bowler (fast round); a good field.

Frederick Morley, Nottingham, twenty-nine years old, bats and bowls left-hand; is a first-class bowler—probably the best fast bowler in England.

W. Oscroft, Nottingham, thirty-six years old, a good bat—especially against fast bowling; a very sure field; a good bowler (right fast), and one of the best leg hitters in England.

John Selby, Nottingham, thirty years old, a splendid bat, especially against fast bowling, and an excellent field.

Alfred Shaw, Nottingham, thirty-seven years old, a very effective medium place bowler; never off the wicket, and varies his pitch well; a good field, especially at short slip.

Authur Shrewsbury, Nottingham, twenty-three years old. In the very first rank of professional cricketers, a sound and steady bat, and sure and smart fielder.

Thomas Emmett, Yorkshire, thirty-eight years old. A fast left-hand round arm bowler, and was until last season as fast as any in England, when he reduced his pace,

and we think with great success—bats well at times.

Ephraim Lockwood, Yorkshire, thirty-four years old. As a batsmen has few superiors at any point; great defence, and cuts very smartly, a good change bowler and a very reliable field.

W. Bates, Yorkshire, twenty-four years old. A promising bat and sure field; has proved himself to be one of the best slow round arm bowlers of the day, some of his performances this season being wonderful.

George Pender, Yorkshire, thirty-eight years old, the wicket-keeper of the North, and unsurpassed especially to fast bowling a resolute and powerful batsman.

G. Ulyett, Yorkshire, twenty-eight years old; probably the best all-round professional of the day; a brilliant bat, with tremendous hitting powers; at times a very dangerous bowler, especially on a bad wicket, and unsurpassed anywhere in the field.

THE YOUNG AMERICA'S SECOND ELEVEN VISIT TO NEW YORK.

YOUNG AMERICA (2D) VS. ST. GEORGES (2D).—On September 4th this match was played at Hoboken. The visiting team was a wonderfully strong and well trained one, and as will be seen won with ease by 112 runs in a one-inning game. Score:—

Young America	8	43	96	109	134	144	178	180	200	203—203

Although we gladly compliment the young gentlemen of the Young America Club for their excellent all-round play, which has enabled them to win in a canter all three games, we cannot, in justice, lose sight of the reason of these victories nor allow this opportunity to pass without extending our hearty congratulations to those older members of their club, whose sound judgment and untiring patience have been the sole means of bringing about this—what to them must be an extremely gratifying result. They now see that their labor has not been in vain. It is the correct and early training that enables this team to play so charmingly together. Brains, besides muscle, are used. A system is observed and a discipline maintained. There is a captain; he is their authority, and his word—law. The spirit of encouragement shines out, and good humor is the order of the day. In fact their method is a beacon to all teams that would succeed. It is practice that is the "open sesame" to victory, or at least that which saves shameful defeat, and no two apophthegms can better be observed than: "Bring up the willow in the way it should go" and "Spare the willow and spoil the cricketer."

ARCHERY.

EASTERN ARCHERY TOURNAMENT.—The programme for the two days' shooting of the Eastern Archery Association tournament, to be held in Boston the last of this month, is as follows:—Competition for the champion medal at the Double American Round; competition for the championess medal at the Double Columbia Rounds; extra match for gentlemen, forty-eight arrows, at eighty yards; handicap matches. Club competitions—Teams of four gentlemen at the American Round and teams of three ladies at Columbia Round.

The champion medal for 1879 shall be awarded to the individual member making the highest aggregate score at the Double American Round, consisting of sixty arrows at forty yards, sixty arrows at fifty yards, and sixty arrows at sixty yards; each archer shooting three arrows at an end. The championess medal shall be awarded to the individual lady member making the highest aggregate score at the Double Columbia Round, consisting of forty-eight arrows at fifty yards, forty-eight arrows at forty yards, and forty-eight arrows at thirty yards; each archer shooting three arrows at an end. Applications for membership should be made to John Worcester, Corresponding Secretary, Waltham, Mass.

DO ARROWS REVOLVE?—Many correspondents still continue to ask whether a straight fledged Highfield or Aldred arrow revolves in its flight. One claims that arrows do not revolve because he tied a thread to an arrow, and having shot it, found that the thread was not wound about the stele. This might be, and most probably would be the case if the arrow revolved truly, from the fact that the velocity of the arrow would be so great, and the string trail so directly behind, the arrow would only twist the string as a spindle does, without winding the thread upon itself. If any one doubts the rotation of a straight fledged arrow, let him stand sixty yards from an archer who shoots an arrow past him at about ten feet high. He will very plainly see the arrow revolving.

—The dates of the Eastern Archery Association meeting are Beacon Park, Boston, September 24th and 25th.

HANDICAPS AT THE NATIONAL MEETING

An interesting feature of the National Archery meeting was the handicap shoots. Handicapping is not generally a satisfactory mode of equalizing the chances between good and poor shots, from the fact that no accurate proportion can be found between the different degrees of skill of the different archers. In this case the National Committee, after considering a great many schemes, came to the conclusion to adopt that of deducting a percentage from the made score of each the six archers who on the previous shooting for the national medal, on the same day, had achieved the six highest scores. Two handicap shoots were arranged for the gentlemen and three for the ladies. In the first gent's handicap shoot at 40 yards, the six gentlemen who in th 60 and 80 yards shooting for the medal on the first day had gained the six greatest scores, were penalized with a deduction of thirty, twenty-five, twenty, fifteen, ten and five per cent. respectively from the scores made by them in the handicap shoot. On the second handicap at 50 yards a similar penalty was imposed upon the six who scored highest in the medal shoot of the second day. A liket penalty was borne by the six ladies who scored highes each day in the shoot for the medal, in the three handit caps which followed the regular shoot each day; the firs at 30, the second at 40, and the last at 60 yards. Now, if there were never more than six archers shooting there would result a comparative degree of equality in such a shoot: but where near sixty are shooting there is little hope of a handicapped archer winning anything. No matter how nearly matched the twenty best shots might be, only six of them could possibly be handicapped, and the remaining fourteen would be sure to furnish the winners of the shoot.

For instance, suppose that the twenty were so nearly matched that there were only twenty points between the lowest and the highest on the medal shoot; that is, A beats B one point, B beats C one point, and so on to T, the twentieth man. Now, suppose they shoot in the same proportion of excellence in the handicap shoot, and the result is that in thirty arrows at 40 yards A scores 200, and T 180 points. A has thirty per cent. of his 200 deducted, leaving him 140 points to T's 180! Of course, this may not happen always in practice, but a similar result is generally reached by a *per cent.* handicap. However, the executive committee decided that any archer who was so fortunate as to get into the first six scores on each day could afford to be beaten in the handicaps, and the archers, without exception, seemed satisfied with th handicaps; and they proved to be exceedingly interest ing. On the first day, at 40 yards, the following gentle men bore penalties:—William H. Thompson, 30 per cent.; Theodore McMechan, 25 per cent.; Ford P. Hall, 20 per cent.; Maurice Thompson, 15 per cent.; G. F. Henry, 10 per cent.; Charles Leach, 5 per cent.

In the second handicap, at 50 yards, the per cent. penalty was distributed thus:—Will H. Thompson, 30 per cent.; E. W. Devol, 25 per cent.; L. L. Peddinghaus, 20 per cent.; J. D. Patterson, 15 per cent.; Theodore McMechan, 10 per cent.; and John A. Booe, 5 per cent.

At the ladies' targets, in the first handicap at 30 yards, the penalties were borne as follows:—Mrs. Klein, 30 per cent.; Mrs. Brown, 25 per cent.; Miss Street, 20 per cent.; Miss Owens, 15 per cent.; Mrs. Lee, 10 per cent.; Mrs. Ramsay, 5 per cent.

In the 40 yards handicap:—Mrs. Lee, 30 per cent.; Mrs. Brown, 25 per cent.; Mrs. Klein, 20 per cent.; Miss Owens, 15 per cent.; Mrs. Ramsay, 10 per cent.; and Miss Street, 5 per cent.

In the 60 yards handicap penalties were borne as follows:—Mrs. Brown, 30 per cent.; Mrs. Lee, 25 per cent.; Miss Bixby, 20 per cent.; Miss Parsons, 15 per cent.; Mrs. Dr. Green, 10 per cent.; Mrs. Gatch, 5 per cent.

Several gentlemen shot in the handicap shoots who did not take part in the contest for the medal, and a few did not shoot through both handicaps who had contested for the medal. Some very good shooting was done in the gentlemen's handicap at 40 yards, notably by Mr. Tac Hussey, of the Des Moines Toxophilites, whose score f 198 from thirty hits is extremely fine shooting for an archer at his first public meeting, and who has only shoone year. He began his score with 40 points for the first six arrows, made 44 with his next six, and three consecut tive golds with his next three arrows, giving a total of 111 points with his first fifteen arrows. He kept almost the same pace until his last three arrows, and it looked as though a score of 220 would be made, but the archer's nerve failed him at the last, and he stopped with 198 to his credit, which is one of the few good scores made at any range during the meeting. The six other gentlemen who scored 160 and over were:—Will H. Thompson, 182; Mr. Warren, 170; H. C. Carver, 167; E. W. Deval, 166; L. L. Peddinghaus, 163; A. G. Spaulding, 160.

In the handicap shooting at 50 yards fine shooting was done by Mr. W. B. D. Gray and Mr. Will Brewer at Target B, and as the end of the shooting approached, and most of the other targets were finished before this one, many archers collected about the shooters at B, and watched with keen interest the close contest between Gray and Brewer. When the last six arrows only remained to be shot Gray was leading by one point only, and both men were shooting with great brilliancy, Brewer's first three of the last six arrows yielded him 15 points, and his last three 17 points, which was splendid shooting, and better than either had averaged thus far, but Gray shut out all hope for his dashing competitor by scoring a gold and two reds with his first three arrows, and a gold and two reds with the last three, closing with a lead of 15 points. This was really fine work, and was loudly applauded. Mr. E. W. Deval made an excellent score of 143, and by his style of shooting attracted much attention, Mr. Maurice Thompson pronouncing him one of the most promising of American archers.

His style, like that of Mr. Kyle, of the Highland Park Archers, and Mr. J. D. Patterson, of the Commodus Archers of Lawrence, Kansas, is extremely graceful, the draw being smooth and rather slow, the loose soft and without any jerky motion, and the flight of each arrow very steady, and low for the weight of bow used. Mr. Kyle scored 141 from twenty-seven hits, and from the rapidity with which he is improving we look to see him appear high in the score lists next year.

Mr. Henry scored 154 from 28 hits and gained second prize, and drew much attention by the amazingly low flight of his arrows. He uses a 48 pound bow and 4.0 arrows, the lightest arrows we ever saw shot in a match, and they were sent with all the steadiness of five shilling shafts, and of course with a much lower trajetory. But the lightness of his arrows cannot alone account for their wonderfully low flight, which we attribute mostly to the absolute perfection of his loose. He truly proves "that weapons are not wielded by strength alone, but by skill and slight of hand."

Mr. W. A. Russell, of the Kohomo Archers, made a good score of 136, and showed himself to be one of the best short range shots in the country. This was noticeable on the first day of the meeting when he made the second gross score at 60 yards, getting five more hits than Dr. McMechan did, who made the first gross score at that range. Indeed, at every range from 40 to 60 yards, he showed fine shooting, but for some reason he fell off at the longer ranges. We shall expect to see him much improved by next season, for we know him to be one of our most enthusiastic and intelligent archers. In the Ladies' Handicap, at 40 yards, a decided improvement was visible among the leading shots over the scores made at the same range in the morning. The lady champion led with 186, followed by Miss Bixby with 165, which was nearly double the score gained by her in the morning shoot. That Miss Bixby was not at her best, was evident by the disproportion between these two scores, and her scoring was equally erratic throughout the meeting. No doubt she was affected by the surroundings of her first public meeting so much as to seriously impair her skill. Another season will prove our prophecy that she will be one of the principal contestants for the medal. The lady champion shot with the same steady nerve exhibited throughout the meeting, and increased her score of the morning 84 points. Mrs. Gatch, who did not shoot in the morning, did well in this match, scoring 151 points from 33 hits. Miss Street improved somewhat; and Mrs. Carver did some really splendid shooting during the first half of the handicap, but fell off badly after passing into the second 24 arrows. Her first 24 yielded her 88 points.

A special handicap at 20 yards for a tent was shot by the ladies, and won by Miss Bixby with a score of 139 points. No good scoring was achieved at this range, all the ladies losing several arrows by overshooting the targets. It was clearly demonstrated that 20 yards is too

short range for any one. We append the scores made in the 40 and 50 yards handicaps by the gentlemen, and the 30 yards, 40 yards, and 20 yards handicaps by the ladies:—

The winners in the Gentlemen's Handicaps were as follows: At 40 yards, first: Mr. Tac. Hussey, a fine self snakewood bow; second: Mr. Warren, a fine backed bow; third: Mr. H. C. Carver, a fine backed bow. At 50 yards, first: A split bamboo bow, W. B. D. Gray; second: Lemonwood bow, Mr. Henry, of Des Moines, Iowa; third: Set of prize arrows, Mr. W. E. Brewer, of Crawfordsville, Ind.

In the Ladies' Handicaps the winners were as follows: 30 yards, first: Silver cup, Miss Bixby; second: Cardcase, Mrs. Proctor; third: Half a dozen fine arrows in case, Mrs. Thompson.

40 yards, first: Miss Bixby; second: Fine snakewood bow, Mrs. Gatch; third: A writing-desk, Miss Brown.

In the 20 yards handicap Miss Bixby won the only prize, a tent.

In the Ladies' Handicap at 60 yards, the score of which we do not give, Miss Bixby won the first, a fine oil painting; and Mrs. Lee, second, a fine Spanish self yew bow. There were several minor prizes for most golds, most reds, etc., which we do not give.

ELLENVILLE ARCHERY ASSOCIATION.—At a recent meeting of the Archery Association of Ellenville, N. Y., the following were elected as officers for the ensuing season:—President, A. Wurt Tice; Vice-President, James B. Keeler; Secretary, Miss Helen Dudley; Treasurer, Mrs. Anna Grant. The club has been making some fine scores lately, and ere long we hope to see them competing with some of the older organizations. If all had the enthusiasm of Geo. A. Dudley, Esq. (who by the way may be termed the father of the club, as he is in reality of its fair Secretary), they would probably attend the meeting of the Eastern Association at Boston in a body.

WESTWOOD AND WAVERLY—*College Hill, Ohio, Aug. 29th.*—Match between the Westwood Club, of Westwood, and the Waverly Club, of College Hill, took place Friday, August 29th, on the beautiful grounds of Mrs. Hollenshade, at College Hill; clubs very evenly matched, and the game from the commencement to the close very interesting; the Waverly Club was, however, victorious by the following score of 1,095 to 1,061:—

WESTWOOD.

	Hits.	*Points.*		*Hits.*	*Points.*
Mr. C. Miller	29	159	Miss Penrose	21	115
Miss K. Miller	30	172	Mr. H. Bruce	21	92

Mr. Upson	26	124	Miss Pierson	25	105
Total	122	532	Total	121	563

Miss Kate Miller of the Westwood Club, and Miss Ida Hollenshade, of the Waverly Club, were awarded the prizes, Miss Miller scoring thirty hits and 173 points, and Miss Hollenshade scoring twenty-seven hits and 129 points. Distance, forty yards for gentlemen and thirty yards for ladies; size of target, forty-eight inches; number of arrows shot by each side, 300; number of rounds ten.

AMERICAN VS. ENGLISH BOWS.—*New York, Sept. 5th.*—*Editor Forest and Stream*:—Will you allow me to answer your correspondent "Toxophilite," in this week's issue of your valuable paper. His statements, I think, are somewhat open to criticism. "Toxophilite" begins by stating that he is not an advertising agent, but proceeds to advertise a firm in this city very thoroughly—in fact, rather too much, as it shows too plainly the purpose for which the article was written. It is all very well to praise up foreign yew bows, but who is willing to pay from $50 to $100 for a bow that may break the first time it is used? All wooden bows are liable to accidents, and yew bows as much so as any others. Mr. Aldred himself will not even string his most expensive yew bows without being first paid for them.

His statement that no maker in this country has stock enough ahead to fill the requirements of the trade, is all nonsense, and proves he knows nothing about the matter. He also gives the prices wrong on American bows; they range from $2 to $20, and, as I stated before, if archers get their bows from responsible houses they will get well-seasoned wood, as no house valuing its reputation would use any other.

I doubt very much, judging from their own statements, that any English makers have wood five years old ahead. They have had too many orders this past two years. In fact, judging from the way their bows have broken this year, I should imagine that they were driven to using wood anything but well seasoned. I could give you any number of facts to show that American bows have stood hard shooting as good or better than foreign bows. Will furnish names of archers using them, length of time in use, &c.; and not only will show English makers that we can make bows and arrows here, but also hope that before long we can show them how to use them.

ARCHER.

95 LIBERTY STREET, NEW YORK, *Sept. 6th.*

In your issue of this week is an article by "Toxopholite" of so peculiar a character that I for one must take issue with some of his conclusions. He says he is not the advertising agent for any house, and then gives us the most glowing adv. of an English archery manufacturer, and winds up by saying no good bows can be made in this country. I have seen the bows for sale by Crook & Co., and they are beautiful specimens of the bower's art. The yew bows are gems that any archer may be proud to own and I know will be pleased to use. They are first-class in every respect, and I would recommend every archer in New York to call and see them. But to an American mechanic, a wood-worker, Mr. Aldred's statement of wood five years in his shop seems rather comical. The English carriage-makers used to do the same thing; but the American carriage-builder uses wood seasoned artificially and only a few months old, and builds a better carriage, especially where lightness and elasticity is wanted, than our transatlantic cousins, so much so that American light buggies, &c., and American timber are used in England in preference to their own make. I think a bow that is this year a 40-pound and next year a 50-pound bow would be a mechanical curiosity—a gain of 20 per cent. in a year. Good old Bishop Latimer says in his sixth sermon: "I had my bows bought me according to my age and strength as I increased in them; so my bows were made bigger and bigger, for men will never shoot well except they be brought up in it." That bow that grew in strength would have done the growing boy if it did not outgrow him. To think a stick of timber, 1 inch by 1½ inches, should take five years to season, and a man to make a bow must have years of experience! Why *yews?* An American mechanic can learn to make anything, and does so every day in less months, and often weeks, than the English says it takes them years to do. Carpenters do not make fly-rods as a general thing in this or any other country; but I know a fly-rod made by a machinist (American), that was calculated upon hyperbolic curve in its cross-section, that when finished the tip and butt were brought together, and the rod described a nearly perfect circle. Would the bow made by an American from the same stick in exactly the same form shoot less well than when made by Mr. Aldred? Now, as to-day we have instruments to measure to the one-thousandth of an inch in common use among our best mechanics, the making of an exact copy of a bow or anything else is a very simple affair. So far we have made but very few yew bows, but they will be made and by our best makers, and as to-day we are making as good self-lance and snake-wood as are made in the world, and better backed bows than are imported, I think it is safe to say that when we get yew-wood we will make as good and perhaps better than any English maker, no matter what his name may be. It will be for this reason—that the Americans dare depart from the old way and try a new one. Let any one examine the backed bows of Horseman or Conroy, Bissett & Malleson, or any others of our first-class makers, and they will find that it has not taken *years* of experience to make a first-class article. The American cannot let anything he touches alone; no sooner does he get his fingers on it than he sets about to improve it without experience, and he makes Waltham watches, locks, rifles, fowling-pieces, &c., better than our English cousins, and John Bull is driven out of the market by a better article at a less price. Within a year two new bows have been brought out that have departed from the long-beaten path—the split bamboo by Mr. Mallison and my own raw-hide backed bow. Now, just a hint to "Toxophilite:" There is more mechanical skill in the making of one split bamboo bow than in all the bows made by Mr. Aldred in a year. It is made up in sections and put together and cannot be tested until finished, and is then either a success or a failure, and is a success; while any other bow made is, if too stiff in one place, worked down until it is all right, tinkered at as it may need it; but the other is built all right from the start to the finish. My own bow I have put upon the back a piece of raw-hide under tension, so that I not only get the power of the wood, as the English bow, but the additional power of the stretched raw-hide. I had supposed I was the first to do this (get tension on the back), but yesterday I found in an old book that bows had been made with the backs grooved, and a strong cat-gut cord stretched on the back and fastened to the ends only, so when the bow was being used the cord lay in the groove and added its tension to the power of the bow, thus getting the two actions at the same time. The two new bows both allow the archer to use longer arrows, and we may see the "cloth-yard shaft" of old again in the field, and shot not by English but by American bows. For no English maker will make a bow six feet long to shoot 36-inch arrows and warrant the bow to stand it, while that warrantee can be had with the two bows just mentioned. If "Toxophilite" or any other person interested in archery, will call on me I will be most happy to show him lance-wood bows pulled 36 inches without harm to the bow and at prices within the reach of any one's pocket. American mechanics are superior to any others in the world, and having begun the making of bows and arrows, will not stop until they supply the world with a better article for a less price than any one else, not excepting Mr. Aldred.

JOHN W. SUTTON.

WILLIAMSBURGH ATHLETIC CLUB.—Opening public games on the club grounds, Rutledge street and Bedford avenue, August 23d. The events upon the programme were as follows, the games passing off with great credit to the new club:—

Two hundred and twenty yards dash; competitors: Chas. Simmons, Chas. Husted, Geo. R. Watson, Frank Price, and Chas. Hazleton. Won by Price in 30s.

One mile handicap walk; competitors: Chas. Wilson, Brooklyn, 55s.; George H. Murray, Harlem Athletic Association, 50s.; Frank Holly, Williamsburgh Club, 50s.; J. M. W. Hunt, Williamsburgh Club, 40s.; W. F. Leeder, Brooklyn, 35s.; George Weimmann, Brooklyn, 10s. Bolstridge, of the North Side Athletic Association, was scratch. Murray won in 9m. and 35s. Holly second, 9m. 6s.

Half mile run; S. Knight, Putnam A. C., scratch; Elmer Cain, Brooklyn, 45 yards; N. I. Lyon, Williamsburgh Club, 40 yards; Joseph Liddle, Brooklyn, 35 yards; Harry Armour, 35 yards; D. Feigenbaum, Harlem Club, 30 yards; R. H. Schile, Pastime Club, 30 yards; Fred. Burns, Brooklyn, 25 yards; John C. Hopkins, Brooklyn, 25 yards. Feigenbaum first in 2m. 15s., and Burns second a second later. Hopkins held a steady third during the last two laps.

Three-mile walk. The entries were: Herman Elrodt, A. C. Hatfield, Herman Wagner, Jr., J. M. W. Hunt, and J. F. Marshall. Won by Marshall in 29m. Elrodt, second.

One-mile run, S. Knight, scratch; Harry Cobertt, Brooklyn, 50 yards; George Kilmer, Williamsburgh Club, 40 yards; Robert Gray, Brooklyn, 40 yards; Michael Eastman, New York, 40 yards. Won by Knight in 5m. 5s. Kilmer second.

LACROSSE—*Newport, R. I., Aug. 28th.*—Match between the Ravenswood and Union Athletic Clubs. The Ravenswood Club had a Ritchey at goal, G. B. Wilson at point, J. Flannery at cover point, H. Goldsmith and N. Noble at defence field, G. Whittaker at center field, W. Journey and H. Cluff at field, J. Nichol and J. Murney at home field, and E. Cuff and W. P. Ritchey at home. E. Cluff acted as captain. The Union Athlethic Club had P. F. Ferris at goal, P. Crosby at point, W. S. Hook at cover point, H. W. Howard and J. K. Simpson at defence field, F. M. Wood at center field, J. Clancy and H. Burton, Jr., at field, J. Campbell and S. McDonald at home field, and A. H. A. Mortimer G. D. White at home. The first goal won by Ravenswoods in 16½m.; second goal, Unions, 2½m.; third goal, Unions, 29½m. This won for the Boston men the challenge presented by the Westchester Polo Club, to be contended for annually.

RYE (N. Y.) ATHLETIC CLUB.—A club has recently been organized at Rye, Westchester County, N. Y., under the name of the Rye Athletic Club, with the following officers:—President, W. H. Catlin; Vice-President, T. T. Sherman; Treasurer, C. Sackett; Recording Secretary, J. H. Wainwright; Corresponding Secretary, F. H. Bell; Captain, W. H. Catlin. The club has already about fifty active members, and new applications for membership are constantly being received. All communications should be addressed to the Corresponding Secretary.

A one-fifth-mile track, sixteen feet wide, with a straight-away of 150 yards, twenty-five feet wide, is now being built, and promises to be when completed one of the best and fastest tracks in the country.

The club hopes to give their opening games about the last of October or first of November.

ONE-ARMED SWIMMERS.—*Fort Monroe, Va., Sept. 1st.*—A. L. Donaldson, of Baltimore, a brother of the late Professor Donaldson, the æronaut, swam from Norfolk to Old Point one day last week, a distance of fifteen miles, in six hours. He has but one arm. And a one-armed inmate of Blackwell's Island, the other night, who could not swim, appropriated an empty coffin in the dead house and went paddling upward with the flood to liberty.

AMATEUR CHAMPIONSHIP OF AMERICA.—The fourth annual meeting of the National Association of Amateur Athletes of America will be held at Mott Haven, Sept. 27th. Programmes and conditions may be obtained by addressing the Secretary N. A. A. A., 183 Broadway, New York. Entries are coming in which promise to make these the best games of the country.

BOOKS RECEIVED.

—o—

VEGETARIANISM THE RADICAL CURE FOR INTEMPERANCE.—By Harriet P. Fowler: M. L. Holbrook & Co., 1879.

This essay is based upon the theory of Liebig that a farinaceous diet by supplying a normal proportion of carbonaceous properties promotes a disinclination for alcoholic liquors. The truth of this theory has been amply tested by Sir Chas. Napier in a series of experiments, and with the best results. We bespeak for the pamphlet a wide reading.

THE SAILOR'S SEA-BOOK.—A rudimentary treatise on Navigation; by James Greenwood, B.A. Revised by W. H. Rosser. "Weale's Series." Crosby, Lockwood & Co., London.

This volume has been written especially to supply masters of vessels and yatchsmen with a complete compendium of navigation within moderate limits. It is divided into two parts; the first devoted to keeping the log and working dead reckoning, and the second to finding the "ship's position" by observation, that is, the latitude by meridian altitude of the sun, and the longitude by chronometer and sun's altitude. All the necessary information about the compass, its deviation and variation, and how to determine them. With this little volume and a Traverse Table, as well as the "Nautical Almanac," the master can navigate the globe. For yachtsmen who prefer knocking about the coast, and who can always make a "landfall," the first part of the book will suffice. As this demands a knowledge of nothing more than common arithmetic and elementary geometry, its study is within the reach of all; nor is there any head-splitting required, so that even those who do not choose to follow up the sport as a science can benefit by a perusal of this book. Aknowledge of the compass, chart, and log-slate, will add much to the interest of sailing, beside placing the owner in a position independent to a large degree of skipper or pilot. The price of the book in England is only 2s. 6d., and can be had of dealers here for $1.25. Beside matters appertaining strictly to navigation, the International Code, Rule of the Road, laws of storms, etc., are also to be found in its eminently practical pages.

—In the "Sanitarian" for September, Nathan Allen, of Boston, who is well qualified to discuss questions of social science, has a paper on "The Education of Girls, as Connected with their Growth and Physical Development." The article should be read by parents and educators.

PRACTICAL TAXERDERMY AND HOME DECORATION.—By J. H. Batty. Published by the author. Parkville, New York. Price, $1.50.

We know of no one better qualified to write a book on taxerdermy, which shall completely fill the bill, than Mr. Batty, the author of "How to Hunt and Trap." Mr. Batty's well-known skill as a taxidermist, and his happy faculty of putting his printed instructions into the simplest and most intelligent form, were sufficient assurance that his book would be at once exhaustive and useful. Such upon examination we find it to be; and we commend it to all sportsmen, collectors, professional taxidermists, and to the ladies as well, who will find in the chapters devoted to home decoration many valuable hints and instructions.

—We destre to particularly call the attention of our readers to the important announcement of the Messrs. Cassell, Petter, Galpin & Co., the great illustrated book-publishing house of London, Paris, and New York, who are now placing before the public, in monthly parts, two elaborate and exceedingly useful works, viz.: "The Illustrated Book of the Dog," by "Vero Shaw, B. A., Cantab," the noted enthusiastic breeder of dogs, a man of world-wide reputation, and one who is thoroughly up in all matters relating to rearing, breaking, working, feeding, dealing, judging, buying and selling, grooming, exercise, diseases, medicines, and treatment of dogs. "The Illustrated Book of the Dog" will furnish a full description of every known breed of dog. This illustrated work will be uniform in size and style with the well-known standard works—"The Book of the Horse," "The Illustrated Book of Poultry," "The Book of Pigeons," and their companion work now issuing in monthly parts at the low price of forty cents each, viz.: "Dairy Farming," edited by J. P. Sheldon, the late Resident Professor of Agriculture in the Royal College, Cirencester, England, with assistance of the most eminent English and American authorities. This grand work will be embellished with colored plates and many fine original wood engravings. We submit a short summary of some of the subjects, which will be thoroughly treated upon in dairy farming, viz., the breeds, the milking, the rearing and feeding of calfs, the selection of cows for dairy purposes, their breeding and feeding through the different seasons of the year, the various and recently improved methods employed in the production of butter, cheese, etc. No country or dog-loving person need consider themselves up in the matters of which these two works treat without a thorough understanding of their practical pages; therefore, take notice of the advertisement of the publishers found on this page of this week's paper. From time to time, as the magnificent works progress towards completion, we shall take occasion to notice the many new and valuable hints introduced.

INDIAN RELICS WANTED to purchase—all sorts of pre-historic stone relics. Give description and price to "RELIC," P. O. Box 689 Pittsburg, Pa.

The noted Dalrymple farm, on the Nothern Pacific Railroad, employs 400 men during the present harvest, and would use 600 more but for self binders. It has 115 self-binding reapers and 20 steam threshers. The farm contains 75,000 more acres in space than the original, District of Columbia. Ground was first broken in 1875. This year more than 20,000 acres are in crops. The owner will ship 500,000 bushels of wheat this year to New York at a profit of $180,000. In reaping, each machine takes an eight-foot sweep and cuts fifteen acres a day. Twenty-one machines work simultaneously on a square mile patch, running one after another.

THE CATTLE OF COLORADO—According to Mr. Fossett, the author of the new book on the West and its resources, the whole number of cattle in the State is now 855,000, and of sheep 2,000,000 or more. He thinks the total yield of wool in 1879 will reach 7,000,000 pounds. If the data furnished to Mr. Fossett can be trusted, sheep raising in this region should be very profitable. It is said that a flock of 1,800 ewes, costing $4,500, were placed on a ranch in southern Colorado; and that, from the start, the wool clipped has paid for shepherds and all current expenses. In the course of eight years 1,600 sheep have been killed for mutton and consumed on the ranch, while 7,740 have been sold for about $30,000. There are now some 15,000 head on hand, worth, at $5 per head, $45,000, showing a net profit over the original investment of $70,000 in eight years.

—o—

A PLUCKY RIDE.—At the Coney Island races the other day one of the two-year-olds when she neared the starting-point began to rear and jump and tear about like a mad hornet. Suddenly her head went down and her tail went up, and she threw little McLaughlin the jockey, over her head and far into the track. The fallen jockey was up and remounted like a flash, but the filly was determined to have him off, and she threw him a second time with great force. The attention of the spectators was entirely diverted from the race and centered upon the capering steed. Ten times was the little rider thrown, each time regaining his seat, but from the eleventh fall the boy was hardly able to rise, and when he did get up his face was cut and he was hurt in the side. Then one of the owners, T. D. Daley, mounted the obstreperous filly and she tried to throw him. Daley, who had neither stirrup nor whip, clung to the seat like grim death, but when he undertook to ride Jessie D. down the stretch she threw him, too, and tried to run away.

New Advertisements.

Now in course of publication an entirely NEW and COMPREHENSIVE WORK on the DOG (demy 4to size), under the title of the

ILLUSTRATED BOOK OF THE DOG.

In 30 Monthly Parts, 40 cents each. Yearly subscription, $4.50.

Neversink Lodge Kennels.

The following celebrated Dogs are for sale.

DOGS!

St Bernard dog "Marco"; rough coated, two years old; a magnificent animal—Rev. J. Cumming Macdona's stock—second prizes Hanover Show and Rochester.

New Foundland dog "Keeper"; four years old: first prize Westminster Kennel Show, 1879.

Pointer dog, "Croxteth," liver and white; one and a half year old; out of Lord Sefton's renowned stock—one of the handsomest pointers in the United States. Second prize in the Hanover International Show. Broken.

Blue Belton setter, "Decimal Dash," eighteen months old; sired by Llewellyn's celebrated "Dash"—a magnificent stud dog—never exhibited.

Irish setter, "Rover II"; pure red; son of Macdona's champion "Rover." Never exhibited; thoroughly broken.

English setter, "Ranger II"; a pure bred Laverack, son of Macdona's celebrated "Ranger". His get won first at Hanover and Paris shows.

English setter "Ranger Rival," a half brother to Ranger II., never exhibited.

Any of these dogs will serve approved bitches at $25.00.

Bitches.

St. Bernard "Braunfels," rough coated, out of Prince Solm's celebrated stock; a magnificent bitch, in whelp to "Marco," 1st prizes in Hanover and Rochester show.

Pointer "Queen," liver and white. 1st Westminster Kennel Show 1878, in whelp to champion "Sensation."

Gordon setter "Beauty," 1st Boston Show 1878, 2nd New York Show 1878.

Pointer "Dora"—liver and white, out of "Queen" and "Sancho," in whelp to Croxteth.

Blue Belton setter "Silk," in whelp to Ranger I.

Irish Setter "Moya," out of Col. Hillard's "Palmerston;" will be bred to Rover I.

English Setter "Donna," white and lemon, in whelp to Ranger II.

Pups out of all the above first-class bitches can be secured by an early application. Besides I offer for sale pointers, setters of minor quality, but of good thoroughbred stock; full pedigrees. Particulars will be furnished on application to

TARGET BALL CO., Titusville, Pa.

VICTOR GLASS BALL TRAP.
STOCK & MORRIS PATENT.

This Trap is destined to revolutionize glass-ball shooting. It weighs but four pounds, and can be set up anywhere, without previous preparation, in two minutes. It is so simple that it can never get out of order. It throws balls without breaking, at any desired velocity, in any direction, faster than twenty guns can continue to shoot them. To become a good shot it is now unnecessary to go to club grounds for practice, as anyone can find a good place for shooting within a few rods of his dwelling, and have an hour's daily practice without the slightest trouble or inconvenience. The Trap has been entirely remodeled and greatly improved, both as regards efficacy and finish.

No. 1 (Plain), $4. No. 2 (Nickel-Plated), $5. Will close out the balance of Old Model Traps at $3.

CHAS. FOLSOM, Sole Agent,
For Sale by Dealers Everywhere. **53 Chambers street, New York.**

PEORIA, *August 8th*, 1879.

Mr. Charles Folsom, Agent for the Stock & Morris Patent Glass Ball Trap, No. 53 Chambers street, N. Y.

SIR—You ask the opinion of the Peoria Shooting Club on the above trap, which is now used exclusively on our grounds. We give it decided preference over all. It delivers the balls with varying velocity, thus more closely imitating the natural flight of a bird, and in this point it has no competitor. We have yet to see its equal for any of the following qualities:—Simplicity of construction, rapidity and certainty of action, durability, lightness, and portability. It works perfectly and is so simple; it does not break down or get out of order at all. We recommend it in highest terms for the use of clubs, and also for amateurs for private practice. For those who would like frequent practice on their own premises, without the need of costly and tiresome preparation, it fully meets a long-felt want, as it weighs but four pounds, and can be set up ready for use anywhere in two minutes. It was to-day tested on our grounds for power and speed, when it threw fifty-nine (59) glass-balls an average distance of twenty-five yards from a single cup in sixty seconds, keeping two balls constantly in the air at the same time. The new model is a decided improvement upon the old. We wish you success in its introduction, and think its use will do quite as much to popularize glass ball shooting as anything that has yet been found.

Yours, &c.,
V. M. LINCOLN, Pres., Z. N. HOTCHKISS, E. B. McCLINTOCK, WM. MEYERS,
W. R. WILEY, FRED. KIMBLE, JOHN KELLY, GEO. W. BAKER, Sec.

PAINE'S
Feather Filled Glass Ball.

THE ONLY SUBSTITUTE EVER INVENTED FOR A LIVING BIRD.

Ask your gunmaker for the FEATHER FILLED AND TAKE NO OTHER. **SPECIAL NOTICE TO DEALERS.**—Owing to the great demand for the FEATHER FILLED BALL, we will from this date pay strict attention to our factory and the careful production of the ball only, and have appointed the well-known house of **HAGERTY BROS. & CO., 10 Platt Street, New York,** as our authorized agents, to whom all orders and communications may be addressed.

ALSO MANUFACTURERS OF THE BEST PLAIN BALL IN THE MARKET.

Attention, Sportsmen!

Kay's Improved and Perfected Ball for 1879.

[PATENTED OCTOBER 13, 1877.]

A SUBSTITUTE FOR GLASS.

HAVING succeeded in producing a Ball for professional and amateur use at the trap, we offer the same with the following recommendations, viz: In breakage, the equal and superior to any glass; Uniformity, being of an exact uniform thickness of 1-20th of an inch, is superior to any blown material; Durability, is not affected by their solubility; Residuum, can be used anywhere, and on finest lawns, leaving neither injurious or unsightly refuse. Packed in barrels by a device peculiar to us, we guarantee against breakage in shipment. For particulars see circulars. Price, $2 per 100. All orders addressed to dealers, or **A. B. KAY & CO., Newark, N. J.,** Manufacturers of Buck and Heavy Drop Shot, Cartridges for Long-Range, viz.: Deer, Duck, and Geese, $3 50 per 100 also, the Chip or Expansive Concentrator, $1 25 per 100. A box of 50 sent on receipt of 75 cents by mail

THE CARVER TARGET BALL.

[CAVEAT FILED.]

GREENVILLE, PA., May 26, 1879.

DEAR SIR:—We take pleasure in notifying all admirers of Target and Ball Shooting that we have introduced a COMPOSITION TARGET BALL for Trap Shooting that is perfect in every particular. It has been thoroughly tested by many of the leading Sportsmen, and pronounced by all as the only perfect and unobjectionable Target Ball in existence. This Ball is very uniform in weight and standard size, and when broken leaves no *debris*, but will EVAPORATE in five days and acts as a FERTILIZER. They can be used on Lawns, Gardens, Fields or Parks, thereby doing away with the danger and annoyance consequent in using Glass Balls. We are now prepared to fill orders. Drafts or P. O. Order must accompany all orders. Organized clubs are invited to send for Sample Box, (25 balls) and Circular free.

J. H. WAUGH, Inventor

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOUR SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive Illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

Sportsmen's Routes.

To Hunting and Fishing Parties.

The Pullman Car Company

IS PREPARED TO CHARTER THE new cars "DavyCrocket" and "Izaak Walton," which are fitted up with dining room and kitchen, sleeping apartments, lavatories, etc., also provided with racks and closets for guns and fishing tackle, and kennels for dogs.

Diagrams, rates and other desired information furnished on application to Gen'l Supt. P. P. C. Co., Chicago. je26 3mos.

FOR HALIFAX,

PORT HAWKESBURY, PICTOU, AND CHARLOTTETOWN.

THE first-class steamships Carroll and Worcester, will leave T wharf, Boston, for above ports, every Saturday at 12 M. Through tickets sold to all principal points in Nova Scotia and Cape Breton. No freight received after 10 A.M. on day of sailing. Shippers must send with receipts the value of goods for Master's manifest. For rates of freight or passage inquire of W. H. RING, 18 T wharf, or O. G. PEARSON, 219 Washington street. F. NICKERSON & CO., Agents.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

PURE TIN-COATED AND BURNISHED

DROP AND BUCK SHOT.

American Standard--Eagle Brand.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM:— NEW YORK, Jan. 13, 1879.

HAVING been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD MANUFACTURING COMPANY, NEW YORK.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 and 209 Water st.,

S-T-A-I-N-E-D
GLASS.

Patented December 3, 1878.

CURTAINS, SHADES, AND BLINDS

Dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly paiuted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Public Buildings, Churches, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented,* and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of **$1.00.**

Agents Apply to **L. Lum Smith,** Patentee & MFr. 717 SANSOM ST., PHILADELPHIA, Pa. { Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald:*

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

The Largest, Spiciest, and only [illegible] REPRESENTATIVE PAPER OF ITS KIND.

INTIMATIONS.

BY RICHARD REALF.

ALL around us lies the awful sacredness
Of babes and cradles, graves and hoary hairs,
Of youthful laughters and of manly cares,
Of moaning sighs and passionate caresses,
Of infinite ascensions of the soul,
And gnawing hungers of the heavy flesh,
Of cottage virtues, and the solemn roll
Of populous cities' thunder, and the fresh
Warm faith of childhood, sweet as mignonette
Among Doubt's bitter herbage, and the dear
Re-glimpses of the earlier stars that set
Down the blue skies of our lost wondersphere.]
And all the consecrations and delights
Woven in the texture of the days and nights.

The daily miracle of life goes on
Within our chambers, at our household hearths,
In sober duties and in jocund mirths,
In all the unquiet hopes and fears that run
Out of our hearts along the edges of
The terrible abysses; in the calms
Of friendship, in the ecstacies of love,
In burial dirges and in marriage psalms;
In all the fair, weird voices that we hear,
In all the mystic visions we behold,
In our soul's summers when the days are clear,
And in our winters when the nights are cold,
And in the subtle secrets of our breath,
And that Annunciation men call Death.

O, Earth, thou hast not any wind that blows
Which is not music; every weed of thine,
Pressed rightly, flows in aromatic wine;
And every humble hedgerow flower that grows,
And every little brown bird that doth sing,
Hath something greater than itself, and bears
A living Word to every living thing,
Albeit it holds the Message unawares.
All shapes and sounds have something which is not
Of them; a spirit walks amid the grass,
Vague outlines of the Everlasting Thought
Melt in the mellow shadows as they pass,
The touch of an Eternal Presence thrills
The tranquil sunset and the brooding hills.

Forever, through the world's material forms
God shoots his immaterial. Night and day
Apocalyptic intimations stray
Down the dark lanes of matter; viewless arms
Lean lovingly toward us from the air,
There is a breathing marvel in the sea.
The sapphire foreheads of the mountains wear
A light within light which ensymbols the
Unutterable Beauty and Perfection
That, with immeasurable striving, strives
Through bodied forms and sensuous indirection,
To hint unto our dull and hardened lives
Poor lives that cannot see nor hear aright,
His bodiless glories which are out of sight.

Up the Tobique.

BY EDWARD JACK.

THE Tobique and Aroostook are two of the largest tributaries of the St. John, the principal river of the Province of New Brunswick, the former emptying into it some two or three miles below the latter. The same fertile belt which follows the Aroostook crosses the St. John and comprises the north side of the Tobique to its source, including in its course long, gently swelling ridges, admirably adapted to the uses of the farmer. But while in the State of Maine this fertile belt is settled by a prosperous people possessing neat little towns with good churches and hotels, on the English side of the St. John one can travel, commencing but a few miles from the mouth of the Tobique, keeping a northeastwardly course for a distance of more than sixty miles through as fine a country as can be met with in either Maine or New Brunswick, but no settlers will be encountered and no clearings reached. All is forest. The soft breath of summer there waves no golden grain; no sound of human voice is heard. As day declines and the shadows of evening are drawing on, you may perhaps hear the lonely owl calling to his mate from the thick cedars which embower some neighboring brook, or the wind sighing among the boughs of the lofty maples and birches with which the splendid ridges are covered. What master spirit will arise and bid these forests give place to smiling fields?

The Tobique takes its rise among the granite ridges which divide its waters from those of the Restigouche, Nepisiguit and Miramichi, which empty into the Bay of Chaleur. On the north side of the mouth of the Tobique, and on a large and fertile flat, stands a village of Melicite Indians, numbering probably a hundred souls, of all shades of color, and who reside in queer, old-fashioned houses, with stove-pipes sticking out of roof or window. Some of these huts have a little paint on them, the color frequently green or other equally inappropriate, according to the taste of the occupant. Everything about them denotes a total absence of system and order. In the middle of their village stands their little church, which has lately been repaired, with a fantastic cross covered with rudely carved devices, including spear, hammer, crown of thorns, and snake, which we presumed represented the old serpent who tempted Mother Eve. This cross was erected by a stranger many years ago; his name and memory are covered with oblivion, and the cross alone is left to speak for itself. Among the descendants of the aborigines living here are found not only very expert canoe men, but honest fellows, whose manners are easy and graceful and who refuse not only strong drink, but in some cases even tobacco.

Crossing the St. John River to this village, myself and companion engaged two young Indians—Ambrose Lockwood and Peter Solis—to carry us in their birch-bark canoes to Nictaux Lake, some eighty or ninety miles up the Tobique. We left the village early in a bright July morning; the air was cool and temperate, and the breeze perfumed with the breath of the white clover and wild flowers of various kinds which fringed the shores of the stream.

A distance of about half a mile brought us to a point where the river is suddenly contracted to a very deep, strong stream running through a narrow cleft in the rocks 110 or 120 feet wide, and upwards of sixty or seventy high, rent or worn through strangely contorted vertical slates traversed here and there by veins of white spar.

As we passed along in our frail canoes on either side was heard the sharp, cutting noise of the deep, strong water as it pressed against the rocky walls of its prison, creating here and there whirlpools which our Indians skilfully and carefully shunned. The canoes were of course impelled against the heavy current by means of poles, which the Indians placed on the top of submerged rocks wherever bottom could be found, which was not always the case. When the water is high canoes dare not attempt the passage of the Narrows. Immediately on emerging from them one sees sloping ridges covered by woods, here and there interspersed with clearings and houses. Here the Tobique widens out to a large river, having an average depth at this time of about three feet and running with rapid current over a bright, gravelly bottom. Its waters are bright and pure and moderately cool, being extremely palatable even in the hottest weather, as it is largely fed by springs which issue from ridges on which are found no heaths or bogs to darken or defile its current. Our progress up this part of the river was extremely slow, owing to the strength of the current, and we were compelled to camp at the Red rapids, thus named from the fact that the river here rushes over a series of ledges of bright red sandstone of the sub-carboniferous period, forming a pleasing contrast to the dark-green foliage, which clambered over the bank hanging in festoons from the cliffs and waving listlessly to and fro as urged by the intermittent evening breeze, the white trunks of the birches which surmounted the shores standing out like marble pillars in front of the green shrubs which grew behind them. The river rushing in sheets of foam over the ledges constituted the lower pitch of the rapids. Many years ago an American company built a dam at this place and erected large saw mills.

At this time there was much pine timber got on the Tobique, and the dam proving an obstruction to the lumbermen in getting their boats loaded with supplies for the winter up the river, a large party of them meeting here at one time held a consultation, and appointing a bold and unscrupulous man as their leader, attacked the structure with their axes and hand spikes, and soon made a hole in it large enough to allow their flat boats to be hauled through.

The Indians, who were remarkably active, soon pitched the tent, spread the fir boughs, and prepared our homely meal. After the shadows of evening had closed around us, the full moon, slowly rising, tipped with silvery light the summits of the distant hills, soon, however, revealing herself to our sight, her rays dancing and quivering on the unresting waters which rippled and dashed along on their uneasy course to the distant ocean.

After we had finished our supper, and all the flies with the exception of an occasional mosquito had retired to rest, we made some enquiries of our Indians as to their knowledge of legendary lore, and after a while, Peter gratified our curiosity with the following legend, which I here carefully narrate in his own words, as nearly as possible, as his English was not of the best:

AN INDIAN LEGEND.

"Many, many years ago, Quabeet, the beaver, was very large, but his tail was so small in comparison with the rest of his body, being nevertheless similar to that now carried by Ke-whis, the muskrat, which at that time was large, broad and flat, that he was moved with envy.

"Quabeet with many flattering words addressed himself to the latter, calling him cousin and other endearing names, at the same time giving him part of his house to live in. At length silly Ke-whis was persuaded with many false promises of return to lend him his tail. Quabeet obtaining his desire from that time, even until now has persistenly refused to return the loan.

"After this, Quabeet becoming very saucy and bold, built a dam across the St. John just above where the city now stands, and where the falls are, which dam flowed the river back to the mouth of the Tobique. His disposition becoming worse and worse every day, became at length so bad that he destroyed all the Indians who came in his way. At last, Glooscap, the great chief, who was of superhuman strength and courage, determined to destroy the monster, and coming down the river tore up his dam and pelted him off with hugh rocks, some of which he threw to within a few miles distance from the mouth of the Tobique. These are yet to be seen, and are well known to those who travel the upper part of the river. Quabeet not a whit disconcerted at the treatment which he had received, built another dam at the Grand Falls, which forced the water back into Temiscouata Lake." My Indian narrator here asked me if I had ever seen that high hill just like a beaver house on the side of the lake, This he said was Quabeet's house, but Glooscap following up his first victory pursued him to his haunt and soon killed him. All the Melicite Indians with whom I have talked knew this story. These, like all other uneducated people are very superstitous. When ascending the Tobique some years ago in company with Ambrose Bear, he stopped our canoe at a low, flat point to show me what the old Indians thought that their bodies were transformed into after death. These objects were nothing but clay concretions, which, as is well known by geologists, often assume strange fantastic figures, such as that of the foot or even face of a man.

We were awoke bright and early by our Indians, who were excellent cooks, and soon had ready our breakfast. Packing up our things in the canoes, we were soon under way. Sixteen miles from the mouth of the Tobique we passed through a pretty little group of houses called Arthurette. The flats here were extremely fertile and extended back on one side a mile from the river. Opposite this place is the mouth of the Odell stream. Some seven or eight miles higher up we came to the mouth of the Wapskehegan, where one of the old Indians informed me that the aborigines get their arrow-heads which they manufactured from the jasper found at the head of the stream. Wapskehegan is large, and navigable many miles at the proper season of the year for bush canoes. At its mouth is a fine island covered by splendid elms, and the plaster rock in the distance rises abruptly from the bank of Tobique to a perpendicular height of 130 feet. This is a great mass of red and white gypsum, through which in the course of ages the river has worn itself a bed. There is here, also, an island covered by large elms and maples, called plaster rock island. Under the plaster rock there was once a famous salmon pool, but salmon are becoming scarce in Tobique. Keeping steadily on our way through a country similar in appearance—meadows, with here and there a house with high hard wood ridges rising behind them—we came to the mouth of the Gulquac, a large branch of the main river distant thirty-six miles from its mouth; there we expected to catch some trout as well as white fish, which the Indians respect at night. The latter fish does not descend the river usually below this. We were fortunate in getting a good string of trout but could not get birch bark very conveniently with which to make flambeaux for spearing, so we obtained no white fish although we saw a good many. Early the next day we arrived at the Blue Mountains, a range of highlands on the south side of the Tobique, which here rise abruptly from the river to the height of 1,641 feet. The view from the summit, especially just before sunset, was remarkably pretty; to the north, south and east, nothing but an unbroken forest was to be seen, above which, especially to the northeast, various mountains raised their heads. A number of years ago when I first ascended Tobique, the country from the Blue Mountains to the head of the river was nearly in a state of nature; these mountains were wooded to their summits and every island and shore shaded by a luxuriant vegetation. Now the scene was changed; fire had ascended the highest peaks of the Blue Mountains, and settlers have destroyed the fragrant Balm of Gilead trees which had lent so cooling a shade to the bright waters of the gently rustling river and where the finny tribe loved to repose during the noontide heat. The beauty of this part of Tobique had nearly departed and was only preserved by the magnificent wooded hills which adorn the north side of the river.

I longed to be above Nictaux, or the main forks

(sixty-one miles from the mouth), above which for more than thirty miles, to the lakes, no profane hand has invaded the sacred forest shores.

Many things, however, to become useful must become unlovely; and the intervals covered by elms and maples had to yield their honors, and the very green sward be blackened by fire before the ground would yield sustenance for civilized man. As our Indians slowly poled our canoes among a group of islands situated about two miles below Nictaux, one of our canoes taking one side of an island, the other taking the other channel, we suddenly saw a great bear start from the island, and swim for the shore. Some of us stood up in the canoe and shouted at him, as he swam for dear life.

A minute or two brought him to the shore, and he passed away from us, "silent as the night," into the tangled mazes of the boundless forest, happy, no doubt, to escape with a whole skin. We had a gun, but it was not loaded. Had it been loaded we would not have shot Bruin. His terror at our appearance afforded us much more amusement than his dying struggles would have done; besides, the weather was warm, and his hide of no value.

Nictaux, which we soon reached, is one of those places which are hard to describe. There were surrounding the deep, silent pool, where three large rivers mingle their streams, many noble elms which extended their boughs over its dark water, mirroring themselves in it. Fifty acres of meadow surrounded the southern side. This is intersected by deep, silent pools, called by the *voyageur* "Perdu." Behind these flats rose in the distance many wooded hills.

At Nictaux our two Indians, when night came on, took their fambeaux and spears, and soon captured three fine salmon and a number of white fish. In the morning we determined to ascend the left hand branch, called Little Tobique, which is a large stream, with many deep holes, which abound in trout and white fish. It is very crooked, often passing for a mile at a time through alder flats. The ascent became slow and tedious.

The air was cold when we stopped for the night. A squall set in, and we got a wetting while making our tent ready. The wind blew furiously, so that we lay down miserably cold, covered by a single thin blanket. The Indians, who, for some reason or other, would not stop in the tent, lay outside under a small shelter of boughs. Under these circumstances we were astir early in the morning, and found our canoes covered with ice. From our last camping ground it took us two days to reach Nictaux Lake. The brook for a great part of the distance was bounded by high hills, and became more rapid in its course. As we were poling up a very quick reach in the stream Peter Solis seemed to have been suddenly attacked with frenzy. He allowed the canoe to run down stream backwards, and made furious darts at the bottom with his pole.

The mystery was solved on my catching a momentary glimpse of a beaver's tail. The animal, however, managed to crawl into a hole in the bank, and we lost sight of him.

The Indians sometimes spear these animals with a beaver spear, but they are uncommonly quick in their movements. Below the lake we passed through a stretch of dead water, which gradually widened as we approached the outlet, which was wide and shallow. the lake is about four miles long and is surrounded by very high lands, the highest of which, Nictaux Mountain, stands near the head, towering up majestically from the lake, whose angry waters have washed its base for countless centuries. On entering the lake we were met by a fresh breeze from the west, which wafted our frail barks to the shores of a little island about one-eighth of an acre in extent. There we landed. There were on it two or three stunted spruces and a few cranberry vines. It was but a rock projecting up in the centre of the lake, its sides being nearly perpendicular. The day was remarkably pleasant, and we thought of camping on the island, but entertained doubts as to the stability of the fine weather. So after catching a few trout and a good many eels we started for the head of the lake, where we found a large spring brook running from another lake, which was distant but a little. We tried the trout here, and found them very abundant, soon getting all we wanted —among them one which would weigh probably five pounds. We pitched our tent at the head of the lake, among a grove of very large poplars, close to the Indian Portage, which leads to the Nepisigent lakes, two miles distant, and which abound in trout.

After supper we laid ourselves down to rest with the expectation of enjoying a good night's sleep; but about ten o'clock we were awakened by the low, heavy rumble of distant thunder, which soon lengthened out to one continuous roar, making the very ground tremble beneath us, while the wind blew in furious gusts, threatening to overturn our frail tent. Flash followed flash in such quick succession that there seemed to be a universal fire. The most conspicuous object which the great flashes of light revealed to us was ancient Nictaux from base to summit, for it rose abruptly from the lake to the height of 2,500 feet.

As I lay in my tent, and watched his rugged sides lit up by the electric light, I thought what was his age, what were the fearful throes of earth at his birth! There he stood for thousands of years, a grim sentinel, silent as the vast country which he guarded. I thought of the words of Scripture: "Lord, Thou hast been our refuge throughout all generations, before the mountains were made, or the earth or the world was formed; from everlasting to everlasting Thou art God." I do not know that we were in any more danger than mortals are commonly exposed to; but when one in a fearful thunderstorm is thirty miles from the nearest human habitation, he is apt to feel as if the thunders were addressing their terrific voices to him alone.

After an hour or two the thunder became less loud, and the lightning less vivid, and about midnight or a little after the sky cleared and the stars mirrored themselves in the tranquil waters of the lake, which, as if tired of their foamy passion, slumbered at our feet.

Fredericton, N. B.

—The programme of races at the Brighton Beach Fair Grounds, for Sept. 12th, 16th, 18th, 20th, 23d, 25th and 27th, is an attractive one. Brighton is taking the lead in popularity.

COL. WILLIAM WASHINGTON.

THE following paper contributed by a Virginia correspondent will be read with great interest by many of our subscribers in Virginia, South Carolina, and other parts of the South, as it concerns a character well-known for his spirit both in war and in peace. Col. Washington has transmitted his love of the chase to his descendants in a very large degree:—

Having been under the weather for the last year, and thereby unfit most of the time for business, I have pleasantly beguiled many hours away, which otherwise would have been wearisome, not to say unendurable, by looking over that old interesting work, Skinner's *Turf Register*.

Entertaining and reliable as it generally is, nevertheless, errors have crept into it with regard to both horses and men. I, therefore, propose now to correct an error made by the author of a foot note published in the *Turf Register* for Jan. 1832, with regard to the relationship which existed between Col. William Washington of the Revolution, and Gen. George Washington, the Commander-in-chief of our Army during the Revolutionary War. This foot note signed "T," was called forth by the publication in the *Register* of a number of letters from Gen. Wade Hampton, of South Carolina, bearing date, A. D., 1800 (not published until thirty-two years after), to Col. Jno. Taylor, of Mt. Airy, Virginia, which letters make frequent mention of Col. Washington. The author of the foot note tells a very pleasant and amusing anecdote of a meeting of Tarlton, of the British army, and Col. Washington of our cavalry, in which Tarlton knowing he stood no chance in a hand to hand fight with this "beau sabear of our southern campaigns," (and too brave to fly) adroitly cut with his sword Col. Washington's bridle reins, and thereby forced Col. Washington (who was mounted upon one of his Virginia thoroughbreds which he could not then control), to do the running.

This author goes on to state that Col. Wm. Washington was a nephew of the Commander-in-chief, Gen. George Washington.

Now, as the writer is a descendant in a direct line of Col. Washington's sister, and as the writer's father, a great nephew of Col. W., and his father's aunt, a niece of the Colonel, are both alive, the writer seems almost to touch hands with this gallant horseman across the long divide.

Knowing that there was no truth in the statement of this writer in the *Register*—who is not alone responsible for the statement, the undersigned having frequently seen it so stated before—he addressed a letter to his father, who answered him under cover of the 11th inst., as per extracts, submitted with the more pleasure as they incidentally allude to several gentlemen who were fond of the chase, and who were friends of that gallant old Southern army officer and sportsman, Col. F. G. Skinner. In fact, no one ever reminded the writer so forcibly of what he has heard of Col. Washington as our old veteran, Col. Skinner, beloved by all who know or ever heard of him. He writes:—

"Your letter of the 8th inst. is before me. Col. William Washington, of whom you inquire, was a brother of my grandmother, who married Dr. Valentine Peyton, of Insenlum, Stafford County, Virginia. Col. Washington was a distinguished cavalry officer of the Revolution, a near kinsman, but not a nephew, of Gen. George Washington. He married a lady of South Carolina by the name of Jane Elliott, after whom my grandparents named a daughter, their only now living grandchild—the widow of the late William Chichester, of Fairfax County, Virginia. Col. William Washington became a general after the war, but all his honors were won while he was colonel. I had the honor, when a child, to receive a kiss from his lips, when he was taking his leave of his friends upon his last visit to them in Virginia.

"He was offered the Governorship of South Carolina and other eminent civil positions, but declined them all, and lived and died upon his ample estate.

"I could tell many interesting incidents, civil and military, of his eventful life.

"The late George Chichester, of Fairfax, senior brother of William Chichester, married the youngest daughter of my grandparents—Margaret Peyton, of Insenlum. I was at both of their weddings. George and William Chichester were sons of Daniel McCarty Chichester, a man of large fortune, who and whose sons were fond of dogs and horses. In my boyhood I have been on fox and deer hunts with my uncles-in-law. I did not know their father, but remember their mother well.

"The late William Brent, of Richland, Stafford County, was the son of Daniel Carrol Brent, who married for his second wife Mrs. Eupham Washington, widow of Bailey Washington, Esq., brother of Col. William Washington first herein mentioned."

The most of the persons mentioned in the above extract, were fond of thoroughbred horses and hounds. Col. Washington owned Shark, Virginia Nell, Ariadne, etc., all famous horses; and the editor of the *Turf Register*, in speaking of the Chichester hounds, says:—

"They would thank no one to give them more than the time in which it takes the sand to shift its position in the hour glass to run into the best grey fox that ever unbuttoned a goose's collar."

And, Mr. Editor, I will tell you a secret. When an old red "gives it up" to this day, and there is the descendant of one of these "first flight men" upon the chase, it is a red apple to a pint of buttermilk that 'tis he who sounds "*La Mort!*"

It is a possible thing that the late Hon. Bailey Peyton, of Tennessee, was named for Bailey Washington, Esq., brother of Col. William Washington. R. M. C.

NEAR PEAKES X ROADS.

Spottsylvania Co., Va., Aug. 23d.

BEES AND HONEY.—*Editor Forest and Stream:*—The following gleaned from the *Texas Journal of Commerce* may interest your many readers. Speaking of the products of Fort Bend Co., on the Brazos river, near Houston, as exhibited at a recent fair, the writer says:—

"In wood, cotton, corn, sugar, grasses, millet, melons, fruits, flowers and vegetables, she made an exhibition that could hardly have been equalled by any county in the United States. Sugar cane with twelve matured joints, water melons almost as large as flour barrels, grasses of twenty different kinds, with specimens of soil rich as could be taken from the Nile. Fifty-four varieties of timber were represented and her exhibit of products truly imposing. A world of the most beautiful honey ever seen was on hand. Mr. J. W. Eckman, of Richmond, from seventy-one swarms of bees had sold so far this year, three tons of honey and will have another ton yet. That is money-making for you. The *Age* in speaking of this, says: "The honey exhibited by Mr. Eckman was made by the Italian bee and gathered the flattering eulogy from everyone who saw it. A gentleman from St. Louis said it beat any exhibition he ever saw though he had attended many exhibitions of the kind. Mr. Eckman uses the old-fashioned hives without divisions and moth traps. The best moth trap, he declares, to be the Italian bee, and he is down on 'patent hives.' He has this season gathered from 70 swarms, 42 young swarms and six thousand pounds of honey, and expects to get 2,000 pounds more."

Such are the gleanings which appear to be well authenticated. Marvelous as they may appear, I do not doubt the statement. Texas lies in the great bee zone of our continent, and is celebrated for her world of wild flowers. Nowhere have I ever begun to see her equal in this respect. Largely a rich prairie country with a mild soft climate, bees can work more or less days the year round. Her forests abound in wild bees, so much so that Indians formerly got a full supply of honey as they roamed over the country. I have seen large bands of them whilst travelling through the woods, scatter out to find and take in the wild honey as they went along. And quickly would the Comanche squaws, with their hatchets, hack down a tree, and much more quickly would they swallow the honey, bee bread, young bees and all—mount and be off for another tree. In 1842, whilst on a buffalo hunt in what is now Hunt Co., I found not only plenty of wild bees, but honey dew so plenty on the grass as to give a glossy coating to my shoes. I also saw the same at Fort Worth, and honey dew is not uncommon in Texas by any means. I notice this subject because I am aware that bee culture is becoming more and more popular as the country grows older, and that thousands are interested in all they can learn concerning the "busy little bee," and where they can best raise him. I saw a water melon raised near Fort Worth in 1852 which weighed 63½ pounds, a large one to be sure.

Jottings from Fort McKavet, Menard Co., on the San Saba river, say Wiley Poe killed eight deer Friday last. They were in fine condition and had a quick sale. Gen. D. S. Stanley had arrived at this post to take command, and the fine "post band" dealt out sweet music every evening. Maj. H. W. MERRILL.

New Rochelle, Aug., 18th.

QUEBEC AND ITS LANDMARKS.—A correspondent sends the following interesting contribution:

QUEBEC, *August* 3d.

I send you to-day a copy of a photo taken from the Laval College, and showing the new Dufferin Terrace mentioned in my former letter. It is one of the best views I have been able to procure; although, as Mr. Hallock can tell you, it does not do justice to the place, as the view is so limited in size that it conveys no actual idea of the length, breadth, etc., of the work. It also shows only one of the pavilions finished, but there are now five, with one more to be added in a short time. The walk is over a quarter of a mile in length, with an average breadth of sixty-four feet; it is about one hundred and eighty-four feet above the river level, and rather less than ninety-five feet below the King's Bastion of the Citadel which shows above it, with the two flagstaffs which adorn it. The building to the extreme right with the arch, is the new Post Office, a very plain but substantial building of cut limestone. The large building in the foreground is the present Parliament Building of the province of Quebec, which will be in use as such until next Christmas, when the magnificent new buildings will be ready to occupy. The view also shows part of the harbor and part of the Point Levi side of the river, which from its distance is necessarily very indistinct. The building to the right of the view, with the two windows in the end, and immediately above the Post Office, is the Normal School, one of the oldest, if not the oldest perfect building in Quebec. This building was put up in 1647, and was for many years part of the celebrated Chateau Louis, the home of all the governors, etc. of Quebec from that time up to a comparatively late period. It is in good repair yet, and when built was put up in the most solid manner. The walls are nearly five feet thick, of solid stone, and they stand to this day without crack or flaw; but alas, they, like all the rest of the ancient landmarks of this poor old city, are doomed, and are to be pulled down because they interfere with the view of the Terrace. I am sorry to hear of it, as I like to see the old places of days gone by, especially such as these, and I look upon such an act as pulling them down as nothing better than a sacrilege, and one that the money-grabbing citizens of this place ought to be ashamed of. Old ideas and old associations are fast dying out here, and the attractions of the old capital that used to bring such crowds of our American friends every summer as tourists, are nearly all gone, and the visitor is shown something of later dates, and in many cases, I am afraid, imposed upon by ingenious persons who are not particular about the way they turn a penny, but can always delude the unwary by some plausible yarn told with great sanctity and appearance of truth. I have seen such things myself and know whereof I speak. AU SABLE.

—Spain is adopting horse racing, and the growing popularity of this new form of amusement promises to diminish the devotion to the bull fight. It is thus possible that the Spanish national amusement may cease from being the Spanish national disgrace. Bull fighting is, after all, not so much worse than some of the sports which amuse our own city populaces. It is rare that a *matador* is injured. The poor horse is usually killed in the *corrida*, but the men are so expert in distracting the attention of a bull from a fallen comrade that human life is seldom endangered.

—September is a glorious month for sport.

Fish Culture.

THE TRANS-CONTINENTAL EXPEDITION OF THE CALIFORNIA FISH COMMISSIONERS.

"These fishes are on their way from the Atlantic to the Pacific Ocean. Please give them the care that they deserve."

Thus read the placards on a number of wooden and tin tanks in the New York Central railway station one night last June; and before following the fishes on their overland journey let us see what these fishes are and what they deserve, for this is almost a new enterprise, and at once novel and interesting. On three large conical, wooden tanks is printed "Lobsters." At once visions of red claws and midnight pangs arise, to be quickly dispelled at sight of one of the ungainly, greenish-black inmates of the tanks, carefully lifted to life and air.

Rubber bands confine their pugnacious looking claws; but this is the only restraint put upon their movements, for restraint proved fatal to the eighty or more lobsters who left this station five years ago, packed in moss and sponge. After patient and laborious experiment another attempt is to be made; but this time the twenty large females, with 75,000 eggs each, disport themselves freely in the clear salt water. Constant aëration with wooden dippers—tin cannot be used with salt water—serves to supply the lobsters with air, and, what is equally important, prevents the salt water from becoming bad. The least taint would be irremediable and fatal, for no fresh supply can be obtained for seven days—every drop is precious.

Next in importance to a sufficiency of air and good water is a maintenance of the proper temperature—in case of the lobster, between 40 and 50 degrees. Ice cannot be used to cool salt water, for it would soon freshen it to a fatal degree; so that it becomes an important problem to devise ways to cool salt water. Necessity is the mother of invention, and necessity in this case has produced three children; for near the tanks are three ways to be used to cool the salt water for the lobsters. First, there are a number of large stone jugs filled with ice and salt. One of these immersed in the water furnishes a weak imitation of a lump of ice, but in addition to the care necessary to keep the jugs supplied with ice there is the additional disadvantage that the presence of the jugs in the tanks seriously interferes with the use of the dippers in aërating. A better form of cooler is a stone tile filled with a freezing mixture of ice and salt and placed in the centre of a barrel of salt water. When the water around the tile becomes cold it is used to reduce the temperature of the water in the tanks. By means of this cooler a supply of salt water at a temperature of 34 to 38 degrees can be obtained. But better than either of the others is a kind of gigantic ice-cream freezer, with the common tin cooler replaced with a stone tile, six inches in diameter and about four feet long, fitted with a wooden bottom. The tile, filled with salt water, is packed in ice and salt. By means of this simple contrivance salt water may be frozen at a temperature of 27 degrees. One of the lobsters met with a misfortune on the way from Boston, and consequently an obliging volunteer found busy work for two hours in removing some fifty or sixty thousand young lobsters from one of the tanks—little things scarcely larger than a pin-head, yet with claws and tail complete. Otherwise the lobsters are in fine condition.

In three other wooden tanks are 135 striped bass (*labrax lineatus*), most of them about three inches long. They were caught with considerable difficulty at Red Bank, New Jersey.

This is the first time that striped bass have been transported, and as they are a very delicate fish they require constant attention. Although taken from salt water in the Neversink River, where the thermometer stood at 80 degrees, experiment showed that they would live when confined in nothing but brackish water at a temperature of 65 degrees. The brackish water can be formed artificially of spring water and sea salt—that is, salt made from sea water—and ice can be used with impunity if care is taken to add enough sea salt to maintain the proper degree of brackishness—a handful of the salt to a pail of melting ice being the proper proportion.

Besides the salt water fishes—lobsters and striped bass—there are two tin tanks of fresh water black bass (*micropterus salmoides*), thirty-one large beauties, full of spawn. These game fish are from the cool waters of Lake Champlain, and are in cool spring water at 45 degrees. When comfortable they remain almost torpid on the bottom, a black mass, without sign of activity; but let the water grow warmer or aëration be neglected for a quarter of an hour, and they come to the top for air, and if neglected many minutes longer will turn on their backs and sink to the bottom dead.

In two other tanks are 3,500 silver eels, about four inches long and slender as a knitting-needle. They were scooped out of the mud at Red Bank and at Boston.

All the care of this expedition is upon Mr. Livingston Stone, the Deputy Fish Commissioner of the United States, whose wonderful success in transporting live fishes across the continent is only equalled by his success in hatching and transporting salmon-eggs from McCloud River, Cal. But though in charge of a United States Commissioner, this expedition is undertaken and maintained under the auspices of the California State Fish Commissioners, and to them is due the credit of its inception. The State may well be proud of the enterprise shown by its Commissioners in supplying its bays and rivers with the choicest varieties of Eastern fishes.

As we have now become somewhat interested, perhaps, in the fate of this emigrant train, a few extracts from the diary of the expedition may not be out of place:—

June, 13th. Thanks to the courtesy of the New York Central Railroad, the tanks with their precious contents were placed in a baggage car this morning at half-past one, and no change made through to Chicago. Mr. Stone and his assistants were allowed access to the car, and everything was done to add to the comfort of man and fish. Few know the care necessary to insure the safe transportation of live fish, none but those who have been engaged in it can realize the immense amount of responsibility involved. Aëration must be almost constant, and a half hour's neglect will destroy the results of months' preparation. The mere routine work of passing from one tank to another, raising a dipper full of water and pouring it back, is for a while mere play; and the first day gives one the idea that, after all, the transportation of live fish is not such a difficult undertaking. We reached Cleveland at 7 P.M., cheered by the thought that not a fish had been lost. Careful preparation had left little to be done the first day; the coolers were all ready for use, arms were fresh, and excitement kept all busy. Ice and fingers were pounded alike without complaint. The day was perfect for our purpose, air cool, and sky cloudy.

June 14th. Last night came our first trouble. The night was very cool; and, almost without warning, the temperature of the water in our tanks began to fall. The striped bass were the first to be troubled, their water fell to 55 deg., a change of 8 deg. in as many hours. Unfortunately, we had no means of heating water; but by lively work at the dippers the water was kept at 55 deg., and, as the fish remained on the bottom, we hoped that no ill effects would follow; but at Chicago an examination of the tanks showed twenty dead bass on the bottom of one of the tanks. They were literally frozen to death, and nothing could be done for them. Taught by this experience, we supplied ourselves with several tiny alcohol lamps so that for the remainder of our journey we shall be prepared for any emergency.

The transfer at Chicago was made without difficulty; the Union Transfer Co. doing the work carefully and with dispatch. On the Chicago, Burlington, and Quincy road we were given part of the provision car. Half a ton of ice was put on, the coolers filled, and everything prepared for a hot afternoon.

In the eel tanks were signs of trouble; one of the tanks was crowded with nearly three thousand of the little creatures, and they began to be suspiciously quiet. Crowded as they were it was dangerous to plunge a dipper among them, and aëration became almost impossible. Soon after leaving Chicago, a piece of turf was cut at one of the stations and about three hundred eels put with it into a bucket partially filled with water. The result of this treatment was very satisfactory, as the eels seemed to revive at once. A curious incident was observed late this afternoon, which for a time filled us all with anxiety and apprehension; the lobsters that had hitherto evinced every sign of health and happiness, began to droop—when lifted from the tanks their claws and tails fell limp, and between the joints of their shells there was a very dangerous looking display of white cartilage. They seemed to be dying; in fact, one of them was put into a pail that happened to be near filled with fresh water, as there seemed to be no life in it; but the fresh water had a very good effect, and soon the lobster was clawing around apparently as fresh as if just out of the ocean. The other lobsters were at once treated to a fresh bath, and whether they had been playing possum, or were suffering for want of air, or in want of a change of air and water—at any rate, they all revived and for a time seemed as fresh as ever. All day, by incessant work with ice and salt, the temperature in the lobsters' tanks was kept at 50 deg.; in the striped bass' tanks at 60 deg. to 65 deg.; in the black bass' at 43 deg. to 50 deg.; and in the eels' at about 57 deg.; this with the temperature of the car at 80 deg.

June 15th. This morning we made our most difficult transfer, at Omaha. On account of the great amount of work and the short time allowed, it was very difficult to have everything done as it should be, and, in spite of all protestation, the tanks were left in the sun for some little while; consequently, after the train started, we had the disagreeable duty of taking seven of the black bass from the tanks. One lobster also, the one which spawned before reaching Albany, died, and became the prize of a wondering native whose astonishment was only equaled by his delight.

The Elkhorn, scene of the great fish tragedy in 1873, when the aquarium car full of fish was unceremoniously dumped into the river, was passed with a feeling of relief, and we begin now to look to the end. The temperature to-day averaged a little higher; the lobsters' rising to 53 deg. and 57 deg., the striped bass' to 66 deg., and the black bass' to 50 deg.

June 16th. One tank full of eels all died to-day, and 2,500 dead bodies were pitched into space. The tank was too crowded, and consequently the use of ice and dippers had been so restricted that heat and foul water became unbearable. The eels in the mud, however, are doing so well that we are consoled in the loss by the thought that perhaps the problem of eel transportation has been solved. The eels thus packed require no care further than a lump of ice once or twice a day. Why then may not eels be packed in mud and sent by express, with directions to messengers that the crates should be kept cool, as is done in the transportation of salmon eggs?

June. 17th. Our last change of cars was made to-day at Ogden, and we took up our position in half a large baggage car on the Central Pacific. After our rather cramped quarters on the Union Pacific we feel quite comfortable in our comparatively commodious quarters. One more lobster died to-day, but with that exception the fish seem as well as when first taken. As we leave the plains the air grows cooler, and the temperature of the tanks can be kept lower; to-day the lobsters have averaged about 46 deg.; the striped bass, 49 deg.; the black bass, 43 deg.; and the eels, 58 deg.

June 18th. This afternoon at Winnemucca a supply of Pacific salt water met us, but unfortunately it is far from sweet. There was danger in using it, and so we satisfied ourselves with redoubled efforts with the dippers on the Atlantic water. On account of the alkali and limestone deposits the water from Chicago to San Francisco cannot be used with fish, and so it happens that no change of water is made from Albany to the journey's end.

June 19th. Our last day! What wonder that we feel jubilant. For the first time in history lobsters and striped bass have been carried alive for seven days and nights a distance of 3,600 miles, without any considerable loss. A discovery has been made that may prove of great practical use in the transportation of eels, and the feasibility of keeping salt water for a week in good condition has been demonstrated. We are about to complete the most successful expedition of the kind ever undertaken. For three days and nights aëration has not been interrupted for a minute, but now all join in a final effort that the good results already obtained may not result in mortification and defeat. At Sacramento we were met by Mr. Redding and Mr. Throckmorton, of the California Fish Commission, who seemed delighted with the success of their undertaking. At Martinez, some thirty-six miles from San Francisco, the train was stopped near the San Joaquin river, and the striped bass were placed in the river, among some tulle. They at once showed their vitality and "level headedness" by striking out at full speed for the deep water. One hundred and ten fish of the one hundred and thirty-five that left Red Bank lived to seek pastures new thirty-five hundred miles from home.

The eels were taken from Tracy to Suñol, and were deposited there in a muddy pool near the mouth of the San Joaquin. A steamer met the train at the Oakland wharf and conveyed the lobsters to their resting place in the mussle-bearing rocks near the Light. The black bass were taken to San Mateo, a few miles south of San Francisco, and placed in the Crystal Lake belonging to the Spring Valley Water Company.

H. A. L.

SEINED AND HOOKED MACKEREL.—The following is an extract from a letter from Capt. J. W. Collins, dated Gloucester, Mass., August 28th, 1879, addressed to the U. S. Fish Commission:—

"Mr. Geo. W. Woods, (quite an old gentleman,) of Boston, a former employé of Frank Snow & Co., and who worked for this firm thirty-five years, says that he has experimented with seined mackerel to find out how they kept in comparison with those caught on a hook. He salted a half barrel of each very carefully, using the same quantity of salt, and pickling them very carefully. He headed the half barrels up, and set them away about the 1st of October, and when he opened them the following spring, about the last of March, he found a marked difference between them. The flesh of the mackerel that were caught on a hook was firm and in fine condition, while the flesh of those that were seined was short and mealy, retaining little or no firmness. He thinks this holds good in most cases.

"He also made some very careful experiments to find out how mackerel would keep in pickle made with fresh water. He salted and pickled two half barrels, using fresh water for one and salt for the other. He put them up in the fall and opened them the following July. He found a marked difference in them. Those filled with pickle made of salt water were in excellent condition, while the others had a dirty scum on the pickle and the flesh was dark and somewhat slimy, while the skin had a whitish, discolored appearance, and they were not thought fit to eat. He says that at present some of the Boston firms use fresh water very extensively in making pickle for fish, and think that when the fish are kept any length of time before they are eaten that they are not fit for consumption, and as a consequence the sale or market for pickled fish is injured."

Natural History.

A RARE RAIL.—Mr. James Bryce, jr., of Madison, N. J., shot on the meadows near that place on the 10th inst. a yellow-crested rail, sometimes known as the little yellow rail (*Porzana noveboracensis*). This little bird, on account of its secluded habits and disinclination to take wing, is very rarely shot. It is not a common species, and its habitat is confined to Eastern North America.

THE SEA CUCUMBER.

ST. JOHN'S, NEWFOUNDLAND, *July 16th.*

A SHORT time ago a fisherman was using his "jigger" on one of the fishing-banks near the harbor of St. John's, and, on drawing it into the boat, he found fastened on one of the hooks a curious creature which none of the fishing fraternity had ever seen before. It was brought to me, and for half a dollar I became possessor of the curiosity, whose appearance was far from prepossessing. I found it to measure eleven inches in length and five or six inches in circumference. In shape it was oblong, tapering slightly at both ends, and covered with a tough leathery skin, which to the touch was slimy and disagreeable. On examination I found running down its body five double rows of suckers, which divided it into an equal number of longitudinal segments or lobes. The mouth was surrounded with beautiful feathery tentacles branching in all directions, like tiny trees. Its figure strikingly resembled a cucumber; and this, with the other characteristic just named, enabled me to determine that it was a sea cucumber, a singular animal, not uncommon on certain shores, but rarely if ever found on these coasts. The specimen was a very fine one as regards size. In the seas around the British Isles the sea cucumbers, or sea gherkins, are small; though occasionally in the Shetland seas a species about the same size as my specimen is taken, and gets the name of "King of the Sea Cucumbers." It was kept alive a short time in sea water in a basin, but as I observed it languid and gradually shrinking in size, I terminated its sufferings by popping it into alcohol and adding it to my little private museum. In the alcohol, like all molluscous creatures, it has shrunk to a little over half its original size.

Let us look for a little at this ugly little creature, for it has peculiarities which render it well worthy of a careful study. And first let us see what its place is in the chain of being. Professor Huxley has proposed as the third subkingdom of the animal world the *Annuloida*, and in it he includes the two groups of the *Echinodermata* and the *Scoleoida*. He divides the *Echinodermata* into seven

orders, the most highly organized of which are the *Holothuroidea*, or sea cucumbers. This classification is now generally acquiesced in by naturalists, at least as a provisional arrangement. Formerly the *Echinodermata* belonged to the old sub-kingdom *Radiata*, that vast and comprehensive division of living beings which have no joints whatever, and no limbs, because all their parts radiate from a common centre. The sea cucumber does certainly exhibit *radiism* in its structure, inasmuch as it protrudes from its fore extremity a circle of plumose retractile tentacles, and has five double rows of suckers exactly resembling in structure and function those of the star-fish and urchin; but the arrangement of the internal organs is mostly bilateral, and there is a distinct anterior and posterior extremity. Hence the necessity of the new classification.

One of the most singular peculiarities about these sea cucumbers is their mode of walking, or rather creeping—one of the most extraordinary modes of progression in the animal kingdom. The rows of suckers I have mentioned are really ambulacral tube-feet. Each sucker has a soft head, which, when applied to any hard substance, adheres to it with tolerable firmness until the pressure is relaxed and the sucker released. The suckers continually move forward, seize upon the ground, draw the body gently along, and then search for a new hold, thus securing a regular gliding progress which hardly seems to be produced by voluntary motion. A circlet of feathery tentacles surrounds the mouth, which opens into a pharynx conducting to a stomach. There is a long convoluted intestine, and a special respiratory, or water-vascular system, in the form of arborescent tubes which admit water from the exterior.

The most remarkable peculiarity of the sea cucumber has yet however, to be described. Their skin is highly contractile, and the body is provided with powerful longitudinal and circular muscles to compensate for the absence of any rigid integumentary skeleton; in fact they are endowed with such high contractibility that they can eject their internal organs entirely when injured or alarmed, leaving nothing but an empty sack. This act, however, does not, as might be supposed, terminate their existence; they merely retire into private life for a short time and grow an entirely new set of organs. Alone, of all animal existences, the sea cucumber is endowed with the high function of being able to disembowel itself without injury or inconvenience, and to re-produce the organs destroyed. When suffering from dyspepia or liver complaint, or when uncomfortable, irritated, or alarmed from any cause, this talented creature promptly disgorges the whole of its interior apparatus. No emetic is needed; the contractile muscles go to work and out leap the stomach, followed by the intestines; and the beautiful ball of tentacles around the mouth is shaken to pieces and sent flying in all directions. There remains nothing but an empty skin which of course cannot eat or digest, having neither mouth nor stomach, and has no inducement to move about. Accordingly it remains torpid for some months, and then first tentacles appear; a new and healthy stomach and intestines follow, and the creature has recuperated and is ready for any emergency. How many human dyspeptics there are who would gladly have recourse, if they could, to such a "happy despatch" as a means of ending their sufferings and renovating their digestive apparatus. No need of drugs or doctors did we enjoy the enviable faculty of the sea cucumber. I think my specimen is worth his price and his alcohol, if only to enable me to exhibit to my friends a creature possessed of such lofty endowments. It is also noteworthy that some species can separate themselves down the middle, and thus in due time become two distinct animals. I am not sure that we should care to imitate them in this transformation. It would be difficult to preserve personal identity and individual responsibility, if men could divide their personalities in this way. The relations of debtor and creditor might be disturbed if the latter could thus become two individuals. In the shallow seas of the tropics the sea cucumbers reach a great size, being sometimes two feet in length; but the average size is much below this standard. The omnivorous Chinese esteem them as delicacies, and the capture and preparation of them form an important branch of industry in the oriental seas. Usually they are obtained by diving for them in from three to five fathoms and collecting them by the hand. A man will bring up eight or ten at a time. They are split, pressed, dried in the sun, and then smoked and packed in bags, and sold in the Chinese market under the name of Trepangs. They are in great demand for the composition of nutritious soups, and bring, according to quality, from two pounds to thirty pounds per hundredweight. Trepangs are very repulsive to look at, being black and wrinkled, and seeming to have been made out of the upper leather of old shoes. They are, however, in as high esteem among the Chinese as turtle among ourselves, and are either stewed or converted into a rich palatable soup. Thus these repulsive-looking creatures are after all made subservient to human uses. Had the immortal Sairey Gamp been a "Heathen Chinee," she would, no doubt, have been inordinately fond of the Trepangs, and would have had the strongest reasons for urging her friend Betsey Prigg "to try the cowcumbers," having such an appreciation of succulent dishes. M. HARVEY.

ARE ROBINS TOPERS?

Having read "St. Clair's" article of May 8th, and that of "N. A. T." of May 13th, I desire to say something in defense of robin redbreast, and declare him no toper, but a victim, for the time, of unfortunate circumstances. I lived in North Louisiana—where these birds come in thousands in the winter—for many years, and during the early part of the season feed upon China berries, of which they are very fond—absolutely gorging themselves with them. They are naturally very gentle, and where the trees are full of berries, shooting only drives them away for a short time.

When I was a boy I remember to have caught a few almost every day, lying on the ground, apparently stupefied or drunk, and it was quite common for the little negroes to watch for and catch them. The general assertion of everyone was the robins were drunk, and I thought it was so, until, one winter after I was grown, the robins came in great numbers, and while shooting enough to make a pie I discovered one on the ground, seemingly drunk, though he could fly, but not very far. I caught him, and upon examination found his crop very much distended with China berries. He kept his mouth wide open, but made little noise, though he evidently tried to. The berries could be seen in the throat. I pressed two or three of them up, and pulled them out, and in a few moments he was fluttering and whistling, and when liberated flew away as rapidly as if nothing had ever been the matter with him.

China berries grow on stems similar to, and about the size of a morello cherry, only a greater number grow in the clusters. The berry is of a light yellow color, and, when ripe in early winter, unlike any berry I ever saw, appearing to be shriveled or dimpled. There is a soft paste, small in quantity for the size of the berry, adhering to seed, and looking like yellow bar soap. These berries fall off late in the winter, the moisture of the ground puffs them up so that they become as round and full as cherries, and one walking on them causes a continued popping, not very loud, but distinct. Now, the fact is, about the robins, they swallow the berries in such quantities as to fill the crop so full that either from the peculiar formation of the berry, or their swelling with the moisture and warmth, they press against the windpipe, and produce partial strangulation. I do not think it ever kills them. It is evident that the robins do not become intoxicated, but a small proportion of the myriads who fill their crops get choked, and that nigh unto death, too. ISSAQUENA.

NORTH MIDDLETOWN, *Ky., Sept. 6th.*

The explanation given by "Issaquena," and, in a recent issue, by another correspondent, is plausible, and, no doubt, correct; but we can readily imagine that China berries, if partially decayed, might intoxicate robins, just as eating rotten apples is apt to make cows drunk.

SKUNK BITE AGAIN.

Editor Forest and Stream:—

For lack of vigor in the prosecution, I fear the accused, whose name heads this article, has well-nigh proved an *alibi* in the minds of the great public by an array of most respectable witnesses who never saw him bite anybody; who have known him to bite without harm resulting; who never knew death to result from his bite, or who know nothing at all about it. The same class of witnesses might say that nobody has died at Memphis of yellow fever because they have not witnessed such deaths. It is of no interest to me to prove that skunk bite is ever fatal, but since I believe that it sometimes is, I consider it my duty to help inform the people, so that those who are exposed may guard against the danger.

When FOREST AND STREAM of April last, containing a number of contributions on the subject, came to me, I was away in the wilderness, with neither time nor opportunity to write. I intended replying as soon as I got back to civilization, but constant pressure upon my time has prevented. I will now occupy space only to refer briefly to four or five of said letters.

"W." recites the particulars of a fight between his aunt and a skunk at Cape Cod, in which the former was bitten and deluged with perfume, but experienced no serious result. In answer to this, it has never been claimed that skunk bite is always fatal. I believe there are no well-authenticated fatal cases east of the Missouri River, except the one hereafter noted. This animal was not making an attack; it was seeking food (hence in good health), and it only fought in self-defence.

The next writer—"Tonic," of Berlin Heights, Ohio—gives a somewhat similar case, which had recently occurred without having yet reached any result. The subject—a young man—was digging a skunk out of a hole in the ground, and putting in his hand, a skunk bit him. This was also a case of self-defence on its part.

Charles E. Ingalls, of East Templeton, Mass., reports a death at Pomfret, Conn., from skunk bite thirty years ago; also that two hogs died about the same time from hydrophobia, of which the same skunk was supposed to be the cause. The evidence upon this point is very indefinite, but if true the case is of peculiar interest, as showing the effect upon animals as well as upon man.

The next writer—"M. G. E.," of Blacksburg, Va.—is incredulous upon the subject. The next, and last in that paper, "Medicus," evidently believes that skunk bite may be fatal, though he does not say so, but he advises a certain course of treatment in such case.

I think there have been frequent references made to the subject in FOREST AND STREAM since, generally discrediting the fatal theory, but I have none of the articles now at hand, except the contribution of "S.," Fort Johnson, N. C., April 19th, who classes skunk bite stories with those of moon-spoiled fish, though he is evidently a fair-minded juror, and can be convinced by evidence.

A few weeks ago I heard that a case of skunk bite had recently occurred at Fort Dodge, Kansas. I wrote to the post surgeon making inquiry, and if true, requesting a history of the case. He replied that no case had been under his charge for years, but that he had heard of a case at Fort Elliott, Texas. He concluded his letter: "The general impression is that hydrophia is caused by the bite, but I am inclined to think it is only when the animal is rabid."

I next wrote to the post surgeon at Fort Elliott, and have just received his reply. As I deem it of great interest I send you his communication entire. He says that it was prepared for a medical journal, but freely gives permission to use it as original. As in the medical publication it can reach only a limited number, confined almost exclusively to the profession, I think you will be justified in giving it full place, since in FOREST AND STREAM it will be read by thousands in all classes of people, including quite as many scientific and professional gentlemen:—

HYDROPHOBIA—MEPHITIC INOCULATION.

"At 6 A. M., May 26th, was called to see I——W——, aged, eight; female. Obtained the following history from father and patient:—

"While himself and wife were absent from home, and the child was stopping with his brother's family, she was bitten, March 15th, while sleeping on the floor of cabin, on upper lid of right eye and cheek immediately below, the latter point being only slightly abraded. She caught and held the intruder down upon the floor until her uncle could rise from bed and start to her rescue. She then released her hold upon it and sprang into bed. Her uncle at the same moment ignited a match and saw it was a skunk, which was advancing toward him with apparent evil intent, but the light evidently altered its purpose as it slowly retreated behind a trunk in the room where Mr. W. shot it as soon as possible. Upon being shot the skunk gave out its characteristic odor very strongly, so much so that they had to vacate the house soon afterwards. The odor was still very strong in the house when visited several days subsequently by the child's father.

"Mr. W. excised with a knife as well as he could the bitten portion of the eyelid within a half hour after the attack. He had no caustic to apply to the wound, but applied a poultice of cactus, which applications were still being continued three days afterwards when the parents arrived, accompanied by Dr. W., another brother of the child's father. The child's hands were lacerated somewhat, while holding the skunk, but whether any of the abrasions were made by its teeth they were unable to determine definitely, but thought not. The Doctor remained some time with them and cauterized two or three watery vesicles that made their appearance on the cheek near the eye, but whether these vesicles were produced by the poison or by the cactus briars, he (the father) was unable to state, but thought the latter, as there were several of same character upon forehead afterwards, produced evidently by cactus points. The wound healed nicely and after a few days, during which time she was somewhat depressed, knowing her danger, her spirits rose and she appeared in perfect heath. This state of things continued until May 24th, when her father upon returning home after an absence of several days, at once noted a very peculiar expression upon her face, different from anything he had ever observed there before. Upon investigation he found that she had no appetite, acted depressed, and had been troubled with vomitings; complaining before and after each emesis of a peculiar itching and burning pain around the right eye. She being somewhat constipated they gave her some salts, hoping that it was only a bilious attack. The salts operated freely during the night but she appeared no better; they started next morning, May 25th, for this post, dreading lest their worst fears were about to be realized.

"Upon examination I found the child lying quietly in bed; pulse rather hard and full, skin dry, tongue coated with whitish-yellow fur, and a slight stare to the eyes. She complained of nothing whatever, said she had no pain at present about the eye or head, acted as though she did not care to be disturbed, and was perfectly rational. Ordered some small pieces of ice to allay any vomiting; visited her again at 9 A.M.; found the ice had relieved the vomiting; prevailed upon her to sit up in a chair. She drooped her head upon her hands and persistently kept her gaze fixed upon the floor; said she wanted nothing to eat, although she had then eaten nothing for over forty-eight hours. When offered food she refused and turned away her head to avoid seeing it. The mother, by my direction, brought some water in a basin to bathe her face and hands. Having stepped out of the room for a moment, I was called and told that the child complained of pain every time they attempted to touch her with a wet cloth. I told the mother to try again. She did so, but no sooner did the water touch her face than she had a very well-marked but not severe convulsion, clutching at her throat and face. The convulsion was preceded and accompanied by marked redness about the region of the bite, radiating over forehead and down the cheek. Convulsions were of the chronic type; laryngal spasm very prominent. Attempted to administer ether, but it only made matters worse. Then gave her one-eighth grain Alcoholic ext. Calabar bean hypodermically. The child being unfavorably situated, owing to the house being quite small and the occupants numerous, I ordered her to be taken to the hospital, where a room was assigned to her, and Steward C. W. Croft gave her the closest attention in seeing the treatment carried out, keeping careful notes of treatment and progress of the disease, and seeing that everything was done that could be for her comfort.

"Eleven A. M. ordered one oz. ii beef tea per rectum, which was retained nicely. At 12.30 P.M. took small piece of ice on handkerchief with some trouble. Food being offered upon a spoon, for which she expressed desire, she was again seized with convulsions of short duration. Saw her again at 1 P.M.; had several spasms of milder type. Administered one-eighth grain Calabar bean hypodermically. Pulse 100; temperature 99 3-10 degrees.

"Three P.M., one oz. beef tea per rectum, but was rejected.

"Five P.M., one oz. ii beef tea injected and retained. Six P.M., small piece of ice again offered, which brought on spasm, but was finally taken and swallowed with great difficulty.

"Seven-thirty P.M., one-eighth grain Calabar bean injected hypodermically. During the afternoon the patient was more or less delirious. Any one coming into the room excited and threw her into spasms; worried her to be looked at, and she would shift her position and try to avoid their gaze. She suffered greatly but heroically during the day, but towards evening the agony became so great that she gave frequent expression to her suffering. The vomiting, which was allayed for a short time during the morning, again set in and continued until death brought relief. Between the spasms of pain and vomiting she was bathed in a profuse perspiration.

"At 8 P.M., beef tea again injected, but immediately thrown off.

"Eight-thirty P.M., pulse 118; temperature, 101 degrees.

"Ten P.M., drachm milk injected per rectum, which produced convulsions of severe type. The last few injections attended with great difficulty, and were here abandoned, as they only appeared to increase the suffering.

"At 1 A.M., one-quarter grain Morphia sulph. hypodermically, the administration of which brought on convulsions anew, which assumed at this time a very alarming character, continuing with hardly an intermission for about two hours, requiring at times main force to keep her in the bed. From this time on, everything tended to increase her sufferings. A draft of air, opening of a door, touch, look, sight of any glassware—all produced the seizures. The countenance expressed great anxiety, ex-

citement and terror. Had tried several times since the morning to administer ether or chloroform, but every attempt was baffled by such alarming convulsions and laryngal spasms that they had to be abandoned.

"About 3 A.M. the patient became exhausted, with a scarcely perceptible pulse. The convulsions were less in number but more severe in character. Could not take the temperature, as the thermometer was liable to be broken in the attempt.

"At 5 A.M. gave hypodermically one-half grain Morphia sulph., which gave her some slight relief, and she rallied slightly, but only for a short time. She grew rapidly worse, and suffered so much that at 7.30 A.M. gave another one-half grain Morphia sulph., but with no apparent effect. Nature was being exhausted, and unable to throw off the accumulations of viscid mucus, and when I again saw her a few moments after injection she was apparently dying from asphyxia, being at the time under the influence of a terrible convulsion. She was pulseless; respirations labored, four or five per minute; lips and face of a purplish hue. Administered chloroform; the spasm relaxed; pulse reappeared; color returned to face; respirations became easier and more frequent. This condition of improvement lasted probably one-half hour, at which time another and still more severe convulsion seized her, which chloroform possessed no power to alleviate, and lasted until death closed the scene and her sufferings were ended.

"The characteristic frothy mucus was present from the the first, and was expelled in great quantities. Horror of water was typical; even ice produced the same effect. Solid food, medicine, everything offered her produced the same result. Was not enabled to give her anything by the mouth, except the few pieces of ice mentioned above.

"This case is of interest, as showing in so far as one case can, that the assertion advanced by Dr. Janeway, United States Army, may be incorrect, viz.: 'It is a well-authenticated fact that rabid skunks are entirely free from the odor so characteristic of these animals, which could not occur if the secretion were not exhausted, and forgetting its normal timidity, it will attack any person or animal it may come in contact with, etc.'

In my case the connections of the patient hoped everything from this theory of the skunk not being rabid, as it gave off the peculiar odor, and I have found so far that it is a popular belief among pioneers and hunters that none but odorless skunks are dangerous. I must side with Dr. Janeway 'that mephitic inoculation' is not necessarily fatal.

"I was visited May 26th by ——, a woodchopper by occupation, who was suffering from acute diarrhœa. During the interview he spoke of some very queer sensations he had been having, principally about the head; but also affecting his whole body more or less. Asked him if he had received any injury about the head—said not; and the only injury he had had for some time that amounted to anything was the bite of a skunk some three years before, at the same time showing me the scar upon forefinger of right hand. The cicatrix was very well marked and of a purplish hue. Said it did not worry him any, although it might possibly have something to do with the way he felt, but thought it amounted to nothing as the animal when killed gave out the peculiar odor.

"Mr. W——, father of my patient, who is a very intelligent man, told me of two cases who had been bitten at his ranch during the last year and neither having developed any alarming symptoms. Also of a third who was bitten near his place since his own child was bitten, and who he thought was either going to be affected or else was in great fear of it, judging from the way he acted.

"I know also of a well authenticated case where during a scout (year 1877) one colored soldier and two Indians were bitten by one skunk, neither of the three ever showing any symptoms of rabies so far as is known. The soldier, who was the first attacked, was bitten through the lip and had to choke the animal to make it loose its hold. He afterwards kicked, clubbed and finally killed it, not the least odor being given off, but the "timid animal" showing fight to the last. This man is still in the service, and I know has never had a symptom. In his case poultices of tobacco and whiskey (?) were applied to the wound. It may have been the applications that exempted him, or, perhaps, by going a little further we might conclude that the negro is impervious to the poison. I think, after reading Dr. Janeway's cases and looking back upon my own, that it is simply "hydrophobia" as laid down by authors on the latter malady.

C. C. GODDARD, M.D.,
Fort Elliott, Texas. A. A. Sg'n, U. S. A."

That is probably enough "skunk" for one dose, but now seems a good time to devote a paragraph to a singular phenomenon that I observed about a year ago. I spent considerable time near some very odorous hot sulphur springs. There were a good many chickens, young and old, about the place, and they attracted the skunks. A number were killed, invariably filling the air with their scent, but in two or three days it would all disappear, even from the dogs that came in contact with them. I cannot imagine why this should be, unless the odor was killed by the sulphur fumes. Can any one tell?

WM. N. BYERS.
Denver, Col., Aug. 27th.

SUCCESSFUL CULTURE OF WILD RICE.—*Springfield, Mass., Sept. 15th.*—I see by last week's FOREST AND STREAM that your Stockbridge correspondent did not succeed well with the wild rice planted by him.

Early this spring I obtained some seed from the Rod and Gun Club of this city, and planted the same opposite here on the shore of the Connecticut River, having first soaked the seed in water. I send you sample of stalk cut last week. The shore for 500 rods is lined with a beautiful growth of the same, a greater part of which is over 8 feet high. Muskrats seem to glory in it more than ducks, eating off the stalks in frequent places. But I think if the planting was more generally carried forward here in New England for a few years, that ducks would be more plenty. E. H. BARNEY.

SNIPE.—Mr. M. Englert, of Delancy street, this city, who usually sends us the first snipe of the season, again reminded us in a substantial manner last week that these birds are coming now into market.

The Kennel.

A NORTH CAROLINA FOX HUNT.

Editor Forest and Stream:—

I am patiently waiting a visit from my old friend W. E. Brodnax to take out of prison my "old male" red fox. He writes me that in a few days he will be on hand, as his pack required some training before venturing in the red fox chase.

Since securing this "old red" I have had two other successful races over the same field. On the 30th of August by appointment I crossed the Roanoke. Hardy and Sherron arrived on the ground in advance and had a red flying, and that right to me. Logan, Red Bird and Van dashed off to join their pack ahead of the rest of my own, and heading them produced a temporary break. In a few minutes Logan, Red Bird and Van were off, and the pack did not overtake them until they caught the fox after a run of thirty minutes.

On Friday, the 5th of September, by appointment again I crossed the Roanoke, taking my dogs over in a boat. I always find a horse ready for me on the opposite bank. Hardy has four hounds (Byron), and Sherron some six or eight. They are always ready for the fun whenever I say so. Hardy, however, does not relish red fox hunting; but Sherron is a brick at it. He is very fond of searching out fast hounds to run against me. In the run of the 30th ult., he had Burrow's white slut. That race did not satisfy him. This morning he brought two cracks of Rodman's pack. They looked formidable indeed. They were in fine condition, of good size, full of life, and looked like champions. They struck the trail and brought it right to my landing. But the fox was at its other end. We consequently turned back to its beginning, and soon had a lively trail. Following it for a mile or more we came upon a gang of wild turkeys and a rabbit quite near the fox, producing a general flutter among the turkeys, and rant among the younger dogs. The fox, taking fright, moved off with one of Sherron's cracks and Fanny at his heels. They passed through an open field, right back on the trail, and to Hardy who had stopped behind. The fox ran within a few feet of him, and Fanny and Wake (the crack) just out of sight. Through the open field Fanny led the crack some fifteen paces. At this point, a slight break occurring, enabled the pack to come up, and Sherron's red speckle (part Byron) took the lead. The run was then up the Roanoke for about four miles. We all halted at a proper distance from the Roanoke to hear the run, if on its bank or on the hills, supposing, as heretofore, the turn would be at Carl's Hill. The cry faded in the distance, and it was evident that the fox was an old one and a stranger. Sherron and myself lit out a few lengths, and came up to the body of the pack, and all at fault. While standing in the public road we heard a cry approaching us from up the Roanoke, but nearer the hills. "Those are hounds," Sherron exclaimed. "But it must be deer hunters." "No; I hear Logan and Monitor—yes, Red Bird, too. They have outrun the pack and are close upon the fox." In a few minutes they ran close to us and caught an "old male" without the crack dogs of Rodman's pack being up. But their company (Fanny and Van), convinced me that it was accidental. Logan, Monitor, Red Bird, and Granville (all Byron's) of my pack, and Lee (half Byron) of Hardy's, did the work. T. G. T.
Gaston, N. C.

A GOOD DOG STORY.

Editor Forest and Stream:—Doctor ——, who is a great sportsman—and I have been shooting in Illinois for a couple of days. Illinois is not far from here—not nearly so far as the good shooting is. The domestic chicken hereabouts has run out the wild variety, very much as timothy runs out gramma grass. So we have no very extraordinary deeds of sportsman-like valor to recount, though the eminent Englewood Doctor does insist that he shot at a prairie-chicken at 500 yards rise, and "quite accidentally" potted a brace of quail which rose under his nose at the report of his gun. However, we had plenty of fun, and heard the best "dog story" ever told on this continent, which, after some preliminaries, I want to offer to the myriad readers of FOREST AND STREAM as a veritable side-splitter.

Butler is in Montgomery County—a land of corn and corn wine and prospective olives—some milk and no honey that I know of. Of course we went to "Griff's," and, equally of course, were most hospitably treated and industriously guided to game-infested spots. Unfortunately, however, the stubble-fields had in the main been ploughed in for winter wheat, and the birds were found, when found at all, lurking in the endless corn-fields, the stalks of which towered above our heads from ten to twelve feet high, leaving but sky-line enough for a bird to flit through in an instant, only to be lost in a maze of maize, if not stopped on the jump or taken in by your neighbor on the right or left of the skirmish line twenty rods distant. The dogs—of which "Griff's" kennel furnishes some beauties whose pedigrees stretch back through Erin and Elcho into the dim vistas of Irish ancestry—were worse than useless, only serving to flush birds twenty rows ahead of one, or "stand" on the few that would lie to them, till we had passed on, all unconscious of their staunchness.

It was hard work and hot work, and disappointing and disheartening work, so that, with a couple of dozen for our pains, we were quite ready to go back to the smoke and dust of the city, much wiser though by no means sadder men—though the eminent Englewood Doctor did make some show of regret at having mistaken a brace of quail out of season for a young prairie-chicken.

"Griff," in repose, looks like a veteran of the "old guard," with his grey moustache and air *farouch*. And so, in fact, he is, for though on he never drew sabre under *the petit bonhomme*, yet he served a term with Col. Sam Black in the Mexican war, and cured his corns by losing his toes at some outlandish place in India, as was fitting in a good subject of the British crown, at the time and place some forty years agone. In action "Griff" looks like a Government mule harnessed down with leather straps of things pertaining to his muzzle-loader, to which he clings despite the progress of modern times (see advertisements in FOREST AND STREAM). The only drawback to the consideration of "Griff" as a purely ideal character is the fact that he keeps dogs, and thus reduces himself to the dead-level upon which we all meet.

I was stretched out on the bed pretending to be fast asleep. "Griff" made sure of the genuineness of my snore, and then proceeded to try to sell a dog to the eminent Englewood Doctor. He wanted to sell him "unsight unseen," as the boys used to trade jack-knives.

"Why," said he, "I have sold no end of dogs, and I never in all my life sold one that didn't turn out to be satisfactory. Only once I came mighty near it. There was a young fellow—his uncle (he was a nephew) kept a big plate-glass establishment in St. Louis—came out here and told me he and his uncle were going up into Minnesota shooting, and he wanted a bird-dog. Well, at that time I didn't have but two dogs, that is, what I call dogs—setters, and I said I couldn't accommodate him. I was sorry, but I wanted all I had to use and breed from. But my young blood must have a dog, and wouldn't take no for an answer. Besides the bird-dogs, I happened to have a pointer beast hanging around the place, and my man sets eye on him and begins to ask questions about him. Now I didn't like to tell him much, for this was a peculiar sort of dog. He had a peculiarity. It was this: He would draw on a bird in fine style, and creep and creep and creep—no power could stop him—and then with a sudden spring he would dash in and capture the thing, feathers and all. But he was as pretty a thing to look at as ever I put eyes on, and my young glass prince thought he must have him, anyhow. Of course I didn't want to sell a dog I knew was off color, and I stood him off as long as I could, but finally he drove me into naming a price. So, thinking to scare him off for good and all, I said not a cent less than $125 would buy that dog. Darn my buttons, if he didn't close the bargain at once, only stipulating that he should pay $100 cash, and the remaining $25 if the beast gave satisfaction after a trial trip. So he toted him off at the end of rope-yarn, and I put the $100 away, to have it handy to return when he found out that the dog 'wasn't well broke yet,' as I had insisted all along. Well, that was the last I heard of my glass-man for a long time, till one day, walking down Fourth street, I came plump upon him so suddenly that I didn't have half a chance to turn down a side street or dodge into a door-way, as I would have done if I could." By this time the eminent Englewood Doctor was yawning to split his jaws, and I was wondering how the long-winded tale might ever come to an end. "Well," continued "Griff," "to my surprise he came with open hands towards me and shook me cordially. 'Come,' says he, 'and see uncle. Uncle wants to see you.' The devil take your uncle, thinks I; but I had to go of course, and up into a fine office I walks, and there sees my uncle and also my pointer pup, the latter in a fine cage, all decked out with ribbons, a fine collar on his neck, and his coat clean as a prize-winner in a bench-show. He introduced me to the uncle, but I never dared to say a word about the dog till he finally said he wanted to settle up that trade, and then and there gave me a check for $25, and then handed me a twenty-dollar gold piece, saying it it was by way of bonus and he hoped it was satisfactory. All this time I never dared open my mouth about the dog; but afterwards I got out with the nephew, and over a glass of beer I did pluck up courage enough to ask him what he thought of the pointer. 'Think of him!' says he. Why he's the finest dog in this country. I don't 'spose you knew it when you sold him, but he can't be beat on this whole continent. Why that dog can *catch more birds in a day than uncle and I together can shoot in a week.*'"

I gave a snort at this unexpected denouement, and the eminent Englewood Doctor rolled over on the floor like a brace of quail mistaken for prairie-chickens.

St. Louis, Sept. 7th. THE MAJOR.

DOGS OF OUR FOREFATHERS.—*Putnam, Conn., Aug. 28th.*—It seems there are two dogs that we have record of that came in the *Mayflower* with the "Pilgrim Fathers;" for among the papers found, it seems, two men were at the brook which was within a few rods of their house, when a large wolf pursued their spaniel, which ran to the men for protection. Afterwards when John Billington and another man got lost in the woods and were obliged to stand by each other all night, the wolves would come very near them, and their large dog would chase them away. The records say there were a great abundance of wild fowl in the bay. Early in the spring of 1621, three men went in a boat up what is now Kingston Bay, and saw a dead grampus on shore, near what is now Rocky Nook; wolves were feasting on the carcass, and on ascending Kingston River they saw many deer. C. F. W.

ST. BERNARDS FOR SALE.—Mr. Lardy Z. Collins, of Lancaster, Mass., well known as an importer, breeder and exhibitor of pure St. Bernards, offers some of his best stock for sale. Mr. Collins has spared neither expense or trouble in getting the very best strains from abroad. See advertisement.

PUG FOR SALE.—A recently imported pug bitch with excellent pedigree, now in season, can be bought very low. Particulars to be obtained at this office.

—Mr. H. B. Vondersmith, of Lancaster, Pa., advertises in another column some fine dogs for sale. These dogs are sold on account of Mr. Vondersmith being about to engage in another business, and out of his kennel of fourteen dogs he will sell eight or nine, comprising three Gordons—Victress, pure Laverack (full sister to Countess); Virginia (Paris-Peeress), and some finely bred red Irish setters and pointers. See advertisement.

—The following litters have been whelped recently at the Neversink Lodge Kennels, Guymard, Orange Co., N. Y.:—Queen-Sensation, 11 puppies, all liver and white, 7 dogs and 4 bitches; Dora-Croxteth, 7 puppies, all liver and white, 5 dogs and 2 bitches; Silk-Ranger, 9 puppies, white and lemon, 4 dogs and five bitches; Donna-Ranger, 10 puppies, lemon and white, 7 dogs and 3 bitches.

—General Webb, of the Westminster Kennel Club, has purchased of the Montclair (N. J.) Hunt the beagle bitch pup Belle. She is black, tan and white, and out of imported English stock.

—Mr. J. Weighell's (Rochester, N. Y.) champion red Irish setter bitch, Breeze, whelped on the 31st of July 7 red puppies, 5 dogs and two bitches sired by champion Rufus.

—The black pointer bitch Gwendoline (Strong's Pete, Woodbridge's Nell) owned by H. C. Glover, Tom's River, N. J., whelped on the 31st, with seven puppies, four dogs and three bitches, all black or black and white, sired by Mr. F. Schuchardt's Jim (Pete–Whisky).

—Mr. E. J. Robbins' (Wethersfield, Conn.) red Irish setter bitch, Bridget Plunket, Plunket–Stella, whelped on the 9th inst. 12 puppies and by same owner's Bob, Rory O'More–Mirah.

Apropos of the above Mr. Robbins writes us that during the last nineteen months his bitch, Bridget Plunket, has whelped forty puppies, and he has found ready sales for them all by advertising in our columns.

—The red Irish setter Zoe, belonging to Mr. Max Wenzel, of Hoboken, whelped last week 14 puppies, 11 dogs and 3 bitches, sired by Messrs. Lincoln's and Henlyar's Arlington, formerly Boss.

—Mr. J. L. Coogan, of Charleston, S. C., claims the names Jack Hinton and Modjeska for a brace of orange-and-white setter puppies presented to him by his friend Mr. G. A. Spooner of Brooklyn.

—Dr. E. H. Lyford, of Vinalhaven, Me., claims the name "Sport" for his thoroughbred cocker spaniel pup whelped July 10 from the kennels of M. P. McKoon, Franklin, N. Y. Sport is out of Nellie, II, by Skip, etc. Skip is owned by D. F. Slade.

—Mr. W. A. Galloway, of New Dorp, S. I., claims the names Flax and Fret for red-and-white setter dog and gyp pups out of Killarney (imported Grouse, imported Frisk) by Prince (imported Milo, imported Belle), whelped May 22d.

—Mr. L. H. Mercilliott's English setter bitch Grace has whelped 8 puppies, 6 dogs and 2 bitches, sired by Mr. Carl Lesschorn's imported Lavarack dog Carlo.

—Mr. L. H. Mercilliott's English setter bitch Pet, has been bred to Mr. P. H. Morris' Lark.

—Will the gentleman who wrote to G. D. M., 83 Peter street, please write again to Box, 3,223 Toronto P. O., as his letter has gone astray through the stupidity of the Post Office Officials. GEO. D. MACDOUGALL.

National Pastimes.

THE GAME OF CRICKET.

FIXTURES.

Sept. 18—Daft vs. 22 Canadians at Toronto.
Sept. 18—Daft vs. 22 Old Countrymen.
Sept. 18—Irish team vs. St. George's.
Sept. 18—Wanskuck vs. Westerly.
Sept. 18—Occident Cricket Club.
Sept. 19—Halifax Incog.
Sept. 18—Whitby vs. Toronto.
Sept. 18-19—Montreal.—Daft's English eleven vs. 22 of Montreal.
Sept. 19-20—Staten Island.—Gentlemen of Ireland vs. eighteen Staten Island Cricket Club.
Sept. 25-26-27—Nicetown.—Gentlemen of Ireland vs. Philadelphia eleven.
Sept. 25-26-27—Detroit.—Daft's English eleven vs. eighteen Peninsular Cricket Club.
Sept. 30-Oct. 1—Ardmore.—Gentlemen of Ireland vs. Merion Cricket Club.
Sept. 30-Oct. 1—Syracuse—Daft's English eleven vs. 22 Central New York.
Oct. 3-4—Staten Island.—Daft's English eleven vs. eighteen of New York.
Oct. 3-4—Montreal.—Gentlemen of Ireland vs. Montreal.
Oct. 7-8—Ottawa.—Gentlemen of Ireland vs. Ottawa.
Oct. 13-14—Hamilton.—Gentlemen of Ireland vs. Hamilton.
Oct. 15-16—Guelph.—Gentlemen of Ireland vs. Guelph.
Oct. 18-20—Coburg.—Gentlemen of Ireland vs. Coburg.
Oct. 22-23—Detroit.—Gentlemen of Ireland vs. Peninsular.

We call special attention to recent changes made in our list of fixtures.

CHESTER CITY VS. MERION (2D).—A large number of persons witnessed this game, played at Chester, Pa., on the 8th of August. As will be seen by the score, the home team won a very creditable victory by 6 wickets :—

The match between the English eleven and the Old Countrymen, which was the second game in the Daft series of Inter-Continental cricket matches, was played at Toronto, Ont., on September 12th and 13th, and resulted in a draw. Although the visitors again contested against a side of twenty-two players, they would have won with ease had the game been played out. We will give the full score next week.

OSWEGO VS. OSWEGO FALLS.—The tables were turned in the return match between these clubs, which was played on Sept. 6th at Oswego Falls. The subjoined scores show that the visitors were victorious by one inning and forty-nine runs :—

CHATHAM (ONT.) VS. FOREST CITY.—This match was played on the grounds of the latter club, at Cleveland, O., on the 7th and 8th insts., and resulted in a victory for the visitors by 150 runs. Although the home club met with defeat, they should by no means be discouraged. It cannot be expected for young clubs to successfully compete against old organizations like the Chatham. We remember some years back that several of the best players in the Dominion hailed from that club, and from the play of the present crop of youngsters we can see that D. M. Eberts, Whelan, and Van Allen left the seeds of good cricket behind them. Score :—

TORONTO VS. WHITBY.—This match was played on the 6th inst. on the University Grounds. The Toronto team was composed of nine players which had been selected to play against Daft's team, and the score of the Whitby's innings shows well for that club. There was some excellent play on both sides. The annexed score shows to whom honor is due :—

TORONTO.

		WHITBY.	
Sproule, c. Trousdell, b. J. B. Laing	17	Ray, c. Boulton, b. Behan	19
Townsend, b. A. Laing	6	Trousdell, c. Brock, b. Behan	6

NAHANT SPORTING CLUB.—In the fall meeting, Nahant, Mass., September 13th, the record was: Foot race, 100 yards, E. Wendell (H. A. A.), 1st; A. T. Greenough (U. A. C.), 2d; T. R. Lord (U. A. C.), 3d; Clark (U. A. C.), Whitney (U. A. C.). Time: 10 1–5s.

Foot race, 220 yards, E. Wendell, 1st; A. T. Greenough, 2d; R. R. Lord, 2d, Time: 25⅘s. G. B. J.

—The Harlem Athletic Club games, open to amateurs, will take place Wednesday, Oct. 8th. All communications should be addressed to J. B. Haviland, Secretary, 5 Beaver street, New York.

ARCHERY.

ARCHERY IN CENTRAL PARK.—The stretches of lawn in Central Park ought to be diversified these fall afternoons, with archery tents, targets and archers. The sport is novel. It would interest thousands of spectators. It makes a brilliant spectacle. The flight of the arrow to the brightly colored target is watched with pleasure, not only by the shooter himself but by all others. The turf is not injured by the sport. We can think of no reason why the Commissioners of Parks should not encourage Clubs to meet in Central Park. Who will initiate the movement?

ARCHERY IN IOWA.—On August 8th, at the Toxophilite Archery Grounds at Terrace Hill, Des Moines, Iowa, occurred a very pleasant ladies match at the Columbia Round for prizes offered by Mr. Tac Hussey, an enthusiastic archer of same club. 1st prize, ¼ doz. pine arrows; 2d, 1 ladies' quiver; 3d, 1 belt score book; 4th, 1 doz. scoring cards. Most golds, a fine bow-string. Miss Laura Owen won 1st prize by a gross score of 245; Miss Mamie Cole, 2d, 220; Mrs. J. H. Windsor, 3d, 163; Miss Fannie Parsons, 4th, 162. Miss Cole won special prize, having made 10 golds. After the contest the clubs were entertained by Mr. and Mr. Hussey at the above house and prizes were awarded.

OHIO STATE ARCHERY ASSOCIATION.—The programme of the first grand annual meeting of the Ohio State Archery Association, which is to be held at Cincinnati, October 2d and 3d, comprises three contests for ladies, three for gentlemen, and a team shoot of four gentlemen from any society. The secretary, Mr. Chas. Welker, 137 West Fourth Street, Cincinnati, will send official programmes upon application. The success of the meeting is assured.

—California Archery Clubs are preparing for a tournament at the State Fair.

—Mr. Will. H. Thompson is arranging several telegraphic archery matches.

AMERICAN BOWS.—*Chicago, Sept. 8th.—Editor Forest and Stream*:—In your issue of Sept. 4th is an article on "American Bows vs. English Bows," signed "Toxophilite." It may be true, as he says, that he is not in the archery business, though his efforts to advertise the one dealer he mentions do not inspire an outsider with confidence. It may be true that he has "used the bow for over twenty years," though he probably does not mean that he has used it as an archer. It may even be true that he was present at the late Chicago tournament, though his ignorance of the fine showing there of American bows and arrows, and the breakage of several expensive Aldred bows, would lead one to think he may have been present only by proxy.

Now, I have not been an archer for twenty years, never having pulled a bow until the last spring, but I have been learning considerable about the qualities of bows this season, and my friends call me a good shot. I have purchased about three hundred dollars worth of bows and arrows already, trying nearly every kind that appears to have merit. I have an Aldred Spanish yew, and like it; also American made bows, such as self lance, lance backed with hickory, beefwood backed with lance, and many others. I have subjected these to very severe tests, and they have had harder use than my yew, intentionally, to try them. The best of these were all made by one manufacturer, "American bows," and I consider them better than any imported bows. Not only is that my opinion, but I know that all the prominent archers at the late tournament agree with me. I would not cry down Aldred yews, because Aldred does make fine bows, but the Chicago tournament demonstrated that American made yews were equal to Aldred's.

It would have been fairer if "Toxophilite" had told the whole truth about Aldred yews at the tournament. Then he would have told your readers that three Aldred yews were broken, viz.: Mr. Burnham's, Mr. Hall's and Mr. Wilkinson's. He would also have stated that although Mr. Carver, the secretary of the National Archery Association, had an Aldred Spanish yew costing him $125, he did not shoot with it, and that he endorses American made bows in high terms.

One of our dealers here tells me he has sold this season over five hundred fine bows made by a manufacturer in your city, varying in price from $7 to $18, and has heard of but six of these bows being broken, and that since the tournament the demand for English bows and arrows has largely fallen off, while there is a very great demand for the American. TRUTH.

TOXOPHILITES VS. CRESCENTS.—*Des Moines, Sept. 7.*—The Toxophilite and Crescent teams shot the American Round at the Driving Park last evening for the championship of the State, which the former had won in a contest on the 4th of July last. Score:—
